"However, I am in hopes that these conditions will change for the better, within the near future, and that it may be possible for Canada, at least in some of our best yards, to continue permanently to build ships. The government made no mistake in going in for shipbuilding, and I will go into all the details regarding this when I make my statement to parliament. In the meantime all the yards in Canada have government contracts to keep them fully occupied all this year, and possibly a part of next, with the exception of one or two yards which have been building ships for the British Government through the Imperial Munitions Board.

"My colleague, the Minister of Public Works, Mr. Carvell, stated in the house the other day that the government is building ships in order to give employment. Undoubtedly he had reference to the necessity of giving employment at present. This was not the reason the government entered into shipbuilding at the time it did, but, on the contrary, because, owing to the world's great shortage of tonnage, and the impossibility of ships being contracted for in any country, and England and other countries being willing to place large contracts in Canadian shipyards at greatly advanced prices over what the government was paying, it would have been an unwise policy in the interests of Canada had she not gone in for shipbuilding on her own account. Further details will, however, be given when I return to the house. I cannot say more at present as to the shipbuilding policy. As to the future of shipbuilding, it will be discussed fully by the cabinet on my return to Ottawa."

"I have nothing to say regarding Canada's naval policy at the present time," said the minister, in answer to a query, "although I have my own views on this important subject. It would be unwise, in fact, for me to make any statement at present until after Admiral Lord Jellicoe's visit, and before the cabinet decides what its policy will be."

Shovelling and Trimming Charges at Grain Elevators.

These matters were dealt with in the Dominion Marine Association's annual report recently (Canadian Railway and Marine World for March, pg. 166). The Board of Grain Commissioners' Secretary wrote the Dominion Marine Association's Counsel on March 11 as follows:

"So far as shovelling is concerned, the board has decided that it is not policy for it to acquire any jurisdiction over this charge, as quite a percentage of the grain received at the eastern public elevators is of United States origin, over which the board has no jurisdiction. The board therefore prefers to leave the matter of the shovelling charge to be arranged between the elevators and the carriers.

"As the government has decided to place the trimming of western grain into vessels at Fort William and Port Arthur under the board's jurisdiction for the purposes of eliminating any profiteering, the board is of opinion that the best way to handle the matter would be to license the trimmers, subject to certain rules and regulations. Part of the regulations would of necessity, include the approval of the rates to be charged for this service, and as the U.S. lake carriers, along with all the other Canadian carriers, with the exception of the Canada Steamship Lines, have advised the board that they are willing for the board to make whatever rules and regulations they think proper, the board feels that it will hardly be necessary to call a session for the discussion of this matter."

Telegraph, Telephone and Cable Matters.

E. N. Hurley, President U.S. Shipping Board, predicts that New York business men soon will be taking and placing orders in South American ports by wireless telephone.

Marconi is reported to have said that wireless telephone communication between New York and London will be in effect within three months. Three minute conversation will cost $5.

The Marconi Wireless Telegraph Co. has, according to a Montreal press dispatch, established wireless telephone communication between Newcastle, N.B., and Lyons, France, and also with Belmar, N.Y.

The Quebec Public Utilities Commission has authorized the National Telephone Co., operating in L'Islet County, to raise its rates considerably to the following figures: Branch lines, business, $25; house, $20. Party lines, business, $18; house, $15.

The Marconi Wireless Telegraph Co. resumed wireless telegraph service across the Atlantic Mar. 10., for the general public. Until further notice the service will be for full rate traffic only. During the war, official messages only were handled.

The C.P.R. Co's. Telegrph Department is stringing a new copper wire from Halifax to Montreal, and the work is expected to be completed very shortly. As there are 800 miles in the telegraph route and it takes 210 lb. of wire a mile, the total weight of the wire is 168,000 lb., or 84 tons. In addition, a number of other copper wires will be strung on different parts of the system this year.

The Marconi Wireless Telegraph Co. has, according to a Montreal press despatch, completed arrangements for supplying airgrams to aviators who may attempt to cross the Atlantic. A complete series of bulletins about weather conditions over the area to be traversed will be compiled from advices of ships at sea and will be sent out from the company's Glace Bay, N.S., station, to be picked up by the aviators.

The Great North Western Telegraph Co. has opened offices at Burlington, and Pass Lake, Ont.; Eaton, and Madison, Sask.; and has closed offices at Cap Rouge station, Cartierville, Little Metis lighthouse, Neuville station, Perthuis, and Portage du Fort, Que.; Camp Mohawk, Chaffeys Locks, Melbourne, and Mitchell, Ont.; and Dropmore and Hodgsen, Man. The name of its office at River Henry, Que., has been changed to Henry River.

The Pacific Cable Board is considering representations made to it by Canadian and U.S. interests, for a duplication of the cable between Canada and Australia. It is pointed out that during the war the cable facilities were greatly overtaxed, and there appears to be no diminution in the traffic. In this connection, it is reported that the Marconi Wireless Telegraph Co. has made a proposal to certain Australian newspapers for a British news service on a 10 year contract at 5c a word, which is stated to be for too long a term and at too high a rate. It it is however stated that the Marconi proposal may mean the life or death of the Pacific cable, but it is considered that there is sufficient traffic for both cable and wireless.

Among the Express Companies.

G. Ford, General Superintendent, Dominion Express Co., Winnipeg, has been on a trip to California.

R. C. Mellish has been appointed lost express freight agent, Canadian Ex. Co., Toronto.

M. W. Corrigan has been appointed lost express freight agent, Canadian Ex. Co., Winnipeg.

V. J. Smith has been appointed cashier, Canadian Ex. Co., Windsor, Ont., vice J. V. Yeoman promoted.

J. T. Madigan has been appointed [illegible] agent, Canadian Ex. Co., [illegible], Ont., a new position.

W. B. Bray has been appointed Agent, Canadian Ex. Co., Sydney, N.S., vice A. C. Millar resigned.

W. J. [illegible] has been appointed agent, Canadian Northern Ex. Co., Quebec, Que., vice W. G. [illegible] deceased.

R. H. Jones, heretofore traffic agent, has been appointed Assistant to Superintendent, Canadian Ex. Co., Toronto.

S. H. Bullett, heretofore agent, Windsor, Ont., has been appointed traffic agent, Canadian Ex. Co., Toronto, vice R. H. Jones promoted.

J. V. Yeoman, heretofore cashier, has been appointed acting agent, Canadian Ex. Co., Windsor, Ont., vice S. H. Bullett, agent, promoted.

The board of conciliation appointed to deal with complaints of the Canadian Ex. Co's. messengers, helpers, drivers, clerks, porters and other employes, filed its report with the Dominion Labor Department at Ottawa, Mar. 18. The enquiry covered the whole system, and the award favors an eight hour day, with increases in wages ranging from 10 to 15%, with time and a half for overtime and legal holidays.

The American Railway Ex. Co. reports that after a 30 days campaign for the better packing and marking of express matter, concrete results have been achieved. At a meeting of the company's local employes at Montreal, Mar. 13, it was stated that not only were packages received in better condition, but there was a noticeable falling off in consignments that were sent to the "no mark" bureau, the decrease being about 50%. The company thanked the local merchants for their co-operation. The campaign is being continued in Canada, and meetings are being held at various points, with the view of instructing both employes and the public on the advantage of greater care in packing and marking.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Independent Pneumatic Tool Co., Chicago, Ill., and 334 St. James St., Montreal, has issued circular 30, describing and illustrating Thor pneumatic tools.

Metal & Thermit Corporation, 120 Broadway, New York, and 15 Emily St., Toronto, has issued a wall calendar for 1919, which contains a map showing the new railway time zones in the United States, which went into effect Jan. 1, together with the continuation of these zones in Canada.

The Canadian Ingersoll-Rand Co. has absorbed the Jenckes Machine Co. of Sherbrooke, Que., and now has two plants, the Rand plant and the Jenckes plant. The products of the "Jenckes plant" will continue to be structural and plate work; tanks, penstocks, etc.; mining machinery and equipment, ore crushers, cars, cages, etc., and pulp and paper equipment such as barkers, grinders, water wheels, etc. The Canadian Ingersoll-Rand Co's. headquarters are at 260 St. James St., Montreal.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries, unless otherwise stated:

Belleville Railway Men's Educational Club. Meets each Tuesday, 7.30 p.m. F. A. Pinkston, Belleville, Ont.

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, [illegible] Toronto.

Canadian Freight Association, Eastern lines—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association, Western lines—W. E. Campbell, [illegible], Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meets at Montreal, 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Railway War Board—W. M. Neal, Montreal.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 556 Church Street, Vancouver, B.C.

NOTICE TO CONTRACTORS.

The Timiskaming and Northern Ontario Railway Commission.

Toronto, Ont., March 26th, 1919.

SEALED TENDERS for the works (other than steel bridges) necessary to the complete construction of the roadbed, ready for the ties and rails, also the tracklaying, ballasting and fencing, upon that section of the Timiskaming and Northern Ontario Commission's railway, extending from Timmins to Mattagami River, a distance of two (2) miles, will be received at the office of the Secretary Treasurer of the Commission, 56 Church Street, Toronto, until twelve o'clock (noon) on the 15th day of April, 1919.

On receipt of a request in writing, a copy of each of the following documents:

Instructions to Bidders.
Form of Tender
Specifications.
Form of Contract

will be furnished to intending bidders at the office of the Secretary Treasurer of the Commission, Toronto; or at the office of the Chief Engineer of the Commission, North Bay, where plans and profiles pertaining to the work may also be seen.

The right is reserved to reject any or all bids.

(Sgd.) W. H. MAUND,
Secretary Treasurer, Timiskaming and Northern Ontario Railway Commission.

CANADIAN NATIONAL RAILWAYS.

Eastern Lines, Ontario District.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Concrete Abutments, piers and culverts, Nipigon Subdivision," will be received at this office until twelve o'clock noon, Wednesday, April 9th, for the construction of four abutments, two piers and two culverts on the Nipigon Subdivision, between Jellicoe and McKirdy.

Drawings, specifications and form of contract may be seen and form of tender obtained at the office of the Engineer, Maintenance of Way, no. 7 Adelaide St. East, Toronto.

Tenders will not be considered unless made on the form supplied by the Railway Company and accompanied by an accepted cheque on a Chartered bank for the sum of Three Thousand Dollars ($3,000.00), payable to the order of the Treasurer of the Canadian National Railways.

NOTE: Blue print copies of the drawings may be obtained at the office of the Engineer, Maintenance of Way, by depositing an accepted bank cheque for the sum of Ten Dollars ($10.00) payable to the Treasurer, Canadian National Railways, the said cheque to be returned if the intending tenderer submits a regular tender.

The lowest or any tender not necessarily accepted.

A. F. STEWART,
Chief Engineer,
Eastern Lines.

Canadian National Railways,
27 Wellington St. East,
Toronto.

CANADIAN PACIFIC RAILWAY COMPANY.

NOTICE TO SHAREHOLDERS.

The Thirty-eighth Annual General Meetnig of the Shareholders of this Company, for the election of Directors to take the places of the retiring Directors and for the transaction of business generally, will be held on Wednesday, the seventh day of May next, at the principal office of the Company, at Montreal, at Twelve o'clock noon.

The Common Stock Transfer Books will be closed in Montreal, New York and London at 3 p.m. on Tuesday, the fifteenth day of April. The Preference Stock Books will be closed in London at the same time.

All books will be re-opened on Thursday, the eighth day of May.

By order of the Board,
ERNEST ALEXANDER,
Secretary.

Montreal, March 19th, 1919.

FOR SALE.

Light Draught Tug.
250 Ton Tow Barge.
2 Sand Pumping Outfits on Scows.

May, 1919

The Economics of Electric Operation of Railways.

By W. G. Gordon, Transportation Engineer, Canadian General Electric Co.

Much has been written descriptive of the different railways now operating electrically, wholly or in part, and of the results as compared with steam operation. I will present some of the latest figures regarding the economies effected by electric operation. At the American Institute of Electrical Engineers convention last year, E. W. Rice said:—"Electric locomotives have been so improved and simplified that they are competent to haul the heaviest train that can be held together with the present train construction; to operate at the highest speed permissible by the alignment of the road and independent of its grades; and the electric locomotives can meet, in the most efficient and adequate manner, the transportation problems confronting the country, and offer better results than are now obtained or seem possible with steam locomotives. It should not be forgotten that steam locomotives burn about 25% of the entire coal mined in the United States, and that 12% of the entire ton mileage movement of freight and passengers carried, is represented in cars and tenders required to haul coal to supply steam for the locomotives." This percentage is shown from the following table (1) of one year's ton mile movement:

	Millions ton miles	Per cent. of total
Revenue coal	204,600	12.56
Railway coal	52,000	4.96
Revenue freight	372,040	35.60
Railway freight	5,600	0.55
Locomotives	148,200	14.20
Locomotive tenders	74,630	7.14
Passenger cars	186,890	17.90
	1,043,960	100.00

The comparative percentages for the different classifications are very close to those given above for the operation of our steam railways in Canada.

Where a trunk line is electrically operated from water power stations, it means that the total movement for railway coal and locomotive tenders is eliminated, and even if partially or wholly operated from steam power stations, the movement for locomotive tenders is eliminated, and the movement for railway coal greatly decreased. The benefit is self evident, of being able to apply this ton mileage, at present absorbed by steam operation, in the movement of revenue tonnage.

The cost of maintenance of the electric locomotive is very much less than that of the steam locomotive. Table 2 gives the cost of maintenance in cents per locomotive mile for a number of roads, these costs being for the years they have been operating electrically to 1917, inclusive. The costs are given for an average of 5 years for 3 roads, and average of 4 years for 2 roads and an average of 2 years for the Chicago, Milwaukee & St. Paul Ry. The average locomotive weight in tons is given for each road, and in order to obtain a comparison, I have given the cost also on the basis of the locomotives weighing 100 tons in each case.

Table 2. Cost of Maintenance of Electric Locomotives.

Road.	Average loco. wt. in tons	Average maint. per loco. mile	Average maint. on basis of loco. weighing 100 tons.	No. of years.
Baltimore & Ohio Rd.	98	5.13	5.24	5
Butte, Anaconda & Pacific Ry.	80	5.66	7.08	4
Chicago, Milwaukee & St. Paul Ry.	290	8.94	3.09	2
Michigan Central Rd.	108	4.39	4.06	4
New York Central Rd.	118	4.12	3.5	5
Pennsylvania Rd.	156	5.3	3.4	5
General average		5.59	4.39	

The cost of maintenance per locomotive mile for steam locomotives, compared with the above, will be from 10c to 20c or higher, depending on the capacity and service of the locomotive.

A very interesting comparison is given in Table 3, showing comparative results between steam and electric operation on the Butte, Anaconda & Pacific Rd. In 1913 the operation was entirely steam; since then it has been gradually superseded by electric. The figures for electric operation are averaged for 3 years, and as there was still a considerable amount of steam operation during these 3 years, the figures do not show full credit to the benefit of electric operation.

Table 3. Comparative Results, Steam and Electric Operation, B. A. & P. Rd.

	Steam 1913	Electric average for 3 yrs.	Saving in amount	Elec. Operation %
Fuel & power	$294,820	175,165	119,665	40.59
Loco. repairs	97,492	57,881	39,611	40.61
Loco. men, wages	99,611	74,036	25,575	25.67
Loco. house expenses	28,342	16,703	11,639	41.06
Lubricant	9,345	5,444	3,901	41.76
Water	4,491	2,084	2,407	53.59
Other supplies	5,435	4,308	1,127	20.73
Total	$539,546	$336,621	$202,925	37.8
Revenue ton miles hauled	153,168,648	169,553,405	16,384,757	10.70

Table 3 shows a saving in electric operation of 37.8%, and at the same time an increase in the revenue ton miles hauled of 10.7%. Had this increased ton miles been hauled in 1913, the total cost would have been $597,277, so that the actual saving in electric operation is 44%. On this road 17 electric locomotives were in operation in 1914, 24 in 1916, and at present there are 28.

Where mountain divisions are electrically operated, a further marked economy is effected by regenerative braking. This is obtained by exciting the fields of the motors on the locomotive on down grades, so that the counter electro-motive force builds up higher than the line voltage, and returns power to the line, this action retarding the train to whatever extent desired, without the use of the air brakes, as well as supplying power to other trains running on the level, or up grades. This action, of course, reduces the total demand on the substations, with consequent reduction in the power demand on the primary source of supply.

Table 4 which shows the saving thus obtained on the Chicago, Milwaukee & St. Paul Ry. is the result of careful tests just worked up by General Electric Co.'s engineers.

The above results are of extreme interest. The runs were taken in both directions, over the total electrified distance of 437.6 miles, with trains as high as 2,853 tons trailing load, giving a general average in watt hours per ton mile, without regenerative braking, of 24.06; and with regenerative braking of 19.72; or a reduction in power due to regenerative braking of 18.04%. As a direct result of regenerative braking, a large saving is effected in brake shoe wear, apart from the elimination of wrecks caused by overheating of the brake shoes, brake heads and wheels, where heavy trains are handled on long down grades. The air brakes are only required for emergency, as the braking is all done by the locomotive. It has been estimated that on the Chicago, Milwaukee & St. Paul Ry. the saving in

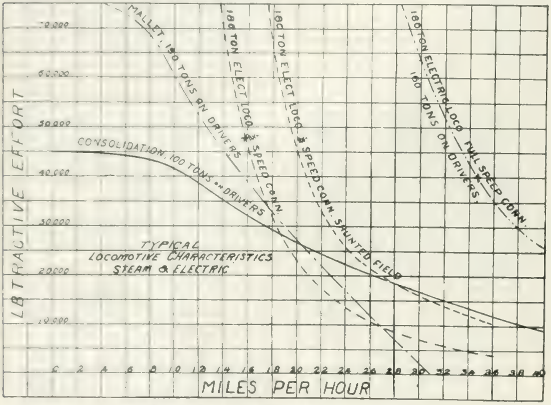
grade, brake shoe wear alone is close to $7,000 on the Denver & Rio Grande Ry. 4% grade between Soldier Summit and Thistle, the instructions are with steam operation not to exceed 8 to 10 miles per hour and to stop every 5 to 6 miles, for from 15 to 20 minutes, to cool brake shoes and wheels. Under these conditions the energy dissipated between rail, brake shoes and wheel may be as high as 2,000 h.p., and it is readily seen that even on small mileage grades of long extent the brake shoe wear, with steam operation, is a serious factor of expense.

The steam locomotive is a power plant, which, owing to physical limitations, can attain only a certain capacity and efficiency. On the other hand, the electric locomotive, itself very efficient, can draw any amount of power desired from a system fed by hydro electric plants, or highly efficient steam electric plants. The continuous draw bar pull of the electric locomotive is limited only by the strength of the draft rigging on the cars. By means of the various series-parallel combinations of the motors, a wide range of running speeds can be obtained, without rheostatic losses. This range can be further varied by shunting the motor fields. Due to the power input available, draw bar pulls can be maintained at speeds impossible with steam locomotives. This means that over any line, trains of heavier tonnage can be hauled at a much better schedule speed than with steam locomotives. In the case where a single track steam line has reached its capacity, and would have to be double tracked to handle increased ton mileage, electric operation will obviate the necessity of double tracking and permit of a large expansion in ton mileage handled. The accompanying diagram sheet giving typical locomotive characteristics, steam and electric, shows a comparison of pounds tractive effort, at various speeds, of 2 steam locomotives, a Mallet with 150 tons on drivers and a consolidation with 100 tons on drivers, with an electric locomotive having 180 tons on drivers. It will be noted that the tractive effort of the Mallet drops off rapidly above 8 miles an hour, while the tractive effort of the consolidation drops off steadily, though not so rapidly, above 10 miles per hour. Curves are given for 3 of the 6 running speeds of the electric locomotive. At 16 miles an hour the continuous tractive effort which the electric locomotive can exert is greater than that of either of the steam locomotives, while at about 35 miles an hour the continuous tractive effort of the electric locomotive is more than three times the tractive effort of the consolidation.

With regard to collection of current, experience has shown that with the slider type of pantograph 1,000 amperes can be taken sparklessly from a single trolley wire. Using 2 trolley wires suspended side by side, as on the Chicago, Milwaukee & St. Paul Ry., 2,000 amperes can be collected. This at 3,000 volts is 6,000 k.w., or over 8,000 h.p. As there is no sparking, the wear on the trolley wire is exceedingly slight, as may be judged from the fact that here in Canada we are getting a life of from 10,000 to 12,000 miles from a single wearing strip on the pantograph.



Typical Locomotive Characteristics, Steam and Electric.

As regards substations, a further decided economy is now credited to electric operation, through the perfection of automatic control. One serious operating condition was the flashing over of the generators from some short circuit outside the station. This might be severe enough to necessitate cleaning up the brush rigging and commutators. Continuity of operation required an attendant at each substation, while the generating sets were in operation. This trouble has been entirely overcome by the use of a high speed circuit breaker, which will open a short circuit, of many times the normal full load value of the generators, in less than eight thousandths of a second. With the further use of flash barriers on the commutators, flashing over of direct current generators is absolutely eliminated. With automatic control, the sets are stopped and started through the voltage drop reaching a definite value at any point on the system. In addition to doing away with sub-station attendants, this also improves the all-day efficiency of the generator sets, as they are shut down during periods where they are not automatically started up to maintain the line voltage at a fixed value. With the refinements now available for substation operation, it can be confidently asserted that the substation equipment is now 99% efficient.

The question of load factor on the power supply lines of the Chicago, Milwaukee & St. Paul Ry. electrification is of considerable importance, since the price of energy per k.w. hour is based upon an assumed load factor of 60%. In case the ratio of the average to the maximum load is less than this amount, the price is somewhat higher. Because of the desirability of maintaining a relatively high load factor, there has been designed and installed, a power limiting and indicating system, which automatically limits the maximum load to certain predetermined peaks, and also indicates to the dispatcher the exact amount of power which the whole system is receiving at any instant. This apparatus is installed in the dispatcher's office at Deer Lodge, and in each of the substations, which are connected to the main office by pilot wires. Two totalizing k.w. meters are located over the dispatcher's desk, indicating respectively the amount of power being drawn by the 200 miles east and the 220 miles west. By means of the pilot wire control, acting upon the motor-generator sets in the substations, the trolley voltage is reduced temporarily on the overloaded substations, so that the total k.w. consumption on the totalizing meters never exceeds the predetermined maximum. By careful dispatching, it is thus possible to keep the maximum load within reasonable limits, without materially slowing up the movement of trains.

As to the reliability of the modern electric locomotive for continuous service, the returns for 1918 just made public by the New York Central Rd. show that the locomotives were inspected after each 3,000 miles of running and that they averaged 33,000 miles per detention.

In changing to electric operation there is practically no upsetting of the regular steam organization, as the locomotive crews, under instruction, readily become highly efficient in the operation of electric locomotives.

Proposed Bridge over St. Lawrence River at Montreal.

Some of the municipalities on the south shore of the River St. Lawrence, opposite Montreal, have taken up recently the question of securing the building of a bridge across the St. Lawrence between Montreal and the south shore, crossing St. Helens Island. A plan, issued by the Montreal Harbor Commissioners in 1914, showed such a bridge, as part of the proposed works in connection with the harbor improvements, provision to be made for steam and electric railway, vehicular and foot traffic. We are advised that no plans have been prepared for the bridge, nor has any charter been applied for. So far the Harbor Commissioners have not given any consideration to the construction of the bridge, but it is felt by south shore municipalities that it should be built in the near future to give them better access to Montreal, it being claimed that the G.T.R. Victoria bridge is congested. A deputation from the south shore municipalities waited on the Canadian National Rys. directors in Toronto recently, to enlist their co-operation.

The Winnipeg Board of Trade has established a Traffic Department, in charge of P. G. Denison, to give service to members of the board.

Canadian Pacific Railway Company's Annual Report.

The C.P.R's. annual report has been issued over President E. W. Beatty's signature as follows:

The accounts for the year ended Dec. 31, 1918, show the following results:

Gross earnings		$157,537,698.05
Working expenses		123,035,310.38
Net earnings		$ 34,502,387.67
Deduct fixed charges		10,177,512.98
Surplus		$ 24,324,874.69
Contribution to pension fund		500,000.00
		$ 23,824,874.69
Deduct net earnings of commercial telegraph, Jan. and Feb., transferred to special income acct.		193,976.64
		$ 23,630,898.05
From this there has been charged a half-yearly dividend on preference stock of 2%, paid Oct. 1, 1918	$1,613,638.42	
And three quarterly dividends on ordinary stock of 1¾%, each, paid June 29, Oct. 1 and Dec. 31, 1918	13,650,000.00	15,263,638.42
		$ 8,367,259.63
From this there has declared a second half-yearly dividend on preference stock, payable April 1, 1919	$1,613,638.42	
And a fourth annual dividend on ordinary stock of 1¾%, payable April 1, 1919	4,550,000.00	6,163,638.42
Leaving net surplus for the year		$ 2,203,621.21

(which amount has been placed taxes imposed by Dominion in reserve to meet special Government.

In addition to the above dividends on ordinary stock, 3% was paid from special income.

Special Income for the year ended Dec. 31, 1918.

Bal. at Dec. 31, 1917	$15,785,750.86	
Less: dividend paid Apr. 1, 1918	1,950,000.00	
		$13,835,750.86
Net revenue from investments and available resources		1,928,183.50
Interest on deposits, and interest and dividends on other securities		2,779,854.22
Net earnings ocean and coastal steamship lines		1,214,869.22
Net earnings commercial telegraph and news department, rentals and miscellaneous		2,205,544.57
		$21,964,502.37
Less: payments to shareholders in dividends: June 29, Oct. 1, and Dec. 31, 1918		5,850,000.00
		$16,114,502.37
From this a dividend has been declared payable Apr. 1 1919		$ 1,950,000.00

The working expenses for the year were 78.10% of the gross earnings, and the net earnings 21.90%, compared with 69.46 and 30.54% respectively in 1917.

There were no sales during the year of 4% consolidated debenture stock, 4% preference stock, or other capital securities.

In consequence of the provisions of the order of the Governor General in council passed in Mar., 1918, imposing special taxes upon the company, the net surplus from railway operations for the year has been placed in reserve to meet such special taxes, and a notation to that effect appears in the accounts.

The sales of agricultural land in the year were 842,191 acres for $15,375,996, an average of $18.25 an acre. Included in this area were 64,124 acres of irrigated land which brought $42.94 an acre, so that the average price of the balance was $16.22 an acre.

Pursuant to the policy adopted by your directors in 1916, 100 farms for returned soldiers were prepared for occupation and qualified men have already been placed on a number of them. In your directors' opinion it is desirable that the company should continue, as conditions warrant, the preparation of farms and the sale of them on favorable terms to soldiers who have served in the Canadian or Imperial forces and to Canadians who have served in the allied armies.

At the outbreak of hostilities your company had in commission in Atlantic and Pacific service 38 steamships, with an aggregate gross tonnage of 342,000 tons. Since Aug., 1914, the construction of 4 steamships previously authorized, having a gross tonnage of 54,000 tons, has been completed, and 12 steamships of 69,000 gross tonnage have, in the same period, been purchased. During the war 15 steamships were lost by enemy action or through accidents at sea, and 9 have been sold to the British Admiralty, after having been requisitioned. The construction at the Fairfield Shipbuilding Co's yards of a ship 625 ft. long between perpendiculars, having a gross tonnage of 21,000 tons, is to be proceeded with pursuant to the authorization previously given, and three passenger ships of what is known as the intermediate class, for Atlantic service, two of which have been previously authorized, will be put under construction as soon as possible at John Brown & Son and the Fairfield Shipbuilding Co's. yards. At the end of the fiscal year your company had in ocean service 28 steamships having a gross tonnage of 264,000 tons, and 6 steamships under order or purchased but not delivered having a gross tonnage of about 80,000 tons. On their delivery the total tonnage of the fleet will be slightly in excess of aggregate tonnage of the vessels in commission on Aug. 3, 1914.

In May, 1918, in consequence of the demands for increases in wages made to the United States Railroad Administration, substantial increases in all wage scales on U.S. lines were authorized, and were accompanied by increases in freight and passenger rates. Demands for wage increases were likewise made in Canada, and, by orders in council, passed under the War Measures Act in July, 1918, what is known as the McAdoo scale of wages was made effective in Canada, and increases in freight rates generally similar to those granted in the U.S. were made effective on all Canadian railways.

There will be submitted for your consideration and approval a lease of the Kaslo and Slocan Ry., extending from a junction with the Whitewater Creek Branch of the Nakusp and Slocan Ry. at Retallack to Kaslo, B.C., a distance of 17.7 miles, the control of which was secured by your company with your approval under agreement with the Province of British Columbia in 1912. With your approval the directors in 1893 concluded an agreement for the leasing of Nakusp and Slocan Ry. at a rental of 40% of the gross earnings. Bonds of the Nakusp and Slocan Ry. Co. for £132,960 were issued, guaranteed as to principal and interest by the Province of British Columbia and matured on July 1, 1918. The rental paid by this company has not been sufficient to pay the interest on the bonds, and $321,698 had been advanced by the province for this purpose up to Dec. 31, 1917. The lease of Nakusp and Slocan Ry. will expire in 1920, and during its existence your company has expended very substantial amounts in necessary betterments and improvements. In consequence of representations made by the B.C. Government your directors have agreed to the purchase by the company from the government of Nakusp and Slocan Ry. Co's. bonds to the above amount at the actual cost to the province of acquiring them, but not exceeding their face value, upon conditions which involve the extinguishing of all claims of the province against the railway. All the issued capital stock of the Nakusp and Slocan Ry. Co. is held by your company, and the arrangement is, in the opinion of your directors, warranted by the value of the railway as a traffic contributor to your company's system.

Subject to your approval your directors have concluded an agreement with the Grand Trunk Pacific Ry. Co. providing for the use by that company of your company's railway from a point east of Sutherland to a point west of Saskatoon, together with the use of your company's passenger, express, and freight facilities at Saskatoon station. The agreement is for 21 years from Sept. 2, 1918, the rental payable by the G.T.P. being based upon interest at the rate of 5% per annum on half the agreed capital account and the payment of maintenance expenses on a wheelage basis.

You will be asked to sanction the issue and sale of consolidated debenture stock to defray the cost of construction of the portion of the Moose Jaw Southwesterly Branch from mileage 35 to mileage 66 to an amount not exceeding £6,000 a mile.

Your directors are of the view that the construction of additional branch line mileage in the west will be necessary in the near future, and your authority will be asked for proceeding with the construction of the following lines when conditions warrant such construction, and for the issue and sale of a sufficient amount of 4% consolidated debenture stock to meet the expenditure, viz: Empress to Milden Branch, 132 miles; Empress to Acme Branch, 132 miles; Vidora east Branch, 35 miles; Russel north Branch, 15 miles; Lanigan north Branch, 150 miles.

Subject to your approval your directors have authorized expenditures on capital account during the present year of $4,482,000, apportioned to the following works, namely:

Replacement and enlargement of structures in permanent form	$ [illegible]
Additional stations, locomotive houses, freight sheds, ice houses and extensions to existing buildings	[illegible]
Additional terminal and side track accommodation	[illegible]
Tie plates, rail anchors and miscellaneous roadway improvements	[illegible]
Lining tunnels British Columbia District	[illegible]
Automatic block signal protection	[illegible]
Surveys for new lines and power possibilities	[illegible]
Miscellaneous improvements and additions designed to improve facilities and effect operating economies	[illegible]
Improvement in connection with telegraph service	[illegible]

Your company subscribed to $17,000,000 of the second Victory Loan and was allotted $12,447,000 of its subscription. Included in this latter amount was $4,866,666 allotted in exchange for the surrender by the company of £1,000,000 Do-

[illegible] of Canada [illegible] bonds maturing [illegible].

The gross earnings of your transportation system in the fiscal year exceeded those of any previous year in the history of your company, and exceeded those of 1917 by $[illegible], but the net earnings decreased by $12,043,630. This large addition of $17,191,993 to the working expenses is principally due to the great advance in wages, though the increased cost of fuel and materials of every description also added a substantial amount to the year's expenses.

The Board of Railway Commissioners having amended in certain respects the [illegible] train and interlocking rules effective over the lines of all railway companies subject to the Dominion Parliament's jurisdiction, appropriate changes in the company's existing bylaws will be submitted for your confirmation and approval.

Lord Shaughnessy, who has been President of the company for the past 19 years, expressed his desire to retire from office in Oct., 1918, and his resignation was accepted with the deepest possible regret. During his tenure of office the company has enjoyed extraordinary and uninterrupted prosperity and now stands among the foremost transportation companies in the world. Your directors appreciate that this result has been due to Lord Shaughnessy's able and most devoted services, which have earned the admiration of the community and the gratitude of the shareholders. Your directors learned with gratification of Lord Shaughnessy's willingness to continue as Chairman of the company, and that the benefit of his counsel and advice will not therefore be lost to the company. E. W. Beatty was elected President. You will be asked to approve verbal amendments to bylaws passed by your directors and made necessary by the separation of the positions of Chairman of the company and President.

In order to give his entire time to your steamship interests, G. M. Bosworth, who for [illegible] years has been in charge of the company's freight traffic and for 17 years Vice President in charge of traffic, resigned his office and will hereafter be exclusively identified with the company's steamship enterprises as Chairman of the Canadian Pacific Ocean Services Ltd. W. R. MacInnes formerly Freight Traffic Manager, was appointed Vice President, in charge of traffic in succession to Mr. Bosworth.

Vice President Sir George Bury, after a service of over 35 years, during which he held many positions of increasing responsibility and importance, and in all of which he showed energy and ability of a very high order, resigned from the company's service in Oct., 1918. He, at the same time retired from the board and from the executive committee. Grant Hall, Vice President of Western Lines, was elected Vice President, a member of the board of directors and of the executive committee, in succession to Sir George Bury.

The following directors will retire from office at the approaching annual meeting. They are eligible for re-election: R. B. Angus, Sir Edmund B. Osler, Sir Herbert S. Holt, Brig.-Gen. F. S. Meighen.

The Alberta and Great Waterways Ry. announced recently that it would receive at Edmonton, Alta., less than carload shipments destined for points on its line between Lac la Biche and McMurray, Alta.

The Filing of Railway Correspondence.

By F. W. Lambert, Chief Clerk to General Superintendent and Chief Engineer, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.

I read with interest the article by W. H. Mathews in Canadian Railway and Marine World for February, on the filing of correspondence in railway offices. In my opinion the general idea of a filing system should be so to arrange the index that all reliance upon memory is removed. The personnel of the office force changes from time to time, and when memory is responsible to any extent for the locating of files, the papers relating to matters a few months, or years, past are most difficult to find. It would appear, therefore, that the only manner in which this can be overcome is by the construction of a filing system using subjects as a guide.

As I understand Mr. Mathews' system, the unit system of filing correspondence is exactly the reverse. The memory must be relied upon to call to mind car numbers, locomotive numbers, mileages, etc., before the correspondence can be found. I infer that correspondence regarding locomotive engine failure would be filed under some combination of numbers constructed from the number of the locomotive, date, or mileage, regardless of the nature of the failure. I cannot see how it would be possible to find the papers at a later date, when these various numbers have passed from the memory of those in charge, or when the office force has undergone changes in its personnel.

Mr. Mathews states that the proper place to file correspondence regarding car delays or pilfering, etc., is under a file number constructed from the car number. Let me suggest a situation which might arise. Some articles are lost from car 123,456, and the file is closed and filed away in file 56, these being the last two numbers. Six months later, the general superintendent requires the file, the company's police officer having located the missing articles. The chief clerk does not remember the car number, or, perhaps he may be a new man. The general superintendent most regretably has also forgotten the car number. It has departed from the memory of the file clerk and is forgotten by the company's police office. I presume the file remains in the archives. Would it not be much easier to locate the papers had they been filed under "Loss and damage?"

There is on the market a book on railway filing, the Williams Filing Classification on Railway Correspondence. This is constructed on somewhat similar lines to the Classification of Accounts issued by the Interstate Commerce Commission. It is subdivided under several headings, including Roadway and Structures; Equipment and Shops; Transportation and Storage, etc. These are again subdivided into various subjects, which in their turn are split up once more. While perhaps this, if adopted in its entirety, would not be practicable in every office, in my opinion it forms the basis upon which a filing system can be constructed. The one feature which recommends it most strongly is that memory is not relied upon. When a file of correspondence is required, it calls for no effort of memory to recall the subject, as were the subject not known the correspondence would njever be requested. Moreover it seems to me to be logical that all correspondence relating to various subjects should be assembled and filed, not necessarily in one file, but in one place in the filing system. The subjects, as mentioned, can be subdivided according to local requirements.

It may be that I do not understand Mr. Mathews' system correctly, but upon reading the summary given in the article referred to, I cannot see but that the whole system relies upon the memory of individuals, whereas the filing of correspondence under its proper subjects places the responsibility with the chief clerk for determining the subject under which the papers should be filed. If the chief clerk is competent to hold his position this part of his duties should not be beyond his ability.

I am at present chief clerk to the General Superintendent and Chief Engineer, Algoma Central and Hudson Bay, and have held positions of file clerk, general superintendent's accountant, and chief clerk in terminal office. [Editor's note: This is a very important and interesting subject, and we would be glad to get the views of other chief clerks in regard to it.]

Regulations With Respect to Railway Safety Appliance Standards.

The Board of Railway Commissioners passed general order 261, Mar. 18, as follows: The general order 102, Feb. 17, 1913, approving regulations with respect to railway safety appliance standards. Whereas reports made to the board show a large number of accidents, sometimes resulting fatally, to railway employes, because of defective coupler attachments used by railway companies; and whereas the Master Car Builders' Association has approved of equipment dispensing with the use of links, clevises, or chains. Upon reading what has been filed by the different railway companies affected, and for the purposes of uniformity and the safety of railway employes, it is ordered that the "Regulations with respect to railway safety appliance standards" approved under general order 102, be amended by adding at the end of the provision under the heading "Uncoupling levers", at the top of page 12, the following, viz: "Cars built after June, 1919, must be equipped with coupler operating lever, connected direct with coupler lock of lock lift without the use of links, clevises, or chains."

Central Railway of Canada Refused Sanction of Agreements.

The Board of Railway Commissioners passed order 28,167, Mar. 17, as follows: Re application on behalf of Central Railway Co. of Canada, for a recommendation by the board to the Governor in council for sanction of agreements made between the company and the Central Counties, the Ottawa River, the Carillon and Grenville, and the Ste. Agathe Branch Railway Companies, and the Ottawa River Navigation Co. Upon hearing the application at Ottawa, Mar. 4, in the presence of counsel and representatives for the applicant company, counsel for the Imperial Bank of Canada, and other creditors, it is ordered that the application be dismissed.

The Hamilton, Ont., Board of Trade, is urging the Grand Trunk Ry. to improve the passenger service between Hamilton, Allandale and Collingwood.

Financial Results of Operation of Railways By United States Government.

The U.S. Railroad Administration has issued the following statement:—The financial results of the operation of railways by the U.S. Railroad Administration during Dec., 1918, and for the entire year 1918, in comparison with those of the same period of 1917, are shown in a compilation just completed for the Director General by the operating statistics section of the Division of Operation. The figures apply only to class 1 roads under federal control—that is, those roads having annual operating revenues in excess of $1,000,000. They will not correspond exactly with the final figures to be issued by the Interstate Commerce Commission as the commission's summary includes a few railways not under federal control, as well as a few terminal and switching roads.

In the month of December there are ordinarily many adjustments in the accounts, so that overestimates or underestimates in previous months (in those accounts which are conducted monthly on a basis of "accruals,") may be corrected to correspond with actual receipts and expenditures. This is in accordance with the accounting regulations of the Interstate Commerce Commission (which permit monthly accruals in certain accounts, but require that adjustments must be made before the end of the year, so that the complete figures for the 12 months will represent the actual results). These adjustments in Dec., 1918, particularly in charges for retroactive wage payments, have resulted in distorting the figures in comparison with Dec., 1917, but the results for the 12 months as a whole are comparable.

In considering the results for 1918 it should be borne in mind that that year was almost wholly one of war conditions. It was necessary to move freight expeditiously, in many cases regardless of cost. Preference had to be given to munitions traffic, and this naturally militated against economies. In addition, the railways were compelled in many instances to employ inexperienced and inefficient labor, due to the inroads made upon their forces by the demands of the military service. It should not be overlooked in this connection that the railways had to supply the demands of the military service generally, just as other industries did, but had the special demand made upon it of supplying men for the military railways of France. Therefore, in considering comparisons with the previous years, the fact that 1918 was one of war conditions should be constantly borne in mind.

The results for Dec., 1918, compared with Dec., 1917, were as follows:—

[Figures preceded by minus marks represent decreases.]

	Month of December 1918	1917	Increase or decrease Amount	Per cent
Operating revenues	[illegible]	[illegible]	[illegible]	30.[illegible]
Operating expenses	388,201,080	[illegible]	[illegible]	57.7
Net operating revenues	[illegible]	[illegible]	[illegible]	-46.7
Operating ratio	89.[illegible]	74.[illegible]	[illegible]	20.6
Net Federal income corresponding to standard return guaranteed by Government	$31,503,259	[illegible]	-$33,367,091	[illegible]
Standard return for 1 month	74,194,649			

For the year the results were as follows:—

[Figures preceded by minus marks represent decreases.]

Calendar Year. Increase or decrease	1918	1917	Amount	Per cent.
Operating revenues	$4,842,695,884	[illegible]	[illegible]	21.4
Operating expenses	3,939,315,122	[illegible]	[illegible]	40.[illegible]
Net operating expenses	903,360,762	[illegible]	-276,901,958	23.5
Operating ratio	81.3	[illegible]	10.9	[illegible]
Net Federal income corresponding to standard return guaranteed by Government	688,200,083	[illegible]	[illegible]	[illegible]

NOTE. Standard return for year $890,335,68[illegible], so that the "Net federal income" for the year fell short of the standard return by $202,13[illegible].

The wage increases which were authorized throughout the year had the effect of increasing the 1918 operating expenses by approximately $583,000,000, which represents an increase of about 32 per cent over what would have been the wages if there had been no increases in 1918. The increased cost of materials also added heavy burdens to operating expenses. The increased cost of locomotive fuel alone was equivalent to adding approximately $125,000,000 to the cost of transportation expenses. In 1918 operating expenses took 81.3 per cent of operating revenues, compared with 70.4 per cent in 1917.

The 1918 results were adversely affected by the extreme weather conditions of Jan. and Feb., 1918, and the extreme traffic congestion which obtained at that time. In January operating expenses took 95 per cent of operating revenues; in Feb. the operating ratio was 90 per cent. In comparison with the same months of 1917, the decrease in net federal income in Jan. and Feb., 1918, was $100,000,000.

The results of freight train operation for Dec., 1918, compared with Dec., 1917, were as follows:—

[Figures preceded by minus marks represent decreases.]

	Month of December – 1918	1917	Increase or decrease Amount	Per cent
Miles of road operated	229,250	229,675	-425	[illegible]
Revenue and nonrevenue ton miles (thousands)	33,659,507	31,960,171	1,699,336	[illegible]
Loaded freight car miles (thousands)	1,129,960	1,101,427	28,533	[illegible]
Total freight car miles (thousands)	1,714,168	1,553,277	160,891	[illegible]
Freight train miles (thousands)	50,402	51,586	-1,184	[illegible]
Averages:				
Train load (tons)	668.0	620.0	48.0	[illegible]
Carload (tons)	29.8	29.0	.8	[illegible]
Per cent of loaded to total car miles	65.9	70.9	-5.0	[illegible]

The increase in freight traffic of 5.3 per cent shown above was handled with actually less freight train miles; in fact, the train miles were 2.3 per cent less than in December, 1917. This result was accomplished by better car and train loading.

The results for the year were as follows:—

[Figures preceded by minus marks represent decreases.]

	1918	1917		
Miles of road operated	228,729	228,633	96	[illegible]
Revenue and non revenue ton miles (thousands)	[illegible]	15,815,601	-887,298	[illegible]
Loaded freight car miles (thousands)	[illegible]	427,341,924	7,656,004	[illegible]
Total freight car miles (thousands)	22,056,329	22,532,507	-476,178	[illegible]
Freight train miles (thousands)	637,924	654,580	-16,656	[illegible]
Averages:				
Train load	682.0	653.0	[illegible]	[illegible]
Carload	29.1	27.0	[illegible]	[illegible]
Per cent of loaded to total car miles	67.7	70.2	[illegible]	[illegible]

The figures for the year are more interesting than those for December, as the former reflect the results of freight operations during the first year of federal control, in comparison with those of the last year under private management. In making the comparison, consideration should be given to the fact that the 1918 figures were adversely affected by the severe weather conditions and the traffic congestion of January and February. Notwithstanding the heavy losses during the first two months under federal control, the summary for the year shows that the 228,729 miles of railway produced 435 billions of ton miles in 1918, compared with 427 2-3 billions, [illegible].

This increase in traffic was handled with an actual decrease in train miles and in loaded car miles. The train miles were 2.5% less than in 1917 and the loaded car miles were 5.6% less than in 1917. This was accomplished through an increase of 4.4% in the train load and 7.8% in the carload, as indicated in the above statement.

The decrease in the percentage of loaded to total car miles was due principally to the relatively greater proportion of empty car miles, as a result of the policy of the U.S. Railroad Administration to move the empties in solid trains to the regions where they would be needed for prospective traffic, such as grain needed for war purposes. This policy, while somewhat increasing the empty car mileage, had the favorable result of ameliorating the car shortage and of expediting the movement of traffic

The passenger traffic for the year will show an increase in passengers carried 1 mile of approximately 9%. The complete figures for the 12 months are not yet available. Those for the 11 months ended Nov. 30 show that in that period of 1918 the railways under federal control carried 39 billion passengers 1 mile, an increase of 3¼ billions over the corresponding period of 1917. These figures include the movement of troops and other military passenger traffic.

Grand Trunk Ry. Employes at Belleville, Ont., have formed an amateur athletic association with W. D. Robb, Vice President, Transportation and Maintenance, and J. D. McMillan, Superintendent, Belleville Division, as honorary President and honorary Vice President respectively. H. M. Gain, Trainmaster, is President.

Railway Histories.—An interesting sale of 450 volumes of railway history of the world, took place in New York, recently. The collection included manuscript journals of George Stephenson and I. K. Brunel, among the more important volumes, and a copy of the Grand Trunk Ry. rules dated 1857, among the minor ones.

Birthdays of Transportation Men in May.

Many happy returns of the day to:

[illegible], Superintendent, Halifax & South Western Ry. (Canadian National Rys.), Bridgewater, N.S., born at Pictou, N.S., May 24, [illegible]

W. R. Baker, C.V.O., ex-Secretary, C.P.R., Montreal, born at York, Eng., May [illegible]

B. A. Bourgeois, Assistant to Comptroller and Treasurer, Canadian Government Railways, Moncton, N.B., born there May 24, 1869.

G. S. Cantlie, ex-General Superintendent of Car Service, C.P.R., Montreal, born there, May 2, 1867.

B. T. Chappell, General Superintendent, Prairie District, Western Lines, Canadian National Rys., Saskatoon, Sask., born at Charlottetown, P.E.I., May 1, 1878.

R. Crosby, Car Foreman, Canadian Northern Ry., Moose Jaw, Sask., born at Hawick, Scotland, May 2, 1886.

N. R. DesBrisay, District Passenger Agent, C.P.R., St. John, N.B., born at Minneapolis, Minn., May 18, 1888.

A. E. Duff, ex-District Passenger Agent, G.T.R., Toronto, now of Winnipeg, born at Sherbrooke, Que., May 1, 1872.

G. C. Dunn, Division Engineer, Grand Trunk Pacific Ry., Winnipeg, born at Quebec, May 13, 1862.

G. E. Graham, General Manager, Dominion Atlantic Ry., Kentville, N.S., born May, 1870.

G. H. Hedge, Works Manager, Canadian National Rys., Winnipeg, born at Neath, Wales, May 26, 1865.

G. A. Hoag, Superintendent, Nipissing Division, Ontario District, Canadian National Rys., Capreol, Ont., born at Walters Falls, May 31, 1866.

J. Irwin, Superintendent, Division 4, Western District, Canadian National Rys., Calgary, Alta., born at Clinton, Ont., May 28, 1866.

J. N. Murphy, Roadmaster, C.P.R., Brandon, Man., born at Mooretown, Ont., May 10, [illegible]

Sir Augustus M. Nanton, President, Winnipeg Electric Ry., and director, C.P.R., Winnipeg, born at Toronto, May 7, 1860.

A. V. Redmond, District Engineer, Central District, Canadian National Rys., Winnipeg, born at Kingston, Ont., May [illegible]

[illegible], Passenger Department C.P.R., Montreal, born at Detroit, Mich., May 12, [illegible]

W. H. Snell, General Passenger Agent, C.P.R., Montreal, born at Palmyra, Neb., May 23, 1872.

W. Stapleton, District Passenger Agent, Canadian National Rys., Saskatoon, Sask., born at Bristol, Eng., May [illegible]

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, [illegible]

[illegible], B.A.Sc., C.E., [illegible] Engineer, Canadian National Rys., Toronto, born at Quebec, May 25, [illegible]

[illegible], Assistant Manager, Toronto & York Radial Ry., Toronto, born at Boston, Mass., May 23, 1871.

A. O. Wolff, Resident Engineer, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at Copenhagen, Denmark, May 14, 1887.

James Yeo., ex-Roadmaster, Intercolonial Ry., Riviere du Loup, Que., born at Bideford, Devonshire, Eng., May 1, 1830.

General Manager Alfred Price's Advice to C.P.R. Agents.

The following letter, reproduced in facsimile of his handwriting, has been sent by Alfred Price, General Manager, Eastern Lines, C.P.R., to all agents in his territory:—

"As you read this letter, I wish you would regard it as a personal communication, just as though it had been addressed to no one else. The C.P.R. enjoys throughout this country the reputation of being efficiently managed, and while such a reputation redounds to the credit of the officials, no small part of it is due to the intelligent and loyal devotion of those employes through whom the public transacts its business with the company.

"An agent is one who acts for another, a representative or deputy. This is the position you hold for the C.P.R. at your station, and it invests you with the power to act for it. Higher officials may, from time to time, make some public statement of importance to the community at large, but the great majority of people who ship or receive fright, or who travel on this company's trains, to or from your station, know little or nothing about these higher officials. They do know you, however, and they regard you as the properly constituted representative of the C.P.R.—in fact, to most of them, you are the C.P.R. This makes you a real part of this great organization, with unlimited opportunities for advancing the company's interests. You are doing this effectually, not only when you are performing your manifold duties satisfactorily, but equally so when you are being courteous, patient and obliging towards the public.

"Our function, as a railway, is to transport goods and people, the shipping and travelling public being our customers. We have not the whole field to ourselves and competition is increasing year by year. It is simply good business, therefore, to cultivate intimate relationships with the public, and possibly the greatest factor the C.P.R. possesses for securing patronage is the well earned reputation of its employes for courtesy. It may be hard at times to practise this virtue, but if you can stand a fusilade of questions—some of which may appear to you to be ridiculous—without displaying any signs of irritation, and if you can keep on smiling good naturedly, even after it may seem that patience has ceased to be a virtue, the public will naturally conclude that your attitude is typical of the C.P.R. and you will win innumerable friends for it.

"The fact that you may be located at a place where there is absolutely no competition should make no difference whatever in your attitude towards the public, or in the way you perform your duties. An unnecessary delay to a shipment of freight, or any irregularity or carelessness in the handling of it, may cause the shipper or consignee to divert a large volume of competitive traffic via other routes. An ill-natured remark to a traveller might easily convert a friend into an enemy, with a resultant loss of revenue.

"Do not forget that your interests are interwoven with those of the company to such an extent that if the company prospers it means prosperity to you, but in order to prosper it must have the confidence and good will of the public. You are an important part of the greatest transportation company in the world; not one excepted. Be proud of it. Stick to it. Popularize it. Remember that if it is to continue to prosper it must have friends, and because the public goes first to you in its dealings with the company, you must inspire confidence in it and must help it to make and retain friends".

Regulations for Transportation of Acetylene Gas.

The Board of Railway Commissioners passed general order 260, Mar. 7, as follows:

Re general order 203, Aug. 11, 1917, tion by freight of dangerous articles other than Explosives as amended by general orders 206 and 207, Sept. 7 and Oct. 26, 1917, and the application of the Prest-O-Lite Co. of Canada, for an order amending regulations approved by general order 203: Upon reading what has been submitted in support of the application, and the recommendation of the Board's Chief Traffic Officer, the Chairman of the Canadian Freight Association consenting for the railway companies, it is ordered that the regulations approved by general 203, be amended by striking out paragraph (j) of rule 1,861, and substituting therfor the following, viz:

"(j) Cylinders containing acetylene gas must be completely filled with a porous material that has been tested with satisfactory results by the Bureau of Explosives, and this material must be charged with acetone, or its equivalent, not to exceed 40% of the interior volumetric capacity of the cylinder. The pressure in cylinders containing acetylene gas must not exceed 250 lb. a square inch at a temperature of 70 degrees F.

"Cylinders containing acetylene gas must not be shipped unless they were charged by the person or company by or for whom the cylinders are manufactured. Provided that they may be charged by a person or company having possession of complete information, furnished in writing by the person by or for whom the cylinders were manufactured, showing the nature of the porous filling and solvent in the cylinders and the meaning of the test markings, solvent indicator markings, and other markings on the cylinders."

Quebec Railway Boards Interest.—The Quebec Legislature has amended the section of the Railway Act relating to the rate of interest on borrowed money, by striking out the words "legal rate" and inserting instead the words, "seven per cent." This rate is the maximum rate, and companies may borrow money at any rate not exceeding it.

A Paying Line.—An interesting statement, if correct, was made in England recently during the discussion as to the internationalization of the coal mines, to the effect that Lord Tredegar is the owner of one mile of line on which the freight is one penny a ton and from which he derives an income of £40,000 a year. It is called the "golden mill railway."

Relations Between Company's Officers and Employes, Organized and Unorganized.

By John McMillan, Manager of C.P.R. Co's. Telegraphs.

The relations between the company's officers and employes must be marked by cordial goodwill, intelligent co-operation and mutual respect. We cannot hope to build and maintain a successful organization on any other foundation. Officers should bear in mind that they are almost wholly responsible for the relations that exist between the official staff and employes. Officers instruct and direct. An officer should remember to instruct as he himself would like to receive instruction All instruction should be clear and concise. Officers who expect to maintain the best relations with employes, should refrain from irreverent appeals to the Supreme Being; profane or abusive language is a weakness and should be avoided. Officers should be quick to note exceptionally good service. Your appreciation should be expressed. You should encourage the less skilful or less efficient, it will pay big returns. Helpful encouragement will make better workmen. Do not threaten to dismiss any employe, unless as a last resort.

Organized Employes.—The best relations will be maintained when officers and employes thoroughly understand and live up to the conditions of service contained in the schedule agreed to by the company and employes. Trifling schedule evasions may mean hours of argument before a labor board. Schedule evasions mean little to the company, and often lead to serious dispute. Officers should deal with organized employes with such fairness that there will be no occasion for an appeal to a grievance committee.

Unorganized Employes.—The relations between officers and unorganized employes should be marked by careful supervision. Officers should have a personal knowledge of each employe's record, so that good work will result in promotion. If there is no opportunity for promotion, and the work of the unorganized employe is important, an increase in salary should be arranged, without waiting for an appeal from the employe. The supervision of the unorganized employes is best test of an officer's fitness to maintain good relations with his staff. There may be little pressure other than his own standard of what is right and fair. His supervision should be such that the unorganized will feel no disadvantage by reason of the lack of organization.

Officers who discipline or dismiss, should, with as little delay as possible, give the employe the full reason for discipline or dismissal and not keep him in suspense. It is a waste of time, for which there is little or no excuse.

So far we have considered the principles that mean success in every organization, namely, goodwill, co-operation, and respect; the general principles of supervision, the recognition of faithful service as applied to organized and unorganized employes. If, however, we wish to create and develop broader lines of organization, which will mean better relations between officers and employes, then we must not be unmindful of the interests beyond the lines of instruction and obedience.

Safety First.—We should consider the principles of safety first. Safety first methods are designed first to protect the employe. Safety first has been advertised extensively, wherever it seemed possible to find space for the familiar motto—"Safety First". Have safety first measures prevented accidents? Has safety first resulted in greater safety in transportation, less risk of injury to employes and passengers, and less loss of life? Officers should freely express their views as to the safety first rule. We should hold fast to every factor of safety and protection against accident.

First Aid measures should appeal strongly to officers and employes. First aid training, carried out by the company without expense to the employe, is appreciated by the employe, as it is an evidence of generous preparation to protect him in the event of accident or unexpected breakdown, due to ill health. In the event of accident our sympathies are quickly aroused, yet, without a proper knowledge of first aid, we can be of little assistance. First aid training will mean prompt and intelligent care of the injured, relieve suffering, and probably save human life. First aid training should be taken up by officers, foreman, chief clerks, engineers and conductors, and an effort made to enroll all who are interested.

Welfare Work.—We should not forget the general need for a broad policy of helpfulness in welfare work. The officers should consider, and probably suggest that the company appoint for the system, a general welfare work officer, appointed to make an inspection of all divisional points where the employes are housed in the company's buildings, and all Y.M.C.A. centers, social and athletic activities and supervision of general recreation interests.

Benevolent Fund.—An opinion should be expressed as to the need of creating a benevolent fund, maintained by the officers and employes by subscribing part of one day's pay; this fund to be administered by a committee of the employes on each grand district, to apply to all cases of unusual need caused by ill health or other emergent cases, not now provided for. For example, where an employe is advised by his physician that unless he is in a position to take special treatment, or two or three months rest and treatment in a sanatorium he is likely to suffer a complete collapse. In a case of this kind a request should be made for money to be taken from the benevolent fund. If the fund created by employes is well handled for at least one year, officers might then recommend that the company consider some assistance to it.

The country and company have passed through a critical period during the last four years. The company's record has been one of high honor; its policy has been marked by a generous administration; its officers are well trained and its employes efficient. It is, I am sure, the ambition of officers and employes, alike, to uphold the present high standard and bend every energy to effect improvements. We will attain the best results by broad and considerate administration and by mutual respect between officers and employes, and through a thorough understanding, by the employes, of the company's policy of generous and fair treatment.

The foregoing paper was read at the C.P.R. Co's. officers' and employes' conference in Montreal recently.

Alberta Branch Line Construction Guaranteed by Government.

The report of the Alberta Department of railways for 1918 shows there were 4,491 miles of railway in the province against 1,060 in 1905. This includes the C.P.R. mileage and that built by the Alberta Ry. and Coal Co., and the St. Marys River Ry., both of which have been absorbed by the C.P.R. In 1906 the Canadian Northern Ry. added 178 miles to the total, and has year by year added to its mileage until now it has 1,195 miles, being second to the C.P.R., which has 1,920. The Grand Trunk Pacific Ry. completed 40 miles in 1908, and to the end of 1918 has completed 640 miles. The McArthur lines opened up traffic with 25 miles of the Edmonton, Dunvegan and British Columbia Ry. in 1912, which has now been extended to 544 miles, of which 308 are comprised in the E.D. and B.C. Ry., 287 in the Alberta and Great Waterways Ry., and 49 in the Central Canada Ry. The other railway is the provincially owned Lacombe and Blindman Valley, 20 miles.

Towards the building of these lines, the province guaranteed the bonds of the several companies, with the exception of the C.P.R., which did not ask any assistance. A table appended to the report shows that construction of 3,656.97 miles of line were called for, of which there have been completed 1,741.02 miles. Five of the lines contracted for with the Canadian Northern Ry., totalling 590.31 miles, and the new lines contracted for with the Grand Trunk Pacific Branch Lines Co., totalling 259.5 miles, have been completed, a total of 849.81 miles, or 1.44 miles more than the mileage for which bonds were issued. Construction has made progress on 11 of the other lines contracted for, while nothing has been done on three branch lines totalling 305 miles. Following are the partially built and "no construction" lines for which guaranteed bonds have been issued:—

Orders by Board of Railway Commissioners for Canada.

[illegible] Canadian Railway [illegible] has published in each issue [illegible] passed by the Board of Railway [illegible] subscribers who have [illegible] No other paper has done this.

[illegible] Mar. 11.—Amending [illegible] articles other [illegible] general [illegible] Aug. 11, 1917, by striking out par. J of [illegible]

[illegible] Mar. 18.—Amending [illegible] standards approved by [illegible] 1918.

[illegible] Mar. 3.—Approving A. E. Bell [illegible] agreement, Feb. 5, with Dunwich & [illegible] Telephone Co., Elgin & Middlesex Counties [illegible] Goderich Rural Telephone Co., Huron County, Ont.

[illegible] Mar. 7.—Authorizing G.T.R. and C.P.R. to operate over interlocking plant at Woodstock, [illegible] first [illegible] train.

[illegible] Mar. 6.—Authorizing C.P.R. to build road diversion at mileage 105.3, Kisbey Subdivision, Sask.

[illegible] Mar. [illegible]—Authorizing G.T.R. to operate [illegible] siding to be built by Toronto Harbor Commissioners, on Block K.T., Toronto.

[illegible] Mar. 6.—Authorizing International Bridge & Terminal Co. to operate railway built for construction purposes along dyke on river front in Fort Frances, Ont.

28144. Mar. 8.—Authorizing Canadian Northern Ontario Ry. to build spur for Spanish River Pulp & Paper Mills Ltd., Westbrook Tp., Sudbury [illegible]

[illegible] Mar. 8.—Approving Canadian Northern Ry. revised location through Secs. 23 and 22, Tp. 27, Range 21 west 4th meridian, mileage 191.90 to 183.80, Alta.

[illegible] Mar. 10.—Authorizing Canadian Northern Western Ry. to build across highway between Secs. 7 and 8, Tp. 27, Range 12, west 4th meridian, Sask.

[illegible] Mar. 11.—Relieving G.T.R. and Michigan Central Rd. from maintaining night signal [illegible] at Southwold and Appin, Ont.

[illegible] Mar. 11.—Relieving Canadian National Rys. from providing further protection at St. Dominique St., Jonquiere, Que.

[illegible] Mar. 12.—Authorizing G.T.R. to build along and across diverted concession road between Consl and 2, Lot 9, Thurlow Top., Ont.

[illegible] to 28152. Mar 12.—Authorizing Canadian [illegible] Ry. to build bridge to carry its line over [illegible] River at mileage [illegible], Sec. 18, Tp. 28, Range 19, west 4th meridian, Alta., and authorizing [illegible] to carry [illegible] by a bridge over same [illegible] at mileage [illegible] and [illegible].

[illegible] Mar. 12.—Authorizing Grand Trunk Pacific Branch Lines Co. to build branch for Dinant Coal Co. from Spicer Coal Co's. spur in Secs. [illegible] and 19, Tp. 18, Range 20 west, 4th meridian, Alta.

[illegible] Mar. 7.—Authorizing C.P.R. to remove agent at Sidewood, Sask., caretaker to be appointed to keep waiting room clean, heated and lighted [illegible]

[illegible] Mar. 11.—Authorizing G.T.R. to rebuild [illegible] over the Mad, Batteaux, and Prettty Rivers, between Allandale and Collingwood, Ont.

28156. Mar. 13.—Approving details of concrete [illegible] to be built by Canadian National Rys., at Station 151, Sec. 23, Tp. 27, Range [illegible] 4th meridian, Alta.

[illegible] Mar. 10.—Approving plan of G.T.R. [illegible] Montreal Subdivision.

28158. Mar. 10.—Authorizing G.T.R. to build [illegible] for British Munitions Co., Montreal.

[illegible] Mar. 12.—Approving electric bell installation at crossing of highway by Toronto-Hamilton and Buffalo Ry., at Beach Road, 950 ft. west of Ottawa St., Hamilton, Ont.

[illegible] Mar. 14.—Extending to May 1, time [illegible] required by order 28052 in [illegible] protection by Kitchener & Waterloo [illegible] at crossing of King St., Kitchener, [illegible]

[illegible] Mar. 14.—Approving Pere Marquette [illegible] contract form 83.

[illegible] Mar. 14.—Dismissing G.T.R. application [illegible] which directed it to install gates at the intersection of its air loop [illegible] plank road, [illegible]

[illegible] Mar. [illegible]—Approving G.T.R. plan showing [illegible] protection of [illegible] Ont.

[illegible] Mar. [illegible]—Relieving G.T.R. from providing [illegible] of second highway [illegible] Ont.

[illegible] Mar. 14.—[illegible] Imperial Munitions [illegible] bell bar- [illegible] applying on steel [illegible] by railway companies on toll bars or planks from Sault Ste Marie Ont., to Toronto and Montreal, after May 1, 1918, were unjust, unreasonable and excessive to the extent that they exceeded lower rates in effect immediately before that date, refund of overcharges being authorized.

28166. Mar. 17.—Ordering Canadian National Rys. to extend existing arrangement to accommodate passengers from west of Trenton and east of Sydenham to trains 5 and 6, by stopping same on flag at Newburgh for passengers to and from Yarker and east, and to and from Napanee and west.

28167. Mar. 17.—Dismissing Central Railway of Canada application for recommendation to Governor in council for sanction of agreement with Central Counties, Ottawa River, Carillon & Grenville and St. Agathe Branch Rys., and Ottawa River Navigation Co.

28168. Mar. 18.—Rescinding order 26196, June 6, 1917, extending area within which express companies' tolls shall include collection and delivery of express freight in Montreal, so as to include British Munitions Co's. plant for the war period.

28169. Mar. 18.—Authorizing Toronto, Hamilton and Buffalo and G.T.R. to build two branches for Canadian Cartridge Co., Hamilton, Ont.

28170. Mar. 17.—Ordering Canadian National Rys. to erect station in St. Laurent, Que.; plans to be filed with the Board and work done within 30 days from date; and suburban and local trains to be stopped there.

28171. Mar. 17.—Approving G.T.R. plan, Oct. 26, 1918, showing location, floor plans and elevation of combination station and section man's dwelling at Vine, Ont.

28172. Mar. 18.—Ordering C.P.R. to install improved type of automatic bell on each side of crossing of Horne Ave., Mission City, B.C.

28173. Mar. 21.—Ordering Canadian National Rys. to appoint caretaker at Vita, Man., to keep station clean, heated and lighted for accommodation of travelling public.

28174. Mar. 21.—Ordering that cost of maintaining transfer track between Grand Trunk Pacific Ry. and C.P.R., at Forrest, Man., be paid 75% by G.T.P.R., and 25% by C.P.R.

28175. Mar. 20.—Ordering that cost of building and maintaining highway crossing over C.P.R. at Pritchard, B.C., reserved under order 27832, Nov. 5, 1918, be paid by B.C. Public Works Department.

28176. Mar. 20.—Ordering C.P.R. to erect station at Horizon, Sask., to be completed by Oct. 1.

28177. Mar. 20.—Authorizing Manitoba Public Works Department to build highway crossing over Canadian National Rys. between Secs. 14 and 23, Tp. 34, Range 23, west principal meridian.

28178. Mar. 20.—Ordering G.T.R. to build farm crossing for H. Laroche, St. Agapit, Que.

28179. Mar. 17.—Approving plan showing changes in interlocking plant, Michigan Central Rd. and G.T.R. crossing, Welland, Ont.

28180. Mar. 21.—Ordering Canadian National Rys. to erect third class station at Arran, Sask., to be completed Aug. 15.

28181. Mar. 19.—Authorizing Canadian National Rys. to build spur for gravel deposit near Ardill, Sask.

28182. Mar. 20.—Authorizing Saskatchewan Highways Department to build highway crossing over C.P.R. on N.W. ¼ Sec. 27, Tp. 34, Range 19, west 3rd meridian.

28189. Mar. 20.—Authorizing C.P.R. to build extension to spur for P. Burns & Co., Calgary, Alta.

28184. Mar. 21.—Approving changed location of Grand Trunk Pacific Ry. right of way and station grounds in n.e ¼ Sec. 12, Tp. 43, Range 2, North Alberta District.

28185. Mar. 20.—Authorizing C.P.R. to divert road allowance on eastern boundary of Sec. 5, Tp. 7, Range 24, west 2nd meridian, Sask .

28186. Mar. 21.—Authorizing G.T.R. to build three spurs for American Cyanimid Co., West Oxford Tp., Ont.

28187. Mar. 20.—Approving agreement, Mar. 7, between Bell Telephone Co. and Innisfail Telephone Co., Simcoe County, Ont.

28188. Mar. 22.—Authorizing Alberta Public Works Department to build highway crossing over Grand Trunk Pacific Ry., at Peers, Alta.

28189. Mar. 26.—Authorizing Canadian National Rys. to divert Rosebud River in Sec. 34, Tp. 27, Range 20, west 4th meridian, Alta.

28190. Mar. 29.—Suspending Nipissing Central Ry. tariff C.R.C. 20, increasing passenger fares, pending hearing by Board.

28191. Mar. 26.—Authorizing G.T.R. to build spur for L. Theroux, Shipton Tp., Que.

28192. Mar. 22.—Approving electric bell installed by G.T.R. at crossing of Queen St., Brampton, Ont.

28193. Mar. 28.—Relieving C.P.R. and G.T.R from maintaining tower man to operate crossing near Forrest, Man., between 5 p.m. Saturdays and 8 a.m. Mondays.

28194. Mar. 27.—Relieving G.T.R. from providing further protection at Woodstock St., Shakespeare, Ont.

28195. Mar. 28.—Approving G.T.R. revised plan 7668 showing track elevation, floor layout and location of station to be erected at Mitchell, Ont.

28196. Mar. 31.—Extending to June, time within which C.P.R. shall complete spurs for Dryden Timber & Power Co., near Eagle River, Ont.

28197. Mar. 25.—Authorizing Quebec and Lake St. John Ry. to use bridge at mileage 57 from Quebec, across Riviere a Pierre.

28198. Mar. 31.—Authorizing C.P.R. to build interchange track between Canadian National Rys. at mileage 28.61, St. Leonard Parish, N.B.

28199. Mar. 25.—Dismissing application of Town of Greenfield Park, Que., for order amending order 18824, Mar. 4, 1913, apportioning cost of installation, maintenance and operation of gates at G.T.R. crossing of Lapiniere Road between Greenfield Park and St. Lambert.

28200. Mar. 31.—Authorizing Quebec and Lake St. John Ry. to use bridge, as rebuilt, across Little Batiscan River, mileage 107 from Quebec.

28201. Apr. 2.—Ordering Edmonton, Dunvegan and British Columbia Ry. to build standard loading platform and stock yards at Donnelly, Alta., by July 1.

28202. Mar. 31.—Ordering C.P.R. to erect class A-2 station at Metiskow, Alta., by Sept. 1, 1920, and within two weeks from date of order, provide extra car body or other structure for temporary storage of package freight.

28203. Mar. 31.—Approving agreement, Mar. 19, between Bell Telephone Co. and Wheatley Telephone Co., Kent and Essex Counties, Ont., revised location from mileage 50.99 to 54.14 Melfort-Humbolt Branch, Sask.

28205, 28206. Apr. 3.—Authorizing Canadian Northern Ry. to rebuild bridges over Mud and Donovan Creeks at mileage 125.40 and 127.50, from Todmorden.

28207. Apr. 4.—Amending order 28059, Jan. 25, re G.T.R. crossing at Market and George Sts., Brantford, Ont., by substituting West for Market.

28208. Apr. 4.—Approving agreement Mar. 25, between Bell Telephone Co. and Southwold & Dunwich Telephone Association, Middlesex and Elgin counties, Ont.

28209. Apr. 3.—Authorizing Canadian Northern Ontario Ry. to rebuild bridge over Black Rapids Creek, mileage 241.60, from Todmorden.

28210. Apr. 5.—Ordering G.T.R. to keep its cars back two car lengths from the south side of Walnut St., Galt, Ont., while standing on crossing.

28211. Apr. 5.—Relieving G.T.R. from providing further protection at first crossing west of Beach Road, Ont.

28212. Apr. 3.—Authorizing Piapot Rural Municipality 110, Sask., to divert road allowance between Secs. 8 and 17, and ordering C.P.R. to remove trees obstructing the view and to make road shown on plan, and take out cut at westerly crossing.

28213. Apr. 8.—Ordering C.P.R. to restore within one week, on its Suffield, Irricana and Stirling subdivisions, Alta., semi weekly train service in effect previous to Jan. 1.

28214. Apr. 5.—Authorizing C.P.R. to remove station agent at Amazon, Sask.; caretaker to be appointed to keep the station clean, heated and lighted for passengers, and care for freight and express.

28215. Apr. 5.—Approving G.T.R. clearance at boiler house on siding serving Engineering and Machine Works of Canada Ltd., St. Catharines, Ont.

28216.—Apr. 7.—Authorizing G.T.R. to build spur for Savoie-Guay Co., Plessisville, Que.

28217. Apr. 8.—Approving Canadian National Rys. plan of shelter on Niagara, St. Catherines and Toronto Ry., at Welland South, Ont.

28218. Apr. 7.—Approving Canadian National Rys. plan of signal protection at swing bridge across Trent Canal at Glen Ross, Ont.

28219. Apr. 4.—Authorizing Quebec, Montreal and Southern Ry. to remove its station agent at Boucherville, Que., caretaker to be appointed to keep station clean, heated and lighted.

28220. Apr. 10.—Authorizing City of Toronto to appeal to Supreme Court of Canada upon certain questions of law in connection with order 28071, Jan. 31, which authorizes Toronto Terminals Ry. to lay conduits for steam pipes across certain streets.

28221. Apr. 8.—Ordering Grand Trunk Pacific Ry. to erect standard A station at Gilroy Sask., by Sept. 1.

28222. Apr. 9.—Authorizing Canadian National Rys. to build extension spur for A. S. Jones, North Battleford, Sask.

28223. Apr. 10.—Ordering Canadian National Rys. to build third class station at Hyas, Sask., by Oct. 1.

Problems in Design and Maintenance of Car Trucks in Relation to Maintenance of Roadway.

By W. J. Hyman, Chief Draftsman, Car Department, G.T.R.

An intimate knowledge of each other's requirements, with close co-operation between the various departments of any great railway system is absolutely essential, if it is to be operated successfully under present conditions, and I am sure you will agree with me when I say it was because the various departments in our railways worked harmoniously together, and had a sympathetic knowledge of each other's needs, that they were able to successfully cope with every emergency and difficult problem which developed under war conditions during the past four years. It seems therefore that as we are now in the great reconstruction period (which we all heard so much about during the war) a study of any subject which vitally affects two or more departments in any of our great railway systems, is quite opportune, and perhaps may be beneficial in helping to solve some of the problems now before us.

STANDARD FREIGHT CARS, 1879.

	Lbs. Capacity	Wheel Base
Average car	40,000	4 ft 6 in.
Large car	60,000	5 ft 0 in.

STANDARD FREIGHT CARS, 1919.

Average car	80,000	5 ft 4 in.
Large car	100,000	5 ft 6 in.

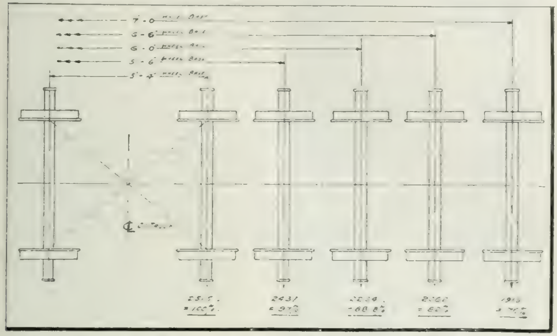

Fig. 1. Showing difference in turning, at start of a 200 ft. curve, for an 80,000 lb. freight truck, under full load, at 30 m.p.h., figured on various wheel bases.

The subject of this paper covers such a wide field, and relates both directly and indirectly to such a multitude of details, both as regards equipment and roadway that I can only hope to deal with two of these problems (wheel base trucks in relation to tracks and flat spots), and, of course, from the car department's view.

The Wheel Base of a Truck is the distance between the centers of the outside wheels on a 6-wheel truck, and of course the distance between the centers of the wheels on a 4-wheel truck.

At present practically all freight cars in this company have the same length of wheel base under the different classes of cars. A 30-ton capacity car has a wheel base of 5 ft. 2 in. centers, a 40-ton car a wheel base of 5 ft. 4 in. centers, and a 50-ton car has 5 ft. 6 in. centers. As these three classes of cars are the standard freight cars of today I want to make a comparison of the wheel base of trucks under these cars and those of 40 years ago, to point out the difference between percentages of increase of car capacities and wheel base of trucks.

Percentage of increase in load capacity of average car in 40 years, 100%.

Percentage of increase in wheel base of trucks of average car in 40 years, 18%.

Percentage of increase in capacity of large car in 40 years, 60%.

Percentage of increase in wheel base of trucks of large car in 40 years, 10%.

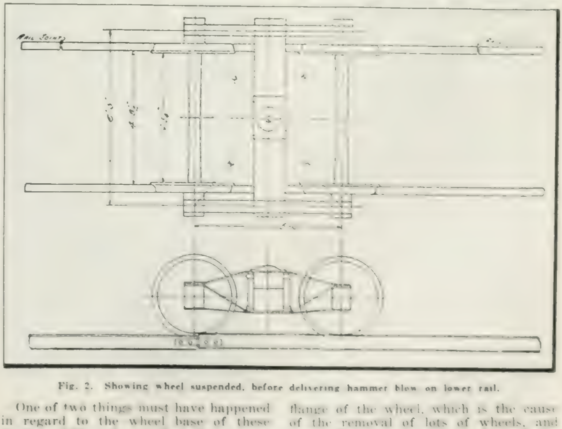

Fig. 2. Showing wheel suspended, before delivering hammer blow on lower rail.

One of two things must have happened in regard to the wheel base of these trucks. Either the original design was ideal, and needed little change, or because it was a standard 40 years ago, on account of trying to standardize as much as possible all material, the design has been perpetuated with little thought or study in regard to the changing conditions in capacity of equipment or roadbed. During this 40 year period, great changes have taken place in the construction of the roadbed and contour of track rails, frogs, switches, etc., which have all been standardized. The M.C.B. Association has done great work in the standardization of cars, and nearly all details which vitally affect the construction of cars have been made standard all over the continent, thus facilitating the interchange of cars on all railways.

As a lot of these standards, both for roadway and equipment, have a direct relation one with the other, especially in reference to contour of wheels and track rails, it would be practically impossible to change any of these designs without affecting the other, and costing the railways an enormous amount of money, and we therefore turn to truck wheel base to see if a change would be beneficial in the maintenance of roadway, or the reduction of cost in repairs to cars.

On passenger cars we have an 8 ft. wheel base for 4-wheel trucks and 11 ft. for 6-wheel trucks, and have taken care of certain conditions with a flexible truck to make an easy riding car. On freight cars we have a short wheel base 4-wheel truck, and fig. 1 shows the turning moment for trucks at various wheel bases under a freight car, at start of curve. From this diagram it is quite evident that, the longer the wheel base the less wear we would have on the ball of the rail at curves and tangents, thus reducing the cause of the removal of a large percentage of track rails at these points. It would also reduce the wear on the flange of the wheel, which is the cause of the removal of lots of wheels, and lessen the thrust on the collar of the journal, with the resultant wear on ends of brasses, and this end thrust is thought by many to be the direct cause of the start of a large percentage of hot boxes and anything which would reduce hot boxes would be welcomed by several departments of any railway.

Another thing in favor of a longer wheel base is that the blow delivered on the end of the rail at the joint would be reduced. Track rails are frequently removed because of the flowing at the end where one joint has become lower than the other, and the constant blows delivered by the wheels of the cars, as they pass over the joint, gradually cause the end of the rail to flatten out or flow. (See fig. 2). It is impossible to figure out a formula to arrive at the blow delivered at these joints, owing to the fact that so many factors enter into the calculations, which vary at every joint, especially in the ballasting of the road and the wheel base of car itself, also the speed of the train, etc., but one thing is certain and that is proved by practical demonstrations by the American Railway Engineering Association's branch committee, that in proportion as the wheel base of a car is lengthened up to a certain reasonable point, this blow is decreased and the life of the rail would be proportionately longer.

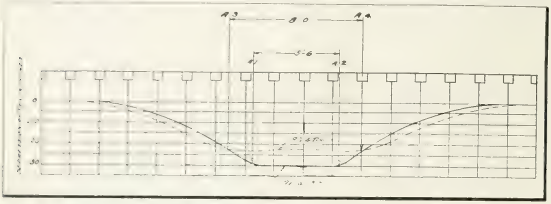

Fig. 3. A. 17,500 lb. per wheel; 85 lb. rail; 12 in. ballast. Actual deflection, caused by wheel loads under one truck, with 5½ ft. centers, A1 and A2. Actual deflection caused by wheel loads under one truck, with 8 ft. centers, A3 and A4.

The stresses produced in the rail through the different wheel bases is another factor to be considered, and shows the deflection in the rail caused by different wheel bases of trucks under exactly similar conditions. This diagram shows that a higher stress is produced in the rail, through the short wheel base truck, owing to the concentration of load over a shorter area. It also shows that the track rails will be tilted upward at the ends, thus creating a worse condition for the hammer blow from the wheel as is passes over the joint of the rail. Of course the condition of the roadbed, ballasting, etc., must be considered with this diagram, but it is a fact that the longer wheel base would distribute the load and reduce the stresses in the rail.

Flat Spots on Wheels, and their effect on track rails, is a very debatable subject, and as it is claimed that flat spots are the direct cause of a certain percentage of broken rails I want to consider the proposal that has been made for several years now, that the maximum length for removal of wheels for flat spots be reduced from 2½ in. M.C.B. present standard to 1½ in. I want to go back forty years again. In 1879, when the large freight car wheel load was but 8,250 lb., the M.C.B. Association fixed the allowable limit of flat spots at 2½ in., and although wheel loads have increased to 18,750 lb. (100,000 lb. cap. car) and as high as 30,000 lb. (170,000 lb. cap. car), and the speed of trains is now much greater, the present M.C.B. rules retain the allowable limit at 2½ in.

The impact from a flat spot under the modern heavy car is many times greater than the impact from the car of 1879, when the present limit was fixed, due to much higher speeds, and the fact that the maximum wheel load is now nearly four times heavier than in 1879. It is a fact that rails are broken by flat spots, though specific cases have been difficult to cite, because often, the rail, while badly damaged, may not break until some time after the passage of the flat wheel.

Ordinarily wheels having 2½ in. flat spots are removed from the axle and scrapped, whereas if the limit were fixed at 1½ in. it would be possible to reclaim such wheels and replace them in service by grinding out flat spots without removing the wheels from the axle and at a cost of about 50c a pair. Grinding is being done, with excellent results, by a number of roads, and it is recognized by authorities as good practice, provided, of course, that the wheel has not been burned during the process of flattening. Therefore a reduction of the allowable limit from 2½ in. to 1½ in. would not only lessen the impact and damage to the rail, but should prove economical from the standpoint of service life of wheels.

It is impossible to determine the force of the blow from the flat spots, as this depends so largely upon the amount that the rail gives under the impact, but to arrive at some conclusion as to energy of the impact the American Railway Engineering Association track committee made some tests, report of which I will quote. Assuming a 33 in. wheel and 2½ in. flat spots, we determine that for the modern car, at average speeds, the factor of safety for a 100-lb. rail is about 5, but for the heaviest cars about 2.75. According to this formula the impact from a 2½ in. flat spot under the modern 50-ton gondola, at 45 miles an hour is about 10 times greater than the impact from the old standard 20-ton car at the then maximum speed of 20 miles an hour. It would therefore appear that flat spots should be reduced from 2½ in. to a maximum of 1½ in.

There is a lot of argument today in regard to the length, and the angle, at which brake head hangers should be hung, and we are told that flat spots on wheels are frequently caused on this account; and on our latest freight cars we are using longer hangers, and trying to remedy the bad effects caused by tilting of shoe through short hangers, and dragging of shoe on wheel; and on passenger tracks the clasp brake is a remedy for the ills of the old time brake gear, so this is one case where in passenger service an improvement is gradually taking place.

In summing up, therefore, it appears that a larger wheel base, say 6 ft. approximately for freight cars, would be an improvement over present standards, and a thorough study of the cause of flat spots on wheels should be made to eliminate this trouble and also a reduction made in maximum length from 2½ in. to 1½ in. on freight car wheels.

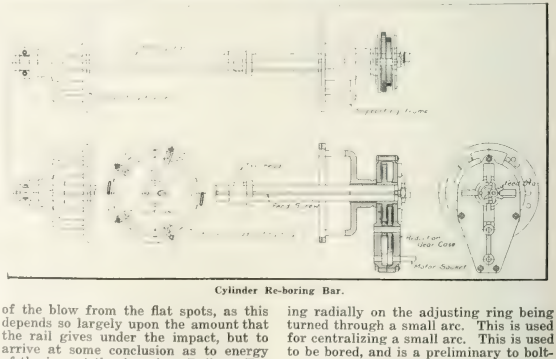
The foregoing paper was read before the Canadian Railway Club in Montreal recently

---

Cylinder Re-Boring Bar, Canadian National Railways Fort Rouge Shops.

The accompanying diagram shows a substantial cylinder re-boring bar, which is used in the Canadian National Rys. Fort Rouge shops, Winnipeg. The two heads are similar castings, and the faces are drilled for the various bolt arrangements used on the cylinders for which the bar was designed. Each face has a chuck jaw adjusting ring, the jaws working on a sliding cam face, the jaws moving radially on the adjusting ring being turned through a small arc. This is used for centralizing a small arc. This is used to be bored, and is a preliminary to bolting finally in place. Much time is saved over the old method of centering by cylinders.

The drive is by air motor, through a chain of gears in a separate gear case on the end of the boring bar. This case must, of course, be held down while the bar is in operation. The feed is the usual star wheel and screw arrangement as shown.



Cylinder Re-boring Bar.

Mainly About Railway People Throughout Canada.

Walter Hardman Ardley, Comptroller, G.T.R., and Grand Trunk Pacific Ry., Montreal, who retired from active service, Mar. 31, under the company's superannuation plan, was presented recently with a gold watch, chain, pencil and knife, and a purse of money, by the Accounting Department staff. He was born in London, Eng., Apr. 24, 1858, and entered G.T.R. service Nov. 5, 1884, since when he has been, to Nov. 1, 1893, clerk in General Auditor's office, Montreal; Nov. 1, 1893 to Dec. 31, 1907, chief clerk and general bookkeeper, Montreal; Dec. 31, 1907 to Aug. 31, 1908, Auditor of Disbursements, Montreal; Aug. 31 to Dec. 31, 1908, acting General Auditor, Montreal; Dec. 31, 1908 to Aug. 1, 1914, General Auditor, G.T.R. and Grand Trunk Pacific Ry., Montreal; Aug. 1, 1914 to Mar. 31, 1919, Comptroller, G.T.R. and G.T.P.R., Montreal.

Chas. Aldington, heretofore Superintendent of the line, Great Western Ry. of England, has been appointed Assistant General Manager.

W. R. Baker, C.V.O., ex-Secretary, C.P.R., and Mrs. Baker, of Montreal, have returned east, after spending the winter in Southern California.

Donald Blair, son of the late Hon. A. G. Blair, at one time Minister of Railways & Canals, and subsequently Chairman of the Board of Railway Commissioners, was married in Ottawa recently to Miss Gladys Cook, daughter of the Assistant King's Priniter.

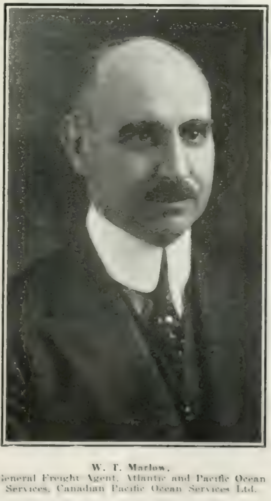
Sir George McLaren Brown, General European Manager, C.P.R., was one of the guests at a dinner given by Grant Morden, M.P., at the House of Commons, London, Eng., April 9, in honor of Lloyd Harris, Chairman of the Canadian Trade Commission.

John Burns, who has been appointed Works Manager, Angus shops, C.P.R., Montreal, was born there, Oct. 14, 1877, and entered railway service Oct., 1892, since when he had been, to Feb., 1898, apprentice, G.T.R., Montreal; Feb., 1898 to Mar., 1902, fitter, C..P,R., North Bay, Ont.; Feb. to Nov., 1903, Locomotive Foreman, C.P.R., White River, Ont.; Nov., 1903 to Sept., 1905, Locomotive Foreman, C.P.R., Chapleau, Ont.; Sept., 1905 to Sept., 1908, Locomotive Foreman, C.P.R., North Bay, Ont.; Sept. to Oct., 1908, General Foreman of Shops, C.P.R., North Bay, Ont.; Oct., 1908 to Feb., 1911, District Master Mechanic, C.P.R., North Bay, Ont.; Feb. to Oct., 1911, District Master Mechanic, C.P.R., London, Ont.; Oct., 1911 to July 1918, Master Mechanic, Eastern Division, C. P. R., Montreal; July, 1918, to Mar., 1919, Assistant Works Managers, Angus shops, C.P.R., Montreal.

A. D. Cartwright, Secretary, Board of Railway Commissioners, is to receive an increase of salary. The Railway Act provides that the Secretary's salary shall be fixed by the Governor in council at not exceeding $4,000. When the Consolidated Railway Act was before the House of Commons committee recently, the Minster of Railways moved an amendment, making the limit $5,000.

W. H. Clancy, formerly City Passenger and Ticket Agent, G.T.R., Montreal, died at St. Michael's Hospital, Toronto, Apr. 15, after several weeks illness. He retired from active service in 1914, after about 40 years with the company, 30 of which had been spent in Montreal, and the balance in Stratford, Cobourg and Toronto. Since his retirement, he lived in Toronto.

W. H. Ardley.
Who has retired from the position of Comptroller, G.T.R. and G.T. Pacific Ry.



W. T. Marlow.
General Freight Agent, Atlantic and Pacific Ocean Services, Canadian Pacific Ocean Services Ltd.

Mrs. Frank Cochrane, wife of Hon. F. Cochrane, M.P., ex-Minister of Railways and Canals, returned to Ottawa early in Apr., with Miss Edith Cochrane, after spending some time in the south.

Hon. N. Curry, Chairman of the Board, Canadian Car and Foundry Co., and Mrs. Curry, have been spending part of the winter at their house, Cedar March, Bermuda. Capt. Victor Curry returned from there to Montreal early in April.

Mrs. E. W. Duval, widow of Lt. E. W. Duval, formerly Superintendent, Saskatoon Division, Saskatchewan District, C.P.R., who was killed in action in the summer of 1918, has been spending the winter in southern California.

Philip Jay Farley, who was appointed recently Cashier and Paymaster, Western Lines, Canadian National Rys., and Duluth, Winnipeg and Pacific Ry., Winnipeg, was born at Foxboro, Ont., and entered railway service in 1901, since when he has been, to 1902, clerk in Roadmaster's office, Canadian Northern Ry., Winnipeg; 1902 to 1903, clerk in Superintendent's office, same road, Port Arthur, Ont.; 1903 to 1904, timekeeper and material clerk, same road; 1904 to 1905, chief clerk to General Roadmaster, same road, Winnipeg; and from 1905 Assistant Cashier and Paymaster, same road, Winnipeg.

W. L. Flaherty, stated to be the oldest Freemason in Canada, in point of membership, who died at Niagara Falls, Ont., Apr. 13, aged 84, was for many years a conductor on the Great Western Ry. and the G.T.R.

Alan Travers Fraser, Chief Engineer, Western Lines, Canadian National Rys., Winnipeg, who death in a snow slide in the Rocky Mountains, at mileage 26, Blue River subdivision, was briefly mentioned in our last issue, was on a train proceeding to the Pacific coast, when the train was held up by a slide. He walked ahead with a section gang to examine the obstruction, when another slide came down, burying the entire party. He was, apparently, instantly killed, but the rest of the party were rescued, little the worse for their experience. He was born at Pembroke, Ont., Jan. 13, 1872, and entered railway service in July, 1892, since when he has been, to 1893, chainman, Gatineau Valley Ry., Wakefield, Que.; 1893 to 1895, chainman, rodman and leveller, C.P.R., and Lake Timiskaming Ry., Mattawa, Ont.; 1895 to 1896, timekeeper, Ottawa-Montreal Short Line, Vankleek Hill, Ont.; 1897 to 1900, transitman and resident engineer, Crows Nest Pass Ry., Fort McLeod; 1900 to 1901, Assistant Engineer, Pipestone extension and surveys on other branches, C.P.R., Winnipeg; 1901 to 1903, Resident Engineer, Ontario & Rainy River Ry., Port Arthur, Ont.; 1903 to 1905, Locating and Division Engineer, Canadian Northern Ry., Winnipeg; 1905 to 1910, mining and prospecting in Northern Ontario, 1910 to 1911, Locating and Division Engineer, Canadian Northern Ry., Edmonton, Alta ; 1911 to 1915, District Engineer, location and construction of main line and branches in Alberta, same road, Edmonton; 1915 to Dec., 1918, District Engineer, Western District, same road, Edmonto, Alta; Jan. 1, 1919, he was appointed Chief Engineer, Western Lines, Canadian National Rys.

F. E. Gautier, Purchasing Agent, C.P.R., and Mrs. Gautier, returned to Winnipeg, early in April, from a visit to Montreal and Quebec, during which Mr. Gautier attended the C.P.R. officials' conference, etc., in Montreal.

J. D. Hamilton, an ex alderman, of Stratford, Ont., who died there, Apr. 14, was, for many years before retiring from active service, a conductor on the G.T.R. Buffalo-Goderich branch, and was well known to travellers.

D. B. Hanna, President Canadian National Rys., is reported to have stated at Edmonton, Alta., recently that he will address the Industrial Congress there in August, on industrial development in relation to railways.

Arthur Hills, Assistant to President, Canadian National Rys., and Mrs. Hills, have been spending a few weeks at White Sulphur Springs, West Virginia.

Lady Holt, wife of Sir Herbert Holt, one of the C.P.R. directors, and her son, Capt. Herbert Holt, returned to Montreal early in April, from overseas.

Chas. R. Hosmer, one of the C.P.R. directors, who has been in the Royal Victoria Hospital, Montreal, for some weeks, and who had to undergo a second operation, was reported Apr. 28 as resting easily and making satisfactory progress toward recovery.

W. B. Lanigan, Freight Traffic Manager, C.P.R., Montreal, and Mrs. Lanigan, made a trip to the Pacific coast recently.

G. W. Lee, Commissioner and General Agent, and **Hon. R. F. Preston**, Commissioner and Land Agent, Timiskaming & Northern Ontario Railway commission, have had their honorariums as commissioners increased by the Ontario Legislature, from $1,000 to $2,000 a year.

Jas. W. Leonard, General Manager, Toronto Terminals Co., died at his home at Brampton, Ont., Apr. 28, after a long illness, due to stomach trouble, for which he had recently undergone treatment at Johns Hopkins Hospital, Baltimore, and subsequently an operation at Battle Creek, Mich. He was born at Epsom, Ont., in Oct., 1858, and entered railway service in 1872, since when he had been to Aug., 1877, telegraph operator and agent, Midland Ry., Aug., 1877 to Dec., 1878, agent, Victoria Ry.; Dec., 1878 to Mar., 1880, Assistant Manager, same road; Mar. to June, 1880 to Nov., 1883, General Passenger Agent, same road; Nov., 1883 to May, 1884, Master of Transportaton, Ontario and Quebec Ry.; May, 1884 to Mar., 1887, Superintendent, C.P.R., Toronto; Mar., 1887 to Mar., 1890, Superintendent, C.P.R., Kamloops, B.C.; Mar., 1890 to Mar., 1893, Superintendent, lines east of Montreal, C.P.R.; Mar., 1893 to Apr., 1901, General Superintendent, Ontario and Quebec Division; C.P.R., Toronto; Apr., 1901 to Mar., 1903, General Superintendent, Western Division, C.P.R., Winnipeg; Mar. to Apr., 1903, General Superintendent, Central Division, C.P.R., Winnipeg; Apr., 1903 to Jan., 1904, Assistant Manager, lines west of Lake Superior, C.P.R., Winnipeg. After some months spent in travelling, he was appointed President, Guelph and Goderich Ry. and in Feb., 1905 was appointed Manager of Construction, Ontario [illegible], C.P.R., and in Oct., 1905, Assistant General Manager, eastern lines, C.P.R., in charge of maintenance of way and operation, and also of construction of new lines in Ontario, which combined positions he held until the appointment of J. G. Sullivan as Manager of Construction, eastern lines, which left him solely to the duties of Assistant General Manager, eastern lines, in charge of maintenance of way and operation, with office at Montreal. He was appointed General Manager, eastern lines, C.P.R., Montreal, in Feb., 1908, and Assistant to the Vice President in Jan., 1911, attending principally to matters arising between the company and its maintenance of way and operating employes, eastern lines, especially as regards wages and other terms of employment; and retired from that position Jan. 31, 1915, on his appointment as General Manager, Toronto Terminals Co., in charge of the construction of the union station at Toronto, which position he occupied at the time of his death. He was twice married, and is survived by his widow and one son. The funeral took place at Mount Pleasant Cemetery, Toronto; the body being taken from Brampton, by a special C. P. R. train.

D. O. Wood.
Traffic Manager, Export & Import Department, Canadian National Railways.

Lt. Col. R. W. Leonard, formerly Commissioner, National Transcontinental Ry., has given $5,000 to Queen's University endowment fund.

Patrick John Melvin, whose appointment as Export Freight Agent, C.P.R., Montreal, was announced in our last issue, was born at Trim, Ireland, Mar. 3, 1872, and entered railway service in Oct. 1888, since when he has been, to Aug. 1889, junior clerk, Freight Department, Great Northern Ry. of Ireland, Omagh; Aug. 1889 to Mar. 1894, clerk, Freight Department, same road, Newry; May 1894 to Apr. 1898, clerk, Audit and Claims Department, G.T.R., Montreal; Apr. 1898 to Feb. 1906, clerk, Foreign Freight Department, C.P.R., Montreal; Feb. 1906 to Sept. 1918, chief clerk, Export Freight Department, same road, Montreal; Sept. 1918 to Mar. 15, 1919, acting Export Freight Agent, same road, Montreal.

Harold Roy Miles, whose appointment as Division Engineer, C.P.R., Lethbridge, Alta., was announced in a recent issue, was born at Winnipeg, Mar. 14, 1879. During 1899 he was on location work with the Washington County Ry., and from 1900 to 1901 was on location and construction, Algoma Central and Hudson Bay Ry., Michipocoten Harbor, Ont.; July 1901 to July 1, 1915, Assistant Engineer, and Resident Engineer, Maintenance of Way, Lake Superior Division, C.P.R.; July 1, 1915 to Jan. 15, 1919, Assistant Engineer, C.P.R., Montreal.

Mrs. Harriet Sym Moore, who died at Montreal, Mar. 29, was the mother of E. Moore, Insurance Commissioner, C.P.R.

C. Murphy, General Manager, Western Lines, C.P.R., Winnipeg, with Mrs. Murphy and Miss Olea Murphy, visited Montreal early in April, also spending a short time in Ottawa and Prescott, Ont.

Lady Nanton, wife of Sir Augustus Nanton, director, C.P.R. and President Winnipeg Electric Ry., left Winnipeg early in April, to visit New York, Atlantic City, etc.

C. S. Ogilvie, who has been appointed Assistant Engineer, Ottawa Division G. T. R., Ottawa, Ont., was formerly Assistant Engineer, G.T.R., at Belleville, Ont., and enlisted for overseas military service with the 13th Royal Highlanders, and went overseas with the first contingent of the Canadian Expeditionary Force. He was a war prisoner in Germany for about three years, and was liberated on the signing of the armistice.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., returned to Vancouver, early in April, with Mrs. Peters and Miss Dorothy Langford, after attending the C.P.R. officials' conference, at Montreal.

S. P. Porter, who has been appointed Assistant to the General Manager for the Receiver, Grand Trunk Pacific Ry., Ottawa, Ont., was born in Somersetshire, Eng., in 1870, and came to Canada in 1886. He entered railway service in 1889 with the C.P.R. as trainman. From 1901 to 1907 he was homestead inspector for the Dominion Government, and in 1908 was appointed Deputy Minister of Railways, Telegraphs and Telephones for Saskatchewan, resigning in 1912, on his appointment as Executive Agent, Grand Trunk Pacific Ry., Regina, Sask.

Col. C. W. P. Ramsey, C.M.G., who commanded the Canadian Railway Construction Corps in France, addressed the C.P.R. Social Club at Montreal, Apr. 9, on the work done by the corps on the Western Front in France and Belgium, and at Salonica, Greece.

Hayter Reed, formerly Manager in Chief, C.P.R. Hotels, and Mrs. Reed, returned to Canada from England early in April and went to St. Andrews, N.B.

James Reid, who died at Toronto, Apr. 5, aged 52, was in C.P.R. service for many years, latterly as travelling auditor, out of Toronto.

Hon. J. D. Reid, Minister of Railways and Canals, spent Easter in New York, where he went to meet Mrs. Reid, who had been in Florida and at Atlantic City for some weeks.

J. K. L. Ross, one of the C.P.R. directors, arrived in Vancouver Apr. 5, in the private car Cromarty.

W. F. Salsbury, Local Treasurer, C.P.R., returned to Vancouver early in April, with Mrs. Salsbury, after attending the C.P.R. officials' conference in Montreal.

Lord Shaughnessy is patron of the big drive to raise $300,000 for Loyola College, Montreal.

F. A. Skelton, formerly Vice President and Secretary-Treasurer, Canadian Car & Foundry Co., left Montreal recently to live at Essex, Lake Champlain, N.Y.

Lorne Cameron Thomson, heretofore General Storekeeper, Eastern Lines, Canadian National Rys., Toronto, has been appointed General Storekeeper, Canadian Car & Foundry Co., with jurisdiction over all plants, viz: Amherst, N.S.; Longue Point, Turcot, and Dominion, Que.; Welland, Brantford and Fort William, Ont.; and with office at 120 St. James St., Montreal. Canadian Railway and Marine World for April, contained his biography and portrait.

Edwin Newman Todd, whose appointment as General Foreign Freight Agent, C.P.R., Montreal, was announced in our last issue, was born at Huntingdon, Que., Oct. 17, 1879, and entered C.P.R. service May 7, 1896, since when he has been, to May 1, 1898, clerk and stenographer, Foreign Freight Department, Montreal; May 1, 1898 to June 1, 1903, import clerk, same department, Montreal, and West St. John, N.B.; June 1, 1903 to May 1, 1904, contracting clerk, Assistant Freight Traffic Manager's office, Toronto; May 1, 1904 to May 1, 1905, Contracting Freight Agent, Foreign Freight Department, Toronto; May 1, 1905 to Jan. 1, 1909, Assistant Export and Import Freght Agent, Toronto; Jan. 1, 1909 to Sept. 1, 1911, Export Freight Agent, Montreal; Sept. 1, 1911 to Sept. 20, 1915, Division Freight Agent, Montreal; Sept. 20, 1915 to Mar. 15, 1919, General Freight Agent, Montreal.

Ivan E. Vallee has been appointed to succeed his late father, L. A. Vallee, as engineer and director of railways for the Quebec Public Works Department.

F. L. Wanklyn, General Executive Assistant, C.P.R., Montreal, and Mrs. Wanklyn, made a trip to the Pacific coast during March and April.

Lady Whyte, widow of the late Sir Wm. Whyte, formerly Vice President, Western Lines, C.P.R., is visiting her daughter, Mrs. Charles Meek, in Vancouver.

E. R. Wood, one of the Canadian National Rys. directors, and Mrs. Wood, have been spending the greater part of the winter at their house at Beverley Hill, California.

David Oliver Wood, whose appointment as Traffic Manager, Export and Import Department, Canadian National Rys., Toronto, was announced in our last isue, was born at Kleinburg, Ont., Mar. 16, 1864, and entered transportation service in May, 1883, since when he has been, to 1902, billing clerk, chief clerk, District Freight Agent's office, and Assistant Foreign Freight Agent, G.T.R., Toronto; 1902 to 1905, Western Freight Agent, Donaldson and Thomson Steamship Lines, Toronto; 1905 to 1917, General Freight Agent, Allan Line Steamships, Toronto; 1917 to Feb. 1919, Assistant Export and Import Freight Agent, C.P.R., Toronto. From Sept. 1917 to Jan. 1, 1919, he was loaned to the British Ministry of Shipping (Canada), and acted as Assistant to the Director General, at Montreal.

Dominion Government Terminal Elevators.—The Trade and Commerce Department's estimates for the year ending Mar. 31, 1920, submitted in the House of Commons recently, contain $30,000 to provide for the construction, acquisition, leasing or expropriation of terminal elevators.

The Canada Steamship Lines will not make any changes in its fares between Montreal and Toronto this year.

Passenger Rate Meetings at Detroit.

The Great Lakes & St. Lawrence River Rate Committee met at Detroit, Mich., Mar. 19. Most of the steamboat lines represented signified that their passenger fares would remain unaltered for 1919, but a few lines announced slight advances in their round trip fares. F. W. Milton, Assistant General Passenger Agent, Cleveland and Buffalo Transit Co. was elected chairman. Jas. Morrison, Assistant General Passenger Agent, Canadian National Rys., Montreal, who had been secretary for some 10 years, declined re-election, and A. E. Storey, rate clerk, General Passenger Department, G.T.R., Montreal, was elected to succeed him.

The International Water Lines Passenger Association meeting was also held at Detroit, Mar. 19, the President, M. J. Powers, A.G.P.A., Champlain Transportation Co. and Lake George Steamboat Co., occupying the chair. It was reported that lines controlled by the U.S. Government were withdrawing from the association, but the opinion was expressed that, when pre-war conditions return, the original lines will again take representation. The following officers were elected: President, W. F. Wasley, Manager and Treasurer, Muskoka Lakes Hotel & Navigation Co., Gravenhurst, Ont.; Vice President, L. G. Lewis, G.P.A., Detroit & Cleveland Navigation Co., Detroit, Mich.; Secretary, M. R. Nelson, Buffalo, N.Y.

The Roadmasters and Maintenance of Way Assocation's annual convention will be held at Chicago, Ill., Sept. 16, 17 and 18, and a committee of which J. H. Regan, Track Superintendent G.T.R., Chicago, is a member, has been appointed to make arrangements. The executive has appointed a committee on road ditching and drainage, of which H. Ferguson, General Roadmaster, G.T.R., Toronto, is a member; a committee on conservation of lumber in maintenance of way road crossings and signs, and a committee on track maintenance in freight and passenger terminals, of which G. T. McCore, Roadmaster, G.T.R., Toronto, is a member.

Longshoremen's Wages at Montreal.—At a joint meeting of members of the Shipping Federation of Canada and representatives of the Longshoremen's Union at Montreal, recently, to discuss the wage question for the current season, a contract was entered into, effective from Apr. 7, 1919 to Jan. 1, 1920, for a wage of 60c an hour, daywork, and 65c an hour, night work, for handling general cargo; the day being from 7 a.m. to 6 p.m., and the night from 7 p.m. to 5 a.m. The wage for handling grain is 75c an hour, and for coal, 65c an hour, at any time. The increase is practically 20c an hour all round.

New Time—Old Time—C.P.R. Time.—In connection with the controversy over daylight saving, attention has been called in Winnipeg to Manitoba Interpretation Act, sec. 24, of which reads: "The time used upon the C.P.R., and known as central time, being the time of the 19th meridian of west longitude, is hereby declared to be the standard time of this province, and when any statute heretofore or hereafter passed refers to any particular time of day, such standard time shall be considered to be meant."

Vice President Grant Hall's Western Inspection Trip.

Grant Hall, Vice President, C.P.R., accompanied by F. L. Wanklyn, General Executive Assistant, C.P.R., left Montreal, Mar. 25, and arrived in Winnipeg Mar. 27 for the purpose of making his first inspection of the company's western lines since his appointment as Vice President. D. C. Coleman, Vice President and General Manager, Western Lines, travelled with Mr. Hall from Winnipeg to the coast and back, the trip lasting from Mar. 29 to Apr. 15. Messrs. Hall and Wanklyn left Winnipeg Apr. 17 for Montreal.

The trip from Winnipeg to Vancouver was via Calgary and the Crowsnest Pass line, and the Kettle Valley Ry., and the return trip was made by the main line route, thence to Edmonton and back by way of Saskatoon.

In statements made at different points on the route, Mr. Hall is reported to have said the improvements and betterments announced in January, will be carried out during this year so far as labor and materials can be obtained. As to branch line construction, it was too early to say anything, owing to the fact that the company's application to the Dominion Parliament for legislative authority was still under consideration.

The only definite statement as to construction work was made by Mr. Hall in Vancouver, Apr. 6, where he is reported to have said that plans for the new ocean pier at that port were almost completed and that the pier will be fully up to date in every respect.

The Lambeth Motor Transport Co. began business Apr. 4, operating motor busses to carry passengers and freight between Lambeth and London, Ont. It is give five round trips a day, except Sundays, the single trip taking 40 minutes, and there are 6 stops on the route. The fare for the single trip is 25c; the return fare being 40c, with intermediate points at proportionate rates. Additional trips are being made on Wednesdays and Saturdays. W. K. Caldicott, Lambeth, Ont., is president of the company, and W. Winegarden, is the agent in London.

River Rouge Ry.—The Quebec Legislature has passed an act changing the name of the company in the English version of the charter to the Rouge River Ry. Co., and extending the time for the construction of the projected railway. The Legislature has also voted a land grant of 2,000 acres a mile in aid of the building of the line from Grenville, on the Ottawa River, in Argenteuil County, along the Valley of the Rouge River, to a junction with the C.P.R. branch line terminating at Mont Laurier, Labelle County, a distance of 80 miles. (Feb., pg.

Railway Ties and Timber for Great Britain.—A London press dispatch says that through the medium of the Canadian Trade Commission, of which Lloyd Harris is chairman, the British Government has entered into a large contract for the purchase of railway ties and other timber from British Columbia. It is said that British railways will require over 3,000,000 ties at an early date.

The Canadian Railway Board of Adjustment No. 1, has re-elected S. M. Berry, Chairman, and G. Hodge, Assistant to Vice President, Eastern Lines, C.P.R., Vice Chairman.

Canadian Transportation Men, Engineers, Etc. in the War.

The Canadian Military and Civil Engineers' Association is reported to have been formed in England, by Canadian Engineers of the 1st Division, with the object of protecting the interests of its members as regards pensions, war service gratuities, civil re-establishment, etc.

It is reported that of the 9,809 C.P.R. employes who joined the expeditionary force, 948 have died, and 1,881 were wounded. Of those who had returned to Mar. 31, 1,731 had been re-employed, and positions had been found for 2,091 other returned solders.

PERSONAL NOTES.

Major General Alex. McDougall, C.B., the Ottawa contractor, who was in command of the Canadian Forestry Corps overseas for a considerable period of the war, returned to England in April, to resume his duties with the corps.

Capt. Kenneth E. Drinkwater, son of the låte Chas. Drinkwater, who was first secretary of the C.P.R. Co., after having been overseas three and a half years with the 3rd Battalion, Canadian Machine Gun Corps, is staying with his sister, Mrs. H. P. Timmerman, wife of the Industrial Commissioner, C.P.R., Montreal.

Lt.-Col. Halfdan F. H. Hertzberg, D. S. O., M. C., eldest son of A. L. Hertzberg, District Engineer, C.P.R., Toronto, and grandson of the late Col. P. H. Hertzberg, R. E., Christiania, Norway, was married at London, Eng., Mar. 19, to Miss Dorothy Hope Judah, of Montreal.

Lt.-Col. Thos. A. Hiam, formerly private secretary to Sir Donald Mann, Toronto, is now assistant director of railways at Haidar Pasha, near Constantinople. He went overseas with the Canadian Buffs in the autumn of 1916 as a lieutenant, and was at Witley Camp, Eng., for nearly a year, while the Buffs formed part of the 5th Canadian Division, and during which time he was promoted to captain and made assistant quartermaster. On the Buffs being broken up, for reinforcing purposes, he transferred to the Imperial Railway Troops, going to France in Feb., 1918 as captain, and was engaged for some time in railway operating work. He returned to England in Oct., 1918 on leave, and was sent almost immediately to Salonica, as railway transportation officer, and after being there a very short time, was transferred to Constantinople, promoted to major and made deputy assistant director of railway transport, which department has charge of the Orient Ry. in European Turkey (Compagnie d' Exploitation des Chemins de Fer Orientaux) and also the Bagdad Line, which commences on the Bosphorus and extends to Bagdad, with a break from Nissibin to Samara, which is still under construction. This line is operated by the Societe Imperiale Ottomane de Chemin de Fer de Baghdad. From Constantinople he was transferred to Haidar Pasha as assistant director of railways, and was promoted to lieutenant-colonel. The accompanying illustration shows an annual pass on the Orient Ry. which Lt.-Col. Hiam sent Sir Donald Mann recently.

Orient Railway Annual Pass.

Major James McGregor has returned to his duties as Superintending Engineer, Halifax Ocean Terminals, Canadian National Rys., Halifax, N.S. He was attached to the 3rd Battalion, Canadian Railway troops, which was, for the most part, engaged on the light railway systems of the First Army, extending along the western front from about Armentieres, Lestrem, Bethune, Loos, Lens, Vimy Ridge, Arras, Queant and to Cambrai. Later, when the German retreat carried them east of their light railway zone, and light railway construction was abandoned, the battalion took part, with other battalions of the Canadian Railway troops, in the reconstruction of the main railway line between Douai and Mons.

Capt. F. H. Moody, B.A.Sc., has resumed his former position of Engineering Editor, Canadian Railway and Marine World. His military work commenced in 1906, when he joined the University section of the 2nd Field Co., Canadian Engineers, which he left Sept. 22, 1911, to take out a commission in the 2nd Regiment, Queen's Own Rifles of Canada. He volunteered for overseas service with the 83rd Battalion Canadian Infantry, Aug. 9, 1915, and was promoted to captain, Oct. 21, 1915. On Feb. 4, 1916, he transferred to the 116th Battalion, Canadian Infantry, and was promoted to major, Mar. 1, 1916, proceeding overseas with that unit July 21, 1916. He went to France with the battalion on Feb. 11, 1917, reverting to captain to conform to the establishment in the field, being appointed acting major on arrival in France, which rank he held until May 26, 1917, when he was wounded at Vimy Ridge. Following convalescence, he was appointed adjutant, 2nd Canadian Reserve Battalion, Aug. 26, 1917, remaining in that position until Dec. 9, 1917, when he was seconded to the Ministry of Munitions (Air Board) as an inspection and expediting officer in the Yorkshire, Lancashire and Derbyshire areas, relinquishing that work Oct. 8, 1918, proceeding to France Nov. 3, 1918, and rejoining the 116th Battalion, in the 3rd Canadian Division. On the latter returning to Canada in April, this year, he accompanied it, and was demobilized Apr. 20, 1919.

Lt.-Col. Blair Ripley, formerly engineer in charge of double track, C.P.R., Toronto, returned from overseas early in Apr. and left Toronto shortly afterwards to make a trip to the Pacific coast. It is expected that he will return to the C. P. R. Co.'s service in the near future.

Major Ian Sinclair, D.S.O., M.C., returned to Canada, Apr. 20, in command of the 13th Battalion, C.E.F. (Royal Highlanders of Canada). At the outbreak of war he was engaged on a contract which his father, Angus Sinclair, of Toronto, had for construction of the Canadian Northern Ry., between Ottawa and Sudbury, Ont., and immediately obtained a commission in the 15th Battalion (48th Highlanders). While at Valcartier camp, he transferred to the Royal Highlanders, and except for periods, during which he was in hospital recovering from wounds, he fought with the 13th Battalion through all the engagements in which it took part, from the second battle of Ypres, four years ago, until the signing of the armistice. At the attack on Hill 70, he won the Military Cross, and was awarded the D.S.O. for work in command of the battalion during the offensive of Sept., 1918, against the Hindenburg line. He was wounded four times, and mentioned in dispatches twice.

Government Railway Employes' Compensation Act.

An act was passed by the Dominion Parliament in 1918 providing for the bringing under the provisions of the workmen's compensation acts of the different provinces any employes of the Dominion Government who might be killed or injured while at work. The act was passed at the request of employes of the Canadian Government Railways, and it has been found that subsect. 4 of sect. 1 of this act does not work out in practice. Parliament has now passed an act repealing subsec. 3 and 4 of the act of 1918, and replacing them by new sections. The new subsec. 3 provides for the payment by the Minister of Finance out of any unappropriated moneys in the Consolidated Revenue Fund as compensation, and their deposit with any provincial board or court, for the settlement of such cases and for any costs in connection therewith. The act, subsec. 4, provides that Prince Edward Island Ry. and Intercolonial Ry. employes shall elect whether they will take their compensation under the I.C.R. and P.E.I. Ry. Employes' Provident Fund or under the Act, and that dependents of killed employes who have not elected shall nevertheless be entitled to benefits under this Act. These amendments were approved of by the employes of the two railways interested. They are to be retroactive.

Ontario Assessment Act Amendments.—The Ontario Legislature has approved of amendments to the assessment act increasing the exemption on income for income tax purposes from $1,500 to $1,700 for householders, and from $600 to $700 for non householders in cities and towns; and from $1,200 to $1,400 for householders, and from $400 to $500 for non householders in other municipalities. In recommending that this change be made the legislature's special committee reported that the increased exemption was desirable owing to the increase in the cost of living, and would also cover the request of railway employes who advocated that they should be allowed a further deduction on account of expenses when absent from their place of residence.

The London and South Eastern Ry.—A section of the City of London Act passed by the Ontario Legislature recently, provides that the proceeds from the mortgage from the company to the City of London received by the city forms part of the corporation's sinking fund. The L. and S.E. Ry. Co. was formed years ago but never built any line. A site was provided in the City of London for terminal purposes and was used by the Michigan Central Rd., which obtained an entrance from St. Thomas, over the London and Port Stanley Ry.

Alien Holders of Canadian Railways Stock.

Mr. Justice Duclos gave judgment at Montreal, Apr. 23, on the petition of the Dominion Government, asking that the Secretary of State be put in possession of 143,676 shares of Canadian Pacific Ry. stock held in New York in the names of German and Austrian shareholders. The petition was based on the consolidated orders in council of 1916 respecting trading with the country's enemies. While the C.P.R. gave the court all information in relation to the matter, it raised questions as to whether it had the right to compensate itself, out of the accummulated dividends on certain of the shares, for the indebtedness of the holders to the company. The C.P.R. had $2,500,000 deposited in German banks at the outbreak of the war, and there was a balance of $215,593 for cars, in addition to a special deposit of $30,000, owing by Austria. The government's request was granted by the court.

A similar petition has been presented in an Ontario court by the Secretary of State in respect of about $154,000 of Canadian Northern Ry. stock, held by 28 alien enemies.

Electrification of the Intercolonial Railway Between Moncton and Halifax.

W. G. Gordon, Transportation Engineer, Canadian General Electric Co., in speaking at an engineers' meeting in Halifax, N.S., recently, repeated an address delivered previously in Ottawa, and which appears on pages 229 and 230 of this issue, and added the following remarks of a more local nature:

"With regard to the 187 miles of line of the Canadian National Rys. at present steam operated, between Moncton and Halifax. Ocean terminal facilities have been provided at Halifax with a capacity of several times the present traffic and an ultimate provision for many times the present tonnage. At present the line from St. John, N.B., with the C.P.R., and Maine Central connections, the I.R.C. along the north shore and the low grade National Transcontinental south of it, converge at Moncton. Between Moncton and Halifax is a single track railway with heavy grades. To increase the tonnage capacity of this line several plans can be considered to keep pace with the developments at Halifax. Under maximum conditions at present, the line is operated to capacity."

The following are the possible plans:

1.—Electrification of the present line.

2.—Grade reduction on the present line.

3.—Double tracking the present line with grade reduction.

4.—Double-tracking the present line without grade reduction.

5. Construction of low grade single track on new locations.

"With electrification of the present line, three times the present tonnage could be handled. This is the result of electric locomtives being able to haul much heavier tonnage, at higher schedule speeds, with almost an entire elimination of the failures and delays at present due to steam operation. Under conditions of winter operation with low temperatures, the steam locomotive is at its worst, due to the dissipation of heat, whereas this condition allows the electric locomotive to operate at higher continuous draw bar rating than normal. With cheap power, available from large generating units, where the high tension lines follow the railway line, a continuously increasing load could be secured for power and lighting from points along, or near, the lines. Careful consideration of the methods above outlined show that the electrification of this line is economically justified on sound engineering principles."

Pacific and Switching Locomotives for Canadian National Railways.

The Canadian National Railways management has, as stated in a previous issue of Canadian Railway and Marine World, ordered recently 50 locomotives, 25 Pacific type and 25 switchers.

The Pacific type, which are being built at Montreal Locomotive Works, are almost identical with some Pacific type ones ordered by the Canadian Government Railways in 1917, general particulars of which were given in Canadian Railway and Marine World at the time. The principal differences being in the application of certain standards, with a view to the eventual standardization of the whole of the Canadian National Rys. operated lines. The general particulars of the locomotives now being built are as follows:—

Gauge	4 ft. 8½ in.
Cylinders	23½ x 28 in.
Driving wheels	69 in.
Boiler	70⅝ in. i.d.
Boiler pressure	200 lb. sq. in.
Firebox	108 in. 10 x 75¼ in. wide
Tubes	185-2 in.
Flues	28-5⅜ in.
Length of tubes and flues	20 ft. 6 in.
Wheel base, driving	13 ft. 0 in.
Wheel base, engine	33 ft. 10 in.
Wheel base, engine and tender	66 ft. 6¾ in.
Weights in working order	
Engine truck	49,000 lb.
Driving wheels	160,000 lb.
Trailer truck	47,000 lb.
Total engine	256,000 lb.
Heating surface, tubes and flues	2,780 sq. ft.
Heating surface, firebox	215 sq. ft.
Heating surface, total	2,995 sq. ft.
Grate area	56.4 sq. ft.
Maximum tractive effort	38,100 lb.
Factor of adhesion	4.2
Capacity of tender, coal	12 tons
Capacity of tender, water	6,500 imp. gall.
Limiting height	15 ft. 3 in.
Fuel	Bituminous

The boiler will be of the straight top, radial stayed type, with sloping roof, face plate and throat sheets, and with a single fire door, with a factor of safety of 4½, and designed to withstand the usual tests. The similar C.G.R. locomotives had a boiler pressure of 180 lb., but this has been increased to 200 lb. The staying, and the washout and arch tube plugs, are to be of the new Canadian National standard.

The firebox will have a 5 in. water space in front, with 4 in. water spaces sides and back. The O'Connor firebox flanges will be used, as it has been found to relieve the frequent leakages at the fire door opening. The Franklin automatic firedoor will also be applied. The staybolts will be 1 in. in diar., 12 thread, with the usual tell-tale holes, and, in the breaking zone, Tate flexible staybolts will be applied. The security brick arch will be used.

The tubes will be of cold drawn seamless steel. The front ends of all tubes and flues are to be rolled, and in addition, the front ends of the flues, and the interspaced tubes, are to be beaded. All back ends are to be prossered with the standard C.P.R. prossering tool. One noteworthy change in the tube spacing is embodied. They are to be 2⅞ and 2 15-16 in. centers, instead of the usual 2¾ in. spacing. This will reduce the tube heating surface some 10 deg., but it is believed the increased ease of circulation will more than compensate for this loss.

The blow-off valve will be C.N.R. standard. The water supply will be cared for by a 4,500 gall. Hancock non-lifting inspirator on the left and a Hancock lifting injector on the right. From the left inspirator, there will be a connection inside the cab for the ash pan sprinkler system. The C.N.R. standard combined bell stand and boiler check will be applied for the boiler feed.

The grates will be of cast iron, standard design, equipped with the Franklin grate shaker, and the combined area of the grate openings to the ashpan will be 1-7 of the grate area. The ashpan hoppers will also be standard. The smoke box, stack, and all the front end arrangement will be the usual C.N.R. standard.

The superheater will be of the Hungerford-Cameron type, designed to give a superheat of 250 degrees under average conditions. It will be provided with C.N.R. standard inspection plugs.

The main frames will be of vanadium cast steel, with single forward section, with lugs, for holding the cylinders, and well braced together. All the driving boxes will have Franklin adjustable wedges.

The engine truck will be the Franklin Economy 4 wheel type, equipped with Preston hub liners, and with 33 in. wheels. The trailer truck will be of the Cole radial type, with 48 in. wheels.

The cylinders will be 23½ in. bore. The C.N.R. standard bypass valve will be applied, and apart from the King metallic valve stem and piston rod packing for the superheated steam, the fittings, etc., will all be C.N.R. standard. The steam ports will be fitted with peep holes, to facilitate the valve setting.

The valve gear will be of the Walschaert type, designed to cut off equally at all points of the stroke. The motion will be applied from the Ripken-Kingan main red arm, instead of from the crosshead arm. The reverse lever arrangement will be C.N.R. standard.

The main and side rods will all be of o.h. steel, and the big ends of the main rods will be similar to the U.S. Government standardized locomotive arrangement. The crosshead and piston head, will be C.N.R. standard.

The driving wheels will be 69 in. diar. over tires. The centers will be of cast steel, 62 in. diar.

The cab will be of the vestibule type, steel construction, wood lined and asbestos insulated, and equipped with the usual fittings.

Lighting will be provided by a Pyle-National type K2 turbine equipment, with a 250 watt incandescent lamp, in a special incandescent headlight case, with 18 x 9 in. reflector. The wiring will be carried through the hand rail, with circuits for the number, pilot and cab lamps. The number lamp will be of the new standard C.N.R. angle type, which provides for a wider angle of visibility. The steam heating equipment will be the Vapor make, with Gold no. 1012 regular valves.

The tender will be of the all metal type, with steel sills, substantial cover plates, and built up bolsters, and equipped with Sharon 5 x 7 in. M.C.B. coupler. The trucks will be of the pedestal type, with flat side frictions, spaced 40 in. centers on the front truck, and 50 in. centers on the rear truck, with M.C.B. standard braces, journal boxes, and trussed brake beams. The tender tanks will have a capacity for 12 tons of coal and 6,500 imp. gall. of water, and will be equipped with the Locomotive Superheater Co's. slope sheet type of coal pusher.

Switching Locomotives.

The 25 switching locomotives which will be of the 0-6-0 type, similar to the 10 ordered by the Canadian Northern Ry. as described in Canadian Railway and Marine World for Mar., 1918, are being built by Canadian Locomotive Co. The same specifications throughout have been used. The general details are as follows:

Gauges	4 ft. 8½ in.
Cylinders	21 x 26 in.
Drving wheels	51 in.
Boiler	68 in.
Boiler pressure	180 lb.
Firebox	41¼ x 95 15-16 in.
Tubes	157-2 n.
Flues	24-5½ in.
Length over tube sheets	12 ft. 5 n.
Wheel base, driving	12 ft. 0 in.
Wheel base, engine and tender	41 ft. 1¼ in.
Weight in working order:	
Driving wheels	154,400 lb.
Tender	96,000 lb.
Engine and tender	251,000 lb.
Heating surface, tubes	1,437.8 sq. ft.
Heating surface, firebox	132 sq. ft.
Heatng surface, arch tubes	11.5 sq. ft.
Heating surface, total	1,581.7 sq. ft.
Grate area	27.5 sq. ft.
Maximum tractive effort	34,400 lb.
Factor of adhesion	4.48
Tender capacity, coal	6 tons
Tender capacity, water	3,800 imp. gall.
Limiting height	14 ft. 10⅝ in.
Fuel	Bituminous

The boilers will be of the straight top, radially stayed, and with sloping back head, and designed to stand 200 lb. pressure, with a factor of safety of 4. There will be a superheater of the Schmidt type, and the security brick arch will also be applied. The feed water connections will be the standard C.N.R. type, through the bell stand. Nearly all the other features of the locomotives will be of the usual C.N.R. standard design.

Unusually Heavy Railway Construction.

The San Diego & Arizona Ry., now being built across Laguna Range in California to connect El Centro with San Diego, traverses some remarkably rugged country that called for heavy construction. Through Carriso Pass the grade has been kept down to 1.4%, because the cost of reducing grade later would be prohibitive. Elsewhere the grades run up to 2.2%, with 10 degree maximum curves. In the 12 mile section of the railway that lies between Jacumba and Carriso Gorge, there are 17 tunnels. Of these, two are about 2,500 ft. long, one is about 1,200 ft., and the remaining 14 are between 180 and 900 ft. The formation was loose, so that 75% of the total length required timbering. There remain to be completed about 11 miles of the mountain division, and crews are working on both ends of the gap. It is expected that the line will be ready for operation during the coming summer.

Exploration of Quebec Hinterland.—The steamship Amberst, bearing the first group of explorers for the penetration of the interior of Ungava, left Quebec Apr. 8, for the north shore of the Gulf of St. Lawrence, whence they will proceed inland. It is said that this party is working in the interests of a British syndicate which has obtained charters from the Quebec Legslature for the building of two lines of railway,—the Quebec and Ungava Ry., and the St. Felicien and Ungava Ry., and is applying to the Dominion Parliament for the incorporation of a railway company with the title of the North Route.

Machine for Boring Babbit Linings of Car Journal Brasses.

For the rapid boring of the babbit lining in car journal brasses a special machine has been built by the Northwestern Elevated Rd., of Chicago, as shown in fig. 1.

Two sizes of journal brass in use on this system are 4 and 4¼ in., and in order to handle both sizes the machine is made in two units connected together, thus forming the complete device. The cylinders are of two different diameters, the one at A being for 4¼ in. bearings and that at B for the 4 in. bearings. Scrap pans are provided below the machine to catch the chips.

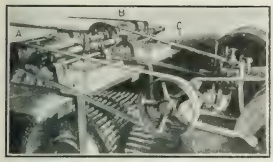

Fig. 1.—Machine for reboring car journal bearings.

A brass, after the babbit lining is cast in, is laid on the cylinder A, fig. 2, which is driven by the belt from a motor. The arm B is lowered on to the brass, so that the prongs C lock into the notches provided on the back of the brass for the locking wedge. Pressing down on the lever the operator slides the brass across the gap D on to the cylinder E, which is slightly larger than A. In its passage across D the cutting tools F bore out the soft metal to a diameter corresponding to that of cylinder E. The action of the machine is somewhat analogous to that of a jointer, in which a piece of wood is planed by passing it from a lower table to a slightly higher one across a gap in which is the rapidly revolving cutter.

A uniform rate of feed is obtained by means of a screw, on a continuation of the shaft to the left beyond the bearings. This screw has a lead of 3-32 in. The handle G has a half nut on its upper face, which fits into this thread on the shaft, and when starting to make a cut the operator raises the handle until the half nut is in contact with the thread and is carried forward by it. The two handles are so fastened as to allow independent movement around the shaft H, which is free to slide longitudinally in its bearings; but the handles cannot move lengthwise on the shaft, therefore when lever G is moved forward by the thread, lever C carrying the brass moves with it.

The machine is always ready to operate, so when a workman takes out a journal brass and finds it badly worn at one end but still serviceable if redressed, he takes it directly to the machine. This is so simple in its operation that almost any workman can soon learn to operate it.

The cut obtained shows noticeable toolmarks, but it is claimed that this condition is not detrimental and that a run of a few miles on the road gives the metal a chance to work down to a good bearing.

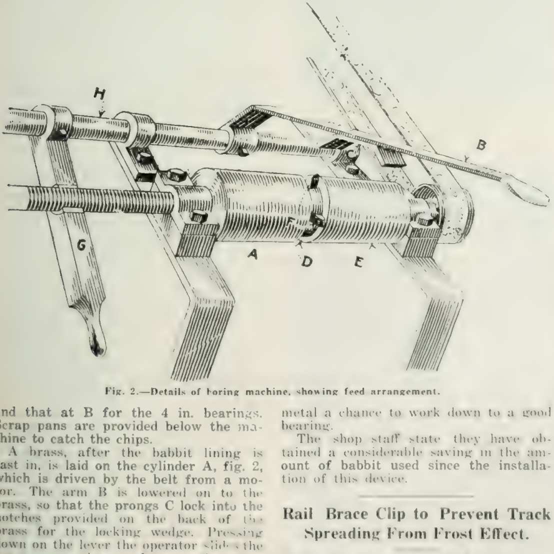

Fig. 2.—Details of boring machine, showing feed arrangement.

The shop staff state they have obtained a considerable saving in the amount of babbit used since the installation of this device.

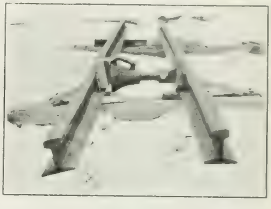
Rail Brace Clip to Prevent Track Spreading From Frost Effect.

By D. McIntyre, Roadmaster, C.P.R., Fort William, Ont.

The northern railways of America experience great difficulty in keeping their track in surface and line, due to the frost heaving. Heaving of track is caused by the freezing, and consequent expansion, of water which is absorbed and retained by the earth and ballast, and, therefore, we have the opinion of the best experts, that any improvement in drainage will greatly reduce the amount of shimming necessary.

When the track becomes uneven, and out of surface, it is then necessary to shim it up, by using small wooden blocks of various thicknesses. It must be remembered that the depth of the spike in the tie diminishes as the thickness of the shim increases, accordingly, the holding power of the spike is reduced, and, owing to this, the side thrust of the trains has a greater tendency to bend the spikes, which causes the spreading or widening of the gauge. This is where the roadmasters and section foremen have to keep a close tab on work of this kind, and keep it braced up in the best possible manner, but in spite of all their efforts they will very often find the track or shims spreading, as it is impossible to keep a very accurate surface.

In order to assist and overcome the difficulties of track spreading, I have been experimenting on a new rail brace clip. As the accompanying illustration shows, I have placed two rails on a tie, and placed shims under them, and spiked them down as though they were in a track. I have placed a standard brace on one side, and on the opposite side have placed another of the same type, using my rail brace clip, and to demonstrate the resisting power of the clip against the standard way of bracing, I have used an ordinary screw jack, so as to give pressure on the flange of the rails, as though it were the side pressure of a swaying train. It will be noted that the standard brace has given out, and the rail turned over, while the opposite side, with the rail brace clip, did not budge. This is due to the fact that the clip has the full service of the spikes, and in gauging the surface of the end of the brace, whereas, on the other hand, with the standard brace, only half of the spike is in the tie, and when the pressure is brought to bear on the brace, the spikes cut into the wood and also bend back. This rail brace clip is made of malleable iron, or pressed iron, with two little tits projecting out from the end of it, which is inserted into the end of the wooden brace. This holds the brace in place and keeps it from working off. The principal advantage of this clip is that it only takes half the material to make it, as compared with the standard type, and it can be used on or off shims, as desired.



Railway Lands Patented.—Letters patent were issued during February, respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta, and British Columbia, as follows:

	Acres
Calgary and Edmonton Ry	[illegible]
Canadian Northern Ry	[illegible]
Canadian Northern Alberta Ry	[illegible]
Canadian Northern Manitoba Ry	[illegible]
Canadian Pacific Ry grants	[illegible]
Canadian Pacific Ry roadbed and station grounds	[illegible]
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	[illegible]
Total	[illegible]

Canadian National Railways Construction, Betterments, Etc.

Halifax and South Western Ry.—A press report states that large quantities of ties have been distributed along the line, and preparations made for other work. It is reported that as soon as the improvements are completed a daily express service will be put in operation between Halifax and Yarmouth.

McGivney-Fredericton Improvements—A press report of Apr. 5 states that the work of bringing the Fredericton-McGivney Jct., section of the old Canada Eastern Ry., up to a standard sufficient for it to be used as part of the projected route from the National Transcontinental Ry. into St. John, over the St. John and Quebec Ry., is to be done by the railways own staff. The only work to be let by contract will, it is reported, be concrete and bridge work.

Moncton-Truro Second Track—A Levis press report of Apr. 16, that W. A. Kingstand, Assistant General Manager, Eastern Lines, Canadian National Railways, stated here that the section's construction programme will include the building of a second track between Moncton, N.B., and Truro, N.S., and that the work will be proceeded with this year.

St. Charles River Bridge, Quebec—The work on the superstructure of the bridge across the St. Charles River, had been so far completed as to allow the operation of trains across it, Apr. 7. It is expected that it will be completed and fully opened for traffic by June 1.

St. Malo, Quebec, Shop—A press report of April 22 states that tracklaying from the rain line to the St. Malo shops was nearing completion. Replying to a question in the House of Commons, Apr. 10, the Minister of Railways said that work on the shops will be started as soon as arrangements can be made, and it is expected that the Canadian National Railways will be in a position to handle some repairs there during the coming summer, and to have the shops in full operation by the end of the year.

Donnacona Washout.—The Quebec Board of Trade, having taken up recently the question of the rebuilding of 14 miles of track on the Canadian Northern from Donnacona east to Quebec, which was washed out some time ago, J. E. Morazain, General Superintendent Quebec, replied as follows: "It is the intention to commence repairs to this line as soon as weather conditions will permit, that is when the frost is out of the ground, but as there are several miles of grading washed away, it will take several weeks after work is started before the line can be opened to traffic. In the meantime we propose to resume running the Quebec-Shawinigan Falls local via the C.G.R. line, commencing at change of time table, which should take effect early in June."

Grenville, Que., Cut Off—Tenders were received recently for fencing, clearing, grading and the construction of culverts for about one mile of line to connect the Canadian Northern Ontario Ry., and the Canadian Northern Quebec Ry., near Cushing, Argentenil County, Que.

Central Station, Ottawa—Replying to a question in the House of Commons, Apr. 10, the Minister of Railways said plans in connection with the entrance of Canadian National Railways trains into the Central Station, at Ottawa, without running backward when leaving for Montreal, were under consideration.

Port Arthur, Coaling Plant—A press report states that it is proposed to enlarge the coal handling plant at the south end of Port Arthur, Ont., and to modernize the equipment.

Grand Beach Improvements—A Winnipeg press dispatch states that considerable improvements will be made at Grand Beach, for the accommodation of summer residents, prior to the opening of the season in June.

Saskatoon Locomotive House—A press report states that the locomotive house at Saskatoon, Sask., is to be removed to a new site north of the city.

Extensions in Prairie Provinces—Tenders were received up to Apr. 15 for building of the following lines:—Amaranth extension; Lampman-Peebles line, Melfort north easterly, Eston, south easterly; Turtleford extension; Humboldt-Melfort; Luck Lake extension, Swift Current extension, Oliver-St. Paul extension, Acadia Valley line, and Hanna-Medicine Hat line, and contracts for grading and culverts have been let as mentioned above.

The Amaranth extension is an extension of some 35 miles of the Delta branch from Portage la Prairie to the west shore of Lake Manitoba, now terminating at Amaranth. Jno. W. Stewart & Co., Winnipeg, contractors.

The Swift Current extension is continuing for some 25 miles the Avonlea-Gravelbourg line from Gravelbourg, Sask., toward Swift Current, Gibbs Bros., Lumsden, Sask., are the contractors.

Lampman - Peebles line — Lampman, Sask., is on the Maryfield extension, where it intersects the Bienfait branch, and Peebles is a station on the Prince Albert line. The extension is to be from Peebles northerly to some 20 miles. Canadian Construction Co., Winnipeg, in which W. A. Dutton is principally interested, are the contractors.

Eston southeasterly, Eston, Sask., is at mileage 84.4 on the line from Elrose Jct., terminating at Glidden, 104 miles from Elrose Jct. A branch is to be built southeasterly from Eston for 35 miles at present. J. W. Stewart and Co., Winnipeg are the contractors.

The Humboldt-Melfort line covers the completion of the branch now in operation from Melfort southerly to St. Brieux, Sask., to Humboldt, 32 miles. J. W. Stewart and Co., Winnipeg, are the contractors.

The Melfort northeasterly line, of some 30 miles, is to traverse the Carrot River County. Jno. W. Stewart & Co., Winnipeg, are the contractors.

The Luck Lake extension is continuing for some 20 miles, a 9 mile branch from Elrose Jct., now terminating at Dunblane. Western Construction Co., North Battleford, Sask., are the contractors.

The Hanna-Medicine Hat line leaves the Saskatoon-Calgary line at Bonar, about seven miles east of Hanna, Alta., and was graded to the bank of the Red Deer River during 1918. Seventy-two miles more are to be built towards Medicine Hat. Canadian Construction Co., Winnipeg, are the contractors.

The Turtleford extension is a continuation for some 20 miles of a 56-mile branch line from North Battleford, now terminating at Turtleford, Sask. Western Canada Construction Co., North Battleford, Sask., in which J. W. Millar is principally interested, are the contractors.

The Acadia Valley line, of some 25 miles, is to be built from the Saskatoon-Calgary line, at or near Alsask, Alta. Grant Smith, Macdonnell & Co., Vancouver, are the contractors.

Oliver-St. Paul de Metis Extension—Grading has already been done on 100 miles of this line from Oliver, Alta., towards St. Paul de Metis, and track has been laid on 44 miles of this. Some 22 miles further are to be built this year to St. Paul de Metis. J. W. Stewart & Co., Winnipeg, are the contractors.

Kamloops-Vernon-Lumby Branch Contract—We are officially advised that a contract has been let to John W. Stewart and Co., Winnipeg, for grading, building and culverts on a line from Kamloops via. Armstrong and Vernon to Kelowna, with a branch line from near Vernon to Lumby, B.C.

Surveys for this line were made in 1913, the total length of the line, including the branch from Vernon to Lumby being 140 miles.

Vancouver Island—The British Columbia Legislature has passed an act providing for the sale of an additional 26.42 acres of the Songhees Indian reserve at Victoria at $8,500 an acre, to the Canadian Northern Pacific Ry., for terminal purposes. The passing of this act was necessary for the confirmation of an understanding arrived at some time ago.

A press report stated that the projected extension of the Victoria-Alberni line, into the Nitinat district, will be undertaken at an early date.

New Brunswick Railway Finances.—The estimates of revenue and expenditure for the current financial year were laid before the New Brunswick Legislature recently. The following items were included in the revenues from railways: Taxes, $57,200; earnings from Southampton Ry., $1.500. The St. John and Quebec Ry., from which there was an estimated income of $100,000 in 1918, is not looked upon to produce anything for this year, neither is anything provided in the way of interest, as compared with $187,299.48 provided in 1918. The Provincial Secretary, in referring to the estimates stated that the cost of the St. John and Quebec Ry. to Mar. 1 had been $3,945,021.12.

Timiskaming and Northern Ontario Ry.—S. B. Clement, Chief Engineer and Superintendent of Maintenance, in his report for the year ended Oct. 31, 1918, states that owing to labor shortage and general conditions, the building of a short revision at mileage 80.8 was not gone on with during the year, but was postponed until a more favorable opportunity. Track laying on the division, mileage 63 to 66.5, was postponed, owing to the shortage in the supply of rails, but will be gone on with during 1919, as also will be the tracklaying on the revision between mileage 54 and 55.

Canadian Northern Ry.—There has been deposited with the Secretary of State at Ottawa, duplicate original of a trust mortgage made between the C. N. R. Co., Lloyd's Bank, London, Eng., and the Dominion of Canada, securing certain 5% guaranteed secured gold notes of the company.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Eastern Ry.—J. M. ALTON has been appointed Treasurer, vice E. W. Shell, resigned. Office Sault Ste. Marie, Ont.

T. F. RAHILLY, heretofore Superintendent, has been appointed Comptroller, vice M. S. Connor resigned. Office Sudbury, Ont. The position of Superintendent has been abolished.

Canadian National Rys.—C. D. BOVARD, heretofore acting Assistant Superintendent, Moncton, N.B., has been appointed Terminal Agent there.

R. F. CLARK, General Agent, Chicago, Ill., has been appointed General Agent, Chicago and district, with supervision of Canadian National Rys. traffic in that territory. J. A. Boak, Western U.S. Agent, Canadian Government Rys., Chicago, having resigned. Office 64 West Adams St., Chicago, Ill.

W. F. CONNAL has been appointed Mechanical Engineer, Toronto, vice H. D. Cameron, who resigned recently, to enter Robinson Connector Co.'s service at Montreal.

W. A. CUNNINGHAM, heretofore Division Freight and Passenger Agent, Halifax and South Western Ry., Halifax, N.S., has been appointed Export and Import Freight Agent, Canadian National Rys. Office, Montreal.

H. A. DIXON, heretofore District Engineer, Pacific District, Vancouver, B.C., has been appointed Chief Engineer, Western Lines, vice A. T. Fraser, accidentally killed. Office, Winnipeg.

G. A. FERNLEY, heretofore Commercial Agent, Montreal, has been appointed Travelling Freight Agent, there.

M. HENCHY, Locomotive Foreman, District 1, Eastern Lines, Chaudiere, Que., has been appointed acting Assistant Master Mechanic District 5, Eastern Lines, Edmundston, N.B., during the absence on leave of H. D. MacKenzie.

S. J. LUPTON has been appointed Chief Boiler Inspector, Western Lines, in charge of all boiler work. Office, Winnipeg.

V. M. MILTON has been appointed Boiler Inspector, Winnipeg, reporting to the Mechanical Superintendent, Western Lines. Office, Winnipeg.

W. D. STEWART, heretofore Assistant General Storekeeper, Western Lines, Canadian Government Rys., Transcona, Man., has been appointed acting General Storekeeper, Eastern Lines, Canadian National Rys., vice L. C. Thompson, General Storekeeper, appointed General Storekeeper Canadian Car and Foundry Co. Office, Toronto.

W. WALKDEN has been appointed Bridge Engineer, Western Lines. Office, Winnipeg.

Canadian Pacific Ocean Services Ltd.—F. G. FRIESER, heretofore Export Freight Agent, C.P.R., New York, has been appointed General Agent, Freight Department. Office, 1548 Woolworth Building, New York, N.Y.

Canadian Pacific Ry.—J. D. ALTIMAS, heretofore Car Accountant, has been appointed Assistant General Superintendent of Car Service. Office, Montreal.

A. BROWN has been appointed Division Master Mechanic, Nelson, B.C., vice G. H. Nowell, transferred.

JOHN BURNS, heretofore Assistant Works Manager, has been appointed Works Manager, Angus shops, Montreal.

John Burns,
Works Manager, Angus Shops, Canadian Pacific Railway.

E. N. Todd,
General Freight Agent, Eastern Lines, C P R.

H. G. DRING, heretofore General Passenger Agent, London, Eng., has been appointed European Passenger Manager. Office, 62 Charing Cross, London, Eng.

G. O. EVANS, Car Service Agent, Calgary, Alta., is reported to have resigned.

J. W. KEPPEL, heretofore Locomotive Foreman, Kenora, Ont., has been appointed General Foreman, Vancouver, B.C., vice J. D. Muir, transferred.

J. D. MUIR, heretofore General Foreman, Vancouver, B.C., has been appointed Assistant Works Manager, Angus Shops, Montreal.

G. H. NOWELL, heretofore Division Master Mechanic, Nelson, B.C., has been appointed Division Master Mechanic, Revelstoke, B.C.

W. PHELAN has been appointed Car Accountant, Montreal, vice J. D. Altimas, promoted.

S. F. PIERCE, heretofore Manager, Hotel Palliser, Calgary, Alta., is reported to have been appointed Manager, Royal Alexandra Hotel, Winnipeg.

R. F. RICHARDSON, heretofore Local Freight Agent, Calgary, Alta., has been appointed Local Freight Agent, Edmonton, Alta., vice S. C. Graham, transferred.

Caraquet & Gulf Shore Ry.—F. B. BURTON, Superintendent, Bathurst, N.B., is now in direct charge of this line, consequent on the death of W. B. Cronk, Vice President.

Grand Trunk Ry.—N. P. CLARKE, heretofore in the accounting department, Chateau Laurier, Ottawa, has been appointed Manager, Highland Inn, Algonquin Park, Ont.

W. CULLIGAN has been appointed Chief Dispatcher, Districts 20 and 21, London Division, Ontario Lines, vice W. K. Rogers, and the dispatching office for these districts has been moved from Brantford to Stratford, Ont.

J. B. FRANKLIN has been appointed Supervisor of Track, District 5, Montreal Division. Office, Brockville, Ont.

H. R. McLENNAN, Trainmaster, District 20 and 21, London Division, Ontario Lines, has had his office moved from Brantford to Stratford, Ont.

C. S. OGILVIE, formerly Assistant Engineer, Belleville, Ont. and latterly in military service, has been appointed Assistant Engineer, Ottawa Division, vice H. Mowat, assigned to other duties. Office, Ottawa, Ont.

W. A. STOTT has been appointed Road Foreman of Locomotives, Districts 2, 3 and 4, Eastern Lines, vice W. H. Wheatley transferred.

W. H. WHEATLEY, heretofore Road Foreman of Locomotives, Districts 2, 3 and 4, Eastern Lines, has been appointed Road Foreman of Locomotives, Montreal Terminals, vice E. S. McMillan assigned to other duties. Office, Turcot, Que.

Grand Trunk Pacific Ry. System.—W. P. HINTON, Vice President & General Manager, G.T.P.R. Co., and its subsidaries, continues in that position for the companies, and is acting as General Manager under the Receiver, the Minister of Railways and Canals. With the Minister's approval, he has opened an office in the Railways Department, at Ottawa, where he is represented in his absence by S. P. PORTER, heretofore Executive Agent of the company, at Regina, Sask., who is acting as his assistant in all matters pertaining to the receivership.

H. H. HANSARD, Solicitor, G.T.P.R. Co., has been delegated to act as Solicitor to the Receiver, to assist the latter in all legal matters pertaining to the receivership. Office, Railways Department, Ottawa.

New York Central Rd. (U.S.R.A.)—F. M. BYROM, General Agent, Utica, N.Y., has had his jurisdiction extended to cover all stations on the Adirondack Division, including Montreal. All matters pertaining to passenger traffic, forwarding directly to A. I. Miller, General Agent, Montreal, should be addressed to the General Agent at Utica. The company's general agency and ticket office, at [illegible] St. James St., Montreal, has been closed, and the New York Central is now represented in the Montreal consolidated ticket office, 248 St. James St., which is in charge of W. De W. Stott, Agent.

Pacific Great Eastern Ry.—G. E. MACDONALD, of MacDonald-Marpole Co. Ltd., Coal Merchants, etc., Vancouver B.C., has been appointed General Manager, vice G. L. Courtney, who has resigned recently. Office, Vancouver, B.C.

Quebec Land Grants to Railways.

The Quebec Legislature has authorized grants of land to aid the construction of the following railways:—

Quebec Central Ry.—From near Scotts Station on its main line, to the National Transcontinental Ry., near St. Jean Chrysostome, 20 miles, 2,000 acres a mile.

St. Francis Valley Ry.—In lieu of the grant voted in 1914, 2,000 acres a mile from Stanstead to St. Francis du Lac, 95 miles, and a similar grant for St. Bonaventure to Sorel, 25 miles.

Rouge River Ry.—From Grenville, Argenteuil County, to the C.P.R. in Labelle County, 80 miles, 2,000 acres a mile. Subsidy may be applied to the section already built from Huberdeau to the Canadian china clay mines, 8 miles, and to its immediate extension to St. Remi d'Ambrose, Labelle County.

Shefford, Bagot and Missisquoi Ry.—From the Vermont-Quebec boundary in St. George de Clarenceville, to the Intercolonial Ry. between Bagot and St. Eugene, 75 miles, 2,00 acres a mile.

Canada and Gulf Terminal Ry.—From the present terminal at Matane through the interior of the Gaspe peninsula to Gaspe Basin, 190 miles, 2,000 acres a mile, in lieu of grant voted in 1914.

Timiskaming or Kipawa to Des Quinze River.—To a company building a line from the C.P.R. line now terminating at Timiskaming or Kipawa, via Ville Marie to the Riviere des Quinze, 100 miles, 4,000 acres a mile.

Belle River to Lake Kamagama.—To a company building a line from the Kiask Falls of the Belle River southerly to Amos, on the National Transcontinental Ry., and thence to Lake Kamagama, between 80 and 100 miles, 2,000 acres a mile.

The Toronto Globe recently said that the Quebec Legislature had voted "a grant of 2,000 square miles per mile of railway track laid". Of course acres should have been stated instead of square miles. The difference between the two is a matter of 1,279,000 acres a mile of line.

The Crossen Car Co., in pursuance of the terms of the mortgage deed of Jan. 2, [illegible] proposes to redeem the whole of the [illegible] first mortgage bonds which may be outstanding July 2 at 105% of par value, with accrued interest. In case of the neglect of bondholders to deposit their bonds for redemption by the date mentioned, the company will deposit the moneys so payable in the Montreal Trust Co., which shall constitute a discharge of the same.

Canadian Pacific Railway Honor Roll 42.

Baker, Arthur Jones	Carman	West Toronto	Wounded
Barker, William C.	Yard foreman	Red Deer	Gassed
Bartholomew, Alfred	Waiter	B.C. Lake & River Service	Wounded
Blacklock, Philip U.	Clerk	Montreal	Killed in action
Bowles, Augustin	Helper	Field	Wounded
Brickwood, Charles H.	Wiper	Brandon	Wounded
Brooks, Harry	Apprentice	Winnipeg	Wounded
Brown, Alfred Stanley	Chargeman	Kingston	Killed in action
Brown, Nelson Alex	Tie and timber inspector	Cranbrook	Presumed dead
Cameron, James	Yardman	Winnipeg	Wounded
Catchpole, William F.	Trimmer	Smith's Falls	Wounded
Cromarty, Thomas	Clerk	Vancouver	Wounded
Davis, Fred	Yardman	West Toronto	Died of wounds
DeWitt, Award W.	Trainman	Brownville Jct.	Killed in action
Dorward, James C.	Car cleaner	Winnipeg	Presumed dead
Duncan, James	Clerk	Vancouver	Wounded
Evans, Robert John	Loco. fireman	East Calgary	Wounded
Fisher, Frederick J.	Machinist	Winnipeg	Killed in action
Fitzsimmons, Hugh H.	Yardmaster	Frank	Wounded
Foster, Robert T.	Ditchrider	Strathmore	Died of wounds
Fraser, Thomas	Clerk	Ottawa	Died of wounds
Galbraith, William M.	Checker	MacLeod	Wounded
Hallam, John Edgar	Waiter	B.C. Coast Service	Wounded
Harrison, David	Clerk	Montreal	Wounded
Henderson, Allen	Car-wheel borer	West Toronto	Wounded
Hill, William	Trainman	Smith's Falls	Wounded
Jack, Charles Henry	Operator	Cobden	Wounded
Jeffs, Joseph	Loco. fireman	Regina	Killed in action
Judge, Thomas Roy	Clerk	Oshawa	Wounded
Laurie, William	Car checker	Cranbrook	Wounded
Lawson, James W.	Clerk	Fort William	Killed in action
Leahy, Michael	Bridgeman	Winnipeg	Wounded
Leaming, Charles	Trainman	Minnedosa	Wounded
McGillivray, Angus D.	Operator	Montreal	Wounded
McNabb, Mervin C.	Brakeman	Medicine Hat	Killed in action
Machin, James Edwin	Car checker	West Toronto	Died of wounds
Middlemiss, Henry	Clerk	Winnipeg	Wounded
Milne, John	Carman	Estevan	Wounded
Morgan, Arthur J.	Freight checker	Vernon	Killed in action
O'Brien, John	Brakeman	Chapleau	Wounded
Orrell, Samuel	Steamfitter's helper	Angus	Wounded
Osborne, Gordon	Apprentice	Angus	Gassed
Patterson, Henry	Constable	Ontario District	Wounded
Perry, Stanley F.	Locomotive man	Brandon	Wounded
Pulham, Cecil W.	Loco. fireman	B.C. District	Wounded
Reeves, Frederick J.	Delivery man	West Toronto	Wounded
Reed, Ernest	Watchman	Colonsay	Wounded
Richbell, Edwin	Locomotive man	Winnipeg	Wounded
Robertson, John P.	Locomotive man	Medicine Hat	Killed in action
Robertson, Walter B.	Storeman	Winnipeg	Presumed dead
Scott, Arthur	Fireman	Winnipeg	Wounded
Sefton, Harry	Clerk	Calgary	Killed in action
Simmonette, Thomas	Loader	Lethbridge	Wounded
Slade, George S.	Operator	Toronto	Wounded
Stephen, William	Sty. fireman	North Bay	Died of wounds
Stitt, Hubert B.	Assistant agent	Didsbury	Wounded
Unwin, Lawrence B.	Accountant	Schreiber	Wounded
Van Mourick, Adrian	Messenger	Vancouver	Wounded
Wilcox, Harry	Timekeeper	Montreal	Killed in action
Wiskar, S.	Teamster	Strathmore	Wounded

The following casualties to members of the European staff on active service have been reported:

Boddington, W.	Clerk	London	Killed in action
Cope, Wilfred	Clerk	London	Killed in action
Cowie, Edward	Clerk	Glasgow	Killed in action
Hutchison, Geo. H.	Clerk	Glasgow	Killed in action
Pedler, Albert	Clerk	Liverpool	Missing
Prevel, James	Clerk	London	Killed in action
Townley, James	Clerk	Liverpool	Killed in action
Van Ackeren, Joseph	Apprentice	Antwerp	Killed in action
Wilson, John	Clerk	Glasgow	Killed in action

Shown on Honor Lists to date: Killed, 895; wounded, 1,911; total, 2,806.

The Elimination of Level Crossings.

The Dominion Parliament has passed an act providing for the extension for 10 years of the act passed in 1909 for the elimination of level crossings on railways. The act provdes for the appropriation of $200,000 a year for the next 10 years to aid actual construction work for the protection, safety and convenience of the public, in respect of highway crossings at rail level in existence on April 1, 1909, and the Miniser of Railways stated that it was not intended to alter the procedure of distributing the money, but simply to extend for 6 years the time of the operation of the present act. Under the existing law the Board of Railway Commissioners may order the elimination of any crossing by the erection of a bridge or the construction of a subway and apportion the cost between the municipality and the railway company, and may direct the payment of a sum from the amount granted by parliament. In the consolidation Railway Act, provision is made to increase the government contribution to 25% of the actual construction cost, not to exceed in any one case $15,000, with certain limitations as to the number of crossings dealt with in one municipality in the year. It was thought well to bring in the present bill pending the passing of the new consolidated Railway Act. The bill does not apply to the Canadian Government Railways.

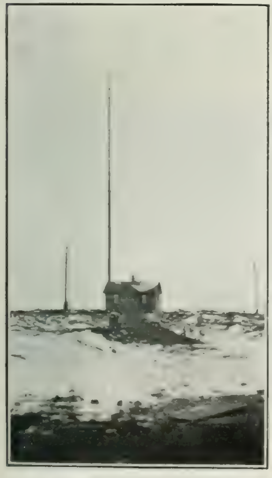
During the discussion it was stated that the sums expended during the last 10 years were not very large, being as follows: 1909-10, $70; 1910-11, $69,109.18; 1911-12, $7,643.14; 1912-13, $20,807.38; 1913-14, $39,968.11; 1914-15, $92,099.48; 1915-16, $47,079.99; 1916-17, $46,630.53; 1917-18, $13,740.85; 1918-19 (to Mar. 12), $2,336.85.

The G.T.R. Shops at Montreal, Ottawa, Toronto, Stratford and London, Ont., now run 40 hours a week, viz.: 5 days of 8 hours each and not on Saturdays.

Wireless Telegraph Direction Finding Stations Erected by the Canadian Naval Service Department.

Of the considerable part played by wireless telegraphy in the war, little has been made public, for obvious reasons. To the average individual, wireless telegraphy is broadly associated with the idea of transmission and receipt of messages without intervening wires, and in the main, this undoubtedly is its chief function. There have, however, been important developments in the use of wireless telegraphy, in which the transmission and receipt of messages is not the primary object, and one of these is the wireless telegraph direction finding station.

Instrument Table, Canadian Government Wireless Telegraph Direction Finding Station, Canso, N.S.



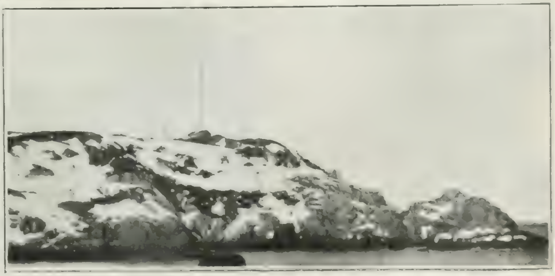
Mast and Operating House, Canadian Government Wireless Direction Finding Station, Cape Race, Newfoundland.

At an ordinary wireless telegraph station, there are no means of determining the direction from which incoming signals are being received, and, in consequence, unless the sending station happens to be a known shore station, it is usually impossible to determine the direction of the signals from the signals themselves. The outstanding advantages arising from the ability to determine the direction of incoming signals, with a reasonable degree of accuracy, are mainly, that it provides a means of locating the position or bearing of hostile craft, should they happen to be transmitting on their wireless equipment within the range of the direction finding stations, and that it provides a valuable aid to navigation, as it enables ships fitted with ordinary wireless telegraph gear to determine their position on the chart, or their bearing on the station, this information being of the utmost importance to a vessel approaching a coast either in a fog or under doubtful reckoning.

The possibility of utilizing specially constructed wireless telegraph stations for the purpose of determining the direction of incoming signals received considerable attention in some quarters before the war, and efforts were made to produce apparatus and stations of sufficient accuracy to warrant general use, but, owing to the difficulties encountered, the success was not very marked. Upon the opening of hostilities, efforts were concentrated more upon the development of this type of station, with very gratifying results. The system used is the invention of Bellini and Tosi, two Italians, and consists primarily of two looped aerials at right angles, and means for resolving the effects produced, so that the direction of the incoming signal may be determined.

Dr. Bellini was born at Foligno, Italy, April 13, 1876, and educated at Naples University. In 1901 he was appointed Electrical Engineer to the Royal Italian Navy, and in 1906 he became Chief of the Naval Electrical Laboratory at Venice, in which capacity he carried out research work, dealing with the employment of wireless telegraphy on warships and submarines. Later, in conjunction with Capt. Tosi, he invented the Radiogoniometer, an apparatus for directive wireless telegraphy. In 1910 the Bellini-Tosi system was installed at the Boulogne-sur-Mer station of the French post office.

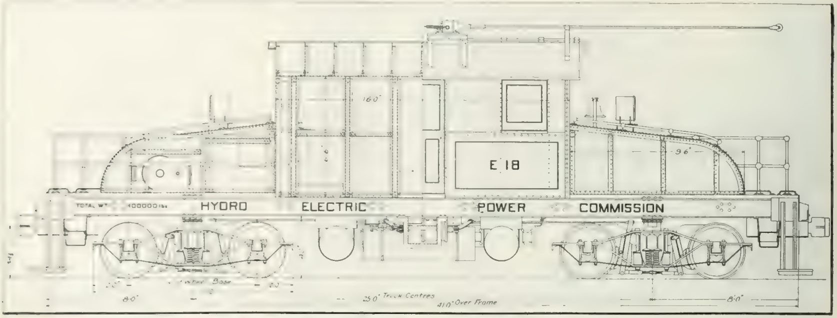
During hostilities the Canadian Naval Service erected four of these stations on the Atlantic coast, with the object of using them as a means of locating hostile craft, and as an aid to navigation of His Majesty's ships, with the ultimate idea of placing them, after hostilities, at the disposal of all shipping, as an aid to navigation. This latter has already been done, and it is anticipated that their successful operation will be an extremely valuable assistance to ships navigating in the waters about the Atlantic coast, particularly during the summer, when dense fogs occur from time to time. These four Canadian stations have been erected at Cape Sable, at the southern end of Nova Scotia: Chebucto Head, at the mouth of Halifax Harbor; Cape Canso, at the entrance to Chedabucto Bay, and Cape Race, Newfoundland. From any or all of these stations a ship may obtain a bearing while still at a distance of several hundred miles from the coast. From the several bearings she would be able to determine her position on the chart. Experience gained during hostilities tends to show that bearings obtained are accurate to within less than two degrees, and that as the personal handling of the apparatus becomes more experienced the accuracy continues to improve.



Canadian Government Wireless Direction Finding Station, Cape Sable, N.S.

During the summer, the whole of the Atlantic coast is occasionally fog bound for days together, and during these periods it is extremely difficult for a ship to determine her position with the accuracy necessary to safety, and in consequence, in spite of all precautions, several valuable ships run ashore each year. It is fully expected that the intelligent use of these direction finding stations will reduce these wrecks.

All these stations are now open to commercial shipping and information to this effect is being promulgated in notices to mariners throughout the world. The service for the present will be given free of charge to the ship, but it may, at some future date, be found necessary to make a nominal charge to avoid abuse.



Electric Locomotive for Hydro-Electric Power Commission of Ontario.

The above elevation plan is of one of the six additional electric locomotives, which the Hydro-Electric Power Commission of Ontario is having built, for use on its Niagara power development construction railway, which were fully described in Canadian Railway and Marine World for April, page 204.

E. W. Beatty as Chancellor of Queen's University.—The Queen's University Alumni Association, of Montreal, entertained E. W. Beatty, K.C., President C.P.R., who has been elected Chancellor of the University in succession to the late Sir Sandford Fleming, at a banquet in Montreal, Apr. 8. The new chancellor, on rising to respond to the toast of the University, was greeted with a newly improvised verse:—

Eddie Beatty's the Chancellor
Sweedle de we dum bum.
We'll all get passes now, by Gar.
Sweedle de we dum bum.
The C.P.R. and Queen's, you see
Sweedle we [illegible]
Are the greatest things in the countree
Sweedle we dum bum.

New Brunswick's Small Railways.—The N.B. Legislature has under consideration a bill providing that any railway company within its legislative authority, which has no statutory power to sell its line, may with the approval of the Provincial Government, sell its railway and undertaking to the Dominion Government. As it has been represented that certain lines which have been acquired, and others that may be acquired, by the Dominion, have not respectively, a right of way of a definite width within clearly established boundaries, the bill authorizes the Provincial Government upon such terms and conditions as may be advisable, to vest in such railways lands for a right of way of 66 ft. wide, and for station grounds and terminals 100 ft. wide.

J. G. Rutherford, C.M.G., one of the members of the Board of Railway Commissioners, Ottawa, has been offered the degree of Doctor of Veterinary Science, by Toronto University, and has accepted it.

Too Late for Classification.

Sydney vs. Rimouski for Landing Mails.—The postal authorities in London, Eng. are said to have stated, with regard to mail and passenger service via Sydney, N.S., which the Canadian Government is said to be considering, that tests made in 1905 and 1906 proved that mails transferred at Sydney and forwarded thence by rail, reached their Canadian destination a day earlier than by the St. Lawrence route, while passengers for the Maritime Provinces saved 48 hours compared with Rimouski.

Lights and Fog Signals.—The Marine Department, Ottawa, has issued three lists of lights and fog signals, corrected to April 1, as follows: 1. Atlantic coast, including Gulf of St. Lawrence to head of ocean navigation. 2. West of Montreal, and east of British Columbia. 3. Pacific coast and British Columbia rivers and lakes.

Electrically Illuminated Welcome Sign Over the Ticket Offices in the C.P.R. Windsor St. Station, Montreal.

Toronto University Memorial.—Among the principal subscribers to the memorial to be erected by Toronto University, to its graduates and students who were killed in the war, are Sir Edmund Osler, one of the C.P.R. directors, $25,000; R. W. Leonard, C.E., formerly commissioner, National Transcontinental, $25,000; E. W. Beatty, Vice President, C.P.R., $5,000.

The Three Rivers Traction Co., Three Rivers, Que., has ordered 2 one-man, single truck cars, from Ottawa Car Manufacturing Co. The underframe is of wood construction reinforced with side sill plates 18 x ⅜ in., roof of arch type, interior finish cherry, folding doors and steps with National Pneumatic Co.'s control, pantasote curtains, Consolidated Car Heating Co.'s electric heaters with thermostatic control, Electric Service Supplies Co.'s golden glow headlights, compensating series lamp fixtures, electric buzzer system. The length over body will be 21 ft. length over bumpers 32 ft. 2 in., front vestibule, 6 ft., rear vestibule, 4 ft.

The Toronto Ry.'s noncompliance with the Ontario Railway and Municipal Board's order respecting the putting into service of an additional 200 cars, came before the board at the end of March, and was adjourned sine die, pending the result of the appeal to the Imperial Privy Council as to the Board's jurisdiction and powers to inflict a fine for failing to carry out its order.

Answers to Questions About the Canadian National Railways.

During the House of Common's current session, a large number of questions about the Canadian National Railways and their management have been asked by members.

The Minister of Railways gave the following information in answer to questions by A. B. Copp, M.P., for Westmoreland, N.B.:

The board consists of 11 directors, their names, dates of appointment, respective occupations immediately prior to appointment, and their places of residence being as follows: D. B. Hanna, Dec. 26, 1914, railway official, Toronto; Major Graham A. Bell, Nov. 5, 1916, Assistant to Minister of Railways and Canals, Ottawa; A. J. Mitchell, Sept. 6, 1918, railway official, Toronto; E. R. Wood, Sept. 17, 1916, banker and director various financial companies, Toronto; Robt. Hobson, Sept. 17, 1918, President, Steel Company of Canada, etc., Hamilton, Ont.; F. P. Jones, Sept. 17, 1918, Vice Chairman, War Trade Board and Vice President, Canada Cement Co., Montreal; R. T. Riley, Sept. 18, financier and managing director trust and loan companies, Winnipeg; C. M. Hamilton, Sept. 18, 1918, farmer, McTaggart, Sask.; Sir Hormisdas Laporte, Nov. 22, 1918, Chairman War Purchases Commission and merchant, Montreal; Thos. Cantley, Nov. 22, 1918, Chairman, Nova Scotia Steel & Coal Co., New Glasgow, N.S.; A. P. Barnhill, Nov. 22, 1918, barrister, St. John, N.B.

The directors, with the exception of Messrs. Hanna and Mitchell do not give their full time to railway. The directors receive no salaries as such, but receive an annual honorarium of $2,000 each. Messrs. Bell, Hanna and Mitchell were appointed because of their long experience in various financial and business enterprises. There are no assistants, secretaries, stenographers or other officials attached to the board of directors.

Passenger and Freight Terminal Maintenance.

By D. McCooe, Superintendent of Track, G.T.R., Toronto.

The three most important things to consider in the maintenance of tracks in passenger and freight terminals may be classified as follows: Proper organization, supervision, and best methods.

The force should be sufficient to maintain all the tracks to a uniform standard of requirements the year around, this to be governed by local conditions and the volume of traffic. The terminal or yard should be divided into sections in charge of a foreman with a small gang (4 to 6 men) to take care of the ordinary maintenance work and policing of tracks. There should also be one or more large gangs of 25 or 30 men, similar to, if not, an extra gang, in charge of a competent foreman, to do all new work, such as relaying rail, rebuilding ladder tracks and other similar work, where necessary throughout the terminal.

The efficiency of foremen depends largely on the supervision and the instructions received from the roadmaster or supervisor, and it is their duty to see that foremen are supplied with the proper tools and the necessary material, and that their orders are obeyed.

The best method for doing the work is to set a standard and adhere to it, and by making use of all practical labor saving devices, of which there are many. The reclamation of small track material, such as spikes and bolts, can be taken care of more economically by assembling them as they accumulate in the terminals, where they can be sorted out, and spikes straightened by hand or machinery. This will get the material into service again that is fit for further use, thereby avoiding delays by letting it accumulate in larger quantities before shipping it to the reclaiming yard, and awaiting its return.

Terminals of 100 miles and over, or where the work justifies it, should have their own blacksmith and carpenter, to repair tools and do other miscellaneous work under the supervision of the maintenance department, instead of having it done by some other department. A regular work train is also necessary in a terminal of this class to handle and distribute material and to expedite the work.

Railway Lands Patented.—Letters patent were issued during March for Dominion Railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Alberta and Great Waterways Ry.	218.28
Calgary and Edmonton Ry.	2,535.14
Canadian Northern Ry	5,610.18
Canadian Pacific Ry.	13.86
Manitoba and Northwestern Ry.	152,73
Edmonton, Dunvegan and British Columbia Ry.	89.15
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	54,233.45
Total	62,852.79

Record Car Movement. — What is claimed to be the world's record for the greatest number of freight cars passing a given point in 24 hours is indicated in a report of conditions made by the Director General of U.S. Railroads to President Wilson. It is stated that in one day 9,531 cars passed Columbia, Penn., on the Philadelphia division of the Pennsylvania Rd. The division operates between Harrisburg and Philadelphia. The report states that 250,000 freight cars passed Columbia in one month. The average daily movement was 8,544 cars, an average of about 6 cars a minute.

The C.P.R. Social Club was formed at Winnipeg, Jan. 9, 1915, and is now reported to have 1,026 active members exclusive of about 300 members at present serving with the Canadian Expeditionary Force. Meetings are held fortnightly, when addresses on railway work and general topics are given by prominent men, and discussions follow. The club has a choral society which gives occasional concerts, and is arranging an athletic organization for the present year. The club quarters are in the Royal Alexandra Hotel. Jas. Bending is President, and J. F. Sprankling is Recording Secretary.

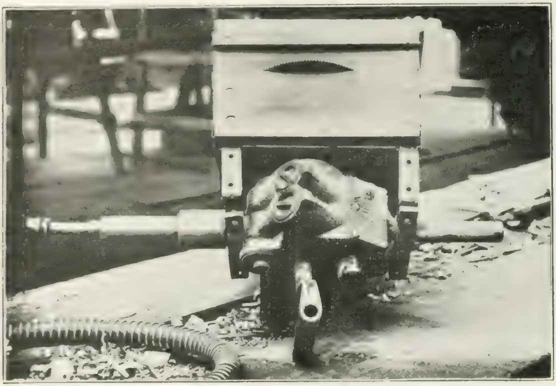
Geo. Walton. Passenger Trainman, C.P.R., Peterboro, in remitting his subscription, writes: "I feel that every railway man should have Canadian Railway and Marine World, for his information, and I will do everything possible to promote the circulation and subscription of the same."

The Great North Western Telegraph Co. has opened an office at Little Metis lighthouse, Que., and has closed its office at Arthur, Ont. The name of the office at Mattawin, Ont., has been changed to Glenwater.

The G.T.R. has stated a new sleeping car service, leaving Toronto 5.45 p.m. daily and arriving at the Pennsylvania Rd. Station in New York.

Cut-Off Saw for Car Work.

The accompanying illustrations show a cut-off saw, set up by J. Gardner, General Foreman, Passenger Car Shops, Canadian National Rys., Transcona, Man. The machine consists of a no. 3 air motor, fitted with a 9in. no. 17 gauge, and a 6 teeth to the inch saw. The rabbit in the box is ½ x 2 in., allowing for ½ x 2 in. strip to be nailed on the car, for the machine to ride on, the saw being set at the thickness of the sheathing to be cut. The machine is doing good work, and will cut off the side of a car in 10 minutes, and can also be used for cutting off box car roofs.



Cut-off Saw for Car Work.

The Railways and the War.

The Canadian Railway War Board authorized the withdrawal from Mar. 20, of restriction as to the granting of special rates for conventions. The question of withdrawing the restrictions as to excursion and other special rates is under consideration.

Transportation.—The transportation burdens due to the war rendered it necessary to depart from the usual practice by which railways in Canada were operated as single and independent units. The first step taken in that direction was an amendment to the Railway Act during the session of 1915-16, when, on the request of the Board of Railway Commissioners, the board was empowered to take traffic in a congested grain area from the line to which it was tributary, and hand it over to other lines at any intermediate points at which a transfer could or should be made.

The power thus conferred on the board has been used to a large extent. It has enabled the large grain production of the west to be marketed practically without loss, through the diversion of traffic to the route, irrespective of its ownership, which at the time was least congested; and it has enabled the transportation of grain and flour to Great Britain and the European Continent to be maintained at the greatest possible speed. Thousands of cars of grain grown in Canadian Northern prairie territory, have been thus diverted from congested Canadian Northern areas over the Canadian Pacific and Grand Trunk Pacific Railways. This practice, commencing with wheat, was extended to coal and then to the movement of other bulk commodities. In general, wherever it would afford quicker transportation, rerouting has been carried out. The result is that the Canadian lines, in so far as actual transportation is concerned, have been treated as a single unit and worked for the purpose of obtaining the best results.

Canadian Railway War Board.—After the entry of the United States into the war the great industrial and agricultural activity, together with the movement of troops, caused the U.S. railway lines and terminals to become blocked, and put an increased burden on the Canadian transportation systems. In order to provide a freer and more perfect coordination of the systems, the Canadian Railway Association for National Defence, now termed the Canadian Railway War Board, was formed. The board's activities have materially assisted the railways to cope with the problems created by the war.

Purchase of Equipment.—The Government has helped to bring about these results, particularly, by the purchase of 260 locomotive engines of various types and about 17,000 freight cars, a number of which are leased by the government to the railways which have not been in position to obtain satisfactory deliveries for their requirements.

Cut-off Saw for Car Work.

Canadian Northern Realities Ltd., which is incorporated by the Dominion Parliament, has been licensed to do business in Ontario, but not to use a larger amount of capital than $40,000. A. J. Reid, K.C., General Solicitor, Canadian National Rys., Toronto, has been appointed its attorney.

St. John and Quebec Ry. Enquiries Expenses.—The cost of the arbitration in connection with the claims of A. R. Gould against this railway were $3,372.50, and the cost of the Steven's inquiry into matters connected with the railway were $4,259.96. These figures were stated in the New Brunswick Legislature recently in answer to questions.

The C.P.R. s.s. Empress of India, which was sold to the Maharajah of Gwalier, on behalf of the heads of several of the Indian states, for a hospital vessel, in 1914, has done excellent work. The altering and refitting which was necessary o make her suitable for the work she was to undertake, was done during the lattter part of 1914, and within four months of the declaration of war, she was ready for service. She was renamed Loyalty, and sailed from the Persian Gulf, Nov. 24, 1914, and during the course of the war, made 41 voyages, carrrying 15,406 patients. The cost of purchasing the vessel and refitting her was approximately $600,000, and her upkeep for four years was $1,800,000, the greater part of which was paid by the Indian states. She was built at Barrow, in Furness, Eng., in 1891, for the C.P.R's. Pacific Ocean service, and was operated in the passenger and freight service betweeen Vancouver, Hong Kong and Japanese ports.

The Winnipeg Electric Ry. has received 2 cars from Ottawa Car Manufacturing Co., completing its first order of 10 cars. Ten cars of similar type are now under construction.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—The Alberta Deputy Minister of Railways in giving evidence before the legislature's public accounts committee, Apr. 13, is reported to have said the length of the line from Edmonton to McMurray is 289 miles, and that track has been laid from Lake Cache to the river bank A further distance of 10 miles of rails have to be laid to reach McMurray, the grading for which has been completed. On the Egg Lake Branch, 30 miles of grading has been completed, and 11 miles of track has been laid. The province has guaranteed the company's bonds for the construction of 350 miles of line, including the Egg Lake Branch of 40 miles, and 20 miles of siding. The total cost of the line to date is $6,748,613.77. (Apr., pg. 134).

Alberta-Hudson Bay Ry.—The Alberta Legislature is being asked for an extension of time for the building of the line authorized in 1910 on the application of the High River and Hudson Bay Ry., from High River to the Alberta-Saskatchewan boundaries with other lines added in 1917 and covering the whole of southern Alberta, from the Saskatchewan to the British Columbia boundary, and reaching the international boundary at Waterloo Lakes and at other points. The company also desires authority to build a line from Calgary to Edmonton, Alta. (May, 1918, pg. 186).

Brunner-Mond Canada Limited.—The Ontario Legislature has authorized the company to build a short tramway line from the Indian stone quarry to the Detroit River in Anderton Tp., to connect its works with navigation and general railway facilities. We were officially advised Apr. 16, that the question of the construction of the line was entirely in abeyance for the present at least. (Apr., pg. 191).

Calgary and Southwestern Ry.—We are officially advised that the company has almost completed the clearing of the right of way between Calgary and the Sheep Creek mining district, Alta., but has not yet made definite plans for the commencement of construction. It is expected, however, that some work will be done during the summer. John Callaghan, Calgary, Alta., is Chief Engineer. (Feb., pg. 79).

Canadian Western Ry.—The Dominion Parliament is being asked to extend the time within which the company may build its projected railway from the international boundary, through Pincher Creek and Cowley, and along the Old Man River to Livingstone Mountain, and thence to Calgary, Alta., with a branch to Michel, B.C. Smellie and Lewis, Ottawa, are solicitors for applicants. (Sept., 1917, pg. 350.)

Dolly Varden Mines Ry.—A select committee appointed by the British Columbia Legislature, Feb. 10, to enquire into matters affecting the construction of this railway, presented its report Mar. 22, setting out that the company was incorporated in 1917 to build a railway of about 18 miles to a group of mining claims on the Kitsault River, the line to be completed in 1918. A contract was entered into with the Taylor Engineering Co. Ltd., for building the line, under which during the first season $275,000 was expended, without the line being completed. At that time the mining company was negotiating a sale of the property, and an arrangement was claimed to have been made for the protection of the contractors' interests in the event of them completing the line. Relying upon this understanding the contractors resumed construction work in 1918, but were forced to suspend operations in October, and to make an assignment. In order to help out the mining company the Taylor firm began negotiations for the sale of the property to the Timiskaming Mining Co. of Cobalt, Ont., for $1,100,000, but subsequently the mining company made an arrangement for a sale to the Timiskaming company for $900,000. The proposal of the Dolly Varden Mining Co. is that in the event of the charter being extended it shall pay in full the claims for wages on the railway, leaving the Taylor company to meet the other losses. Since the proposal to sell to the Timiskaming Co. for $900,000 was made an offer had been made on behalf of creditors of the Taylor Co. to take over the mines and railway at $1,100,000 and pay all the creditors in full. The committee recommended that the charter be renewed upon condition that the actual cost of construction of the railway during 1918 plus 10%, such cost to be arrived at by arrangement between the parties, or by reference, shall constitute a lien on the property, subject to certain pre-existing charges. The wages due are to be paid within 14 days after the passing of the legislation and the balance due on constructon account shall be paid within 30 days after it has been ascertained. In the alternative the Taylor Engineering Co. shall have the right to acquire the entire property on payment of the investment therein, the amount of such investment to be ascertained by agreement or reference, and on assuming certain pre-existing charges. The report was referred back to the committee for further consideration, but the committee reaffirmed it, and it was subsequently adopted, and a bill in accordance therewith was passed.

Under the terms of the act the B.C. Minister of Railways appointed Justice Clement to ascertain the actual amount due the Taylor Engineering Co. for the construction of the line. (May, pg. 132).

Edmonton and Southwestern Ry.—J. K. L. Ross, of Montreal, one of the C.P.R. directors, was in Edmonton, Alta., Apr. 7, his visit, according to a press report, being in connection with the project for the development of a water power at the Blue Falls of the Saskatchewan River. A part of the project is the building of a railway of 80 miles from Edmonton to the site of the proposed development. Under an agreement with the City of Edmonton made in 1916, the Hydro Electric Power Co., of which Mr. Ross is a shareholder, was to expend $1,500,000 on the plant within 2½ years, and a further $2,000,000 within the next two years. Up to June, 1918, there had been expended $442,092, when the company, owing to war conditions, was unable to provide further funds. The company then asked the city council to extend the time for he expenditure of the money, but was refused. Mr. Ross is reported to have stated that if a restart can be made with the work the plant will be finished in five years. E. W. Barnes, who was in charge of the construction work has been in Edmonton again looking into matters connected with the project. (Sept., 1918, pg. 390).

Edmonton, Dunvegan and British Columbia Ry.—The Alberta Premier, in a statement to the legislature, Mar. 28, relative to financial matters, is reported to have said that the government assumed full responsibility for allowing interest on guarantee by the province to be paid on construction estimates, these charges to be taken from the company's trust funds. However, if something is not done in the way of raising money to go on with construction, the system will have to go into a receivership. The trust account will probably not suffice for all charges for, more than a year. The railway is not in first class shape, but the opinion has been expressed by Dominion Cabinet ministers and a Dominion Government railway engineer, that the grade is of the best and that the line could readily be placed in running order. In this connection these ministers, after a conference with the provincial government, had made representations to the Dominion Government with regard to the line being taken over as a part of the national railway system. The line under present conditions, is not paying interest charges on the bonds guaranteed by the provnce.

The province has guaranteed bonds for $7,000,000 at 4%, and approximately $2,500,000 at 4½%, and has loaned $2,000,000 at 5%, while the Dominion Government has granted a subsidy of $320,000 for the Prairie Branch line.

Replying to a question in the House of Commons, Apr. 7, Sir Thomas White, acting Prime Minister, said while the railway has been brought to the government's attention for some three or four years past, in connection with matters relating to subsidies, no arrangement for the taking over of the line had been completed, nor were there any negotiations at that time looking to that end. It is, of course, open to those connected with the railway to bring to the government's attention, from time to time, anything that would be of public interest relating to its affairs. (Dec., 1918, pg. 541).

Grand Trunk Ry.—The Montreal City Council has authorized the reopening with the Board of Railway Commissioners of the matter of the elevation of the G.T.R. tracks in the ciy, which has been in abeyance during the war.

The Dominion Parliament has extended the time for the building of the projected Lachine, Jacques Cartier and Maisonneuve Ry., from Dorval to Maisonneuve, adding thereto the provision that construction must be started during the first year of the extension.

A proposition is being discussed in Norfolk County, Ont., for the electrification of the G.T.R. Woodstock-Simcoe Port Dover branch, and for its extension to Port Rowan. (April, pg. 190).

Great Northern Ry. Lines in Canada.—The Brandon, Man., Board of Trade, is urging the Great Northern Ry. management to extend the Brandon, Saskatchewan and Hudson Bay Ry., which now runs from the international boundary, near Bannerman, to Brandon, to a junction with the Dominion Government Hudson Bay Ry. at Pas, Man.

Hudson Bay Ry.—Very early in the session a discussion was initiated in the

Senate by Senator Schaffner on the question of the navigability of Hudson Bay and Straits, the adaptability of Nelson as a seaport, and the building of the railway from Pas to Nelson. Subsequently on motion of Senator Fowler, a committee was appointed to take evidence and to report upon the navigability and fishery resources of Hudson Bay and Straits, and of the character of the ports on Hudson Bay, with regard to their places as railway terminals, and Senator Schaffner's motion was withdrawn. The special committee began its sittings Apr. 2, and on Apr. 9 took the evidence of S. W. McLachlan, the engineer in charge of the terminal works under construction at Port Nelson. He is reported to have described the character of the harbor works in progress which include a bridge 0.75 mile in length, built out towards the channel; at the end of the bridge crib work, is being constructed which will be filled in from the channel. This will make an island; will provide 9,000 ft. for dockage, elevators, etc. The summer of 1918 was spent surveying the channel. Soundings taken showed that there was a channel suitable for seagoing vessels approximately 20 miles from the harbor works to open water. This channel is from 300 to 1,200 ft. wide, but would have to be dredged for a considerable portion of its length.

It is reported that the Dominion Government has decided to take over from J. D. McArthur, the general contractor, the work of completing the line from Pas to Port Nelson, Man. The work to be done is the laying of 92 miles of track from the Nelson River to Nelson, ballasting and general finishing up work. This work, it is stated, will be done under the Canadian National Railways management.

A conference between members of the Manitoba Government and the Dominion Government, was held at Ottawa, Apr. 7, with regard to the completion of the line. Sir Thomas White, acting Premier, is reported to have informed the Manitoba representatives that the government recognized that the Hudson Bay project is one that must be gone on with. The government had asked for tenders for the supply of 250,000 ties for the line, but pointed out that any funds for the work placed in the estimates would be in the nature of a revote, as the sum voted last year was not expended. On his return to Winnipeg, Apr. 17, the Premier of Manitoba is reported to have said that the resumption of work on the line by the Dominion Government was assured. (Apr., pg. 190).

Lacombe and Northwestern Ry. Co.—The Alberta Legislature has changed the name of the Lacombe and Blindman Valley Electric Ry. Co. to the above, and has made the changes necessary in the original act and the amending acts, now that the line has been taken over by the Alberta Government. The Premier, in the course of the discussion stated that the cost of the line to the province up to date, was $613,700.37, made up as follows:—Advances by province, $255,000; interest paid on defaulted bonds, $41,000; accrued interest due on advances, $9,000; miscellaneous outstanding liabilities, $35,000; original bond issue, $273,700.37. The estimated cost of an extension of 10 miles from Bentley to Larson is $122,000, and for the remaining 10 miles to Rimberg, $197,785, a total of $319,785. It is practically necessary to complete the line, and when completed it will represent an expenditure of $933,485. The government has no intention of entering the railway business, and as soon as the line is finished, steps will be taken to dispose of it to one of the larger companies. The C.P.R. is apparently, not unfavorably disposed to consider its acquirement. There is a possibility of the C.P.R. building a line southwest of Edmonton to the Rocky Rapid's power site, in which case not more than 60 miles of territory will intervene between the rail head at Bentley and the Rapids. (April, pg. 190).

Magdalene River Valley Ry.—The Quebec Legislature has authorized the company to change the location of its projected railway along the Magdalene River to Little Falls, and on to Gaspe, for about 4,000 ft. in the parish of St. Maxime-du-Mont Louis, but it is not to approach nearer than 350 ft. to the east bank of the Magdalene River in so doing. (Mar., pg. 135).

Medicine Hat Central Ry.—Jos. B. Swan is reported to be the principal promoter of this projected line from Coutts, via. Medicine Hat to Hilda at the Alberta-Saskatchewan boundary line. The projected line would include the 7.5 mile Colberg line from Medicine Hat to the Ajax mines, completed recently. (Apr., pg. 191).

Miller Independence Gold Mines Co.—A press report states that this company has a project for the construction of three miles of narrow gauge railway to give connection between its mines and Boston Creek, the Timiskaming and Northern Ontario Ry., 153 miles from North Bay.

The North West Route.—The Dominion Parliament is being asked to incorporate a company with this title to lay a transportation route by railways and steamboats from the westerly end of Baker Lake, at the headquarters of Chesterfield Inlet, Hudson Bay, to the easterly end of Great Slave Lake, near Old Fort Reliance. The railways are proposed to connect the navigable stretches of the several waterways reached, and the company seeks power to deepen and widen the waterways, where necessary, to develop the water powers and to carry on a general navigation business. The head office of the company will be in London, Eng.; its authorized capital is to be $1,000,000, and power is asked to issue bonds for $50,000 a mile, and work of railway construction or under contract. The provisional directors are: Right Hon. Viscount Templeton, Sir John Scott Keltie, T. L. Gilmore, H. C. Thomson, London, Eng., and B. Spring-Rice, Burwash, Sussex, Eng. The first and last mentioned of these directors are also provisional directors of the Quebec and Ungava Ry. Co. and of the St. Felicien and Ungava Ry. Corporation, at the Quebec Legislature's recent session, which aim at the opening up of rail and water routes from Seven Islands of the St. Lawrence River to Hudson Bay.

Pacific Great Eastern Ry.—The British Columbia Government is reported to have let a contract to Robertson and Partners, Vancouver, for the erection of an electric power plant at Squamish, the starting point of the Pacific Great Eastern Ry., inland, at an estimated cost of $72,000. The plant will supply power for the railway machine shops and for other purposes.

A Vancouver press report of Apr. 14, states that the British Columbia Premier had said that it is expected to have the line completed to Soda Creek, by the autumn. This would provide a through connection from Vancouver to Prince George by rail and water, and would be available on the opening of navigation, 1920.

The Port Arthur Terminals Limited has been incorporated under the Ontario companies Act to take over certain lands in Port Arthur, from J. J. Carrick, and to deal with the same under the terms of an agreement. The company is authorized to lay out townsites on the property, and to sell land for residential purposes, and to loan money for the erection of buildings thereon. It is debarred from operating or controlling any public utility or municipal franchise. The capital is fixed at $1,500,000, of which $300,000 shall be preference shares. Its offices is at Port Arthur. A. J. McComber, Port Arthur, is named as trustee for the company in the agreement for the transfer of the property.

Quebec Central Ry.—A press report, Apr. 21, states that as soon as the frost leaves the ground, work will be started on the construction of the extension from Scott's Jct., to the Quebec Bridge. (Apr., pg. 191).

Quebec and Ungava Ry. Co. has been incorporated by Quebec Legislature to build a railway from Seven Islands on the north shore of the St. Lawrence River, in Saguenay County across Ungava, to the most suitable harbor between the mouth of Big River and Nastapoka Sound on Hudson Bay. (Mar., pg., 135).

Quebec and Saguenay Ry.—A press report of Apr. 17 states that the Dominion Government has paid over the balance of the purchase price for this line.

A Quebec Lumber Railway.—A press report states that lumber men in the St. Maurice district and the upper section of Lake St. John, Que., are planning to organize a company to build a railway to open up timber limits which at present cannot be worked because of lack of transportation facilities.

Stewart, B.C.—A press report states that C. F. Caldwell, President of the Utica Mines Ltd., is promoting the building of a railway from Stewart, in the Portland Canal district, B.C., to some recently discovered gold mining areas. About 20 miles of railway are said to be needed to reach the district, of which 12 miles would be in United States territory. Mr. Caldwell, was stated, Apr. 8, to have left Vancouver for Ottawa and New York in connection with the matter.

The St. Felicien and Ungava Ry. Co. has been incorporated by the Quebec Legislature to build a railway from St. Felicien, St. John County, to Lake Mistassini, thence to Lake Nichikum, and to Lake Petitsikapau, or by an alternative route between the same termini. (Mar., pg. 135).

St. John and Quebec Ry.—The Dominion Parliament has granted an extension of time to Dec. 31, 1919 for the completion of construction of the line from Gagetown to Westfield, N.B. When the bill was before the Senate, Mar. 27, Senator Lougheed stated that the work was about 85% completed, and that it would cost about $406,000 to complete the line. The work to be done consists principally of repropping, ballasting, culverts and cleaning up. The cost of the line to Oct. 31, 1918, was $2,314,000, and the total cost when completed, will be about $2,720,000. The Dominion subsidy paid over to date is $121,500. When completed, the line will be taken over for operation as part of the Canadian National Railways system, under the terms of chap. 23 of the statutes of 1916, under which the Gagetown-Centerville section of the line was built.

A bill was introduced in the New Brunswick Legislature recently, authorizing the N.B. Government to grant an extension of time for construction to Dec. 31, by order-in-council, and to make any agreements or modification of agreements with the company, or the Dominion Government, which may be necessary owing to the granting of the extension of time. The bill recites that negotiations are being carried on with the Dominion Government to transfer the ownership of the lease from the N.B. Government. In order to provide for such transfer being made, if agreed upon, it is declared that the lands taken by the company for railway purposes are the company's property and provision is made for the payment of the N.B. Government for any such lands not already paid for. The N.B. Government owns the railway subject to a trust mortgage held by the Prudential Trust Co.

In speaking in the legislature in support of the bill, the provincial secretary stated that the cost of the Gagetown-Westfield extension to Mar. 1 was $2,377,545, and it was estimated that it would cost $290,000 more to complete it. The cost of the completed sections of the line was: Fredericton to Gagetown, $1,170,065; Fredericton to Woodstock, $2,419,994; Woodstock to Centerville, $920,000. Surveys have been made at a cost of $58,415 for the extension of the line from Centerville to Andover. The total extenditure to Mar. 1, therefore, was $6,946,019.

Timiskaming and Northern Ontario Ry.—An extension of this Ontario Government owned railway, from the southern terminus at North Bay, south westerly to Parry Sound, has been asked for by the Parry Sound Board of Trade, and the Ontario Associated Board of Trade have endorsed the request.

Vancouver Union Terminals. — The Vancouver City Council, on Apr. 7, received a report from the city solicitor upon a proposal for the laying out of union terminals and the building of a central station there, which was submitted to it Mar. 12, by A. P. Gillies, of New York. The city solicitor said the scheme was an ambitious one, but that before the city should take action the applicants should give some assurance of the willingness of the railway companies to join in the application. From a legal standpoint the only status the city has in the matter is to consider the advisability of giving its assent to cross the streets as shown on the plans. This consent, of course, would be given on any application made to the Board of Railway Commissioners to consider the scheme. The letter was ordered filed. (April, pg. 191).

Disabled Soldiers in Railway Shops.—A Winnipeg press dispatch says that according to a decision by the Canadian division of the International Railwaymen's Union, disabled soldiers may enter railway engineering shops as three-year apprentices at the special rate of 48c an hour on the basis of a 47 hour week. Such men are to be recommended for these positions by the vocational authorities at Ottawa.

Traffic Order by Board of Railway Commissioners.

Rates on Shell Bars or Blanks.

28,165, Mar. 14. the complaint of Imperial Munitions Board against Canadian Pacific, Algoma Central and Hudson Bay, and Canadian Northern Railways, for charging complainants higher rates on shipments of shell bars or blanks from Sault Ste. Marie, Ont., to Toronto, and Montreal, than was charged on commercial steel bars: and re subsequent application of Imperial Munitions Board for an order declaring shell bars or blanks to be entitled to rates published to apply on steel billets. Upon hearing the complaint at Ottawa Mar. 5, 1918, the Imperial Munitions Board, the Canadian Pacific, the Grand Trunk, and the Canadian Northern Railways being represented at the hearing, and upon the report and recommendation of the board's Chief Traffic Officer, representatives for the respondent railway companies later undertaking to refund the amount declared by this order to have been wrongfully charged and collected on such shipments, it is ordered and declared as follows:—That the application for an order declaring shell bars or blanks to be entitled to the rates published to apply on steel billets is refused. That the rates charged the complainants by the respondent railway companies on shell bars or blanks from Sault Ste. Marie to Toronto and Montreal, as aforesaid, since May 1, 1918, were unjust, unreasonable, and excessive, to the extent that such rates exceeded the lower rates in effect immediately before May 1, 1918, subject from August 12, 1918, to the increase authorized by order in council 1863, July 27, 1918; the respondent railway companies being hereby authorized to refund to the complainants the excessive rates charged and collected.

Demurrage on Coal Cars at Ottawa.

28225. The application of Ottawa Gas Co. for cancellation of demurrage charges made by G.T.R. on cars loaded with coal consigned to the applicant company at Ottawa: Upon reading what is filed in support of the application and on behalf of the G.T.R. and the Canadian Car Demurrage Bureau, and the report and recommendation of the board's Chief Traffic Officer, and upon its appearing that the influenza epidemic had a material bearing on the accrual of demurrage. It is therefore declared that the applicant company shall be required to pay the G.T.R. $3,058.50 only, as demurrage charges on the cars in question.

Lumber Carload Rates in British Columbia.

28232. April 14. Re complaint of Pacific Coast Shippers' Association, on behalf of Abbotsford Timber and Trading Co., against rate of 9c per 100 lb. on lumber, in carloads, charged by C.P.R. from Abbotsford to Vancouver, B.C. Upon its appearing that the C.P.R., by its tariff C.R.C. no W. 2248, published and filed what is therein described as a competitive rate of 5c per 100 lb. on lumber, in carloads, from Huntingdon, B.C., to Vancouver, and in the same tariff a mileage rate of 9c per 100 lb. from Abbotsford, B.C., Abbotsford being intermediate between Huntingdon and Vancouver. It is declared that the movement from Huntingdon to Vancouver, not being competitive within the meaning of the Railway Act, the lawful rate on lumber, in carloads, from Abbotsford to Vancouver, over the C.P.R., on June 14, 1917, when the shipment complained against was made in car 122950, was 5c per 100 lb., on which basis reparation is authorized.

Placing and Weighing of Cars on Track Scales.

The Board of Railway Commissioners has issued the following circular: "The board has had its operating department for some time past investigating the methods and practices of railways, in connection with the manner in which cars are placed and weighed on track scales. Tests have been made of the scales at various points on the different railways, by weighing cars when standing free, uncoupled at both ends, coupled on one end, and, when the deck of the scale permits, coupled at both ends. The report and recommendations of the board's Chief Operating Officer as the outcome of these inquiries is as follows:

" 'The best results are obtained where one person is employed to supervise and check the weighing of cars and that person should be sworn in. He need not be engaged as a weigh master, exclusively, but a suitable person, already working in some position on the staff, should be instructed by the company's general officer, having the jurisdiction, and this person should have the power to instruct the men how to place the cars and supervise and take the record himself from the scale beam. Each company, in its own interests, should go over the facilities, to see that it gets the best arrangement for protecting scales from severe winter conditions, water, etc.'

"The board desires to have the various railway companies' comments upon the foregoing recommendations, together with a concise statement as to the practice now followed by each railway, with a view to considering and adopting some uniform system which will work satisfactorily to both the shippers and the railways."

The New York Central Rd.'s general agency and city ticket office at 220 St. James St., Montreal, was discontinued Apr. 1, since which date the New York Central has been represented in the Montreal consolidated ticket office, at 238 St. James St. which is in charge of W. de W. Stott, agent. Diagrams of Pullman cars via New York Central operating from Montreal, are handled at Windsor St. station ticket office and applications for space in parlor or sleeping cars should be addressed to E. J. Whelan, ticket agent. The jurisdiction of F. M. Byron, general agent, N.Y.C. to Utica, N.Y., has been extended to cover all stations on the Adirondack Division, including Montreal. All matters pertaining to passenger traffic formerly forwarded to A. L. Muller, general agent, Montreal, should be addressed to the General Agent at Utica.

The Consolidated Railway Act.—The measure for the consolidation of the Railway Act, which had been before Parliament in 1917 and 1918, was the first bill introduced into the Senate this year. After discussion and amendment, there it came before the House of Commons, and after its formal introduction, was referred to a special committee, of which J. E. Armstrong, was appointed chairman. The non-contentious sections were first deal with, and the committee is now dealing with the contentious sections.

Aerial Transportation for Canada.

A. Thompson, M.P. for Yukon, in speaking in the House of Commons recently, said a new system of transportation had been developed in the world since the war began. The war had practically created aerial navigation. Three types of air ships are used, first, the lighter than air machines; second, the land plane, and third, the sea plane. By means of this method of transportation, he believes, safe and rapid transport can be given to an enormous section of country which lies undeveloped. There is a tract of virgin soil 1.600 miles long and 1,000 miles deep reaching from Hudson Bay to the Alaska boundary. In that vast tract there are not many more than 1,000 people, certainly not 10,000. It is an empire in itself, with great possibilities, and is owned by the Dominion. In that tract there may be minerals enough to pay the national debt a dozen times. An article written for the Geological Survey of Canada describes this area of 900,000 square miles, as having underlying it the pre-Cambrian rocks, in which occur the copper, nickel, iron, silver and gold in Northern Ontario. About 150,000 square miles of the lower Mackenzie basin have as surface rocks the Devonian strata, and here it is believed is the largest undeveloped oil field in the world. The climate is salubrious; men can live and are living out in the valleys of that country all the year round. It is a well watered country, with plenty of rivers and lakes.

How can it be reached? By means of the aeroplane. The population, such as it is, is capable of being highly developed, but they lack transportation for about seven months of the year. He suggested that the government purchase, or get the British Government to give Canada, an airship—one of the latest dirigibles—the lighter than air machines—such as the R.33, which was equipped with engines of 1,250 h.p., a speed of 70 knots, a range of well over 200 hours, and a carrying capacity of from 27 to 30 tons. Base such an airship on Edmonton, sail it down the Mackenzie River valley to the Arctic Ocean, across the Dawson, up the Yukon River valley to White Horse across the northern part of British Columbia back to Edmonton. Such an airship as the R.33 could make Herschell Island, at the mouth of the Mackenzie river, from Edmonton, 1,300 miles, in 15 hours; thence to Dawson in 6 hours, and could get back again to Edmonton from Dawson in 18 hours. The various trading forts all through that country could be reached in anything from 6 to 19 hours. An airship could be navigated all the year round—there are few storms in the country and it is not very cold. It would be an enormous blessing to the Mackenzie River country and also to the Yukon. It would not be a costly experiment, compared with the building of a railway, and Canada has more than once mortgaged its future to give the country transportation. He commended the proposition to the government's favorable consideration.

Referring to the territory between the Mackenzie river and Hudson Bay, Mr. Thompson suggested that the government get some aeroplanes—recent report stated that the British Government had given the Canadian High Commissioner 15 aeroplanes for Canada. Canadians during the war had developed the highest type of air men that the world has so far seen. They are now being demobilized and brought home. Canada has the aeroplanes; the trained airmen and the trained miners who could go into this land and find out whether the minerals which geologists say might be found there are there or not. It would not require a large expenditure. The scientists could go in by aeroplanes, be taken from almost any part of the northland into the very heart of the country in a few hours; they could stay there through the summer and come out in autumn. There need be no fear of landing places; the country abounds in lakes and rivers, and an aeroplane can land on a river or lake almost anywhere. It would be possible to go there in the spring, before the ice melted, and if the machines were provided with skids as well as, or instead of, wheels, a landing could be effected on the ice. Then, also, reports could be obtained as to the possibility of utilizing the immense herds of caribous as a source of food supply, which has not yet been tapped.

Further the science of aeroplane photography has been enormously developed during the last few years, so that an aeroplane can fly over a city and mark every street and avenue so that it can be identified, just as was done during the war in France. It is no trick at all to take aerial photographs of this vast area up north and have maps made, so that there would be no difficulty in knowing just where the rivers and lakes were. There are no mountains there, it being practically a level country. Why not have some of our trained airmen patrol the Hudson Bay and report on ice and weather conditions, there and in the straits. An air station could be established on Hudson Bay, and the aeroplanes could communicate by wireless with that station. This is not an impracticable proposition, it is just applied common sense. It might be objected that the weather conditions would be too severe, that the cold would be too intense. He had not the slightest doubt that the airmen who could stand the cold of an altitude of from 25,000 to 30,000 ft., as they did in Europe, would find that temperature colder than anything to be found in the Klondike, or anything found by Nansen on his trip to the North Pole. He further urged the using of the aeroplane in connection with the Royal Northwest Mounted Police work, thereby effecting a considerable saving of transportation expenses, and enabling better work to be done.

There is not the slightest doubt that this year, and perhaps within a few weeks, airships will be crossing the Atlantic. And they will not stop at that, they will fly across Canada, to Siberia, to China, to Japan. Now Canada is on this great highway of aerial commerce which is about to be made, because Canada is nearer to Europe than the United States or any other country south, to Patagonia, and nearer also to Asia than any other American country. Air routes will be outlined, airships will fly across the North Atlantic, across the North American Continent, across the North Pacific, and the route they will take is Siberia, China and Japan will be practically the same, but a little further north than ships are taking today. These airships will cross the very sections of country for which transportation facilities were being asked. They will seek the line of the mountain ranges where the winds are not great; they will cross the great section of this country between the Alleghanies and the Rockies; this great central plain, they will sail across to the Rockies, north along that great chain, down the Yukon Valley and across over the Aleutian Islands, and thence by way of Siberia and China to Japan. And on this route from the mainland of America to Yokohama, there is not a section of more than 150 miles, perhaps not more than 100 miles, over which they will fly over water. We should do this because we are a progressive people who have led the world in great enterprises, notably steamships, and wireless telegraphy, and were the first people in the British Empire to federate great states, thus establishing a model upon which the other confederations in the empire have been modelled.

Aerial Transportation Notes.

The Canadian Pacific Ry. is making application to the Dominion Parliament for authority to operate services by aircraft between such points and places within and without Canada as may be found advisable.

The C.P.O.S. Atlantic steamship Montcalm, which arrived in St. John, Apr. 8, was fitted with special apparatus for taking soundings in the air for aviation purposes, the work being in charge of Lieut. G. Harris, of the Air Ministry's meteorological department.

For the purpose of carrying urgent official mails and passengers in connection with the peace conference, an aerial service has been inaugurated between London, Eng., and Paris, France. The average time taken by the mail carriers is 2½ hours, between the two cities, but the record one way trip is 1 hour, 50 minutes, and the record round trip 3 hours, 50 minutes. The passenger machines carry two passengers and the pilot.

Manitoba Power Transmission Act.—The Manitoba Legislature has passed an act providing for the transmission of electrical power within the province. Under the terms of the act the government may appoint a board together with such engineers, etc., as may be necessary to co-operate with the Minister of Public Works and the municipalities for the purpose of developing water powers, and the distribution of electrical energy. In the carrying out of these plans the minister may contract with the City of Winnipeg, the Winnipeg Electric Ry., or with any railway company, for the supply of electrical power or energy required to carry out the provisions and purposes of the act, and may make contracts with any railway company for the use of its right of way for the erection of a pole line, and other works.

Mount Royal Incline Ry.—A press report of Apr. 17, stated that the inspectors appointed by the court in connection with the liquidation of the Mount Royal Incline Ry. Co., had under consideration the question of the operation of the incline for the summer. A question relative to the operation of the line was asked at the Montreal City Council's meeting, Apr. 15, but no information appears to have been obtainable. It is said that the Montreal administrative commission has the matter under consideration, as under the charter, the city has a right to operate a service in the event of the company failing to do so.

Railway Rolling Stock Orders and Deliveries.

The G.T.R. is having 200 refrigerator cars repaired and fitted with brine tanks, by Canadian Car and Foundry Co.

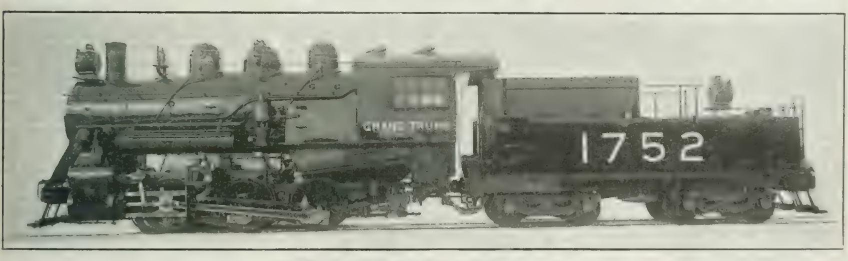
Canadian National Rys. has ordered 25 Pacific type locomotives, 260,000 lb., with cylinders 23½ x 28 in., from Montreal Locomotive Works.

The Canadian National Rys. will probably be in the market in the near future for considerable more rolling stock, especially passenger equipment.

The G.T.R., since January, has received six 6 wheel switching locomotives from its Point St. Charles shops, Montreal, and has 13 of this type still under construction there.

The C.P.R., between Mar. 19 and Apr. 12, ordered 4 vans to be built at its Winnipeg shops, and received 92 flat cars from its Angus shops, and 6 vans from its Winnipeg shops.

Montreal Locomotive Works is building 20 mountain type locomotives, approximately 200,000 lb., with cylinders 22 x 28 in., and 20 mountain type locomotives, approximately 195,000 lb., with cylinders 22 x 26 in., for the South African Government.



Grand Trunk Railway 6-wheeled Switching Locomotive.

A Winnipeg press dispatch stated recently that the re-lettering of Canadian Northern Rys. cars, by substituting "Canadian National Railways," had been ordered to cease. We are advised that this is incorrect. An order was given to reletter a few cars of a certain series, and this has not been cancelled.

G.T.R. Switching Locomotives.—An error was made in Canadian Railway and Marine World for April, page 188, in reference to the 6-wheeled switching locomotives, of which 25 were ordered to be built in the company's Montreal shops, and of which a number have been delivered. A few days after the May issue was published, G. Cavin, Chief Mechanical Engineer, Canadian Locomotive Co., very courteously called our attention to the error, pointing out that the description published was of the 6-wheeled switching locomotives which were built for the Canadian Government Railways in 1918 by the Canadian Locomotive Co., and we are much indebted to him for doing so, as we are most anxious for anything we publish to be accurate, and as our readers know, we have a standing invitation in each issue asking for the pointing out of errors which may occur. Following is the description of the G.T.R. 6-wheeled switching locomotives which should have been given, and which was originally published correctly in Canadian Railway and Marine World for May 1918.

Boiler, pressure	180 lb.
Heating surface, firebox	168 sq. ft.
Cylinders	21 x 26 in.
Driving wheels	51 in.
Boiler, diar.	68 9-16 in. to 76 in.
Heating surface, tubes and flues	1836 sq. ft.
Heating surface, total	2004 sq. ft.
Grate area	30.62 sq. ft.
Wheel base, driving	11 ft. 6 in.
Wheel base, engine and tender	45 ft. 11½ in.
Total length, overall	62 ft. 4½ in.
Weight on drivers	170,000 lb.
Weight, including boiler	298,000 lb.
Tractive power	31,298 lb.
Tank capacity	6,000 gal.
Coal capacity	10 tons
Superheater	Schmidt, 28 units

The Canadian Railway War Board's Work.

Special Trains Allowed.—Instructions embodied in the board's circular 6, Nov. 1, 1917, and letter of Dec. 14, 1918, prohibiting the operation of special passenger trains, except in cases of extreme urgency, are cancelled. The provision of equipment for, and prompt efficient movement of troops and civilians returning from overseas shall continue to receive first consideration.

Delay to Diverted Tank Cars.—It has been drawn to the board's attention that diverted tank cars on occasions have met with delays on account of extra haulage, due to agents at destination of transshipped loads failing to show full routing, including junction points, on rebilling covering movement of empty cars, resulting in cars going to wrong junctions. Clause 2 of circular 96, is, therefore, amended to read as follows: "The agent of the terminating line at such destination must, upon release of the car, promptly rebill (showing full routing, including junction points), and forward same to its original destination unless otherwise instructed by the owner or owner's authorized representative."

Examinations in Train Rules and Regulations. General order 65 issued by the Board of Railway Commissioners for Canada requires that all employes engaged in train or telegraph service, where trains are handled, shall pass an examination in train rules and regulations, according to the forms of examination papers which have been filed with the commission by the railways. It is reported that in some instances the efficacy of the examination is interfered with by employes copying answers to the questions from a catechism of the rules, or similarly obtaining improper assistance in the examination, and that examination papers completed in this manner are sometimes accepted, obviously to the detriment of the service. Railway managements are requested to take action to eliminate practices such as those described above, so that bona fide examination on the regulations will be assured. On some railways it is the custom for the examiner to call for oral answers to representative questions, in addition to the written examination. It is suggested that this be done on all lines, as a further test of the employe's knowledge of the rules under which he is required to work, and with which safe operation demands that he be thoroughly familiar.

Suggested Taxation of Alberta Railways.

In the course of a discussion on provincial and municipal finance in the Alberta Legislature recently, W. M. Davidson advocated the taxation of railway lines, and is reported to have said: "In Alberta we have exempted by statute, passed by this legislature all of the lines the bonds of which we have endorsed. We have collected no taxes on those sections of the Grand Trunk Pacific and the Canadian Northern, which we did not guarantee. We are debarred by Dominion law from taxing the C.P.R. main line. We have an agreement with the C.P.R. which runs until the end of next year, by which we tax the branch lines of that road at $100 a mile, which is 1% on a valuation of $10,000 a mile, which certainly is a most paltry valuation. The railways of this province should bear their fair share of the provincial burdens. They have not been doing so. I believe that between now and the time when the agreement wiht the C.P.R. expires, the government should investigate thoroughly the question of railway taxation, and I shall be disappointed if, at an early date, the revenue from this item is not ten times the amount of the present paltry revenue of $110,000. We should be getting a million and a half from this source without doubt

Light Railways for Soldiers' Settlement Lands.—Major Shore and S. Maber of the Dominion Soldiers Settlement Board, advocated the construction of light railways in conection with the settlement of returned soldiers on the land, at a meeting at Prince Albert, Sask., Mar. 11. A block of land some 60 miles from a railway is being considered in that district for settlement and the suggestion is that light railways such as were used at the battle front in France and Belgium, could be laid to open up the territory.

Canadian Pacific Railway Construction, Betterments, Etc.

Construction work for 1919.—E. W. Beatty, President C.P.R., is reported to have said in Ottawa Apr. 17, that the company proposed to enter actively into construction work this year, and while no new works will be opened immediately, several construction jobs, principally the extension of lines in the west and the general improvement of facilities, will be commenced within the near future.

The directors' report for the year ended June 30, 1918, says that: "Subject to the shareholders' approval, the directors have authorized expenditures on capital account during the present year of $4,482,000, apportioned to the following works, viz:

Replacement and enlargement of structures in permanent form, $545,000;

Additional stations, roundhouses, freight sheds, ice houses and extensions to existing buildings, $525,000;

Additional terminal and side-track accommodation, $700,000;

Tie plates, rail anchors and miscellaneous roadway improvements, $1,017,000;

Lining tunnels, British Columbia district, $185,000;

Automatic block-signal protection, $112,000;

Surveys for new lines and power possibilities, $125,000;

Miscellaneous improvements, and additions designed to improve the facilities of the company and to effect operating economies, $1,103,000;

Improvements in connection with telegraph service, $170,000."

Ottawa, Northern and Western Ry.—The Dominion Parliament is being asked to authorize the construction of a line from the present terminus at Waltham, Que., through Waltham, Chichester and Sheen, Tps., across the Ottawa River to a junction with the C.P.R. at Chalk River, Ont. The company also asks authority to increase its bonding powers in connection with this line.

Ontario District.—We are officially advised that the company has no immediate intention of building a second track on its Toronto-Windsor line between Guelph Jct. and London, Ont., as stated in a recent press report.

A Bridgeburg, Ont., press report of Apr. 2 credited the C.P.R. with having secured 5,000 acres of land on Grand Island, Niagara River, opposite Bridgeburg, and suggested it had been acquired in connection with a proposed new bridge, for the erection of which a company has been formed in Canada and the State of New York, in which the Toronto, Hamilton and Buffalo Ry., the C.P.R., and the New York Central Rd. are interested. A Montreal press report, Apr. 4, stated that C.P.R. officials know nothing of the matter.

Western Branch Lines.—The directors' report for the year ended June 30, 1918, contains the following: "Your directors are of the view that the construction of additional branch line mileage in the west will be necessary in the near future, and your authority will be asked for proceeding with the construction of the following lines when conditions warrant such construction, and for the issue and sale of a sufficient amount of 4% consolidated debenture stock to meet the expenditure, viz.:—Empress to Milden branch, 132 miles; Empress to Acme branch, 132 miles; Vidora East branch, 35 miles; Russell North branch, 15 miles; Lanigan North branch, 150 miles."

We are officially advised that location surveys for the Empress to Milden branch are being made; that surveys for the Empress-Acme branch have been completed; that a preliminary line has been run for the Russell North branch, and that engineers are running the preliminary lines for the Vidora East branch and the Lanigan North branch. We are further officially advised that until the Dominion Parliament authority is obtained for the building of the lines, and until the shareholders give authority for the expenditure necessary, no decision will be reached as to what construction will be undertaken. The shareholders' authority is, of course, a mere formality and a foregone conclusion.

The Manitoba and North Western Ry. is applying to the Dominion Parliament for authority to build a line from its Shell River branch in Tp. 21, Range 28, west of the 1st Meridian, northerly to Tp. 23, Range 28, west of the 1st Meridian.

Saskatchewan District—Tenders were received to Apr. 15, by W. A. Mather, General Superintendent, Moose Jaw, Sask., for the following works: One 15 ft. and one 10 ft. culvert on the Lanigan subdivision; two miles of new wood pipe at Macoun; 3,000 ft. new wood pipe at Estevan, and a new baggage and express building at Saskatoon.

British Columbia District—A Vancouver press report, Apr. 16, states that a gang of returned soldiers has been organized to undertake repairs on the cribwork on the line through the Kicking Horse Pass. The work is expected to last all summer. (Apr., pg. 189).

President D. B. Hanna's Trip to the Pacific Coast.

D. B. Hanna, President Canadian National Rys., made a trip to the Pacific coast towards the end of March and early in April, being accompanied throughout by M. H. MacLeod, Vice President, in charge of operations and from Winnipeg westerly, by B. T. Wiley, one of the western directors. Operating, and other officials joined the party at various points, travelling through their respective territories. On the western journey, Winnipeg was reached Mar. 27, Regina, Mar. 28, and the party, after touching at other points, arrived at Vancouver, Mar. 31 and Victoria Apr. 1. Several days were spent in Vancouver on the return trip and they left there Apr. 6; Edmonton was visited Apr. 9, and they again reached Winnipeg Apr. 12; Port Arthur, Apr. 14 and Toronto, Apr. 17.

In the course of interviews at different points during the trip, Mr. Hanna is reported to have said that while tenders for the construction of a number of branch lines had been called for, they did not include all the work contemplated. At Vancouver, one official had a conference with the mayor in regard to the development of False Creek, in connection with which some revision of the terms was discussed, and at Victoria, there was a conference with the B.C. Premier, upon the question of the Songhees Indian reserve and construction matters generally.

Messrs. Hanna, Wiley and MacLeod were guests at a dinner given by the Vancouver Board of Trade, Apr. 5. In a review of the Canadian Northern Ry. and its prospects under government ownership, Mr. Hanna is reported to have said: "As I look into the future, I think more than ever that we should never let the work end for today, but build for years into possession of a property that, mile nto possession of a property that, mile for mile, is laid in such territory as will in time produce a maximum of traffic—given the same time as the C.P.R.—the gross earnings of which, west of the Great Lakes, will be greater than the C.P.R." He added that the directors are contemplating the establishment of a Montreal-Vancouver steamship service, and it is also hoped to branch out in other directions with a view to getting a share of the Japanese and Chinese trade. It is proposed to use the Dominion Government dock on Burrard Inlet, and something will probably be done in the way of further developments on English Bay. Mr. MacLeod is reported to have said that the company had in mind a line round Point Grey into the Songhee reserve.

Dominion Government Purchasing Department.—The president of the Privy Council in introducing in the House of Commons on Apr. 4 a bill respecting the purchasing of departmental and other supplies for the government, stated that by order in council of May 8, 1915, a war purchasing commission was organized, its duties being to supervise the purchase of materials for which payment was to be made out of the war appropration. In 1918 the duties of that commission were enlarged to cover purchases for the other branches of the public service. The work of the commission had been so satisfactory that the government believed it should be continued. The bill introduced provides for the appointment of a purchasing commission, which shall do the purchasing of all supplies required by all departments of the government, except the government railways, which now form part of a larger system, and are being operated under a board of directors. The purchasing board is to consist of three commissioners who shall be appointed for 10 years, and shall be eligible for reappointment, but shall not hold office after reaching 70 years of age; they shall be removable at any time by Parliament. A director of the purchasing commission may be appointed, and members of the present war purchasing commission may be appointed at their present salaries to this commission, and employes of the war purchasing commission may be transferred to it.

Greater Winnipeg Water District Ry. Operation—The question of the future of the railway built by the Greater Winnipeg Water District Commission to aid in the construction of the water supply system from Shoal Lake, is being given a good deal of attention in Winnipeg now that the water system is completed. The railway is 97 miles long and opens up a large area of territory, and its operation up to the present has been of benefit to the settlers along the route. The matter was taken up by the Winnipeg Board of Trade, April 17, when a resolution was submitted, favoring the taking over of the line by the city. After some discussion, an amendment was submitted by J. H. Ashdown, favoring the operation of the line for five years at least by the commission. No decision was reached, and the question will be further considered.

Railway Department Estimates for 1919-1920.

The estimates for the year ending Mar. 31, 1920, submitted to the House of Commons recently, contained the following items, among others, chargeable to capital account:—

Canadian Government Rys. construction and betterments	$11,121,681
Hudson Bay Ry. Port Nelson terminals	100,000
National Transcontinental Ry., to pay claims for right of way	125,000
Miscellaneous railway equipment, to acquire directly or indirectly, or to assist in acquiring during the current fiscal year, railway equipment and materials, for the purposes and upon the terms (save as herein varied) mentioned in chap. 38 of the statutes of 1918. The assistance herein provided for may be by way of advances to any Canadian railway or Canadian rolling stock company, or by way of equipment or materials acquired by the minister	35,000,000
	$46,346,681

The following items are chargeable to income:—

Arbitrations and awards	$20,000
Board of Railway Commissioners for Canada, maintenance and operation of, including $800 for Clyde Leavitt as Chief Fire Inspector	190,150
Board of Railway Commissioners for Canada, to pay expenses in connection with cases before the board	15,000
Contribution of Government Railways to McGill University towards foundation of a school of railway engineering and transportation in general in connection with Faculty of Applied Science	2,500
Contribution of Government Railways to Polytechnic School, Montreal, for advancement of learning in connection with railway engineering and transportation in general	2,500
Contribution to International Association of Railways Congress	97
Costs of litigation	3,000
Commissioner of Highways, to provide for the organization and payment of staff of Commissioner of Highways, including A. W. Campbell, C.E., as Commissioner of Highways at $5,000 a year	25,000
Governor General's car, attendance, repairs and alterations	5,000
Loan not exceeding $35,000,000, repayable on demand with interest payable half yearly at 6%, to be used to meet expenditures made or indebtedness incurred in paying interest on securities in excess of amount available from net earnings, or paying maturing loans of Canadian Northern Ry. or any company included in Canadian Northern Railway System, and for construction and betterments; said loan to be secured by mortgage upon the undertaking of the Canadian Northern Ry. System, containing such terms and conditions as the Governor in council may approve	35,000,000
Miscellaneous works not provided for	2,500
Printing and stationery, outside service	7,000
Surveys and inspections, railways, including salaries and expenses of experts employed temporarily	55,000
To provide for audit on behalf of Government, of any railway company in Canada	15,000
	$35,342,747
Salaries of Board of Railway Commissioners	$55,000

The following items are chargeable to collection of revenue:—

Canadian Government Railways; towards working expenses	$6,000,000
This is a decrease of $31,000,000 from 1918-1919.	
Canals, staff and repairs	1,800,000
Canals, statistical officers	42,500

MISCELLANEOUS.

Allowance to Stephen Holmes, father of Miss Myle Holmes, to cover cost of artificial limb, and doctors fees and expenses, etc., incurred as result of accident at Aitkens crossing, Pirate Harbor, Jan. 17, 1918	500
Allowance to widow and children of Amedee Belanger, who was killed while in discharge of duty in employ of Canadian Government Rys. near L'Islet station, April 7, 1918	2,000
Allowance to Mrs. Agnes Alma Steadman, mother of Leslie Steadman who was killed while in discharge of duty as brakeman on Canadian Government Rys. at St. John, N.B., Mar. 12th, 1917	2,000
Allowance to Mrs. G. Peterkin mother of Herve Bazinet, who was drowned in discharge of duty while in the employ of department, on the Lachine Canal, May 9, 1918	2,000
	$7,849,000

Freight and Passenger Traffic Notes.

Up to Mar. 31 of the winter traffic season C.P.R. ocean steamships and trains handled 32,727 passengers at St. John, N.B.

The London, Eng., Times, commenting on G.T.R. earnings, expresses the opinion that traffic is being carried under its cost.

The Grand Trunk Pacific Ry. announces that summer tourist fares to Pacific coast ports and to California will be given over its line from June 1 to Sept. 30, with first time limit to Oct. 31.

Motor cars leave Penticton and Oroville, B.C., each way daily, at 9.30 a.m. and 3 p.m., and a motor launch is run in connection on Lake Shaka between Penticton and Okanagan Falls.

A press report states that railways in Canada and the United States have under consideration the advisability of restoring to a considerable extent the pre war excursion and special rate tickets.

The Victoria & Sidney Ry., a subsidiary of the Great Northern Ry. (United States), which operates on Vancouver Island, will, a press report states, discontinue its service in the near future.

The Canadian National Rys. Western Lines have sent circulars to station agents respecting prizes for keeping and beautifying station grounds. Flower seeds, etc., will be distributed to the agents.

The Grand Trunk Pacific Ry., is reported to have put into force a train service on Mondays, Wednesday and Fridays each way, between Regina and Weyburn, Sask., in place of the former twice a week service.

F. W. Peters, General Superintendent British Columbia District C.P.R., is reported to have stated recently, that a daily passenger train service will be inaugurated on the Kettle Valley Lines, on June 1, in lieu of the present tri-weekly service.

Representatives of the British Columbia Manufacturers' Association, and Vancouver Board of Trade and the Central Ratepayers Association, met in Vancouver, Apr. 1, to discuss the revival of a freight transportation bureau for the city.

The Canadian National Rys. report that for the week ended Mar. 31, 562 loaded cars covered by revenue war bills were taken across the Quebec bridge, 404 being from the bridge station to Chaudiere Jct., and 158 from Chaudiere Jct. to the bridge station.

The Alberta and Great Waterways Ry., according to a press report, Apr. 14, has placed a general embargo on freight traffic on its line, pending the making of some repairs to the track, and the establishment of better conditions along the line.

Canadian Pacific Ocean Services Ltd. will resume its freight service from Montreal to Antwerp, May 14, with the s.s. Dunbridge. It is expected that a fortnightly service will be arranged. About 70% of the cargo space is reserved for government purposes according to press reports.

The Canadian National Rys. has been ordered by the Board of Railway Commissioners to stop its train 8, on flag, at Richmond, Ont., on Monday mornings, to accommodate the additional passenger traffic for Ottawa offering on those mornings, as a result of the week end travel from Ottawa to Richmond.

The Quebec Public Utilities Commission heard applications recently from Price Bros. and Co., against proposed increase by Canada and Gulf Terminal Ry., of freight rates between Matane and Mont Joli, and of W. Hurd, against proposed increase of rates on ties from 10c to 19c, by the Quebec Central Ry., between Lake Frontenac and Levis.

J. H. Walsh, General Manager Quebec Central Ry. is reported to have said Apr. 20, that an arrangement had been made with the United States Federal Railways to operate a sleeping car between New York and Levis, Que., which service will be augmented during the summer by a similar service by a through sleeping car to Boston and another to Portland, via the White Mountains.

The Edmonton, Dunvegan and British Columbia Ry. was reported Apr. 16 to have arranged to resume a gas car service between Edmonton and Westlake, Alta., 52 miles, at an early date. The car will leave Westlake in the morning and return in the afternoon. The experience of its operation during last summer is said to have been profitable to the railway, as well as to the advantage of the public.

Railway Finance, Meetings, Etc.

Grand Trunk Ry.—The ordinary general meeting of shareholders was held in London, Eng., Apr. 28.

Kettle Valley Ry.—At the annual meeting of shareholders held in Montreal, May 7, authority will be asked to issue bonds and other securities for the completion of the company's undertaking.

Lacombe and Blindman Valley Electric Ry. H. A. Warner, an engineering member of the Alberta board, managing this steam operated railway, laid before the public accounts committee of the legislature, Apr. 11, a statement showing the results of operation for 1918. The total revenue was $18,543.87 and the working expenses $18,680.64, leaving a deficit of $136.77.

Railways and Canals Department Salaries.—The Dominion Government estimates for the year ending March 31, 1920, presented to the House of Commons recently, provide $189,300 for salaries for the Railways and Canals Department against $203,112 for the previous year. The Deputy Minister's salary is increased from $5,000 to $6,000, but the item of $5,000, voted in previous years for Assistant to the Minister, has been struck out, that position having been abolished. The following advances in salary have also been made: Chief Engineer, W. A. Bowden, from $5,000 to $5,500; Assistant Chief Engineer, L. Sherwood, from $4,000 to $4,500; Electrical Engineer, Jno. Murphy, from $4,000 to $4,500; Inspecting Engineer, Alex. Ferguson, from $4,000 to $4,500. The Solicitor, E. E. Fairweather, remains at his former salary of $5,000.

The Edmonton, Dunvegan and British Columbia Railway's Position.

R. L. Richardson, M.P., for Springfield, Man., asked if the government's attention had been drawn to the Alberta Legislature's proceedings of April 1, which were reported as follows: "During the general discussion of the estimates, Dr. G. D. Stanley, High River, again asked the Premier concerning his previous statement in the house that the Edmonton, Dunvegan and British Columbia Ry. might be taken over by the Dominion Government; that negotiations were pending between J. D. McArthur, the railway promoter, and the Dominion Government, for such a consummation, and that the completion of the deal awaited only the signature of the Minister, presumably Sir Robert Borden. The Premier replied that the extent of his knowledge was that negotiations of this nature were pending; he could give no information as to their progress. In answering another question relative to the government having paid the interest on the bonds of this railway to prevent default the Premier stated that the procedure had been to give the company authority to make the payments; there was, however, no difference in the charges."

Mr. Richardson continued: "There have been remarks about the house to the effect that the Dominion Government might take this railway over, and it has been reported that very strong pressure was being brought to bear upon the government to do so. I would like very much to know if the government has any information that it cares to impart to the house, because it is very important to know what has been done with regard to the railway in question."

Sir Thos. White, acting Prime Minister, replied: "While the Edmonton, Dunvegan and British Columbia Ry. has been brought to the government's attention for some three or four years past in connection with matters relating to subsidy, no arrangement such as is suggested with regard to the taking over of the road has been completed, nor are there any negotiations at present looking to that end. It is, of course, open to those connected with this railway to bring to the government's attention from time to time anything that would be of public interest relating to its affairs."

It has been currently reported for some time that J. D. McArthur has been endeavoring to get the Dominion Government to take over his lines and that they will probably be added to the Canadian National Rys. System.

Central Railway Company of Canada's Affairs.

The Board of Railway Commissioners decided recently that the company had failed to make out its case upon an application to have the franchises, assets, etc., of the Ottawa Valley Ry., the Carillon and Grenville Ry. and the Ottawa River Navigation Co. vested in it, according to agreements, and that it would be manifestly against public interest and contrary to the spirit if not the letter, of the Railway Act for the commissioners to recommend the Dominion Government to sanction the ratification of the agreements. The Central Ry. Co. of Canada is the survival of a pre-confederation project, initiated for the purpose of taking advantage of a Dominion land grant for the building of a line from Montreal to Georgian Bay. A short line was built many years ago, to which was awarded some part of the land, but this line was subsequently sold to the C.P.R. Some years ago the Ottawa Valley Ry. was incorporated, with which C. N. Armstrong of Montreal became associated, and this branched out until the Central Ry. of Canada became its title. The existence of the old land grant was made use of in the flotation of bonds in England, and this fact led to the cancelling of the grant. The company made agreements to take over the Ottawa River Co.'s project, the old Carillon and Grenville Ry., and the Ottawa Navigation Co., the two latter being worked in con-conjunction. As a railway company, some construction work was done in the vicinity of Hawkesbury, but financial stringency came, and the company and its contractors took legal action with the result that there were proceedings of various kinds—creditors' meetings arrangements with bondholders, etc., in the course of which the right of way of the Carillon and Grenville Ry. was bought by the Canadian Northern Ry. The company applied to the Dominion Parliament in 1912, 1913 and 1914 for approval of the agreements referred to, but the bills failed to pass. A bill asking for an extension of time for construction of the company's projected railway from Montreal, via. Ottawa to Georgian Bay, is before the Dominion Parliament, but in passing through the House of Commons, the power of the company to build any additional lines was done away with, and the bill left in such a form, as the Minister of Railways explained, would leave the bondholders to sell everything connected with the company to which any value could be attached. The company has an interest in two sections of line, viz.: from South Glen Roberts to Hawkesbury, a total of 35 miles, which are leased to the Grand Trunk Ry. and it also owns the right-of-way from South Indian to Hawkesbury, and from St. Andrews to St. Agathe.

In connection with the action of the City Safe Deposit and Agency Co. against the Central Ry. of Canada, the Exchequer Court of Canada has directed that all persons having claims against the company shall file them with the Registrar of the Court at Ottawa on or before Sept. 9. F. S. Williamson, 103 St. Francois Xavier St., Montreal, is the Receiver.

Public Works Department Salaries.—The estimates for the year ending Mar. 31, 1920, submitted to the House of Commons recently, provide for $575,537 for salaries in the Public Works Department, against $574,955 for the year ended Mar. 31, 1919. The salary of the Deputy Minister, J. B. Hunter, is raised from $5,000 to $6,000, and that of the Assistant Deputy Minister, A. St. Laurent, from $4,000 to $4,500.

G.T.R. Ambulance Center—This branch of the St. John's Ambulance Association has elected the following officers: Patrons, W. M. McPherson, and E. J. Chamberlin; President, H. G. Kelley; Vice President, W. D. Robb; Hon. Treasurer, F. S. Scott; Hon. Secretary, F. A. Bourne; representatives to general council of Canadian branch, Dr. J. H. Hutchinson and Dr. H. B. Carmichael.

The Grand Trunk Pacific Railway Receivership.

The following circular has been issued:

Grand Trunk Pacific Railway System.
"W. P. Hinton, Minister of Railways
"General Manager. & Canals Receiver.
"Winnipeg, Man., Mar. 25, 1919.

"To all concerned:—With the Receiver's approval, an office has been arranged for in the Department of Railways and Canals, at Ottawa, to facilitate the handling of the work connected with the receivership of the railway.

"H. H. Hansard, Solicitor for the company, has been delegated to act as Solicitor to the Receiver, to assist the Receiver in all legal matters pertaining to the receivership.

"S. P. Porter, Executive Agent of the company, will represent me at Ottawa, during my absence, as my assistant in all matters pertaining to the receivership.

"All correspondence in connection with the receivership at Ottawa should, therefore be addressed to, 'S. P. Porter, Ass't. to General Manager, Grand Trunk Pacific Ry. System, Department of Railways and Canals, Ottawa, Ont.'

"In order not to create confusion, or delay, all official Receiver's correspondence to the company will be directed and addressed to, 'The Secretary, Grand Trunk Pacific Railway Co., Montreal, Que.', or, 'The Vice President and General Manager, Grand Trunk Pacific Railway Co., Winnipeg, Man.' as the case may be.

"All orders on supply houses for materials, etc., and all communications with outside individuals, firms, or companies, involving financial transactions should be stamped with rubber stamp, as below: 'Minister of Railways and Canals Receiver.'

"Transfers, deeds, leases, agreements, contracts and other documents should be prepared and handled as usual and sent to the Vice President and General Manager for execution on behalf of the company. These documents will require the Receiver's approval and signature, to be endorsed thereon before delivery, but should first be signed by the proper officers and then sent to the General Manager's branch office, Ottawa, for the Receiver's approval and signature, and then returned to the Secretary for sealing and delivery.

"These instructions cover not only the Grand Trunk Pacific Ry., but all Grand Trunk Pacific subsidiary companies.

"W. P. Hinton, General Manager."
"Approved, J. D. Reid, Receiver.

Railway Troops—In "Canada's Part in the War," a booklet issued by the Dominion Government, it is stated that "Canadian Railway Units were attached to all the British armies. Canadian Railway troops were responsible for the whole of the construction of light railways and 60% of the standard gauge railways in the area occupied by the British forces."

The Alberta Government and Railway Bonds.—In speaking on the Lacombe and Northwestern Ry. bill in the Alberta Legislature, Apr. 9, the Provincial Premier stated that the government had no intention of going into the railway business and that as long as he is the head of the government there will be no more guarantees of railway companies' bonds given.

Electric Railway Department

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—See under British Columbia Public Utilities Act, on another page of this issue.

The Cape Breton Electric Co. is reported to have decided to sell 10 school childrens' tickets for 30c. The Nova Scotia Public Utilities Commission in its recent judgment, recommended the issue of such tickets, leaving it to the company to fix the rate and the manner of issue.

Edmonton Radial Ry.—The Edmonton, Alta. City Council is reported to have decided to advance fares on the Edmonton Radial Ry. which is owned and operated by the city, as follows, from Apr. 21:—Cash fares, 7c; ticket, good until midnight, 4 for 25c; limited tickets, good until 8.30 a.m., 5 for 25c. After midnight, 10c cash, or 2 tickets. No change was made in childrens' fares.

London and Port Stanley Ry.—The Dominion Parliament has ratified an agreement made Jan. 20, 1919, between this company, which it operated by the London Railway Commission, of which Sir Adam Beck is Chairman, and the City of London, varying an agreement of Nov. 28, 1913, and increasing the excursion rate between London and Port Stanley. The clause in the new agreement, which replaces a clause of the original agreement, is as follows:—That semi-weekly excursion trains from London to Port Stanley and return on the same day, will be ran in each week from May 24 to Sept. 10 in each year during the term of 99 years. The fare from London to Port Stanley and back on such trains, shall not exceed 50c for each person 12 years of age or upward, and 25c for each person under 5, accompanied by a parent or other person having them in charge, such children to travel free, and such fare shall entitle the passengers to be carried to the termini at the beach south of the present picnic grounds at Port Stanley.

London St. Ry.,—After having been under discussion for nearly a year the London, Ont., City Council, on April 7, voted on the question of an increase of fare on the London St. Ry. The company's application for power to charge increased fares came before the council's no. 1 committee, which referred it to a special committee. This committee discussed it at length, and reported against it, and this recommendation was adopted by no. 1 committee, the section of the report dealing with the matter, and passed on to the Council for consideration being as follows:—

"That inasmuch as the communication from the London St. Ry. offers a suggestion as to the improvements in service conditional on increased fares, that the company be advised that the city cannot give the communication further consideration.

A copy of this resolution having been supplied to the company the mayor was advised that if the increased fares asked for were granted the company would at once put into effect and maintain the service called for in the city's bylaw passed in Aug., 1918. This communication was considered by the council on Apr. 7 at the same time as the report of no. 1 committee with the result that it was resolved on motion of Alderman Cunningham, seconded by Alderman Colbert, by 6 votes to 5 "That without prejudice to the city's right under bylaw 916, and agreements relating thereto that the following be the fares: 5c cash, 6 unlimited tickets for 25c, and 7 limited tickets for 25c; the latter to be good until 8.30 a.m. and that bylaw 916 be amended accordingly, and that if necessary, application be made to the Ontario Legislature, now in session, by the city solicitor, to confirm the same.

The company inaugurated the desired service on Apr. 9, but the City Solicitor, subsequent to the passing of the resolution, authorizing increased fares, advised the council that it was too late to apply for confirmation of the amendment to the bylaw, at the then current session of the legislature, so the company is still selling tickets at the old rate.

Following is a comparison of the old fares and of the new ones authorized by the city council, but not yet ratified by the legislature:

	Old.	New.
Cash fare	5c	5c
Unlimited tickets	7 for 25c	6 for 25c
Limited tickets	9 for 25c	7 for 25c

The city council extended the time within which limited tickets may be used in mornings by half an hour, viz. to 8.30 a.m., instead of to 8 a.m. as under the previous arrangement.

Among those who voted for the increase of fares was Alderman J. Colbert, President of the Street Railway Men's Union. A couple of days later the Independent Labor Party declared in a statement that he was unworthy of the political support of organized labor.

New Brunswick Power Co.—See under "Commission's Report on New Brunswick Power Co.'s Franchise, Rates, Etc.," on another page of this issue.

Nipissing Central Ry.—Canadian Railway and Marine World for Apr. contained full particulars of local passenger tariff C.R.C. 20, issued Feb. 22, by this company, which is owned by the Ontario Government, and operated by the Timiskaming & Northern Ontario Ry. Commission, and which increased passenger fares about 25 per cent. The Board of Railway Commissioners passed order 28190, Mar. 29 on the complaint of Haileybury Town, Bucke Tp. and B. B. Caibbe, suspending the tariff, pending hearing of complaints on date to be fixed by board.

Ottawa Electric Ry.—The board of railway commissioners passed order 28,230, Apr. 14, allowing the Ottawa Electric Ry. Co. to appeal to the Supreme Court of Canada, upon questions of law, against two orders passed by the board, viz. 27,830, of Nov. 6, 1918, impending the company's tariff c. 6, c. 5, and 28,120, of Feb. 25, 1919, disallowing the said tariff. Both these orders were published in full in Canadian Railway and Marine World for Dec., 1918, pg. 557, and Mar., 1919, pg. 137. The order of April 14, states that the questions for the consideration of the Supreme Court are:

"1. Whether upon the proper construction of the agreements with the City of Ottawa and the Village of Hintonburg, the statutes relating to the Ottawa Electric Ry. Co. and the relevant provisions of the Railway Act, the board was right in disallowing the tariff of the company filed, providing for payment of addtional fare for carriage upon the extension from Holland Ave., notwithstanding that the board has found as a fact that the company did not require additional revenue.

"2. Also, whether, upon the proper construction of the said agreements and statutes for the purpose of computing the toll to be charged to passengers upon the said extension, the point of commencement of the said extension should be considered to be at Holland Ave. or at the former westerly limit of the Village of Hintonburg, now the City of Ottawa.

"3. Has the board the right to treat the company's operations as a whole and continue the existing tariff; or must the board permit the filing of tariffs on a mileage basis covering services on the Britannia line without reference to the larger part of the system covered by municipal agreements?"

It is probable that case will be heard at the Supreme Court's sittings, beginning on May 6.

The Proposed Purchase of the Ottawa Electric Ry. is Off.

The petition of the Ottawa City Council for authority to purchase the Ottawa Electric Ry., came before the Ontario Legislature's standing committee at the end of March, and the committee reported to the legislature Apr. 1 that among other things the petitioner desired to be authorized to enter into a provisional agreement with the Ottawa Electric Ry. Co., and with the Ottawa Traction Co., or that if they should approve of the same, to carry the same into effect, and in such an event that the petitioner be authorized to provide by bylaw, to be passed without obtaining the approval of the ratepayers of the city thereto, for issuing city debentures to such an amount not exceeding $6,500,000, as might be required to provide for the payment of the sum agreed upon as the purchase price of the Ottawa Electric Ry.'s. real and personal property, assets and franchises, whereas the notice said that the bylaw providing for the issue of debentures for raising the before mentioned sum should be subject to the obtaining of the assent of the electors. The committee was informed that a portion of the paragraph in the petition relating to the issue of the debentures was omitted and that the paragraph appearing in the petition did not convey the petitioner's intention. The committee recommended that the private bills committee's attention be directed to the difference between the notice and the petition, with regard to the assent of the ratepayers being required to the bylaws, and that the bill be made to conform in this particular with the notice as published.

The Ottawa City Council discussed the whole situation Apr. 7, when the board of control recommended among other things, that the council inform the company that the city was not prepared to purchase the railway at the price named. The council decided unanimously to withdraw the bill.

In the course of the discussion it was stated that the city would have to obtain power from the Quebec Legislature, and from the Dominion Parliament to deal with the matter, as well as from the Ontario Legislature.

British Columbia Public Utilities Act.

The B.C. Legislature has passed an act providing for the appointment of a public utilities commission for the province. The 1st section contains the interpretation clauses; the 2nd sets forth the duties and restrictions imposed on public utilities companies; the 3rd deals with the supervision of the commission over such companies; the 4th deals with the commission, and its procedure. The commission is to consist of one member to hold office during good behaviour for 10 years, who shall be eligible reappointment; devote the whole of his time to the duties and shall reside in such place as the government may from time to time determine. The salary of the commissioner shall not be less than $7,000 nor more than $8,000 a year. An acting commissioner may be appointed in cases of illness or absence, or in case the commissioner may be interested in any case coming before it and him. Provision is made for the appointment of a secretary and such staff as may be required, and a report is to be presented annually by the commissioner to the legislature. The Minister of Railways' power in respect of any public utility company or its service, is transferred to the commissioner, who may act without the consent of the government, and may vary existing orders of the Mnister of Railways, upon any matters coming within the commissioner's jurisdiction. The commissioner is given certain Supreme Court powers and is to make decisions on the merits and justice of the cases submitted, and shall not be bound to follow strict legal precedent. Appeals may be made from the commissioner's findings on questions of jurisdiction and law, upon permission to do so being obtained from the Court of Appeal, within 28 days after the decision has been made.

The important sections affecting electric railways, and the British Columbia Electric Ry. in particular, are the three dealing with rates. Sec. 9 provides that no public utility shall make any unjust, unreasonable, unduly discriminatory or unduly preferential rate for any service furnished by it, or any rate otherwise in violation of the law; sec. 10 prohibits the granting of reduced rates or rebates, and sec. 11 provides that there can be no changes of rates, or the establishment of any new rates, except with the approval of the commissioner. Subsec. 2, of this section, provides that the burden of proof as to the desirability of any change in rates from those in existence or legally chargeable at the time the act came into force, shall be upon the company; subsec. 3 preserves the right of application for a change in rates, while subsec. 4 makes special provision in respect to the British Columbia Electric Ry. The effect of this subsection is that beginning on Apr. 9, the company has to keep a record of all fares in excess of 5c, but not exceeding a 6c fare within or without the City of Vancouver, showing the amount of excess collected, and shall keep the same deposited in a special trust account, until the commissioner shall fix a rate for such service, which he shall proceed to do with due diligence. In the event of the rate so fixed being less than the rate charged from Apr. 9, the amount held in the special trust account in excess of the rate fixed shall be paid to the Vancouver General Hospital, and the balance, if any, shall belong to the company, but if the rate fixed by the commissioner is equal to or in excess of the rate charged from Apr. 9, then the company shall be entitled to the whole of the amount in the special trust account. The effect of this section is that the British Columbia Electric Ry. will continue to collect 6c fares in Vancouver, New Westminster and North Vancouver, until the commissioner decides otherwise.

It is provided that no public utility shall capitalize any franchise or right to be a corporation, or capitalize any franchise in excess of the amount actually paid to the province or a municipality as the consideration for the same; or capitalize any contract for consolidation, amalgamation or lease, or issue any security or evidence of indebtedness against or as a lien upon any contract for amalgamation, merger or lease. All amalgamations shall be subject to the commissioner's approval, and unless he approves, no public utility company can acquire shares in any other public utility company.

The commissioner is given power to ascertain the value of the property of any public utility company and may order the costs of such appraisal to be paid by the company as the work proceeds.

During the passage of the bill through the legislature, there was considerable discussion upon the question of fares, with the result that an amendment having for its object the re-establishment of a 5c fare in Vancouver, was defeated. Another amendment, which was defeated, was one asking to have it specifically defined just what businesses should be considered public utilities.

A Victoria dispatch of Apr. 17 stated that the B.C. Government had decided to appoint R. H. Gale, Mayor of Vancouver, as commissioner under the new act. This news was not favorably received in Vancouver, particularly by the Great War Veterans' Association, which had been advocating the appointment of Lt.-Col. L. L. Retallack. His appointment was also recommended by the British Columbia Technical Union. The G.W.V.A., at a meeting on Apr. 17, protested against the appointment of Mayor Gale, and arranged for a deputation to go to Victoria to interview the government. A Victoria press dispatch, Apr. 21, stated that Mayor Gale's name had been withdrawn, and that Lt.-Col. Retallack had been appointed. He was formerly in the Royal Northwest Mounted Police, and during the war served with the Canadian Railway troops in France and Belgium.

Proposed purchase of Sandwich, Windsor and Amhurstburg Ry.—A Windsor, Ont. press report of April 13, states that an agreement has been reached between Windsor and the other four border municipalities with respect to the joint purchase of the electric railway system in the border municipalities, and that negotiations to determine the price to be paid are to be opened immediately by the Hydro-Electric Power Commission of Ontario.

Street Railway Operating Questions in Regina.

The Regina, Sask., city council, on Mar. 28, discussed a report relative to the operation of the municipal railway, proposed by City Commissioner Thornton in reply to a series of questions submitted by Alderman Rope, and covered the question of advertising schedules; provision of signposts at railway stations; of meeting trains; provision of rear vestibule doors on cars; use of automatic trolleys; appointment of a special inspector, and suggestions by W. R. Reilly as to looping all lines downtown, instead of running them through as at present. Commissioner Thornton points out that schedules, of used, would be beneficial from a revenue standpoint, and that the advertising agent is working on an advertising booklet which will contain schedules of all lines. As to signs of railway stations, there is a board at Rox and South Railway Sts., and a similar board might be placed on C.P.R. property if permission could be obtained. It has been found impossible to make the car schedules conform to train arrivals, and experience has shown that even the meeting of excursion trains from the beaches has frequently not been justified by the patronage received. The commissioner says it would cost about $4,000 to equip the cars with rear vestibule doors, and under present circumstances, this expenditure is not considered justifiable, particularly in view of the fact that the equipment may in the near future be converted for the operation of one-man cars. The use of automatic trolleys is not essential for the operation of two-man cars, but they will have to be provided at a cost of approximately $15 each for one-man cars when adopted. As to the employment of an additional • inspector, the commissioner says such an officer would certainly ensure a closer supervision over traffic, both special and at transfer points, but suggests the appointment of an assistant to the superintendent, whose duties, among other things, would be that of traffic manager. The suggestion as to looping all lines downtown, Commissioner Thornton says would, under present conditions, result in additional expense without any appreciable increase in traffic. The concensus of opinion among street railway operators is, he says, decidedly in favor of the radial system of routing as opposed in the belt system. He recommends the provision of a waiting room at the corner of Hamilton and Eleventh Sts.

The council spent about four hours discussing the report and adjourned its further consideration to a future meeting. The aldermen, with the exception of Alderman Rose, who had raised the various questions, were favorably disposed to the suggestions made by the commissioner.

The Edmonton, Alta., City Council, on Mar. 10, gave consideration to several matters affecting the Edmonton Radial Ry. employes. The council restored all men who participated in the walk out of 1917, to the standing which they would have had if there had been no strike or no war. Five of the employes taken on at the time of the strike are reported to be affected by this settlement. Men who had enlisted were being placed on the list next to the men they had followed at the time of enlistment.

Double Truck Motor Cars for Winnipeg Electric Railway.

The Winnipeg Electric Ry. is adding 10 double truck, single end, semi steel, arch roof, motor cars to its equipment, the following being the principal dimensions, etc.:—

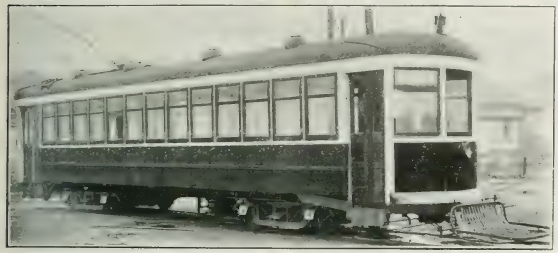
Length of car body	33 ft. 3 in.
Length of front vestibule	5 ft. 0 in.
Length of rear vestibule	7 ft. 6 in.
Length over bumpers	45 ft. 8 in.
Width over all	8 ft. 6 in.
Distance between bolsters	21 ft. 6 in.
Weight of car body	19,000 lb.
Seating capacity	46 persons

The bottom frame and sides are of steel with side sill made up 5 x 3 x ½ in. angle, rivetted to side plate 18 x 5-16 in., cross members are of 4 x 5-16 in. plates, also 4 in. channel at 7.25 lb., reinforced with oak cross sill, headstock made up of 10 x ½ in. steel plate, with two 4 x 3 x ½ in. angle rivetted together.

Bolsters are made up of channel, top 12 in. at 25 lb., bottom 10 in. at 20 lb. with cross channel at center. Front vestibules, center and side knees are of channel 6 in. at 8 lb., running through to bolster, bumpers 6 in. at 13 lb., with 3-16 in. cover plate for toe board. Rear vestibule center knees 6 in. channel, running through to bolster, side knees are of 4 in. channel, made up in counterlever style, toe board also of 3-16 in. plate.

Above side plate and below belt rail, 16 gauge panels are used between side post, with ⅛ in. strap covering joint. This arrangement facilitates repairs. Belt rail is 2 x ½ in. steel strap bolted to post, with beaded bar rivetted to top of side plate with 4 x ½ in. reinforcing plate inside.

The body posts are of white ash, straight and grooved for sash. The wood belt rail is covered with no. 16 gauge steel.



Double Truck Motor Car, Winnipeg Electric Railway.

Front and rear vestibule doors are 2 leaf folding out and back, controlled by motorman and conductor, with which are operated a folding step, provided with Ottawa Car Mfg. Co's. anti-slip tread.

A Keystone illuminated sign box is placed in the front vestibule right hand window, and Keystone side window signs are installed on each rear window. The interior lighting arrangements include 5 shaded lights in the center of arch roof, with through selector switch on rear platform over conductor's position.

The seats are light weight pressed steel fittings, with Ottawa Car Mfg. Co. spring upholstered cushion and back, covered with rattan. Motorman's seat is the Electric Service Supply Co's., and conductor's seat is the Ottawa Car Mfg. Co. standard drop seat. The heating arrangements are for hot air.

The rear bulkhead has swinging door, with door-check arranged to swing in for entrance side, full panelling and sash at center, sliding door for exit, front bulkhead has door mounted on double acting spring hinges on right hand side for exit, panelling and two sash, with louver, in upper half of left hand sash. A protective compartment is installed in rear vestibule for conductor and provided with raised floor about 4 in. high, also heater and seat. A winter partition is also arranged for motorman in front vestibule.

A sand box is installed in front bulkhead, with O. B. sander valve, arranged to sand both rails. Front vestibule windows have double glass, with extra storm sash fastened from inside, to protect the motorman from frosted windows.

The rear vestibule doors are fitted with electric signal, and arranged with switch on door frames, with electric light in front of motorman. A signal bell system is installed to operate car push buttons, direct from trolley circuit of 500 volts.

Draw bars are provided at each end, with Winnipeg Electric Ry. standard draw head and Ottawa Car Mfg. Co. improved spring case. Side sash are arranged to lift up with an automatic cam lock. The advantage obtained by the use of lift up sash is that the absence of lower pockets makes the car more sanitary, because the chance for careless patrons to use the pockets as a place into which to drop rubbish is done away with.

The interiors are finished in cherry inlaid, including doors, sash linings and mouldings.

Sanitary hand straps are used over longitudinal seats, 21 being installed. The ventilators are exhaust, 4 on each side of roof, with grills on inside. The headlining is painted light cream color with railway enamel. Removable window guards, in 4 sections, are placed on devil strip side and made interchangeable. This arrangement makes the cleaning of windows easy. Hand brakes are provided.

One special feature of these cars is the coloring of all bronze trimmings to an antique green, a serviceable and lasting color compared with highly polished bronze, which tarnishes after a car has been running two or three weeks. The painting of the cars is Winnipeg Electric Ry. standard light cream color above belt rail, below belt rail is painted a solid cherry, sash and doors natural cherry.

The car bodies were built by the Ottawa Car Mfg. Co., the Winnipeg Electric Ry. supplying and installing the trucks, motor equipments and air brakes.

The trucks have 26 in. wheels, on which are mounted 4 C.G.E. ball bearing motors.

Plan View of Double Truck Motor Car, Winnipeg Electric Railway.

Higher Electric Railway Fares in Scotland.—Municipal and company owned tramway managements, at a meeting in Edinburgh recently, adopted the following resolution: "That the responsible officials of the Scottish tramways industry pledge themselves to call meetings of their directors and committees, and to advise and do everything in their power to induce these bodies to take united action until the responsible government departments admit, and take immediate steps to put into effect, the principle of allowing tramway undertakings to increase their present scales of tolls and charges by not less than 50%, and not more than 100%.

Buffalo, Lockport and Rochester Railway Reorganization.

In connection with the recent sale, under foreclosure, of the property, franchises and other assets of the Buffalo, Lockport and Rochester Ry., to the bondholders, we are officially advised that the plans for reorganization of the company are being carried out, and that a new board of directors will be elected at an early date. The reorganization plan provides for the purchase of the property at the foreclosure sale by a committee representing the reorganization committee and to be turned over to a new corporation to be formed by the committee, which corporation is to issue the proposed new securities in payment for the property.

The securities dealt with by the reorganization committee consist of $2,799,000 first mortgage 5% gold bonds, and $200,000 second mortgage 6% gold bonds, the preferred and common stock not participating. The new company is to issue $1,499,500 of 6% cumulative preferred stock, and $2,199,250 of common stock, being part of a total capital authorized of $1,500,000 preferred stock, and of $2,200,000 common stock subject to the approval of the Public Service Commission of the State of New York. The new stock to be issued will be distributed as follows: To holders of first mortgage bonds, $500 preferred and $750 common stock in respect of each $1,000 held; and to holders of second mortgage bonds $500 preferred and $500 common stock in respect of each $1,000 held, and they will also receive the new securities underwritten by them as provided in the underwriting agreement. This agreement provided that bondholders signing it would advance pro rata for the cash requirements of the plan in respect of such holders of first mortgage bondholders as did not deposit their bonds thereunder.

The reorganization relieves the company of any fixed annual interest obligations. The reasons given for the adoption of the plan are that for the six years ended June 30, 1918, the average amount available to pay interest on the first mortgage bonds was $88,176 or $51,774 less than the sum required to meet the interest, such deficiency having been provided out of the issue of second mortgage bonds; that possibly for the next five years the company will be confronted with disturbed labor and other operating conditions, and that fairly large expenditures on track and equipment must be maintained if the property is to be put in first class condition.

The bondholders' protective committee, which is carrying through the reorganization, consists of: R. Home Smith, chairman; Hon. F. Nicholls, and D. B. Hanna, all of Toronto. A. S. Muirhead, also of Toronto, is secretary.

Winnipeg Electric Ry.—The Winnipeg City Council on Mar. 11, considered a suggestion from the Manitoba Premier to the effect that the present 5c fare be allowed to stand for two years. The suggestion was made in connection with the work of paying for the valuation of the company's property which is now being made, the payment for which the company desired should be spread over a lengthened period. The company paid $3,000 for the first month's work of the valuation, but declined to pay the $6,000 asked for the second month's work. Further construction was postponed.

The Toronto and York Radial Railway and the City of Toronto.

Canadian Railway and Marine World for March contained details of a proposed agreement under which the city was to take over the portion of the Toronto and York Radial Ry. Metropolitan Division on Yonge St., within the city limits, on payment of $590,000. It was also provided that the company might establish a freight receiving station on Yonge St. at the city boundary, and certain other receiving station within the city, on a rental basis, and that the Toronto Ry., during the balance of its franchise term, would be permitted to transport package freight from the freight station on Yonge St. to other stations in the city, in cars to be provided by the city, and after the taking over of the Toronto Ry. by the city, and after that company's franchise in 1921, the city would continue such transportation of freight, the company paying to the city the freight charges, and for the maintenance and depreciation of the cars, and interest at 6% on their cost, with platform wages for the car crews, and the actual cost of power used, no charge to be made for power used between 12 midnight and 6 a.m.

This agreement was arrived at after considerable negotiation, and as a result of arbitration proceedings before the Ontario Railway and Municipal Board, and was considered to provide a reasonable solution of the grievances which the city claimed to be suffering under, owing to the company's operations within the city limits.

Under another agreement, in common with other municipalities, respecting the proposed construction of hydro radial railways, with the Hydro-Electric Power Commission of Ontario, the city is not permitted to enter into any agreement for the acquisition, operation of, or the granting of any franchises to any other railway company, without the commission's approval, and on the submission of this proposed agreement, to the commission, approval was refused, as it was considered to be inimical to the projected hydro radial projects, and also on the ground that the proposal to carry freight within the city limits would be construed as a perpetual franchise, which the commission would not allow the city to assume, when it took over the Toronto Ry. on the expiry of the franchise in 1921

An alternative scheme, laid before the City Board of Control, Apr. 12, by Sir Adam Beck, chairman of the Hydro-Electric Power Commission of Ontario, provides for the removal of the company's tracks entirely between Farnham Ave. and the northern limits of the city on Yonge St., now situated on the west side and the laying of a double track in the centre of the roadway, thus making it possible to pave the whole street. This, it is estimated, will increase the accommodation so far as the company is concerned, and make possible the operating of the city system as far as Farnham Ave. to connect with the company's city lines until 1921, when a through city service will be operated. It is presumed that dual service of the city and the company on Yonge St. will affect the local passenger service company and an act was drafted by the commission's solicitors to provide for the building of tracks for the dual system; the city to provide for the whole of the road from Farnham Ave. to the northern city limits on Yonge St., and making possible a better operation of the company's cars on the double tracks than it now has with a single track. It would also enable the city to operate its cars between Farnham Ave. and the northern city limits until the city's contemplated lines up Mount Pleasant Road on the east and Avenue Road on the west, are constructed. It proposed that the city absorb the company's cars which are now used for local passenger service, for which the company would be paid, the company to hand over its rails, ties and overhead equipment to the city, and the city to construct a double track standard gauge railway with overhead equipment suitable for the company's cars.

Considerable discussion took place subsequently on the merits of both this original and the later proposals, by the board of control and the city council, and the scheme proposed by Sir Adam Beck was adopted.

A bill was prepared and submitted to the Ontario Legislature, Apr. 16, to ratify the arrangement, but was rejected owing to the late date at which it was presented, the session closing on the following day. The provisions of the bill were to empower the city to lay two double track lines of different gauge (city lines 4 ft. 10⅞ ins., T. & Y.R.R. standard), approximately on the same location, on the center of Yonge St., between the terminus of the Toronto Ry. and the northern city limits, each of the double track lines of different gauge to be installed as near as practicable on the same center line and parallel thereto; to remove the existing rails, etc., from the west side of the street; to take over the company's existing local service cars now operating over this section, solely for traffic between Farnham Ave., and the northerly city limits. The company to have the use of the tracks of the gauge of its present railway, between the points mentioned, and the city to have the use of the tracks of the gauge of the tracks now within the city limits. Provision was also made that the city and the company might enter into agreements as to the amounts to be paid in compensation for the loss of profit, for the cars taken by the city, the amount of the company should pay for the advantage of operating over a double track line in place of a single track one, the number of cars to be operated by each party, and the amount to be paid to the city as its share of the cost of maintenance. A final clause in the bill stated that nothing in it was to be deemed to confer upon the company the power to continue the operation of its cars on that portion of Yonge St., beyond the period within which it is now empowered to operate cars thereon.

The Toronto Railway Employes Union has asked the Ontario Government to amend the Hydro Electric Power Commission Act, so as to provide for five commissioners instead of three, one at least of the five to be a labor representative.

Henry Ford is said to be working on plans for a street car, to be driven by an internal combustion motor.

Mainly About Electric Railway People.

Capt. F. D. Burpee, Superintendent, Ottawa Electric Ry., who returned recently from overseas service, has been elected a member of the Canadian Electric Railway Association's executive committee, succeeding the late Jas. D. Fraser, formerly Secretary-Treasurer, Ottawa Electric Ry.

J. L. Baird, Assistant Secretary and Treasurer and Auditor, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont. underwent a serious internal operation at Harper Hospital, Detroit, Mich., Apr. 8. On Apr. 18 he was reported to be progressing as well as could be expected, and it was stated that, unless some unlooked for complication occurred, he should be able to leave the hospital early in May.

J. Buntzen, formerly General Manager, British Columbia Electric Ry., who, since his retirement some years ago, has been acting as an advisor to the directors, and has lived in Copenhagen, Denmark, is expected to visit Vancouver during the summer.

Capt. F. R. Glover, who has resumed his duties as general executive assistant, British Columbia Electric Ry. at Vancouver, went overseas with the 72nd Seaforth Highlanders as honorary captain and paymaster, and on returning late in 1917, was appointed superintendent of military police for British Columbia, under the Military Service Act.

R. N. Godin, has been appointed acting Superintendent, in charge of car barns, power and distribution system, Montreal & Southern Counties Ry., G. J. Meyer, Chief Engineer and General Superintendent, having resigned.

Geo. Kidd, General Manager, British Columbia Electric Ry., entertained at a complimentary dinner at Vancouver, on April 5, all the men in the company's employ who had returned from overseas service. Invitations were issued to 209 on the mainland portion of the system. There are a large number more to return, but the dinner could not be postponed, as Mr. Kidd had to leave early in April for London, Eng., where he expects to spend two or three months at the head office, in connection with the company's affairs.

A. F. Laberge, heretofore Assistant Superintendent, Montreal & Southern Counties Ry., has been appointed acting Superintendent, in charge of transportation, G. J. Meyer, General Superintendent, having resigned.

W. H. Lutz, heretofore Treasurer, Grand River Ry., and Assistant Secretary-Treasurer and Claims Agent, Lake Erie & Northern Ry., has resigned, on being appointed Manager, Galt Art Metal Co., Galt, Ont.

T. H. McCauley, Superintendent Calgary Municipal Ry., spoke at the Calgary, Alta., Board of Trade's luncheon recently, on the city's electric railway.

Sir Wm. Mackenzie, President, Monterey Ry., Light & Power Co., and Toronto Ry., returned to Toronto, Apr. 4, with F. H. Phippen, K.C., Miss Mackenzie and Mrs. Frank McCarthy, after a short trip to Monterey, Mexico, and Hot Springs, Arkansas.

G. J. Meyer, Chief Engineer and General Superintendent, Montreal & Southern Counties Ry., has resigned, and has returned to Chicago.

Geo. A. Mills, Electrical Engineer, Winnipeg Electric Ry., has resigned, and is returning to the United States.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., returned to Vancouver early in April, after having spent two months in Southern California, where he had gone under his doctor's orders, on account of his health.

Miss C. Nevin, who returned recently from overseas, where she had been doing war work, has been appointed Assistant to Treasurer, Grand River Ry. and Lake Erie & Northern Ry.

Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., and Mrs. and Miss Royce, returned to Toronto recently, after spending several weeks at Palm Beach, Florida.

H. C. Small, Secretary, Ontario Railway & Municipal Board, is a beneficiary under the will of his brother, J. T. Small, K.C., who died suddenly on the golf links at Pinehurst, N.C., Jan. 30, leaving an estate valued at $101,121. He left his Toronto house to H. C. Small, under certain conditions, also a fourth of the residue of the estate, after providing for certain other legacies, succesion duties, etc.

Warren Y. Soper, Vice President, Ottawa Electric Ry., and Gordon Gale, Vice-President & General Manager, Hull Electric Co., were among the members of the Royal Ottawa Golf Club's committee, which received the Governor General and other guests, at the club's reopening, Apr. 14.

David A. Starr, M.I.E.E., formerly of Halifax, N.S., and who has been General Manager of the Clyde Valley Electrical Power Co., at Glasgow, Scotland, for several years, left there early in December, on an extended leave of absence, to recuperate after an attack of pneumonia. He went via New York to Florida, Cuba, and Jamaica, thence to New York again, and after visiting Toronto, Ottawa, Montreal and Halifax, sailed towards the end of April for Glasgow, to resume his duties.

M. Milne Todd, Vice President, Grand River Ry. and Lake Erie & Northern Ry., has also been appointed Treasurer of both companies.

Ivan E. Vallee, heretofore first assistant engineer and assistant director of railways, has been appointed chief engineer and director of railways, Quebec Public Works Department, and chief engineer, Quebec Public Utilities Commission, succeeding his father, L. A. Vallee, deceased. He has been in Public Works Department's service since July 19, 1910.

George Kidd, General Manager British Columbia Electric Ry., gave a dinner at Vancouver, Apr. 5, to 200 of the company's employes who had served either in the army or the navy during the war. In addressing them, he said 570 of the employes had served in the war, of whom a number had been killed or had died; 125, who had served, had returned to the company's service, and over 300 men were yet to return.

The Toronto Ry. is increasing the number of prepayment cars on its various routes throughout the city. Several of the cars on the Dundas St route have been remodelled and equipped with the National Pneumatic Co.'s pneumatic door control, in accordance with the plans adopted on other of its cars, and fully described in previous issues.

Electric Railway Notes.

The Quebec Ry. Light and Power Co. has asked for tenders for 10 double end cars for its city division.

The City of Toronto has been authorized by the Ontario Legislature to expend $200,000 on new cars for the Toronto Civic Ry.

Regina, Sask., City Council proposes to submit to the ratepayers, at an early date, a bylaw authorizing the operation of one man cars on the municipal railway.

The Hamilton, Ont., City Council has agreed to the cuttting out of about 30 stops on the Hamilton St. Ry. lines to expedite the service. Cars now stop at the near side of crossings.

A deputation representing Liverpool, Eng., city council, is expected to arrive in New York about May 1, to inspect street railway and other public utilities in the United States and Canada. Toronto and Montreal will be visited.

Winnipeg City Council has referred to the assessment commissioner a petition of residents and property owners on Morley Ave. and Bartlett St., asking for a bus service on Morley Ave., and a petition from River Ave. residents asking that the Winnipeg Electric Ry. tracks thereon be taken up and a bus service substituted.

The Regina, Sask., city council decided Apr. 18, on the recommendation of City Commissioner Thornton, to submit a bylaw to the ratepayers at the earliest convenient date under the provisions of the recent amendment to the Saskatchewan Railway Act, for the purpose of authorizing the operation of one-man cars on the municipal railway.

The Edmonton Radial Ry's. Superintendent, J. H. Moir, in his annual report to the commissioners, suggests the replacement of the heavier cars by lighter ones, fitted with safety devices for one man control. He is reported to have sad that a 10 minute service could be given in place of a 15 minute one, and that the cost of operating would be reduced.

Regina Municipal Ry. officials are reported to have expressed the opinion that it would not be a justifiable expenditure to equip the street cars with rear doors and folding steps at present. The cost would be in the neighborhood of $4,000

The Cape Breton Electric Ry. is reported to be about to issue metal tickets to facilitate the payment of fares on the new rates. The tickets will, it is said, be of a light weight metal, pierced through the center, in different designs, to denote the difference in fares, and will be sold by conductors in any quantity desired.

In discussion on the estimates for the current year by the Regina, Sask. city council, Apr. 14, Alderman McKinnon is reported to have said he believed the utilities with a capitalization of $5,000,000, were of sufficient importance to warrant them being placed in the charge of one man who would devote his sole time to making them pay. He was convinced if this were done, that the deficit would be reduced to a minimum. The utilities owned by the city are the electric light plant, the waterworks plant and the electric railway, on which the actual deficits for 1918 were $96,656.04, reduced to $76,081.28 by a loan of $20,574.76 from property sales account to the street railway sinking fund.

Electric Railway Finance, Meetings, Etc.

	Feb., 1919	Feb., 1918	2 mons. to Feb. 28, 1919	2 mons. to Feb. 28, 1918
Gross	[illegible]	[illegible]	$95,154.11	$77,722.78
Expenses	[illegible]	28,999.16	70,857.50	62,255.81
Net	[illegible]	7,295.99	24,296.61	15,466.97

Calgary Municipal Ry.—We are advised recently in reference to the reported deficit of $34,000 for 1918, that there were several adjustments to be made, which will reduce this, and which include $16,000 spent on Bowness Park, $2,000 on reconstruction of cars, and certain amounts chargeable to depreciation, as well as other items.

Edmonton Radial Ry.—Superintendent Moir's report for 1918, has been submitted to the city commissioners. During the year the cars ran 1,972,462 miles against 1,860,883, in 1917; carried 9,909,529 passengers, against 10,086,213; earned $507,185.82 against $487,778.22, and cost for operation, $395,927.43, against $396,481.41. The increased revenue is attributed to the increase of fares, which went into effect in May, 1918, and it is estimated that about $27,000 of revenue was lost during the influenza epidemic. During the year, $1,500 was paid to employes for wages during absence through illness, and $2,593.62 was paid in settlement of damage claims. Including debt and interest charges, the deficit up to Dec., 1918, was $143,732.11.

Oshawa, Ry.—There have been filed with the Secretary of State at Ottawa, copies of the following documents:—Discharge of a mortgage made Oct. 18, 1895, to C. B. Powell and J. C. Browne, trustees; discharge of a mortgage dated Apr. 26, 1895, to T. Aherrn and W. F. Soper, Ottawa, and subsequently assigned to the Rathbun Co.; partial discharge of a mortgage dated Nov. 15, 1895, to the Grand Trunk Ry.

Regina Municipal Ry.—The deficit for 1918, according to a report presented to the Regina, Sask., City Council, Mar. 28, was $67,844.21, as against the estimate, made at the beginning of the financial year of $46,824.82. The detailed statemen of receipts shows a falling off in the number of passengers carried of 524,452 during the last four months of the year, due very largely to the influenza epidemic. The car schedule was reduced materially during the harvest period in order to permit all the men possible to go on the farms. Despite these periods of reduced revenue, there was a surplus of $30,178.67 on operation, or about $2,000 less tha nthe operating surplus for 1917. The number of passengers carried was [illegible] against 5,112,460 for 1917, and [illegible] for 1916. The estimated loss of revenue for 1918 due to the two causes mentioned above is $25,278. The estimated deficit for the year, is $22,526.23.

Earnings, etc., for three months ended Mar. 31, [illegible]

[illegible]	[illegible]	$62,018.55
[illegible]	[illegible]	1,423,417

The 5c straight fare, became effective during Mar., 1918. The average fare per passenger for the three months ended Mar. 31, 1919, was 4.82c.

Sandwich, Windsor and Amherstburg Ry.—The Windsor, Ont., City Council, passed a resolution, Mar. 31, to arrange for a joint meeting of representatives of municipalities through which the line runs, to discuss its purchase as recommended by the Hydro Electric Power Commission of Ottawa.

Sudbury-Copper Cliff Suburban Electric Ry.—The Ontario Legislature has authorized the company to increase its capital stock from $250,000 to $500,000 and to sell the unissued shares at a discount, upon such terms as the shareholders may authorize, provided that stock authorization shall be given at a meeting, specially called for that purpose, and that the resolution shall be sanctioned by the vote of at least two-thirds of the company's subscribed stock.

Toronto Ry. Toronto and York Radial Ry., and allied companies.—

	Feb., 1919	Feb., 1918	2 mons. to Feb. 28, 1919	2 mons. to Feb. 28, 1918
Gross	$1,015,797	$981,933	$2,122,637	$2,050,252
Expenses	620,200	548,486	1,255,493	1,139,143

The net result after providing for fixed charges, for February, is $47,765.11.

Sunday Electric Railway Services in Ontario.

The Ontario Legislature has, by an announcement to the Ontario Railway Act, authorized the operation of cars on the London St. Ry. Springbank line on Sundays, subject to the approval of the London City Council and the London Public Utilities Commission. For the operaton of the L.S. Ry.'s other lines on Sundays, the London City Council passes a bylaw annually, providing for such operation from May 1 to Apr. 30. A committee of the council on Apr. 16, recommended present Sunday car bylaw for a month, so that the question of the operation of cars on Sundays on the Springbank line could be considered along with it. A press report of Apr. 15 stated that the company might insist on a straight 5c fare for all Sunday traffic. The company has never been very favorable to the Sunday operation of cars, and C. Currie, President, is reported to have said in an interview on Apr. 10: "The Sunday service on the cty lines yields us nothing, and we can foresee no better results from Sunday operation of the Springbank line."

The Kitchener Board of Trade passed a resolution Apr. 9 in favor of Sunday operaton of the Grand River Ry. between Kitchener and Galt.

Nova Scotia Tramways and Power Co.'s Directorate.—At the annual meeting in Halifax, N.S., recently, O. E. Smith and H. H. Smith of Halifax, and E. A. Robert, S. H. Wilson, J. W. McConnell, and W. G. Ross, of Montreal, retired, and the following directors were elected: W. H. Cavers, K.C., and H. R. Mallison, Halifax; F. B. Adams, New York; F. P. Royce, M. L. Sperry, L. B. Buchanan, W. C. Crawford, M. M. Phinney, and Roger Ernst, Boston.

British Columbia Electric Railway Aids Office Employes to Secure Houses.

In order to assist the company's office employes to build or acquire homes during the present scarcity, Geo. Kidd, General Manager, B.C. Electric Ry. Co. has placed $50,000 at the disposal of the company's employes' association to be loaned at 6% over a term of 12 years. The scheme is believed to be one of the first of its kind to be launched in B.C., if not in Canada, and has been gladly accepted by the employes. In announcing the matter Mr. Kidd said: "My reason for making the proposal is to relieve, as far as possible, our employes from the pressure of high rents, give them homes of their own, and thereby induce thrift and interest in their community. Many of them have been inconvenienced, as are others, by having the houses they rent sold over their heads. Many others feel that paying out rent, year after year, without a permanent interest in their homes, is not desirable. Some of our employes already have lots, but have not the wherewithal to build on them, unless at high rates of interest, when the monthly charge for principal and interest would be much heavier than rent. It is these that we hope to help and in view of the need for more houses, we expect that it will induce some of our employes to build."

The disposal of the fund has been placed in the hands of a joint committee, composed of representatives of the office employes' association and the company's management, and the $50,000 has already been allotted by the committee. The employes' committee consists of A. E. Chamberlain, president of the association; J. Munro, vice president; F. G. Graham, secretary; J. V. Armstrong, treasurer, and J. McNee, J. Freemont and H. G. Findlay.

The St. John River Steel Arch Bridge—The New Brunswick Government on Dec. 24, 1912, made an agreement with the St. John Ry. under which the government agreed to retain space on the steel arch bridge to be erected over the St. John River to replace the suspension bridge suitably equipped for laying street railway tracks thereon, and the company agreed to pay, therefore, $3,000 a year for five years, $4,000 a year for the next 10 years, and $5,000 a year thereafter so long as the company used the bridge. The bridge was completed Jan. 1, 1916, and the company laid its tracks over the bridge. In 1917 the N.B. Legislature confirmed the agreement for the transfer of the property, etc., of the St. John Ry. to the New Brunswick Power Co. A new agreement for the use of the bridge upon the terms above mentioned was made Mar. 27, 1919, between the government and the N.B.P. Co., and the New Brunswick Legislature has been asked to ratify the same.

Seattle Acquires Street Railways.—The Puget Sound Light and Power Co. has transferred its electric railway lines in Seattle, Wash., to the city for $15,000,000 in bonds. The interest and redemption charges are to be paid from the revenues of the system. The company agrees to sell current to the city at 1c. per kilowatt until the city is ready to supply its own current. Some 2,000 company employes will be put on the city payroll.

Electric Railway Projects, Construction, Betterments, Etc.

The Berlin and Northern Ry. Co. has been authorized by the Ontario Legislature to change its name to the Waterloo-Wellington Ry. Co., and has been granted an extension of time for three years within which to extend its line from Bridgeport, its present terminus, to Elora and Fergus, Ont. (Apr., pg. 208).

Calgary Municipal Ry.—At a meeting of the Tuxedo Park and District Ratepayers' Association, Apr. 1, the question of the extension of the Calgary Municipal Ry. line on Center Ave., up to 16th Ave., was discussed. It was stated that if the extension were made the rails now used on the Tuxedo Park line serving the Sarcee Reserve military camp would have to be moved. It is considered likely that the camp will be required again this year, hence there is no desire to take up the track. However, the matter is under consideration. (Feb., pg. 85).

Grand River Ry.—We are officially advised that the company is constructing a 2-mile revision of line between Preston and Hespeler, Ont., to prevent damage to the roadbed by spring floods, and to enable a more frequent service to be given. The character and extent of the work to be done was fully described in Canadian Railway and Marine World for March, pg. 143. The company has also in contemplation the relaying of 7.5 miles of track between Preston and Kitchener with 80-lb. second-hand rails, replacing the 64 and 70-lb. rails laid in 1902. (Mar., pg. 143).

Hamilton St. Ry.—The Hamilton, Ont. City Council's street railway committee on Apr. 15, directed the city engineer to report as to the cost to the city of the proposed extension of the Hamilton St. Ry.'s York St. line to the extreme western end of the cemetery. If the cost is not excessive, the committee will recommend the council to ask the company to build the extension at an early date.

Hamilton, Ont.—The sections of the City of Hamilton's bill before the Ontario Legislature recently providing for the building of certain railway lines were withdrawn after a discussion with Sir Adam Beck, chairman of the Hydro Electric Power Commission of Ontario, and other sections were substituted. The new sections provide that the Hydro Electric Power Commission of Ontario may build a line from the Toronto, Hamilton and Buffalo Ry., near Red Hill, Saltfleet Tp., northerly and across the Hamilton and Burlington tracks to near Burlington Pt., on the G.T.R.; a line from the crossing of such line by the G.T.R. line east of the city westerly through Hamilton and Saltfleet Tp. to the T.H. and B. Ry., near the cemetery; to construct terminals, etc., and to enter into agreements with other railways for running rights. The City of Hamilton is authorized to enter into agreements with the H.E.P.C. of Ontario for the construction, equipment or operation of such railways; and such agreement may provide for the incorporation of any such lines in a system of radial railways to be constructed under the Hydro Electric Railways Act of 1916. The H.E.P.C. of Ontario is given, for the purposes of building and operating the lines, all the rights and powers conferred upon it by the Hydro Electric Ry. Act of 1914 and amendments thereto, and the City of Hamilton is authorized to issue, with the consent of the ratepayers, debentures to raise the amounts necessary to carry out the work. (Apr., pg. 190).

Levis Tramways Co.—The Quebec Legislature has incorporated a company with this title to take over the Levis County Ry. and to extend the service in the counties of Levis, Bellechasse, Dorchester and Beavie, subject to agreements with municipalities. The new legislation means a reorganization of the present Levis County Ry. Co. with more extensive powers and a new title. (Mar., pg. 143).

London and Port Stanley Ry.—A press report states that a contract has been let to John Hayman and Sons, for the erection of a new station at St. Thomas, Ont., at an estimated cost of $15,687, and that the contract for similar station at Port Stanley has not yet been awarded. (Apr., pg. 208).

Niagara, St. Catharines and Toronto Ry.—A press report states that orders have been received at St. Catharines, Ont., from the Canadian National Rys. management, for the carrying out of a number of betterments on the line. These are said to include the relaying of several miles of track within the City of St. Catharines, the laying of new pavement between the rails, new overhead work on the line between St. Catharines and Thorold; the enlarging and transforming of the park at Port Dalhousie, into a pleasure ground, and the provision of a bathing house there. (Jan., 1918, pg. 32).

Quebec Ry. Light and Power Co.—The Mayor of Quebec informed a deputation from Limoilou ward recently, that a settlement was near at hand with the company with respect to the building of extensions in the district.

Quebec Ry., Light and Power Co.—A Quebec press report states that as the result of a conference between representatives of the company and the Quebec City Council, Apr. 14, it was arranged that the company, without prejudice to the terms of the original contract with the city, will for the present extend the service on 8th St., over to and along to 10th St., cross the Beauport Road, and within 300 ft. of the railway tracks, proceed along 10th St. track and over the Dronin Bridge, thus laying a trackage for street car service, approximately three times the present distance covered and that the company will later complete its contract by extending the trackage to La Canardieri. It is added that W. J. Lynch, General Manager, assured the Mayor that work will be commenced as soon as the frost is out of the ground, and that the car service extension will be in operation in Aug.

St. Thomas Municipal Ry.—A press report states that the ratepayers will be asked at an early date to vote on the proposed assure of $50,000 of debentures for general improvements on this railway. The work to be done includes the reconstruction of the line on Talbot St., and the improvements of the car barn. It is also proposed to improve the cars and to purchase some additional only. (Apr., pg. 208).

Sudbury-Copper Cliff Suburban Electric Ry.—The Ontario Legislature has extended for three years the time within which the company may complete the construction of its proposed extensions. The company has 7.9 miles of line in operation in Sudbury, Ont., and from Sudbury to Copper Cliff, and has power to build other lines to serve the surrounding country, of which a line to Murray Mine is the one which is likely to be built at an early date.

Toronto Ry.—We are advised by a city official that the company has signified to the city council its intention of reconstructing 6.324 miles of existing tracks as follows: Broadview Ave. Line—Queen St. to Danforth Ave., 2.339 miles of single track. Gerrard St. Line—Broadview Ave. to Carlaw Ave., 0.98 mile; Carlton St. Line—Sherbourne St. to Parliament St., 0.456 mile. Spadina Ave. Line—Queen St. to College St., 1.185 miles. Front St. Line—From Yonge St. to York St., 0.532 mile. Parliament St. line—From Queen St. to Gerrard St., 0.812 mile. How much of this work will be done this year it is impossible to say, as everything depends upon the delivery of the steel, and on the reconstruction of the track allowances by the city. $390,000 has been provided in the city estimates on account of this, and general repair work throughout the city for the current financial year. (Feb., pg. 88).

Winnipeg Electric Ry.—A press report states that the Winnipeg Board of Trade has asked that access to the Winnipeg Stockyards be made possible by an extension of the Ry. (Oct., 1918, pg. 453).

Restrictions on Granting Franchises on Highways Near City.

G. H. Gooderham, M.L.A., introduced a bill in the Ontario Legislature, at its recent session, to amend the Municipal Franchise Act, R.S.O. chap. 197, sec. 3, by adding the following as sec. 9A: z

"The council of a local municipality shall not grant any franchise upon any highway of the municipality within a radius of five miles of the boundary of any city of 200,000 inhabitants and upwards without notice to and the approval and consent of the council of such city, expressed by bylaw and the assent of the municipal electors of such local municipality as provided by the preceding section."

The bill was passed without amendment.

Proposed Purchase of Detroit United Railways Defeated.

The ratepayers of Detroit, Mich., voted Apr. 7 upon the adoption of an agreement made between the Detroit United Rys. and the city council, for the purchase of the company's city lines and franchises, subject to certain limitations, a summary of which agreement was given in Canadian Railway and Marine World for Apr., pg. 206. Of the total votes polled, 63,883 were for the approval of the agreement, and 70,271 against. In order to approve an agreement of this kind, the state constitution requires that there shall be three-fifths of the vote cast affirmative. The total number of votes cast was 134,154, and the three-fifths of affirmative votes required would have been approximately 80,500 votes. At a meeting of the city council, Apr. 17, it was decided to call a conference of the Mayor, the members of the Street Railway Commission, and representatives of the Detroit United Ry., for May 9, to discuss the matter.

Electric Railway Employes' Wages, Working Conditions, Etc.

Calgary Municipal Ry.—The Calgary city commissioners on Mar. 26, withdrew their recommendations to the city council as to the wage schedule for the municipal railway employes for 1919, and the matter is expected to go to arbitration. In the course of the negotiations, the commissioners conceded the 8-hour day, the 48-hour week, an increase of 8c an hour and a guarantee of 7 hours a day for spare men. The men asked for an increase of 15c an hour.

Edmonton Radial Ry.—The non-union employes notified the city clerk, Apr. 7, that application has been made to the Labor Department for the appointment of a board of conciliation under the Industrial Disputes Act. According to press reports, there are rumors of a strike by the union employes, with whom there is a special agreement with the council, unless the bylaw governing employment on the railway is repealed. Questions of wages, hours of labor, and conditions of employment are involved.

Hamilton St. Ry.—Employes were reported Apr. 16 to be considering the question of asking the company for shorter hours. Under the present agreement, which has one more year to run, provision is made for a 10-hour day, but the men are now working 9½ to 9¾ hours as a rule, although at times they work more than 10 hours, for which they receive time and a half for all extra time.

The Hull Electric Co.'s employes, whose agreement expires Apr. 30, applied recently for considerable advances in wages of men in all departments, and this was followed by an application for a board of conciliation.

London and Port Stanley Ry.—At a meeting of the London Railway Commission, Apr. 5, it was stated that the wage increase, announced recently, were the result of a conference between Sir Adam Beck, chairman, and J. E. Richards, manager of the L. and P. S. Ry., and the employes. The amount involved is approximately $10,000 a year. The provision as to hours, according to a press report, is that the men are guaranteed a 55 hour week at 8 hours a day, but that the 10c an hour extra payment for overtime shall not begin to run until after 2 hours beyond the 8 shall have been worked.

London St. Ry.—On Apr. 1 the employes asked for an increase of 10c an hours for conductors and motormen and of from 10c to 25c for the shopmen. After considerable negotiations, the company's management entered into an agreement with the men's committee to increase wages of conductors, motormen, barnmen and other employes, 3c an hour, and this was ratified at a men's mass meeting Apr. 19. The new rates for conductors and motormen are: 1st year, 33c an hour; 2nd year, 36c; 3rd and subsequent years, 38c. Overtime beyond schedule working hours per day is to be paid at the rate of 12c an hour, instead of 10c as previously. Spare men did not have a 10c overtime rate previously, but under the new agreement, they do. Heretofore, regular conductors and motormen were paid for Sunday work the same as their regular schedule for a week day called for. This is done away with in the new agreement, and regular conductors and motormen, together with spare men, and all other employes working on Sundays, are to receive 12c an hour in addition to their regular rates for Sunday work.

Montreal Tramways Co.—Toward the end of March, the Minister of Labor appointed a board of conciliation to deal with the employes' requests for wage increases, and the members being Jos. Quintal, President, Montreal Chamber of Commerce, representing the company; J. T. Foster, President of Trades and Labor Council, representing the men, and Jas. Perrault, architect, appointed chairman by the Minister of Labor.

Ottawa Electric Ry.—A press report of Apr. 26, states that the O.E.R. employes are preparing to ask for a substantial increase in wages. The present agreement expires June 1.

Sandwich, Windsor & Amherstburg Ry.—The conductors and motormen asked recently for 50c an hour for the first 6 months, and 65c an hour thereafter. The present wages are: 1st 6 months, 35c; 2nd 6 months, 37c; 2nd year, 38c; 3rd year, and thereafter, 40c. They also asked 3c an hour extra in lieu of uniforms, the company to supply caps and badges. The request included a minimum working day of 8 hours, with one hour leeway for completing runs; work over 8½ hours to be paid as overtime; all runs to be completed within 12 consecutive hours; runs on Sundays and holidays to be paid as overtime. All conductors and motormen, who are eligible, to become members of union. On the men's application a board of conciliation was appointed, consisting of F. H. McGuigan, Toronto, representing the company; A. Hooper, Windsor, representing the men, and Judge Wallace, of Oxford County, as chairman, the latter in place of Judge Bowles of Simcoe County, who was unable to act owing to illness.

Winnipeg Electric Railway.—The conductors and motormen, whose agreement will expire shortly, applied recently for the following wages: 1st 6 months, 60c an hour; 2nd 6 months, 65c an hour; 2nd year and thereafter, 70c; Sunday work, 10c an hour extra. The present rates are: 1st 6 months, 39c; 2nd 6 months, 41c; 2nd year, 44c; after 2nd year, 47c. The following requests were also made: Motormen operating cars to which trailers are attached, to receive 5c an hour extra for each trailer; 8 hours to constitute a day's work, overtime to be paid time and a half. Extra conductors and motormen reporting regularly to be paid minimum wage of $25 a week. All conductors and motormen to join employes' union.

Montreal and Southern Counties Ry. Franchise.—The Montreal Administrative Commission has under consideration a proposition for the renewal of the company's contract, by which it obtains an entrance into the city over the Victoria bridge.

Complaint has been made to the Edmonton, Alta., City Council, of the passing of electric current from the Edmonton Radial Ry., at the street railway crossing of 124th St., and the electrifying of the rails of a Canadian Northern Ry. spur, thereby endangering the public.

Municipal Railway Operating Results, Etc.

Calgary Municipal Ry.—T. H. McCauley, Superintendent, in a report on the railway's finances for 1918, is reported to have stated that the total deficit was $34,680.21, which may possibly be decreased when certain credits, etc., have been adjusted. The earnings for the year were the largest the railway has experienced since 1913, although the influenza epidemic and continued fine weather through the winter reduced the daily receipts. While receipts have increased, operating expenses have also gone up, and the 4% tax which was levied June, 1918, by the council totalled $24,667, a considerable portion of the deficit.

Daily receipts increased from $1,594 in 1917 to $1,954 in 1918, although in the same period daily operating expenses increased from $1,590 in 1917 to $2,163.14, an increase of 2.488c a mile, or seven-eighths of a cent a mile.

The line carried 677,781 less passengers in 1918 than in 1917, although, due to an increase of 1/9% in the fares, the total earnings surpassed those of 1917 by $107,124, the largest increase in five years, the total for 1918 being $635,677 and for 1917, $582,553. Against that, operating expenses jumped from $356,096 in 1917 to $441,623 last year. The estimated deficit for 1919 is $10,000.

Port Arthur Civic Ry.—In a report on the public utilities of Port Arthur, Ont., prepared for the Board of Trade by M. M. Inglis, Manager of the city's public utilities, the following particulars are given:—

"The street railway comprises 19.75 miles of track completed as single track within the city limits, and operation extends over the city of Fort William system also. The system has been in operation since 1891, and the following equipment is in use:—22 motor cars, 3 trailers, 1 baggage car, 2 snow ploughs and sweepers. The industrial activity during the past year is reflected in traffic conditions, and more especially when compared with previous years.

Passengers Carried.

	1916	1917	1918
Transfers	341,023	248,970	241,789
Military	159,219	19,569	6,524
Ordinary	101,774	349,271	1,571,057
Work	557,300	335,478	1,398,059
School	71,066	116,195	154,783
City	22,881	27,276	28,293
Dead Head........	7,589	1,137	5,169
Cash	1,487,361	213,588	713,653
Total	2,748,213	3,246,953	4,119,332

"The average fare per revenue passenger for 1918 was 3.87c, and the total car mileage 648,369 miles.

"In making comparisons it should be noted that the fares collected at the boundary of the two cities are included in the above distribution from July 25, 1917, when the new rates of fare came into operation."

The capitalized assets of the public utilities are placed at $3,705,863.86, the street railway representing $956,255.87.

Regina Municipal Ry.—The following figures were reported by the city commissioners of Regina, Sask., to the council, Jan. 31:—

	1917	1918
Regular tickets	$107,090	$ 55,668
Labor tickets	17,231	7,798
Child's tickets	4,137	4,519
Book tickets	18,861	16,303

Total tickets	$148,325	$ 85,486
Cash fares	66,749	145,542
Total	$215,074	$231,029
Increase	....	15,955

Commission's Report on New Brunswick Power Co's Franchise, Rates, Etc.

The New Brunswick Legislature in 1918 authorized the appointment of a commission to investigate matters relating to the New Brunswick Power Co, which operates a street railway in St. John and furnished heat light and power to the public. On June 5, 1918, the Government appointed G. W. Currier, Boston, Mass.; H. Holgate Montreal, and Prof. A. S. Richey, Worcester, Mass., as a commission. The commissioners in their report presented recently, say that they appointed Lybrand, Ross Brothers and Montgomery., a firm of accountants, skilled in public service corporation affairs to examine the company's books. After an examination of the accountants' report the commissioners made an interim order increasing the rates for street railway, gas and electric service. These increased rates have been reflected in the company's gross income, but have not been in force for a sufficient time to enable the commissioners to determine with any accuracy the net income which they will produce.

The commissioners, after reviewing the evidence offered by the company and the city, and a careful study of accountants' report, and other reports, arrived at the following conclusions: The original cost of the property of the company which on Jan. 1, was used in the production of railway, gas, electric light and power service was $2,800,000. This does not include $118,000 apparently invested in undeveloped water powers. The present bond issue, $1,750,000 face value, the present issue of first preferred stock, $1,000,000 face value, and the present issue of second preferred stock should be permitted to remain as at present, but the present $2,000,000 of common stock should be reduced to an aggregate par value not exceeding $500,000, which, however, should not be entitled to dividends until a surplus revenue fund of $300,000 has been built up. The control of the company should be vested in a board of directors, 4 to be elected by the company and 3 to be appointed by the New Brunswick Government, the directors to be paid $1,000 a year each, the public directors to be paid by the City of St. John. The directors should fix such rates for railway, electricity and gas service as will meet, but not exceed, the cost of service, as found by a special auditor who should report exery six months. The rates fixed by the interim order are to remain in force until July 1, and thereafter until revised by the directors. The public directors may appeal to the Public Utilities Commission against any rate fixed which is not in accord with the principle of service at cost as laid down. The directors are to determine the extent and character of the services required, and in the case of differences the question should be settled by the Public Utilities Commission, except that in case of a capital expenditure of $25,000 which might endanger the minimum return the company may appeal to the government. The company is to create a depreciation fund of $200,000, at the rate of $75,000 a year, and afterwards at a rate of 7% of the rate base, against which should be charged all renewals, retirements and replacements other than maintenance. The return to the company is to be not less than 6% nor more than 9% on the fixed valuation. The principles upon which this return is to be ascertained are explained in tables appended to the report. The commissioners recommend that no special taxes of any kind should be assessed against the company, and that the acceptance of an act embodying these recommendations should be made to constitute an agreement on the part of the company to sell to the province, or any political subdivision thereof, all its property which may have been included in the rate basis, and its franchise, as a going concern, for an amount of cash equal to the base as determined plus 10% and plus any premium required to retire the bonds. The report adds: "As the company's income will be strictly limited to a reasonable return on its investment, it is not fair, nor is it in the public interest, to expose the company to the hazard of competition, the possibility of which would impair its credit."

A bill was introduced in the New Brunswick Legislature to bring the commission's recommendations into effect. The St. John City Council expressed itself strongly against some of the commission's findings, and consequently to the terms of the bill. The amendments prepared by the council, and laid before a committee of the legislature by a deputation, affected a number of points, the chief being: The bill based on the commission's report fixes $2,800,000 as the rate base and provide that the company shall be entitled to a return of 7% thereon, while the city is given the option of acquiring the company's property at that figure. The city wishes the rate base reduced to $1,850,000, plus 10%, with the option of purchase. The city asks further that the three public directors be appointed by the city council instead of by the N.B. Government; that the clause as to exemption from taxation be eliminated; that snow cleaning be paid for by the company on a basis of $500 a mile of single track a year, and that the company pay a portion of the cost of street surface or pavement maintenance. The bill was discussed at considerable length, but at the time of writing, the question of its amendment had not been settled.

The Ontario West Shore Railway Fiasco.

The Ontario Legislature in 1902 incorporated the Huron, Bruce and Grey Electric Ry. Co. to build a railway, railways or a radial railway system, from Goderich, to serve the three counties named. In 1903 the company's title was changed to the Ontario West Shore Ry. Co., and it was authorized to build additional lines and to issue a portion of its capital as preferred stock. The company has from time to time been granted extensions of time for construction. After some years of negotiating, the local promoters of the company entered into an agreement with a company of which J. W. Moyes, then of Toronto, but whose present whereabouts are unknown, was president, for the building of a line from Goderich to Kincardine. Towards the building of this line the municipalities guaranteed bonds as follows:—Goderich, $150,000; Kincardine, $50,000; Ashfield Tp., $150,000; Huron Tp., $75,000. The total bond issue was for $600,000, and the sale of the guaranteed bonds realized $385,000. Construction was started and up to 1911 there had been laid 16 miles of track, from just outside Goderich toward Kincardine, and materials were on hand for the completion of several additional miles. The construction company could not raise any more money, and the municipalities were called upon to pay interest on the guaranteed bonds. The line was taken possession of subsequently in the interests of the municipalities, and several unsuccessful efforts were made to sell it. There was a government investigation into the financial situation, during which J. W. Moyes disappeared, which resulted in a report showing overpayments on account of construction. The local municipalities made efforts to recover some of this overpayment and to make a sale of the rails, etc. Under this plan there has been realized $135,000, which stands to the credit of T. Stothers, the trustee appointed by the Ontario Legislature for the municipalities in 1913, with the Toronto General Trusts Corporation.

Ontario Legislature Refuses to Penalize London Street Railway.

The Ontario Legislature, in 1918, among other amendments to the Ontario Railway Act, R.S.O., chap. 185, added a section, 260 (a), which is given below. At the legislature's recent session, S. Eilber, M.L.A., introduced a bill to amend section 260 (a), which is reproduced below, both in its original form and as it was proposed to amend it, the proposed amendment being shown in bold faced type.

"260a (1)—The board (Ontario Railway and Municipal Board), for the purpose of enforcing compliance with any order heretofore or hereafter made by it, requiring any railway company, operating a railway or street railway in whole or in part upon or along a highway under an agreement with a municipal corporation, to furnish additional cars or equipment for its service, **or to comply with any regulation contained in any bylaw of a municipal corporation, or to comply with any order or direction of an enginer of a municipal corporation given under the provisions of any bylaw of a municipal corporation,** may order such company to pay to the corporation of the municipality in which the company so operates, a penalty not exceeding $1,000 a day for non-compliance with any such order."

The City of London claimed that when the company reduced its cost service July 1, 1918, that it did so in violation of the city's official requirements, regarding such service, and it would, therefore, seem that the amendment was aimed to enforce such service, the city apparently not wishing to ask for enforcement of the penalties provided for in the bylaws affecting the company. Counsel of the London St. Ry. opposed the bill before the legislature's private bills committee and it was thrown out.

The British Columbia Electric Ry. is applying to the Dominion Government for the approval of plans for the laying of a submarine cable across Victoria harbor, for supplying electrical energy for industrial purposes on the old Songhees Indian reserve.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Steel Cargo Steamships.—Complete particulars of all orders placed by the Marine Department are given in a full page table on pg. 271 of this issue.

Contracts Signed.—Since Canadian Railway and Marine World for April was published, we have been advised of the signing of two contracts between the Marine Department and the Nova Scotia Steel & Coal Co., for two, 2,800 ton d.w. steel cargo steamships, department contracts 40 and 41, builder's yard nos. 5 and 6 respectively.

Keels Laid.—Since the publication of the table in Canadian Railway and Marine World for April, we have been advised of the laying of keels as follows:—

Contract 17, builder's yard no. 459, Davie Shipbuilding & Repairing Co., Lauzon, Que., 5,100 tons, Mar. 11.

Contract 18, builder's yard no. 460, Davie Shipbuilding & Repairing Co., Lauzon, Que., 5,100 tons, Mar. 28.

Contract 19A, builder's yard no. 41, Port Arthur Shipbuilding Co., 3,400 tons, Mar. 31.

Contract 20A, builder's yard no. 42, Port Arthur Shipbuilding Co., Port Arthur, Ont., 3,400 tons, Mar. 31.

Contract 22, builders yard no. 2, Halifax Shipyards Ltd., Halifax, N.S., 8,100 tons, Mar. 15.

Contract 44, builders yard no. 4, British American Shipbuilding Co., Welland, Ont., 4,350 tons, Mar. 29.

Launchings of Vessels—Two more of the steel cargo steamships under contract were launched during April, as follows:—Apr. 5, department contract 4, builders' yard No. 100, 4,300 tons d.w. capacity, Canadian Volunteer, by Wallace Shipyards, Ltd., Vancouver, B.C., and Apr. 19, department contract 24, builders' yard No. 68, 8,100 tons d.w. capacity, Canadian Ranger, by Canadian Vickers, Ltd., Montreal.

The s.s. Canadian Voyageur arrived at New York, Apr. 4, with a cargo of sugar from Barbados, and, after discharging, loaded a general cargo and sailed from New York, Apr. 17, for St. Kitts, Antigua, Guadeloupe, Martinique and Barbados. From the latter place she will proceed to Cardenas and Matanzas to load a cargo of sugar for Montreal.

British American Shipbuilding Co., Welland, Ont., laid keel for department contract 44, builders yard no. 4, of 4,350 tons, Mar. 29. It expects to lay keel of department contract 45, builders yard no. 5, of 4,350 tons, about the middle of May.

The Canadian Vickers, Ltd., Montreal. The third of the steel cargo steamships to be built by this company for Canadian Government Merchant Marine Ltd., department contract 24, builders' yard no. 68, was launched Apr. 19, and named Canadian Ranger, the ceremony being performed by Mrs. Orr Lewis, wife of the company's president. The Canadian Ranger has a cargo carrying capacity of 8,100 tons d.w., and her dimensions are, length overall, 400 ft., breadth moulded, 52 ft., depth moulded, 31 ft. She is equipped with triple expansion engines of 3,000 i.h.p., for a speed of 11 knots an hour at sea. She is of the 2 deck type, with poop, bridge and forecastle. The contract was signed Oct. 11, 1918, the keel being laid on Nov. 30, 1918, for delivery about June 1. She has been built under special survey, to meet the requirements of Lloyd's 100 A1 classification certificate.

J. Coughlan and Sons, Vancouver, B.C., expect to launch the last steamship for which they have contracts for the British Government during May, and then to lay the keel of one of the four 8,100 ton steamships ordered by the Marine Department for Canadian Government Merchant Marine Ltd.

Davie Shipbuilding & Repairing Co., Lauzon, Que., which has contracts, from the Marine Department, for 2 steel cargo steamships, of 5,100 tons d.w. each, laid the keels as follows: department contract 17, builders yard no. 459, Mar. 11; department contract 18, builders yard no. 460, Mar. 28.

Halifax Shipyards Ltd., Halifax, N.S., laid the keel for department contract 22, builders yard no. 2, of 8,100 tons, Mar. 15. This makes two keels laid ,the first, for department contract 21, builders yard no. 1, 8,100 tons, having been laid Feb. 24.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., which has contracts from the Marine Department for 2 steel cargo steamships of 2,800 tons each, department contracts 40 and 41, builders' yard nos. 5 and 6, laid the keels for both toward the end of March, and expects to complete both ships this year. They will have the following dimensions: Length between perpendiculars, 270 ft.; beam, 38 ft.; depth moulded, 20½ ft.

Port Arthur Shipbuilding Co., Port Arthur, Ont., which laid two keels for 3,400 ton vessels in December, as mentioned previously, laid two more keels, for 3,400 ton vessels, Mar. 31, viz.; Marine Department contract 19A, builder's yard no. 41, and department contract 20A, builder's yard no. 42. It is expected that keels for department contracts 32 and 33, builder's yard nos. 43 and 44, of 4,300 tons each, will be laid early in August. This company has contracts for the Marine Department for four steamships of 3,400 tons and 2 of 4,300 tons.

Wallace Shipyards Ltd., Vancouver B.C.—The fourth of the steel cargo steamships under contract at various yards throughout the Dominion for Canadian Government Merchant Marine Ltd., was launched at this yard Apr. 5, and named Canadian Volunteer, by Lady Hibbert Tupper. The contract for this vessel was signed Mar. 15, 1918, the keel was laid Oct. 1, 1918, the approximate date for delivery being Mar. 31, 1919. The chief delay was occasioned by the British Government requisitioning the boiler furnaces, and had this not occurred, it was the intention to launch the vessel completely equipped, but notwithstanding this, all the machinery was aboard and the pipe connections made. She has a deadweight capacity of 4,300 tons, and is of the single deck type, with poop, bridge and forecastle, built to Lloyd's classification, and for a speed of 11 knots at hour at sea. Full details of the dimensions, etc. of this type of vessel, will be found elsewhere in this issue, in tabular form. Immediately after the launching of this vessel, work was commenced on the keel laying for the Canadian Aviator, 5,100 tons d.w. capacity, department contract 6, builders' yard no. 101, the approximate date for delivery being July 31. The Canadian Trooper, department contract 5, builders' yard no. 106, is well on towards completion, and the launching is expected to take place at an early date. The approximate date for delivery being May 31.

The Status of Dominion Steel Corporation's Chartered Vessels Under Requisition.

At the outbreak of war a number of steamships, which were then under charter for varying periods, were requisitioned by the British Government for war purposes. Since the cessation of hostilities, and the consequent releasing of such vessels by the government, the question has arisen whether the requisitioning of the vessel by the government for war purposes, put an end to its charter, or merely suspended it. As a charterer of numerous vessels, the Dominion Steel Corporation took action recently in England against the British and Chilean Steamship Co., Liverpool, Eng., as owners of the s.s. Wabana, seeking a declaration that the charter-party relating to that vessel, of Oct., 1909, and corrected Jan., 1910, was a valid and subsisting document, and that the owners were under an obligation to place her at the plaintiff's service. The point at issue was whether the charter was brought to an end by the doctrine of commercial frustration, as alleged by the defendant. The s.s. Wabana was under charter for seven consecutive seasons, for the coal traffic on the St. Lawrence, with an option for an extension of three seasons, which option the plaintiff claims to have exercised. At the conclusion of the St. Lawrence navigation season of 1914, the vessel was delivered to the defendant, in accordance with the terms of the charter. She was requisitioned in Apr., 1915, and was released from requisition in Feb., 1919. The defendant claims that the charter-party was no longer in force and that all rights thereunder ceased by reason of the requisition. It was also claimed that the increase in operating costs had destroyed the basis on which the parties had contracted, and changed the circumstances in their contemplation at the date the charter-party was entered into.

The judgment declared that there had been no frustration of the adventure, and the court made the declaration asked for, and granted the plaintiff an injunction. The plaintiff gave an undertaking that no proceedings with regard to the question of the government hire, as against the charter-party hire, would be taken in any Canadian or U.S. courts, the matter being decided in the British courts.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has authorized, by order in council, to place orders for, and which orders are to be carried out. Where a contract date is not given the contract had not been signed at the time of our latest official advice.

The following contractions are used in the column giving the type of the vessels to be built:—s.d., single deck; 2.d., two deck; 3.d., three deck; lake, lake type; p., poop; b., bridge; f'c's'le, forecastle.

Contract no.	Contract date	Builder	Yard no.	Tons d.w.	Price per ton d.w.	Total price	Type	Classification	Speed, knots	Approximate delivery date	Keel laid	Launched	Name

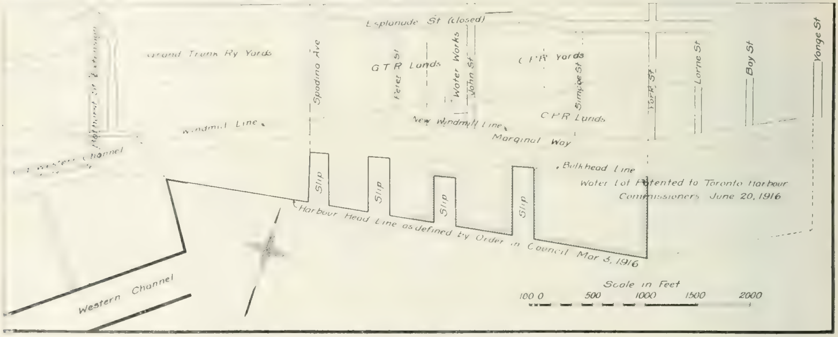
				263,850		$52,691,450							

Toronto Harbor Improvements for 1919.

The amount involved in the Toronto Harbor Commissioners' improvement programme for this year is approximately $3,300,000, of which, about $2,000,000 will be expended, provided satisfactory arrangements can be made for the disposal of the commissioners' bonds.

It is intended to continue the industrial harbor development easterly from where it now ends between John St. and Spadina Ave., through to York St., and to reclaim about 90 acres of additional property for industrial purposes, and possibly some park reclamation work will be undertaken. This latter work is to a great extent dependent on the completion of the breakwater, which is being undertaken by the Dominion Government, but it is the intention to top dress and complete the park area between Sunnyside and the Humber River, as far as possible.



Toronto harbor improvement, location plan, harbor headwalls.

It is expected that the Dominion Government will complete about 4,400 ft. of cribwork on the western breakwater, and also the turning basin in the eastern section of the harbor, which will provide for about 4,000 ft. of dock wall, with concrete superstructure, and it will also finish what is known as the circulating channel, which will provide for dockage construction for another 1,800 ft. of sea wall.

The Harbor Commissioners have awarded three contracts, to Russell and Roddick, R. Weddell and Son, and Port Arthur Construction Co., jointly, for the construction of approximately 5,200 lin. ft. of harbor head wall, which is to form the piers and slips of the new harbor. Development from Peter to York Sts., as shown by the shaded lines on the accompanying plan. The type of construction will be rock filled timber cribs and concrete superstructure. The work will be started as soon as the material can be procured, and is expected to be completed in about eight months of working weather and will represent an approximate expenditure of $900,000.

A 125 ft. barge has been built as an experiment, in which all the plates were joined by electric-welding, a saving of about 20% resulting, over riveted barges.

Coasting Privileges for Canadian Vessels Rescinded by United States.

W. F. Nickle, M.P., asked in the House of Commons April 3, if the Government's attention had been directed to the fact that the United States authorities have discontinued the practice of granting licenses to Canadian vessels to engage in coasting trade within the U.S., and, if so, what steps the Government were taking in the matter?

The acting Minister of Trade and Commerce replied: "Yesterday the member for Kingston transmitted to me a telegram from one of the Dominion Marine Association's officials indicating that licenses had been refused permittting Canadian steamships to engage in the coasting trade in the U.S. In order that I might learn the actual facts I immediately transmitted the following message to the Chairman, United States Shipping Board:

"'Will be obliged if you will inform me officially by wire of reasons why applications made by Canada Steamship Lines for permission Canadian steamships J. H. G. Hagarty and W. Grant Morden engage in U.S. coasting trade Great Lakes refused.' The department has not yet received any reply to this communication. If it should transpire that Canadian shipping has been refused permission to engage in the coasting trade of the U.S., it will be quite proper for Canada to immediately cancel the like privileges granted to U.S. shipping in Canadian waters."

On April 8, the acting Minister of Marine said: "I have received the following message from Washington: 'Advices from our lakes representative indicates apparent scarcity business on lakes for American ships for this season. Coastwise permits are now almost invariably declined on Atlantic and Pacific coasts, only exceptional situation warranting departure from this policy.'

"By order in council the Minister of Customs is permitted to grant coasting privileges to U.S. shipping in Canadian waters. The order in council, which is dated the 5th February, 1918, provides that 'during the period of the war, until otherwise ordered the Minister of Customs may, under conditions specified by him, authorize collectors of customs to issue licenses permitting vessels of the U.S. of America to engage in the coasting trade of Canada.'

"Inasmuch as the U.S. now declines to confer the privileges upon Canadian vessels engaged in their coasting trade, it is contemplated that no further licenses be granted to U.S. shipping for coasting trade in Canadian waters except under very exceptional circumstances. This will place our policy in this regard on a parity with that of the U.S."

In reference to the foregoing we are advised that licenses were refused this year to Canadian ships applying to the United States for permits to coast, and on enquiry at Washington, it was stated that the Lake Carriers' Association (a U.S. organization), considering that its members could handle the traffic themselves, had recommended, accordingly and that the Shipping Board had endorsed the recommendation with the result named. The Dominion Marine Association then made representations to Ottawa, resulting in enquiries by the government to the authorities at Washington, and a report in reply on the line above mentioned, with the result that the Dominion Government decided upon the measure of reciprocity possible under the circumstances. Accordingly, permits are to be refused to ships applying for leave to carry coastwise in Canada. At least one application has been refused already. The Dominion Marine Association had not the slightest objection to a continuance of the reciprocal arrangements extended by both nations and the present action results entirely from the unexpected move in the U.S., which seems to have surprised the Dominion Government as much as it did the Dominion Marine Assocation.

The Ottawa Salvage Co., Ltd., has been incorporated under the Dominion Companies Act, with $50,000 authorized capital and office at Ottawa, Ont., to rescue persons endangered through distress of weather or vessel, by wreck or other calamity, and to rescue from danger, or salve when wrecked, vessels and their contents, on waters in the Dominion and elsewhere, and to salve vessels and other materials abandoned in such waters or having no known owner.

Cargo Steamship Building in Canada for British Government.

Steamships Launched and Under Construction.—We were officially advised Apr. 15, that no launchings had taken place since Mar. 15, a complete list of which was given in our last issue. At that date, there had been launched, 32 steel steamships, 157,100 tons, and 45 wooden steamships, 138,600 tons, a total of 77 steamships, with an aggregate tonnage of 297,700.

Following is a list showing the other vessels in process of construction, giving the builders' names, the names which will be given the various vessels, and the deadweight capacity of each:

Steel Steamships.

Builder.		**Tons d.w.**
British American Shipbuilding Co. Welland, Ont.		
	War Racoon	3,500
Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont.		
"	War Vixen	3,500
"	War Wallaby	3,500
"	War Wombat	3,500
J. Coughlan & Sons, Vancouver, B.C.		
"	War Chariot	8,800
"	War Column	8,800
"	War Company	8,800
Midland Shipbuilding Co., Midland, Ont.—		
"	War Magic	3,100
"	War Fury	3,400
Polson Iron Works, Ltd., Toronto, Ont.		
"	War Algoma	3,500
"	War Halton	3,500
	11 steel steamships	54,200

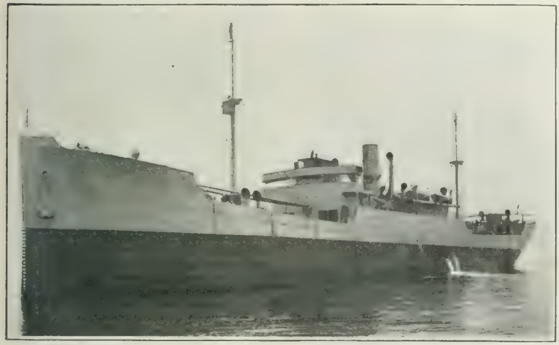
Wooden Steamships.

Grand & Horne, St. John, N.B.		
	War Moncton	3,080

Total 11 steel steamships, 1 wooden steamship, 57,280 tons.

Sales of Vessels.—Several of the steamships which have been built in Canada, under orders from the Imperial Munitions Board, for the British Government, are reported to have been sold to various parties, chiefly in Great Brtain, and at least to one in the U.S. While we have received no official confirmation of such sales, they are in general conformity with the policy announced by the British Government. Had the war continued, it was the intention to continue the policy of assigning these vessel to various companies for operation on the government's behalf, but the cessation of hostilities, and the government's decision to return requisitioned vessels to their owners, also brings into effect the decision to sell such vessels as had been built on government account.

The s.s. War Selkirk, built by Western Canada Shipyards, Vancouver, and the War Yukon, built by Cameron Genoa Mills Shipbuilders, Victoria, B.C., are reported sold to the London Transport Co., London, Eng. They are both wooden ships. The s.s. War Convoy, built by J. Coughlan & Sons, Vancouver, is reported to have been sold to G. T. Williams and associates, of New York, for over $1,500,000. She was launched Dec. 18, 1918, and underwent her trial trips Mar. 17, 1919, maintaining a speed of 12.50 knots over a 6 mile course. She is of steel, with a deadweight capacity of 8,800 tons.



Steel Cargo Steamship, War Convoy,
8,800 tons d.w., built for British Government by J. Coughlan & Sons, Vancouver, B.C.

"Lame Ducks" Story Contradicted.—With reference to a dispatch from St. John's, Nfld., to the effect that that port was a haven for "lame ducks" built through the Imperial Munitions Board for the British Government overseas traffic, an official of the board is reported to have made the following statement at Halifax, Apr. 4.—"The Imperial Munitions Board has approximately 100 steel and wooden ships during the past year in Canada. The two wooden ships mentioned are the only ones on voyage from Eastern Canada to the United Kingdom, that have put into port for repairs. Owing to the early close of navigation in the St. Lawrence last year, it was necessary to send several wooden ships to Halifax in an incomplete condition. These vessels have been completed and all except two have already arrived at British ports and the remaining two will sail next week. It is noted, however, that these ships did not come to Halifax for repairs, but to be completed, thus saving time, which would have been lost, if the work had been done in the St. Lawrence. Of the two vessels at St. John's, one sailed from Quebec and put into that port with slight boiler defects. This vessel should have sailed along with the others, except for the wretched laboring conditions existing, and contrary to the misstatement of the correspondent, excellent reports regarding the construction of this vessel have been received from the St. John's Lloyd's surveyor and the drydock officials. Regarding the second vessel, the statement is that she took 17 days for the voyage from Halifax to St. John's. She was well on her way across the ocean, but returned owing to a steering chain breaking in heavy weather, which might have happened to any ship. With regard to the correspondent's suggestion that these vessels are not suitable for trans-Atlantic trade, they were not intended for it when designed, but for short voyages between British and French ports, for which purposes they are very well suited. The statement that the first vessel had to have her cargo unloaded at Halifax is incorrect. The suggestion that three of them have foundered is also incorrect, as all have arrived safely in England, after a North Atlantic passage in the worst time of the year, and have continued in service since.

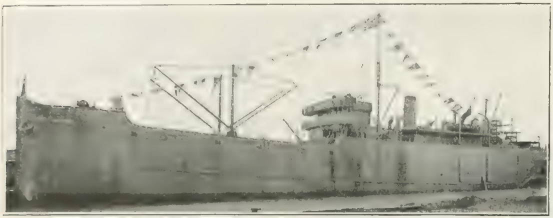
"The statement of Capt. Martin, of the War Ontario, an old Donaldson Line skipper, is of interest in reference to the voyage across of these vessels. He states that never in all his experience has he encountered such heavy weather. For three days he was hove to in a south-east hurricane, with mountainous seas, while the weather throughout the voyage was exceedingly severe. Notwithstanding this condition the vessel made the passage to Queenstown in 16 days, and he further states that he did not ship a cup of water during the whole time. In view of these facts it does not seem justified that the two vessels should be singled out for mention on which to hang a tale of woe, concerning one of

Steel cargo steamship, War Leveret, 3,500 tons d.w., for British, immediately after launching by Canadian Allis-Chalmers Ltd., at Shipyard, Welland County, Ont.

Canada's native industries, that of wooden shipbuilding."

"There are five vessels at Quebec completed, ready to sail, and will do so as soon as the ice is cleared. There is also one at St. John's, which will be ready about July and one at Toronto. These ships will complete the entire wooden shipbuilding programme of the Imperial Munitions Board in Canada."

Canadian Allis-Chalmers Ltd., Bridgeburg, Ont., which has orders for 4 steel cargo steamships, of 3,500 tons each, for the British Government, launched the first one, War Leveret, Mar. 3. An illustration of her is given in this department.



Wooden Cargo Steamship, War Ontario,
3,080 tons d.w., built by Toronto Shipbuilding Co. for British Government.

The second one, to be named War Vixen, was expected to be launched in April. Work has started on the two last, which will be named War Wallaby and War Wombat. Considerable difficulty is reported in dealing with the labor situation, owing to lack of housing, in the vicinity of the yards, and the Ontario Housing Commission is reported to have been appealed to for assistance in the matter.

J. Coughlan and Sons, Vancouver, B.C.—The seventh of the 9 steel steamships of 8,800 tons d.w. capacity, built for the British Government under orders from the Imperial Munitions Board, was expected to be launched about Apr. 26, and named War Column. The eighth will probably be launched about the end of May, and named War Company. The s.s. War Cavalry was expected to be ready for her trials at the end of April.

Grant and Horne, St. John, N.B.—The s.s. War Fundy, an illustration of which is given in this issue, is one of the two wooden steamships ordered from this firm by the Imperial Munitions Board for the British Government. The keel was laid Aug. 13, 1917, but owing to delays in getting suitable timber, the frames were not all erected before the end of November. All the main deck beams were in place by the beginning of Mar. 1918, and the deck was laid by the middle of April. The hull was complete, including the hatches, main deck houses, and bridge, together with the winches and some of the machinery, when she was launched on Aug. 24. The boilers and engines were installed by the Union Foundry Co., under the superintendence of an official of the board. The trial trip was made Feb. 17, 1919, a run of 4 knots being made just outside the harbor in 22 minutes, indicating a speed of 10.9 knots, currents being negligible. In running over a land measured course of 15 knots, a speed of 10.5 knots through the water was attained, allowing for an average current of 1½ knots, the estimated speed from engine revolutions being 11.1 knots. The vessel was handed over to the owners Feb. 28, for loading with cargo for a British port.

Southern Salvage Co., Liverpool N.S.—The s.s. War Halifax, which was launched Sept. 21, 1918, loaded lumber at Halifax, early in April, for Great Britain.

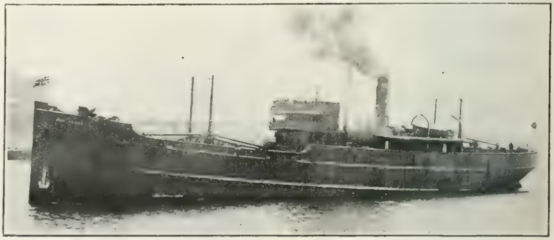
Canadian Pacific Railway's Atlantic and Pacific Fleet.

The C.P.R. directors' report, for the year ended Dec. 31, 1918, contains the following paragraph: At the outbreak of hostilities your company had in commission in Atlantic and Pacific service, 38 steamships, with an aggregate gross tonnage of 342,000 tons. Since Aug., 1914, the construction of 4 steamships previously authorized, having a gross tonnage of 54,000 tons, has been completed, and 12 steamships of 69,000 gross tonnage have, in the same period, been purchased. During the war 15 steamships were lost by enemy action or through accidents at sea, and 9 have been sold to the British Admiralty after having been requisitioned. The construction at the yards of the Fairfield Shipbuilding Co. of a ship 625 ft. long between perpendiculars, having a gross tonnage of 21,000 tons, is to be proceeded with, pursuant to the authorization previously given, and three passenger ships, of what is known as the intermediate class, for Atlantic service, two of which have been previously authorized, will be put under construction as soon as possible at the yards of John Brown & Son and the Fairfield Shipbuilding Co. At the end of the fiscal year your company had in ocean service 28 steamships having a gross tonnage of 264,000 tons, and 6 steamships under order or purchased but not delivered having a gross tonnage of about 80,000 tons. On their delivery the total tonnage of the fleet will be slightly in excess of aggregate tonnage of the vessels in commission on Aug. 3, 1914.

The 15 steamships mentioned in the report as having been lost through enemy action, or accidents at sea, are as follows: Through enemy action,—Calgarian, 17,515 gross tons; Carthaginian, 4,444 tons; Ionian, 8,268 tons; Hesperian, 10,920 tons; Lake Michigan, 9,288 tons; Milwaukee, 7,323 tons; Montreal, 8,644 tons; Mount Temple, 9,792 tons; Montford, 6,578 tons; Missanabie, 12,469 tons; Medora, 5,135 tons; Miniota, 4,928 tons; Pomeranian, 4,421 tons; through accidents at sea, Corinthian, 7,333 tons; Lake Manitoba, 9,674 tons.

The 9 steamships sold to the British Government, are Montezuma, 8,360 tons; Montcalm, 5,505 tons; Montrose, 7,207 tons; Mount Royal, 7,998 tons; Mongolian, 4,838 tons; Numidian, 4,836 tons; Ruthenia, 7,208 tons; Tyrolia, 7,535 tons. The s.s. Empress of India was purchased by Indian princes and presented to the British Government for use as a hospital ship. Her gross tonnage is 5,934. The total tonnage lost through enemy action and other causes, is 126,552, and the tonnage sold is 59,421, a grand total of 185,973 gross tons.

Vessels purchased during the war are as follows: Botsford, 4,782 tons; Dunbridge, 6,650 tons; Holbrook, 6,655 tons; Montezuma, 5,038 tons; Montcalm, 6,542 tons; Medora, 5,135 tons; Mattawa, 4,874 tons; Miniota, 4,928 tons; Methven, 4,852 tons; Mottisfont, 5,692 tons; War Beryl, 10,800 tons; War Peridot, 10,800 tons. Vessels built and added to the fleet during the same period are: Missanabie, 12,469 tons; Metagama, 12,420 tons; Melita, 13,967 tons; Minnedosa, 15,000 tons. The total tonnage of vessels purchased was 76,748 tons, and of those built, 53,856 tons, a grand total of 130,604 gross tons. There are now 4 steamships under construction, with a gross tonnage of 67,000.



Wooden cargo steamship, War Fundy, 3,080 tons d.w., built for British Government by Grant & Horne, St. John, N.B.

Editor's Note.—It will be noticed that the name Montcalm appears both in the list of vessels sold and purchased. They are two distinct vessels.

Alex. Johnston, Deputy Minister of Marine, before leaving Vancouver, for the east, Apr. 10, is reported to have stated that there is no reason why Vancouver, as a port, cannot capture a large portion of the business now going to U.S. ports, and that he would urge on the government the importance of immediate action in the development of the port.

General Shipbuilding Matters Throughout Canada.

Fraser, Brace Shipyards Ltd., Montreal, which has a contract for 8 wooden steamships for the French Government, laid the keels as follows: 3 on Oct. 3, 1918; 3 on Nov. 9, 1918; 1 on Dec. 3, 1918, and 1 on Jan. 22, 1919. One hull was launched Feb. 19, two others Feb. 28, and they expected to launch the remaining five in May.

Foundation Co., Victoria, B.C.—The third of the twenty, 3,000 ton d.w. wooden steamships which this company is building for the French Government was launched Apr. 10, and named Mulhouse, by Mrs. John Hart, wife of the B.C. Finance Minister, who was presented with a gold vanity case, by the builders.

Jos. McGill Shipbuilding Co., Shelburne, N.S., is reported to have four vessels under construction, a beam trawler to cost approximately $300,000, two fishing schooners, and a 300-ton freight vessel.

New Westminster Construction and Engineering Co., New Westminster, B.C.—The third of the five 1,500 ton d.w. wooden steamships which this company is building for the French Government, was expected to be launched about the end of April, or early in May. The first two vessels, named respectively Victoria and Frontenac, are expected to be ready for sea early in May, provided delivery of certain equipment can be obtained in time.

Nova Scotia Shipbuilding and Transportation Co., Liverpool, N.S., launched the schooner Faustina Apr. 8, for J. F. Creaser Co., La Have, N.S., and John Penny, Newfoundland. The keel was laid early in January. Her dimensions are, length, 117 ft. overall; breadth, 26 ft.; depth of hold, 12½ ft.; net tonnage, 150.

Polson Iron Works Ltd., Toronto—As stated in Canadian Railway and Marine World for April, the Ontario Supreme Court made an order Mar. 19 to wind up this company, and appointed G. T. Clarkson, of Toronto, as liquidator. On Apr. 9, Mr. Clarkson notified the creditors that the company entered into a contract in Nov., 1917, with Christopher Hannevig of Christiania, Norway, and New York, N.Y., to build 2 steel cargo steamships during 1918 for $735,000 each, but if they were not delivered until 1919 the price would be reduced to $665,000 each. Little or no work, except the laying of the keels, has been done on these ships, but the company has on hand materials therefor which cost about $335,000, viz.: steel bought for ships, $150,000, other steel allocated to them, $35,000, engines, boilers and other equipment in process of manufacture, $150,000. Steel has dropped in price about 30% since the purchases referred to were made, and it is questionable whether more than $180,000 could be obtained from the products on sale. Against the materials bought, Mr. Hannevig has advanced $568,000 to the company, an over payment of $233,000. Mr. Hannevig having expressed his willingness to release all claims against the company's estate, if it will transfer the materials on hand, including the keels, to him, the liquidator recommended that the offer be accepted, stating that if this was not done and the estate retained the materials, there would be little or no chance of completing the ships in 1919, and Mr. Hannevig would have an additional and substantial claim for damages. The estate, with its encumbrances and liabilities, is not in a position to finance for the completion of the ships, and to do so under present conditions, including those of labor, might mean a risk which would be costly to the creditors. It was decided at a creditors' meeting on Apr. 12 to act on the liquidator's recommendation.

At the same meeting, it was reported that the company had contracts from the Imperial Munitions Board for 6 steel cargo steamships for the British Government, one of which had been delivered. Counsel advised that the other 5 belonged to the board absolutely, but the board, which had already paid almost as much as the contract price, had agreed to advance the money necessary to complete them probably $600,000, to waive any claim for damages and to rank with the unsecured creditors for any money it might be necessary to advance.

Steel Cargo Steamship, War Noble.
8,800 tons d.w., built for British Government by J. Coughlan & Sons, Vancouver, B.C.

The liquidator submitted the following statement of the estate's position, consequent on the acceptance of Mr. Hannevig's offer.

Liabilities.		
Trade		$ 100,000
Damages, etc		75,000
Imperial Munitions Boards, say		600,000
		$1,075,000
Assets.		
Real estate, plant and general assets		$1,000,000
Less.		
Bonds	$292,000	
Preferred claims	100,000	
Taxes and rent	25,000	$417,000
		$583,000

Probable dividend, about 54%.

Prince Rupert Drydock and Engineering Co., Prince Rupert, B.C.—Newman Erb, of New York, president of this company, who visited Prince Rupert during April, to inspect the plant, is reported to have said that work on the two 8,100-ton steel steamships for the Canadian Government Merchant Marine Ltd., will be pushed along, as soon as the material, which has been ordered, is received, and this should necessitate the employment of a considerable number of men for 18 months or two years. As the business develops, it is the intention to enlarge the shipbuilding plant considerably.

W. D. Sweeney, Yarmouth, N.S., launched the s.s. Glenholme, Apr. 16, for the St. John Steamship Co. Her dimensions are, length, 188 ft., overall; 96 ft. on keel; breadth, 30 ft. 5 ins.; depth, 12 ft., approximately 140 tons. She is intended for coastal service in the Bay of Fundy, between St. John and Minas Basin.

N. Tessier, Hull, Que., is building a steamboat for the Chats Falls Navigation Co., Ottawa, for service between Britannia on the Bay, and Fitzroy Harbor, as mentioned in our last issue. She will be 90 ft. long, 19 ft. beam, with a hangover of 1 ft. on each side. The engine and boiler were installed during April, and it is expected that she will be ready for operation by June.

The Future of Shipbuilding in Canada.

Since the signing of the armistice treaty, and the practical cessation of hostilities, the principal item of general discussion has been, the resumption of the normal, at least so far as business and general trading are concerned. On account of the comparatively great expansion of shipbuilding in the Dominion, this particular business is receiving a great amount of attention, and various modes of treatment are being recommended in order to foster the growth of the industry, which, it must be admitted, is carried on to some disadvantage, as compared with some other countries. The following statement by one of the leading Canadian shipbuilding firms, puts the matter succinctly, and gives scope for argument as to the means to achieve the desirable end:

"The general opinion in circles where the experts foregather is that Canada can, should and must, build ships. It is argued that she can build them profitably, that she should build them to foster the new industry in which millions of dollars of capital and approximately 25,000 persons are interested, and that she must build ships to hold her place as a great manufacturing and agricultural country with a huge surplus to export every year. It is not generally realized that something like four-fifths of the shipping using Canadian ports is owned outside of this country; and built outside of it. That means that the money spent in building vessels, and the money they earn after they are built, all goes out of Canada. As to the argument of cheaper production, that is entirely exploded, when the question of the operation of the ships and the retention of the earnings in this country is taken into consideration. It is reported that it is not possible to place a contract in any British yard for delivery during 1919."

The Dominion Marine Association has added to its membership recently, the Webster Steamship Co., Montreal; the Geo. Hall Coal Co. of Canada, Montreal, and the Union Steamship Company of British Columbia, Vancouver.

Harbor, River and Graving Dock Estimates for 1919-1920.

The Public Works Department estimates for the year ending Mar. 31, 1920, [illegible] to the House of Commons [illegible], [illegible] the following items, among others, chargeable to capital:—

HARBOR AND RIVERS

[illegible] W[illegible]am [illegible] improvements	$ [illegible]00,000.00
[illegible] improvements	7[illegible]0,000.00
S[illegible] improvements	[illegible]00,000.00
	$1,[illegible]0,000.00

The following public works items (Marine Department) are chargeable to capital.

River St. Lawrence ship channel	$ 178,000.00
[illegible] and completion of dredging [illegible] St. Lawrence River [illegible] to Father Point	68,900.00

The following items for harbors and rivers are chargeable to income:—

NOVA SCOTIA

A[illegible] and groyne	$ 800
A[illegible] repairs to wharf	3,000
B[illegible] repairs to pier	1,300
B[illegible] repairs to wharf	3,000
B[illegible] wharf	1,800
C[illegible] Cove breakwater wharf	6,200
C[illegible] Point repairs to wharf	2,000
D[illegible] repairs to wharf	1,000
D[illegible] Cove repairs to wharf	2,000
D[illegible] to breakwater	10,000
D[illegible]	3,000
E[illegible] wharf extension	650
E[illegible] repairs to wharf	3,500
F[illegible] completion of wharf	1,700
F[illegible] repairs to wharf	1,200
[illegible] repairs to breakwater ap[illegible]	1,270
[illegible] wharf extension	1,200

Supervision of Lakes and Ocean Freight Rates.—The Trade and Commerce Department's estimates for the year ending Mar. 31, 1920, submitted in the House of Commons recently, contain $6,000 for the supervision of lake and ocean freight rates, a precisely similar amount to that voted for the previous fiscal year.

Proposed Plan for Operation of United States Merchant Marine.

E. N. Hurley, chairman of the United States Shipping Board, has proposed a plan for the future control and operation of the ships which have been built under the board's auspices. Briefly, the scheme which he proposes to recommend to Congress contemplates the eventual sale of all the government owned ships to private interests, but the retention of partial government control through a period of years by means of the government holding of a mortgage and the Government issuance of insurance. There is to be establihed a special fund, under government control, which will be used to foster the development of certain trade routes.

Mr. Hurley states that when the present contracts are completed there will be under the United States flag next year 16,732,700 tons of ocean going steel cargo and pasenger ships. He is convinced that government ownership and operation of these ships, except as a last resort, is undesirable. On the other hand, he thinks that were the ships built at government expense to be used now merely for he advantage of groups of ship operators with sufficient capital to purchase the ships from the government he would unhesitatingly advocate the retention of the whole fleet by the government. His plan is intended to provide as soon as possible the necessary development of the U. S. merchant marine, at the same time guaranteeing to the U.S. people as large a return as possible from the war expenditure for ships.

The primary recommendation of the plan is that the ships should be sold at a price which fairly reflects the current war market for similar tonnage. Twenty-five per cent of the purchase price of each ship is to be paid down, the remainder to be paid in annual installments over a period not exceeding 10 years. The government will take a mortgage for this unpaid balance, charging interest, at the customary commercial rate of 5%, but inasmuch as the government ordinarily borrows money at 4%, the 1% difference will be diverted to the merchant marine development fund noted above. At the same time, the purchaser is to be required to insure with a U.S. marine insurance company his equity in the vessel, but the government will carry in its own fund for the purchaser's account the hull and machinery insurance covering that part of the vessel for which payment has not been made. Inasmuch as the government can carry this insurance for a least 1% less than the market rate, this 1%, too, will be diverted to the development fund.

Each purchaser who wishes to operate in foreign trade should be obliged to incorporate under a federal charter, for which legislation will have to be obtained, and provision is to be made that all control shall remain in U.S. hands. One member of the board of drectors of each company is to be named by the government, and these directors will be formed into a board of government directors, who will have certain advisory powers n relation to the administration of the development fund. This fund is to be used to relieve such financial difficulties as may be encountered in the development of an adequate and well balanced U.S. merchant marine. For instance, one suggestion is that if the government thinks that a certain trade route should be opened, a company may buy ships for the express purpose of operating on that route. If operation does not prove profitable at once, it will be necessary to provide for the payment of defaulted interest from the merchant marine development fund in the discretion of the government agency, and when the ships of the route earn their annual interest rate and a profit, one-half the profit earned each year should be paid into the develment fund until all moneys drawn from that fund, on account of the vessel in question, shall have been replaced. The other half should go to the stockholders of the company. If the route does not prove profitable, the ships on it may be transferred by the government to other routes and if the government becomes convinced that the vessel has failed to make expenses solely or chiefly because of incapable management, it may foreclose the mortgage which it holds on the vessel.

A final clause in the plan is that, until sold under the terms stated, all vessels should remain the property of and should be operated by the U.S. Government. Mr. Hurley specifically states that the wooden ships are not included in this plan.

Canal Estimates for 1919-1920.

The Railways and Canals Department's estimates for the year ending Mar. 31, 1920, submitted to the House of Commons recently, contain the following items, among others, chargeable to capital account:—

Welland Ship Canal—construction	[illegible]

The Bishop Navigation Co. Ltd., the incorporation of which was announced in a recent issue, is being organized to take over the s.s. Lake Manitoba, owned formerly by the Canadian Pacific Ocean Services Ltd., and which was considerably damaged by fire at Montreal, last year. The vessel has been practically rebuilt, and renamed W. A. Bishop, in honor of Col. W. A. Bishop, V.C., of the Royal Air Force. The vessel was acquired by interests associated with Halifax Shipyards, Ltd., and the Montreal Transportation Co. The organization of the company has not been completed, but it is said that the vessel will be used in overseas trade.

Atlantic and Pacific Ocean Marine.

The Nippon Yusen Kaisha is reported to be building 6 passenger steamships of about 20,000 tons, with speed of 20 knots, for its trans-Pacific service.

The Canadian Pacific Ocean Services s.s. Monteagle, which was reported, in Montreal, to have been burned at Hong Kong, China, sailed from there, Apr. 8, for Vancouver.

The s.s. Turbinia, which was built for the Toronto-Hamilton service and performed it for a number of years, is now carrying troops between France and England.

An order in council has been passed rescinding previous regulations respecting the identification and safeguarding of vessels carrying high explosives while navigating the River St. Lawrence ship channel.

Canadian Pacific Ocean Services will, it is announced, recommence its sailings between Montreal and Antwerp, Belgium, this summer, although it is not expected that the traffic will be of any considerable dimensions for some little time. The service will be fortnightly, should the traffic warrant it. W. D. Grossett, agent at Antwerp, before the war, has resumed his duties there.

The first trans-Atlantic steamship of the St. Lawrence navigation season, the s.s. Queen Elizabeth, arrived at Quebec, April 19, light, and loaded grain at the Harbor Commissioners' elevator, afterwards proceeding to Montreal for general cargo. The first vessel of the 1918 season arrived May 6. The first vessel to arrive by the St. Lawrence route was the British s.s. War Redcap, from New York to Montreal, for cargo.

A steamship service between Canada and South American ports is announced to commence about May 5, under the local management of McLean, Kennedy and Co., Montreal. The first vessel to be operated will be the s.s. Clan Keith of the Houston Line, Liverpool, Eng., and a monthly service will be given, to Buenos Aires and Montevideo, with Montreal and St. John, N.B. as the Canadian summer and winter ports respectively.

Maritime Provinces and Newfoundland.

It is stated that the establishment of a harbor commission for St. John, N.B., will be taken up by the Minister of Marine, now that he has returned to Ottawa, from Atlantic, where he has been recuperating after his serious illness.

The Eastern Steamship Corporation resumed sailings between Boston, Mass. and St. John, N.B., Apr. 14, calling at Lubec and Eastport. The s.s. Calvin Austin sailing from Boston on a bi-weekly schedule. This is the first sailing of this line since Nov. 27, 1917.

The Dominion Steel Corporation's s.s. Cape Breton was wrecked and five men were killed and three injured, by the explosion of the combustion chamber of the port boiler, off Cape Spear, while en route from St. John's, Nfld., to Louisburg, N.S., Apr. 5. The vessel was towed into St. John's by the Reid Newfoundland Co.'s s.s. Argyle.

The s.s. Northumberland started running on the Point du Chene-Summerside route, between the mainland and Prince Edward Island, Apr. 23, while the car ferry s.s. Prince Edward Island, which runs between Cape Tormentine, N.B., and Port Borden, P.E.I., is undergoing a general overhaul. It is expected that the s.s. Prince Edward Island will return to her service about the end of May.

The Newfoundland Government received tenders Apr. 25, for the service steamships, steel or composite construction, suitable for ice conditions, for use ini the postal or other service. These vessels must be about 1,000 tons, 200 ft. long, 31 ft. beam , 16 ft. draft when loaded, and with accomodation for 60 cabin and 90 steerage passengers, to class X 100 A 1 at Lloyd's, and with a speed of at least 12 knots. The service to be supplied in 19 fortnightly trips to the north, and 26 fortnightly trips to the south and west, commencing about May 1, each year, for 10 years.

The owners of the s.s. Premier sued the Crystal Stream Steamship Co., St. John, N.B., recently, for damages sustained by their vessel in a collision with that company's s.s. D. J. Purdy, in the St. John River, Oct. 5, 1918. The judgment delivered by Chief Justice, Sir Douglas Hazen, formerly Minister of Marine, held that both parties were to blame for the collision, but that the Crystal Stream Steamship Co. must pay to the owners of the Premier, one-half of the amount by which the damages to the Premier exceed those sustained by the D. J. Purdy. No claim was made for damages to the latter vessel.

Province of Quebec Marine.

The Quebec Ship Laborers' Society is stated to have made an agreement with the shipping companies at Quebec, for a new scale of wages for this season, providing for a 9-hour day at 57½c an hour, and time and a half for overtime. The original demands were for an 8-hour day and 60c an hour, with time and a half for overtime.

Ontario and the Great Lakes.

Canada Steamship Lines freight steamship service between Montreal, Toronto and Hamilton, was resumed Apr. 22, and the Quebec-Montreal service, Apr. 24.

The Imperial Oil Co's. s.s. Iocoma opened navigation at Fort William, Apr. 14, the master, Capt. G. Cross, being presented with a silk hat by the Board of Trade. This date is stated to be the earliest on which a vessel from the east has entered the harbor.

A Hamilton press dispatch states that the first section of the harbor improvements to be undertaken by the Dominion Government there, this year, at an approximate cost of $200,000, will include the first section of the bascule bridge over the Burlington Canal.

Navigation out of Midland, was opened Apr. 5, with the sailing of the Great Lakes Transportation Co.'s s.s. Glenorchy, for Toledo, Ohio, with Capt. F. Burke as master. This is stated to be the earliest date for the opening since 1887, when passengers were carried to a regatta at Penetaguishene, on Christmas Day.

It is reported that another attempt will be made to raise the s.s. Keystorm, which was sunk in the St. Lawrence below Alexandria, several years ago. Several previous attempts have been unsuccessful. The work is being undertaken by Capt. W. Leslie, Kingston. The Keystorm was owned formerly by the Keystone Transportation Co., Montreal.

The Northern Navigation Co. has announced that it will commence its service, May 1, with the sailing of the s.s. Huronic from Sarnia, the s.s. Hamonic following a few days later. These two vessels will handle the traffic until July 1, when the s.s. Noronic will be placed in

The United States Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for March, as follows: Superior 601.89; Michigan and Huron 580.74; St. Clair 575.39; Erie 572.47; Ontario 246.01. Compared with the average March levels for the past ten years, Superior was 0.31 ft. above; Michigan and Huron 0.81 ft. above; Erie 0.79 ft. above, and Ontario 0.37 ft. above.

Manitoba, Saskatchewan and Alberta.

Capt. Lane, an Arctic explorer, is reported to be in charge of the building of several boats on the Clearwater River at McMurray, Alta., for operation in the neighborhood, in the interests of J. H. Bryan, and also to be building a steamboat for Arctic operation on the Mackenzie River. He has taken in a 20-ton steam boiler for installation in the latter vessel. It is stated that he will build two, or more, auxiliary schooners, equipped with gas engines.

Briish Columbia and Pacific Coast.

The whaling season in the Pacific opened during the first week of April, with the departure of the Consolidated Whaling Corporation's fleet for the hunting grounds, from Victoria and other points.

The Dominion Public Works tender Gunhild, is being offered for sale by public tender to May 1. She was built at Quartermaster Harbor, U.S., in 1906, and was purchased, prior to the war, for use of quarantine officials at William Head station, off Victoria. Her dimensions are, length, 61 ft.; breadth, 12.7 ft.; depth, 5.1 ft.; tonnage, 27 gross, 18 net. She is driven by a triple expansion engine with cylinders 6, 9 and 15 ins. diar., by 18 ins; stroke, supplied with steam by a Robert tube boiler, at 185 lbs.

The Grand Trunk Pacific Coast Steamship Co. puts its summer schedule in effect between Vancouver, Charlotte Islands, Prince Rupert and Stewart, Apr. 18, the steamships Prince Albert and Prince John, making the trip weekly, leaving Vancouver on Fridays and Prince Rupert on Wednesdays. The steamships Prince Rupert and Prince George commenced their summer service, Apr. 23, between Victoria, Vancouver, Seattle, Anyox, etc., leaving Vancouver on Saturdays and Tuesdays and Prince Rupert, Wednesdays and Saturdays, respectively.

The C.P.R. s.s. Princess May, of the British Columbia Coast Service, is reported to have been sold to shipping interests at Ecuador, for the South American coasting trade. She was built by Hawthorn, Leslie & Co., Newcastle-upon-Tyne, Eng., in 1888, and has borne the names of Ningchow and Hating, and for a time plied in the Chinese coasting trade. She was remodelled for the Alaska service and renamed Princess May. She was in this service for several years, but has been replaced by more up-to-date vessels. She ran on the Sentinel

Reef, in the Lynn Canal, a few years ago, and has since been utilized more as a utility vessel. Her dimensions are, length, 249 ft.; breadth, 33.2 ft.; depth, 17.7 ft.; tonnage, 1,717 gross, 892 net, and she is screw driven by engine of 450 n.h.p.

Mail Subsidies and Steamship Subventions for 1919-1920.

The estimates for the year ending Mar. 31, 1920, submitted to the House of Commons recently, contain the following items among others:—

ATLANTIC OCEAN STEAMSHIP SERVICES.

Between Canadian Atlantic ports and Australia and New Zealand	$ 140,000.00
Between Canada and Great Britain	1,000,000.00
Between Canada and Newfoundland	70,000.00
Between Canada and the West Indies or South America or both	340,666.66
Between Canada and South Africa	146,000.00
Between Halifax, St. John's, Nfld. and Liverpool	20,000.00

PACIFIC OCEAN.

Between Canada and Australia or New Zealand or both	180,509.00
Between Canada, China and Japan	253,333.34
Between Prince Rupert, B.C., and Queen Charlotte Islands	21,000.00
Between Victoria and San Francisco	3,000.00
Between Victoria, Vancouver, way ports and Skagway	12,500.00
Between Victoria and west coast Vancouver Island	5,000.00
Between Vancouver and northern ports of British Columbia	16,800.00

LOCAL STEAMSHIP SERVICES.

Between Baddeck and Iona, N.S.	5,825.00
Between Charlottetown, Victoria and Holiday's Wharf, P.E.I.	2,500.00
Between Froude's Point and Lockeport, N.S.	600.00
Between Grand Manan, N.B., and the mainland	10,000.00
Between Halifax, Canso and Guysboro	5,000.00
Between Halifax, N.S., and Newfoundland via Cape Breton ports	10,000.00
Between Halifax, Mahone Bay, Tancook Island and La Have River ports, N.S.	4,000.00
Between Halifax and Spry Bay and ports in Cape Breton, N.S.	4,000.00
Between Halifax, N.S., South Cape Breton and Bras d'Or Lake ports N.S.	6,000.00
Halifax and west coast Cape Breton, calling at way ports	4,000.00
Between Halifax and Sherbrooke, N.S.,	2,000.00
Between Mulgrave and Canso, N.S.	6,500.00
Between Mulgrave and Guysboro, N.S., calling at intermediate ports	5,500.00
Between Newcastle, Neguac and Escuminac, calling at intermediate points on Miramichi River and Miramichi Bay, N.S.	2,500.00
Between Pelee Island, Ont., and the mainland	8,000.00
Between Petit de Grat and the Intercolonial Railway terminus at Mulgrave, N.S.	7,000.00
On Petitcodiac River between Moncton, N.B., and way ports, and a port or ports on west coast of Cumberland County	2,500.00
Between Pictou and Montague, calling at Murray Harbor and Georgetown, P.E.I.	5,000.00
Schooner service between Pictou, New Glasgow, Antigonish County ports and Mulgrave, N.S.	1,000.00
From opening to closing of navigation in 1919, between Pictou, Mulgrave and Cheticamp, N.S.	7,500.00
From opening to closing of navigation in 1919, between Port Mulgrave, St. Peter's, Irish Cove and Marble Mountain and other ports on the Bras d'Or Lakes, N.S.	6,500.00
Between Quebec and ports on the north and/or south shores of the Gulf of St. Lawrence, and/or between ports in Prince Edward Island, Nova Scotia, Newfoundland and the Magdalen Islands	70,000.00
Between St. Catherine's Bay and Tadousac, Que.	886.67
Between St. John, N.B., and ports in Cumberland Basin, N.S.	8,000.00
Between St. John, N.B., and St. Andrew's, N.B., calling at intermediate points	4,000.00
Between St. John, N.B., and Bridgetown, N.S.	2,500.00
Between St. John, N.B., and Digby, N.S.	20,000.00
Between St. John, N.B., Digby, Annapolis and Granville, N.S., viz., along the west coast of Annapolis Basin	2,000.00
Between St. John, N.B., and ports on Bay of Fundy and Minas Basin, and Margaretville, N.S.	8,000.00
Between St. John, N.B., Westport and Yarmouth and other ports	10,000.00
During 1919 between St. Stephen, N.B., Ste. Croix River points, Deer Island, Campobello and inner islands, Passamaquoddy Bay and L'Etete or Back Bay	6,000.00
During season of 1919, between Sydney, N.S., and Bay St. Lawrence, calling at way ports.	6,000.00
During season 1919, between Sydney, and Whycocomagh, N.S.	3,000.00
From Sydney to Bras d'Or Lake ports, and ports on the east and west coasts of Cape Breton, N.S.	14,000.00
Expenses in connection with supervision of subsidized steamship services	3,000.00
	$2,467,120.67

AUTHORIZED BY STATUTE.

Canada, China and Japan	121,666.66
	$121,666.66

Coast, Lake and River Steamship Officers for 1919.

The following appointments, made by navigation companies, engaged in Canadian and Newfoundland navigation for their various steamships and tugs, have been reported to Canadian Railway and Marine World, in addition to those given in the last issue. The first column gives the names of the vessels; the second, those of the captains; and the third, those of the chief engineers.

American Interlake Line.

Sir Trevor Dawson	H. Hinslea	W. W. Norcross
Stadacona	G. H. Page	W. L. Shay
Wyoming	T. B. Greenway	G. Schroder

Bowring Bros., St. John's, Nfld.

Portia	S. Parsons	A. Smith
Prospero	A. Kean	J. McKinlay

British Yukon Navigation Co., White Horse, Yukon.

Casca	J. O. Williams	J. P. Bourne
Dawson	W. Turnbull	P. Larssen
Nasutlin	H. Bailey	R. E. Haws
Selkirk	G. H. McMaster	W. C. Vey
Tarahne	C. Coughlan	F. Vey
Tutchi	J. McDonald	J. Lauderdale

Buffalo and Erie Beach Transportation Co., Buffalo, N.Y.

O. Bedell	J. Fontaine	C. Beach

Buffalo and Fort Erie Steamship Co., Buffalo, N.Y.

Orleans	R. Ward	T. Rolfe

Marine Department Estimates for 1919-1920.

The estimates for the year ending Mar. 31, 1920, submitted to the House of Commons recently, contain the following items chargeable to capital:—

Government shipbuilding programme, construction of steamships	$30,000,000.00

The following items are chargeable to income:—

OCEAN AND RIVER SERVICES.

Maintenance and repairs to Dominion steamships and ice breakers	1,500,000.00
Examiners of masters and mates	18,000.00
Investigations into wrecks	12,[illegible]
Expenses of schools of navigation	8,000.00
Registration of shipping	6,000.00
Removal of obstructions in navigable waters	5,000.00
Inspection of live stock shipments	3,000.00
Subsidies for wrecking plants—Quebec, Maritime Provinces and British Columbia	85,000.00
Unforeseen expenses	35,000.00
Two boilers for C.G.S. Montcalm	70,000.00
One steamship, buoy and lighthouse service in Maritime Provinces	1[illegible]
	$1,8[illegible]
Agencies, rents and contingencies	$ 1[illegible]
Salaries and allowances to lightkeepers	[illegible]40,000.00
Maintenance and repairs to lighthouses	7[illegible]0,000.00
Construction of lighthouses and aids to navigation, including apparatus, submarine signals, and providing suitable boats for carrying on construction work	400,000.00
Signal service	6[illegible],000.00
Administration of pilotage	2[illegible]0,000.00
Maintenance and repairs to wharves	1[illegible]00.00
Breaking ice in Thunder Bay and Lake Superior and other points deemed advisable for the good of navigation	40,000.00
Pensions to retired pilots	9,900.00
Telephones at different points throughout the Dominion in connection with aids to navigation	500.00
Allowance to harbor master at Amherstburg, for supervision of lights and buoys in St. Clair river, Detroit river, Lake Erie, and other services during season of navigation	400.00
Compassionate allowance to widows of lighthouse keepers	1,000.00
	$2,20[illegible],800.00

MISCELLANEOUS.

Marine hospitals, including grants to institution assisting sailors	7[illegible],000.00
Shipwrecked and distressed seamen	3,000.00
Steamboat inspection	87,827.77

Wooden Steamship Building in Canada for French Government.

Canadian Railway and Marine World has published in previous issues considerable information as to the twenty 3,000 ton and fifty 1,500 ton wooden steamships which have been ordered in Canada for the French Government. We are now able to give some additional particulars, together with plans:—

The 3,000 Ton Wooden Steamships.

Following are the general dimensions, etc., of the twenty 3,000 ton d.w. wooden steamships:

Length over all	293 ft.
Length between perpendiculars	276 ft.
Beam extreme about	47½ ft.
Beam moulded about	46½ ft.
Depth moulded	23½ ft.
Draft fully loaded about	21¾ ft.
Deadweight carrying capacity	3,000 tons
Load displacement	5,655.5
Block coefficient used	.718

The vessel to be of single deck cargo type, built principally of Oregon and Washington pine, with hold beams, wood [illegible] and rails. The vessel to have a cruiser or elliptical stern, with [illegible] aft and raised forecastle forward. The vessel to have 5 hatches, 1 [illegible] bulkhead, 1 bunker bulkhead, which is to be non-watertight, and 1 [illegible] bulkhead. One watertight door [illegible] and shaft tunnel to be furnished. Accommodations for officers will be in deck houses erected in the poop deck. Accommodations for the crews will be located in the forecastle. A bridge and bridge house will be erected at the foreward end of the poop. Accommodations for gun crew of men to be arranged in the wheel house aft. Eight cargo winches, one of which is to be a warping winch, are to be installed. The windlass on forecastle head suited to handle anchors and full scope of chain, and also arranged for warping as usual practice.

Feed water tanks of full capacity to be located aft of engine room, top of tanks to be on level with all of deck forming shaft tunnels. Culinary water will be distributed from 2 separate steel tanks. The vessel is to be driven by twin screws, with engines located abaft midships.

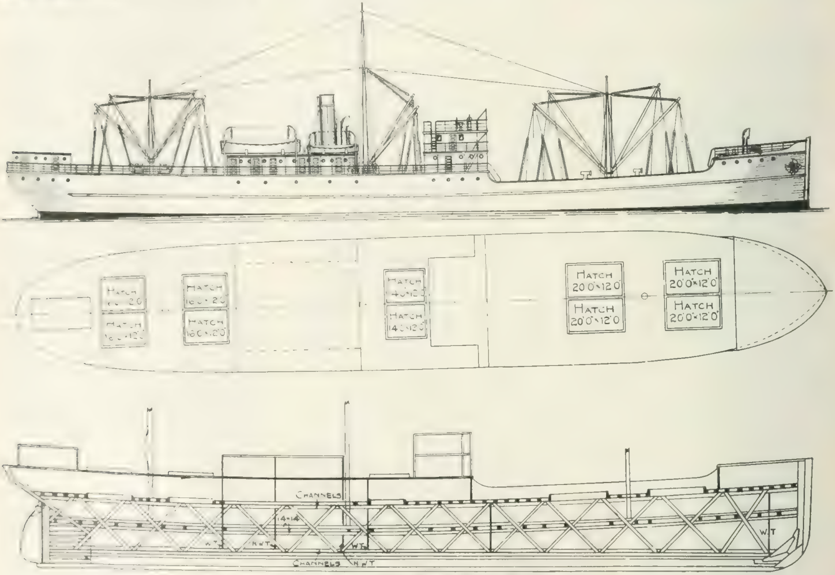
The vessel is to be built to the requirements of the Bureau Veritas for highest classification, as far as necessary for a cargo steamer. All lumber used in the construction of the vessel to be of Oregon or Washington pine and fir, unless otherwise specified. All materials to be to the satisfaction of the Bureau Veritas for highest classification. As long lengths as practically can be obtained, without delay for the completion of the vessel, are to be used in the keel keelsons, planking and ceilings, to be clear of shakes, loose knots and other defects and faults, and as far as possible free from sap. All decking to be edge grain, fastenings to be treenails, screw and drift bolts of galvanized and black iron as per best practice.

The contractors are to supply the owner with vessel constructed in a workmanlike manner, satisfactory for ocean service except for water, fuel and stores. The work to be to the satisfaction of the owner, his representative, or Bureau Veritas inspectors and surveyors. The contractors are to furnish all necessary lines, offsets, construction drawings and all detail plans for the successful construction and completion of the vessel.

When completed and ready for trial, the owner will fill the bunkers with coal and water tanks with fresh water. Then a series of progressive trials will be run on a measured mile course, at which a speed of 11 knots is to be obtained. The vessels are to be delivered by the contractors at the yard at Victoria, B.C., or if the owner decides on delivery elsewhere, the contractors are to be compensated for any such delivery as per arrangement agreed upon. The contractors are to keep the vessel, including all outfit and material entering into the construction of the vessel, fully insured, both ashore and afloat, until delivered to the owner.

All scantling to be shown in midship section and as approved by Bureau Veritas. Should any difficulty be found in obtaining the size of scantling as shown on drawings, and as specified in detail specifications to be submitted when signing contract, it is understood that the contractors are to use a different sized scantling, as long as the same is approved by Bureau Veritas for highest classification.

On top of wood keelsons, rider keelson is to be installed, to be of lattice girder



3,000-ton Wooden Steamship for French Government.

[illegible] the two tiers of steel channels, running the length of the ship, on her center line. It is claimed that this will [illegible] the boat that the ship will prove much more seaworthy than some other types.

construction of approved design, to the satisfaction of Bureau Veritas. All necessary davits, life boats, anchors and cable, steering engine, ladders, storerooms, and wireless apparatus are to be furnished and installed. Heating, plumbing to be furnished and installed to the approval of Bureau Veritas.

Electric lighting plant is to be installed, consisting of two $7\frac{1}{2}$ k.w. engine or turbine driven generator sets, complete, all wiring to be furnished and installed; one switchboard with double pole switches, ammeter, voltmeter and short circuit indicator. Entire installation to conform to the requirements of Bureau Veritas. Complete pumping arrangements to be fitted. Hand pump scuppers, fire service, etc., to be installed to the satisfaction of Bureau Veritas.

Outside planking below load waterline to be painted with 2 coats of copper paint. All above to have 3 coats of lead and finished with color as selected by owner. All interior work to have 3 coats of lead paint. Interior accommodations to be finished with color as selected by owner. All deck work, fittings, etc., to be finished in color as selected by owner. Inside of decks, clamps, etc., to be oiled and all projecting ends of fastenings and visible iron work, including iron work on rider keelson, to be painted with red oxide paint.

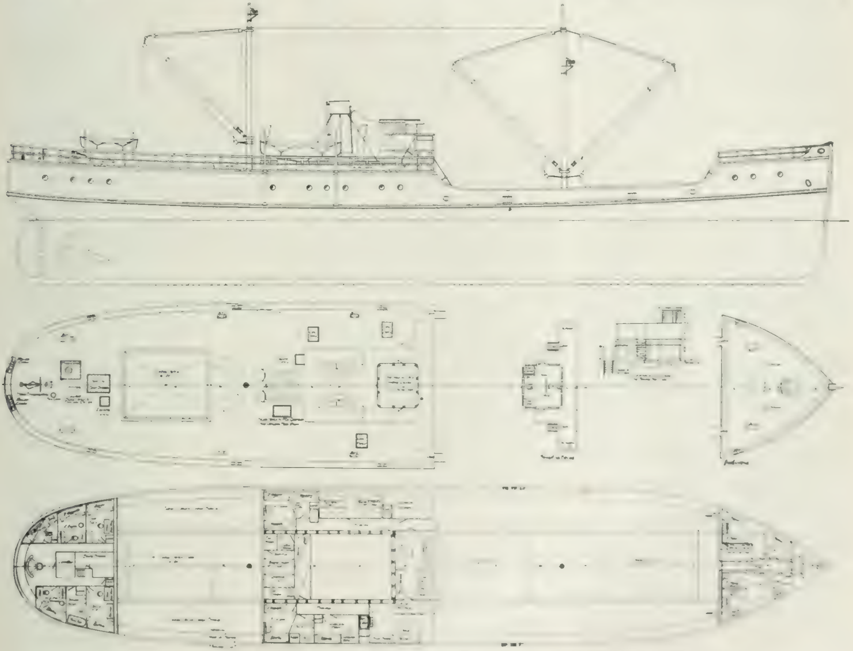
The propelling machinery is to be built to conform to and meet with requirements of Bureau Veritas for highest classification. The machinery will consist of two 550 h.p. vertical, inverted, direct-acting, three-crank, triple expansion marine engines, each to develop not less than 550 i.h.p. when working under full boiler pressure. The boilers will consist of 2 coal-burning Scotch boilers, with a heating surface of about 3,500 sq. ft., built for a steam working pressure of 225 lb. a sq. in. There will be one each main surface condenser, auxiliary condenser with combined air and circulating pump, steam driven centrifugal circulating pump, independent air pump, main feed pump, auxiliary feed pump, fire and bilge pump, sanitary pump, general service pump, bilge pump, fresh water pump, injector, feed water heater, evaporator feed pump, oil filter, induced draft fan, electric generating set and switchboard, ice machine, and evaporators, distiller, waste and soda tanks, engineer's storeroom, workshop, together with such other machinery and outfit as is necessary for the proper operation of the ship.

The Foundation Co. of British Columbia, Ltd., has the contract for these vessels and is building them at Victoria, where it has two yards, the one at which it built five 2,800 ton wooden steamship hulls ordered by the Imperial Munitions Board for the British Government, the other yard adjoining, which it has leased from the Cameron-Genoa Mills Shipbuilders, Ltd. These two yards have 8 ways. The contract calls for the delivery of the 20 completed steamships before Jan. 1, 1920. The vessels have been designed by Cox & Stevens, New York, N.Y.

The 1,500 Ton Wooden Steamships.

The 4 vessels, which are described as first class full powered barges, will have the following general dimensions:—

Length over all	[illegible] ft. 6 in.
Length between perpendiculars	195 ft. 8 in.
Beam, moulded	[illegible]
Beam, extreme	[illegible]
Depth, moulded	[illegible] ft.
Depth of hold	[illegible]
Draft, loaded	[illegible]
Block coefficient	[illegible]



1,500 ton Wooden Steamship for French Government.

Plan 1. Out board profile. Plan 2. Forecastle, [illegible] and poop deck. Plan 3. Main deck.

They are to be built of Douglas fir, and timber in keel, keelsons, stem, apron, stern post, frames, deadwoods, ceiling, deck beams, stanchions, pointers, breast hooks, etc., to be no. 1 merchantable, planking, bulwarks, rails and rail stringers, waterways, coamings and all timber above deck, to be no. 1 select, and the deck is to be clear vertical grain, no. 2 grade. The ceiling from floor to clamps to average 40 ft. lengths, also the clamps, planking above the bilge to deck, and waterways, while the rail is to be in lengths of not less than 40 ft., and the planking and bottom on bilges to average 35 ft. Keel, sided 18 in., moulded 12 in. net; shoe, sided 12 in., moulded 3 in. net;

frames, half sided 8 in., moulded 20 in. at keel, 14 in. at bilge, 8 in. at head, spaced 27 in. centers. From the break of the bridge deck aft, and the forecastle deck forward, the frames to run up to rail double, and between these points the frames to be single from deck to rail. Stem, sided 18 in., moulded about 24 in., and connected to keel with a natural crook fir knee, or in other approved manner. Apron, sided 18 in., moulded 18 in.; deadwood, sided 18 in.; stern post, sided 18 in. at keel, moulded 24 in., and connected to keel with fir knee. Rudder trunk to be bolted securely to stern post. The main and sister keelsons to be sided 16 in. and moulded 14 in.; first and second rider keelsons to be sided 16 in. and moulded 14 in.; first and second rider sister keelsons to be sided 14 in. and moulded 14 in. From sister keelsons to main deckhouse, the ceiling to be 8 by 11 in.; the 'tween deck ceiling to be 4 in. thick, butted and spike fastened; main ceiling to be scarphed from the turn of the bilge to the main deck beams, and edge bolted in each frame space. No scarphs allowed on the same frame without at least 3 strakes between. Beams at the hatches to be moulded 12 in. and sided 14 in.; sided 12 in. and crowned 6 in. Chocks to be fitted between deck beams, securely fastened to frames, leavnig proper air space, and beams to be spaced 36 in. center to center. There is to be one 12 x 14 in. beam in the lower hold, placed directly over every other main deck beam; these, however, to be omitted in the way of machinery, and compensating fore and aft members added. There are to be 3 sets of pointers at each end of vessel, to be sided 12 in. and moulded 10 in. at top and at least 14 in. at bottom, and run diagonally from the center of deadwoods, aprons, etc., well up to the upper deck beams. These pointers to be connected at the lower ends across the deadwood with fir knees 12 in. thick and at least 4 ft. arms. There are to be stanchions 12 x 12 in. under every beam and under the hatch corners, and at each side of the stanchion heads there is to be a 5 x 10 in. plate; chocks to be fitted between the stanchions on top of rider keelson, and top of stanchion to have hardwood cap; rods 1½ in. upset to 2 in. turnbuckle to be placed between the beams, with ¾ x 6 in. plate washer on the outer ends let into the frame. The rudder stock to be in one piece of iron bark, 18 in. diar., the balance of the rudder to be fir. The bulkheads, as may be required in peaks and forward and aft machinery spaces, to be of two thicknesses of 3 x 6 in. tongued and grooved stock, finished down to about 2¼ x 5¼ in. face laid diagonally in opposite directions, and canvas laid in white lead paint to be laid between the two thicknesses. Beams so arranged that one m.d. and one t.d. beams are secured to face of bulkhead.

The 2 masts and 6 cargo booms are to be of Oregon pine, of suitable diameter and strength for handling cargo equal to about a 3 ton lift. The general accommodation and quarters, include wheel house and chart room, berths, mess rooms, pantry, galley, store rooms and ice house, lavatories, etc. Each vessel is to be equipped with two lifeboats 20 x 6 x 2½ ft., with swinging davits. All anchors to be of the stockless type.

The propelling machinery to consist of 2 vertical inverted direct acting compound surface condensing engines, with cylinders 12 x 24 in. diar., by about 16 in. stroke, turning outboard when going ahead, capable of developing 275 i.h.p. with no live steam in the receivers, at not more than 175 r.p.m. Steam is to be supplied by either one return tube, 3 furnace, single ended Scotch boiler, with a total heating surface of 1,800 sq. ft., or one water tube boiler with heating surface of not less than 2,000 sq. ft. The propellers are to be solid, 3 bladed cast iron. There is to be one main condenser independent of the main engine, one main circulating pump of centrifugal pump with 6 in. suction and discharge; main air pump, vertical single acting beam type, 7½ x 14 x 10 in.; 2 main and auxiliary feed pumps of vertical simplex type, 7½ x 4 x 10 in.; general service pump, horizontal duplex type, 7½ x 4½ x 10 in; fire, bilge and general service pump, horizontal duplex type, 7½ x 4½ x 10 in.; sanitary pump, 5¼ x 4¾ x 5 in., and evaporator feed pump or centrifugal pump with 6 in. sucash ejector is to be provided, operated by water from fire, bilge and general service pump. Feed water heater of approved type to be of sufficient capacity to heat 12,000 lb. feed water an hour from 80 to 212 deg., using exhaust steam at 5 lb. a sq. in. Feed and filter tank of 325 gall. to be placed in convenient location in the engine room.

The deck machinery is to include a spur geared windlass with horizontal engine and 2 gypsy heads aft, 12 in. diar.; vertical steam winches; steam and hand steering gear of approved type with about 6 x 6 in. double cylinder engine; steam capstan with engine in the base. The electric lighting system to consist of 10 k.w. marine type generating set, driven by vertical self oiling engine of approved make for 150 lb. steam pressure; dynamo to be compound wound of the multipolar type. There are also to be provided, mechanical telegraphs, water tanks, donkey boiler, etc.

When completed, the vessels are to have endurance trials, under conditions and with results satisfactory to the owners. The propelling machinery and auxiliaries are to be designed for a speed of 9½ knots under light load.

The fifty 1,500-ton wooden steamships, which were designed by Tams, Lemoine and Crane, New York, were ordered by the Anderson Co., New York, for the French Government, as follows:—

Davie Shipbuilding & Repairing Co., Lauzon, Que.	12
Fraser, Brace & Co., Montreal	8
Wm. Lyall Shipbuilding Co., North Vancouver	8
National Shipbuilding Corporation, Three Rivers, Que.	10
New Westminster Engineering & Construction Co., New Westminster, B.C	5
Pacific Construction Co., Port Coquitlam, B.C.	2
Western Canada Shipyards, Ltd., Vancouver, B.C.	5

Landing Mails at Rimouski.—In answer to a question by Hon. R. Lemieux, in the House of Commons, recently, the President of the Privy Council stated that Halifax, N.S., had not been substituted for Rimouski, Que., as the port for the landing of the trans-Atlantic mails, and continued: "The situation is this. Owing to the interruption of trans-Atlantic traffic, due to the war, there is no regular line of ships now carrying Canadian mails. Hence the Post Office Department must make arrangements with whatever vessels are available, and as the majority of these vessels are carrying troops, and come under orders with respect to the landing of those troops, the mails are necessarily landed at the port where the disembarkation of troops takes place. There is no intention of changing the permanent policy which has been followed".

Montreal Harbor Development Plans.

Prior to the outbreak of war in 1914, the Montreal Harbor Commissioner had under consideration extensive plans for the improvement of the harbor works at an estimated cost of some $15,000,000. The work covered the electrification of the harbor system of railways, and the elevation of the tracks from McGill St. to Victoria Park.

We are advised that a commencement on the electrification work will be made during the coming summer if the commissioners present plans are carried out.

A bridge over the St. Lawrence, crossing over St. Helen's Island, is also spoken of in connection with the general development plan for the harbor.

We were informed recently that no plans have been prepared for a bridge and that although an outline plan appeared on one of the commissioner's maps in connection with the development of the harbor; the commissioners have not given any consideration to the building of such a bridge. The south shore municipalities have felt for some time that a bridge should be built as the G.T.R. overcrowded Victoria bridge. While representations to this effect have been made to the commissioners and to the Dominion Government from time to time, no decision has been reached as to when such a bridge should be built, by whom, or the type of structure. There is no charter in existence for the building of such a bridge.

Loss of the C.P.R.'s s.s. Princess Sophia.—The report of the commission appointed to enquire into the loss of the C.P.R. s.s. Princess Sophia, with all passengers and crew, in the Lynn Canal, Alaska, Oct. 24, 1918, was submitted to the House of Commons, Apr. 23, by the Minister of Marine. It deals exhaustively with the impossibility of the commission securing evidence bearing directly on the wreck, and concludes, as follows: "From the evidence adducted, the conclusion is arrived at that the ship was lost through perils of the sea. As to why passengers were not landed, is a matter of conjecture, but the commissioners beg to submit that from the evidence of all the surrounding circumstances, such as the ship being staunch, and well officered, other craft being in the vicinity, and other ships approaching the shore, the lack of shelter sufficiently near, the time of year and weather conditions, they are prepared to find than it was not unreasonable for the master of the ship not to land his passengers."

Lake Sale of Trawlers and Drifters—The Anderson Co. of Canada, 285 Beaver Hall Hill, Montreal, has entered into a contract with the British Government for the purchase of the entire lot of trawlers and drifters built in Canada for the Admiralty through the Naval Service Department, and is offering them for sale, preference being given to Canadian interests. A press dispatch states that the purchase covers 60 steel steam trawlers and 89 wooden drifters, now lying in Halifax harbor. Details of these vessels have been given in Canadian Railway and Marine World, from time to time. It is reported that six have been sold to the Phillipines Government, and that enquiries have been received from Great Britain, France and Holland.

The Minister of Marine on the Dominion Government's Shipbuilding.

Hon. C. C. Ballantyne, in speaking at the launching of the s.s. Canadian Ranger, by Canadian Vickers Ltd., in Montreal, April 19, said he had ever been a believer in shipbuilding in Canada, and especially in the harbor of Montreal, and he felt that his optimism had not been in vain. The vessels already launched and sent to sea would be followed by others, and he predicted a growing and permanent industry. Canadian Vickers Ltd., being the pioneers of the work so happily begun. A great deal had been done to bring this plant up to its present state of efficiency, and those who had visited the great shipbuilding yards on the other side of the Atlantic were convinced that ships could be constructed in Montreal as well and as quickly, and warships would, no doubt, be built there. Referring to the orders given by the government, he said that the policy of the department would be sufficiently liberal to stimulate this great branch of our national industry, giving employment to the artizans of Montreal and developing industry, as the presence of 3,500 men working in Maisonneuve means a great deal to the general welfare of the commercial metropolis of the Dominion.

The Minister stated that at present the shipbuilding industry, although in its infancy, was giving to 25,000 men in Canada, including boiler and engine makers and mechanics of all kinds, a means of earning an honorable living and at the same time the industrial activity of Canada was being given an impetus that could not be overestimated. "If," he said, "Canada is to possess a carrying trade, she must have a mercantile marine, and it will be the pride of all to see the country's flag on every sea."

British Columbia Timber Raft.—A London, Eng., cablegram says:—Vickers' office at Westminster contains a model of a novel 9,000 ton ship being built in British Columbia of 5,000,000 ft. of timber. The ship and cargo will form really a huge raft, which will have ample accommodation on the deck for the crew and will have motor engines to assist the sails. This strange ship will make the voyage to England through the Panama Canal, and on reaching its destination, will be dismantled and the timber distributed.

Marine Department Salaries.—The Dominion Government estimates for the year ending Mar. 31, 1920, provide for $241,650 for salaries in the Marine Department, against $225,800 for the previous year. The Deputy Minister, Alex. Johnston, is increased from $5,000 to $6,000 a year; the Assistant Deputy Minister, C. Stanton, from $4,000 to $4,500; and the Naval Conductor, C. S. Duguid, from $4,000 to $4,500; the Chief Engineer's salary remaining at $4,000.

The Mount Royal Steamship Co. Ltd., has been incorporated under the Dominion Companies Act, with authorized capital of $100,000 (the official notice reads "one hundred dollars divided into 1,000 shares of one hundred dollars each), and office at Montreal, to build, own and operate steam and other vessels, and to carry on a general transportation business and shipping agency.

Mainly About Marine People.

Sir Montagu Allan, formerly of the Allan Steamship Lines, and Miss Martha Allan, who have been in England for a considerable portion of the war, are expected to return to Montreal at an early date. Lady Allan who has been in charge of Sidmouth Hospital for the past year, has postponed her return to Canada until the autumn.

J. Herbert Anderson, of the Anderson Co., New York, and the Anderson Co. of Canada, Montreal, ship builders, left New York, early in April, on a business trip to England and France.

Hon. C. C. Ballantyne, Minister of Marine, and of the Naval Service, returned to his house in Montreal, Apr. 12, accompanied by Mrs. Ballantyne, after spending some weeks at Atlantic City, N.J., recuperating after his serious illness. He arrived in Ottawa, Apr. 12, to resume his departmental duties, and took his seat in the House of Commons, Apr. 22.

J. T. Boissinot, Secretary-Treasurer, Davie Shipbuilding and Repairing Co., Lauzon, Que., has been appointed a justice of the peace for Quebec District.

Capt. A. L. Campbell, who died at Toronto, Apr. 18, aged 44, was for several years in Northern Navigation Co.'s service, and last year was master of the company's s.s. Hamonic. He was recently appointed master of the company's flag vessel Noronic, succeeding Capt. Foote, retired.

John Donnelly, of the Donnelly Salvage & Wrecking Co., Kingston, Ont., has been elected a member of Queens University Council, by the graduates.

Mrs. Foy, widow of Jno. Foy, who was president, Niagara Navigation Co., died at Toronto, Apr. 12. She was the eldest daughter of the late Sir Frank Smith, also a former president of the Niagara Navigation Co. Her two sons are in the transportation service, Frank C., being Passenger Agent, New York Central Rd., Utica, N.Y., and John V., being General Passenger Agent, Canada Steamship Lines, Toronto.

F. G. Frieser, who has been appointed General Agent, Freight Department, Canadian Pacific Ocean Services, Ltd., New York, N.Y., entered C.P.R. service in Maq, 1905, as Assistant Export and Import Agent, New York, and in July, 1906, was appointed Assstant Import Freight Agent, Chicago, Ill.; leaving the service in Oct., 1906, and re-entering it in Mar., 1911, as Assistant Foreign Freight Agent, New York, was appointed Export Freight Agent, Montreal, in Sept., 1911, and Export Freight Agent, New York, in Jan., 1916.

F. Orr Lewis, President, Canadian Vickers Ltd., has arrived in Montreal, after a considerable absence in England.

J. W. Norcross, President, Canada Steamship Lines, has removed to his new residence, 97 The Boulevard, Montreal. Mrs. Norcross and daughters returned recently from a visit to Atlantic City.

W. F. Wasley, Manager and Treasurer, Muskoka Lakes Navigation and Hotel Co., Gravenhurst, Ont., has been elected President of the International Water Lines Passenger Association.

R. M. Wolvin, vice president and managing director, Halifax Shipyards Ltd., and Mrs. Wolvin, returned to Montreal in April from Europe

W. A. Wright, eldest son of A. A. Wright, Assistant Director of Shipbuilding, Naval Service, Montreal, and a prominent member of the Dominion Marine Association, died at his father's house, in Toronto, Apr. 9, aged 21.

Naval Service Department Estimates for 1919-1920.

The estimates for the year ending Mar. 31, 1920, submitted to the House of Commons recently, contain the following items among others:—

Naval Service maintenance and upkeep of ships, Naval College, dockyards at Halifax and Esquimalt, and Royal Canadian Volunteer Reserve	$ 600,000.00
Hydrographic surveys	250,000.00
Fisheries protection service repairs and maintenance of fisheries protection steamships	100,000.00
Radiotelegraph service building and maintenance of wireless stations	285,000.00
Tidal service	30,000.00
Patrol of northern waters	40,000.00
Life saving stations including rewards for saving life	100,000.00
Royal Naval College of Canada	100,000.00
	$1,505,000.00

Canadian Merchant Service Guild.—A bill to incorporate the Canadian Merchant Service Guild has been introduced into the House of Commons, for bringing together men engaged in the Canadian merchant service, and to make provision for the insurance of the members, subject to the requirements of the Insurance Act relating to fraternal benefit societies. The organization has hitherto been confined to British Columbia, and it is now desired that a Dominion charter be obtained. The head office will be at Vancouver, B.C.

The Upper Canada Tract Society has been given $200 by the Dominion Marine Association in connection with the work at the Sailors' Institute in Toronto, where in 1918, by actual count, 839 men entered their names for work, and over half of these, according to the actual knowledge of those in charge, were supplied with berths. A much greater percentage, no doubt, secured work without informing the institution.

Aids to Navigation.—The Dominion Marine Association's committee on aids to navigation, met in Toronto Apr. 12 and decided to make several recommendations to the Lighthouse Board. The committee strongly favors the re-establishment of the light at Otter Head, Lake Superior, and also asks for a horn there. It also supports the Port Arthur Board of Trade's proposal for light and horn at Angus Island.

West Coast Towing and Salvage Co. Ltd. has been incorporated under the Dominion Companies Act, with $250,000 authorized capital and office at Vancouver, B.C., to carry on a general transportation, towing, wrecking and salvage business, and in connection therewith, to own and operate steam and other vessels, wharves, piers, etc.

The Ottawa Salvage Co. Ltd., the incorporation of which was announced in a recent issue, with office at Ottawa, is being organized to salvage logs from the Ottawa River, and for other salvage work. Capt. Milford, an engineer and former sea captain, recently of New York, is chiefly interested.

Pacat Steamships Ltd. has been incorporated under the Dominion Companies Act, with $50,000 authorized capital and office at Toronto, to carry on a general navigation and steamship owning and building business.

Details of the Different Types of Steamship for Canadian Government Merchant Marine Ltd.

The following are comparative details of five of the six different types of steamship being built for the Canadian Government Merchant Marine Ltd. At the time of writing, he plans for the 10,500-ton vessels were not available:

	[illegible],400 ton	[illegible],700 ton	4,300 ton.	5,100 ton.	8,100 ton.
Length overall	260 ft.		333 ft. 7 ins.	..	413 ft. 1 in.
Length bet. perpendiculars	[illegible]½ ft	251 ft	320 ft.	331 ft.	400 ft.
Breadth moulded	[illegible] ft.	43½ ft	44 ft.	46½ ft.	52 ft.
Depth moulded	23 ft.	26 ft.	25 ft.	25½ ft.	31 ft.
Draft loaded	20 ft. 1½ in.	22 ft. 2 in.	21 ft. 2 ins.	21 ft. 8 ins.	25 ft. 1 in.
Type	S.d., p.b. & f'c's'le	Lake, s.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	S.d., p.b. & f'c's'le	2d., p.b. & f'c's'le

Wooden Steam Drifters at Lauzon, Que.

The vessels shown above are a portion of the 56 wooden steam drifters, built in Canada during the war, for the British Government, through the Canadian Naval Service Department. A full description, and plans of them, were given in Canadian Railway and Marine World for February.

Loss of the s.s. Troja.

Held at St. John, N.B., Mar. 25., before Commander H. St. G. Lindsay, assisted by Capts. Jas. Gillies and C. W. Hodder, as nautical assessors, into total loss of the s.s. Troja, on Old Proprietor, in the Bay of Fundy, Mar. 18. The court was unanimously of the opinion that the stranding and subsequent loss of the vessel was caused by the actions of the master, Capt. J. C. Caine, as he neglected to make use of his dead sea lead, which, had he done so when taking his departure from Seal Island, would have given him a better idea as to the distance, thereby enabling him to place more confidence in his course. A proper allowance was not made for the tidal set, owing, no doubt, to the fact that the tide tables used by him, were shown to be incorrect. The court, taking into consideration the master's long and successful service, and the proper and seamanlike manner in which the vessel was handled when the broken water was reported, until the stranding, and not wishing to deal with his certificates, severely censured him and ordered that he pay the costs of the investigation.

Since the taking over of the cable companies by the U.S. Government, and the placing of them under the Postal Department, some friction has developed in regard to the corporate officials of some of the companies, and this culminated recently in the "dismissal" of C. H. Mackay, as President of the Postal Telegraph Cable Co., by the Postmaster General. Mr. Mackay is reported to have stated that the action could not have been more arbitrary, despotic and vindictive. He also expressed the opinion that the action was intended to lead to a cable monopoly in the U.S., and was especially discriminatory against his companies.

The Marine Department will receive tenders to May 12, for the building on the Barret rock, near Prince Rupert, of a concrete tower, 38 ft. high, surmounted by an Aga light, supplied with compressed gas, capable of burning for about 6 months without attention. This is similar to the tower and light erected on the Ogden Point breakwater, at Victoria.

The Dominion Public Works Department will receive tenders to May 2, for repairs to the wharf at the quarantine station, Williams Head, B.C., about nine miles southwest of Victoria.

United States Ships Going Out by the St. Lawrence.

In Canadian Railway and Marine World for April, mention was made of a large number of ships built at U.S. yards on the Great Lakes, for ocean and coast service, and of their passage to the ocean via the St. Lawrence River. We have ben officially advised that during 1918, 160 coal burning steamships, built at U.S. yards on the Great Lakes, passed through the St. Lawrence to the coast, the total deadweight tonnage being 560,000. For this year, 154 oil burning and 106 coal burning steamships, all steel, and 70 steel and wooden steam tugs, will be completed on the Great Lakes, and sent to the ocean by the same route. Folllowing is a list of these, giving the builder, the ship's names and the deadweight tonnage.

American Shipbuilding Co., Chicago Yard, Lake Grafton, Lake Grainger, Lake Grama, Lake Grampian, Lake Grampus, Lake Granby, coal burning vessels, 4,200 tons d.w.; Lake Gazette, Lake Gebhart, Lake Gera, Lake Gert, Lake Getaway, Lake Geyster, Lake Giddings, oil burning vessels, 4,050 tons d.w.

Detroit Yard,—Lake Grattan, Lake Gravella, Lake Gravity, Lake Greenbrier, Lake Gretna, Lake Grogan, Lake Flovilla, Lake Flume, Lake Flushing, Lake Flynus, Lake Folcroft, Lake Sapor, Lake Fonda, Lake Fontana, Lake Fontanet, Lake Faresman, coal burning vessels, 4,200 tons d.w.; Lake Gilboa, Lake Gilpen, Lake Gilta, Lake Giltedge, Lake Girth, Lake Gitano, Lake Glasco, Lake Fablus, Lake Fabyan, Lake Fackler, Lake Fagundus, Lake Fairfax, Lake Fairlie, Lake Inglenook, Lake Fairport, Lake Fairton, Lake Faliah, Lake Falfa, Lake Falkner, Lake Treab, Lake Falun, Lake Tippah, Lake Fandango, Lake Fandon, oil burning vessels, 4,050 tons d.w.

Cleveland Yard,—Lake Faristelle, Lake Forkville, Lake Forney, Lake Forsby, Lake Fossil, coal burning vessels, 4,200 tons d.w.; Lake Fannin, Lake Farabee, Lake Farber, Lake Faribault, Lake Fariston, Lake Farley, oil burning vessels, 4,050 tons d.w.

Superior Yard,—Lake Fouche, Lake Foxboro, Lake Foxcroft, Lake Fraichur, Lake Fraley, Lake Farlin, coal burning vessels, 4,200 tons d.w.; Lake Farmingdale, Lake Farragut, Lake Farrar, Lake Stobi, Lake Falama, oil burning vessels, 4,050 tons d.w.

Lorain Yard,—Lake Franconia, Lake Fray, Lake Frazee, Lake Frecks, Lake Freeborn, Lake Freed, Lake Freeland, Lake Freezeout, Lake Frenchton, Lake Fresco, Lake Inaha, Lake Friar, Lake Frio, Lake Fronna, Lake Frolono, Lake Frugality, Lake Frumet, coal burning vessels, 4,200 tons d.w.; Lake Fanbush, Lake Faulk, Lake Fansdale, Lake Fanquier, Lake Favonia, Lake Faxon, Lake Felden, Lake Hachita, Lake Fellowship, Lake Felton, Lake Fenn, Lake Feodora, Lake Fergus, Lake Fernalda, oil burning vessels, 4,050 tons d.w.

Buffalo Yard,—Lake Cathcoon, coal burning vessel, 3,550 tons d.w.; Lake Fugard, Lake Furley, Lake Furlough, coal burning vessels, 4,200 tons d.w.; Lake Fernando, Lake Ferrona, Lake Fessenden, oil burning vessels, 4,050 tons d.w.

Burger Boa Co., Manitowoc, Wisc. Retriever and Terrier, steam tugs..

Dachel-Carter Boat Co., Benton Harbor, Mich.—Badger and Leopard, steam tugs.

Globe Shipbuilding Co., Superior, Wisc.—Conotton, Procter, Copalgrove, Lake Glebe, Lake Glencoe, coal burning vessels, 3,500 tons d.w.; Lake Fiscus, Lake Fisher, Lake Fitch, Lake Fithian, Lake Flag, Lake Glaucus, Lake Gunni, Lake Harminia, Lake Hector, Lake Justice, oil burning vessels, 4,050 tons d.w.

Great Lakes Engineering Works, Ecorse Yard.—Cottonplant, Cottonwoood, Coulee, Council Bluffs, Couparle, Courtois, Coushatta, Couolene, Covalt, Covedale, Covena, Coverun, Cowan, coal burning vessels, 4,200 tons d.w.; Lake Elkwood, Lake Elkwater, Lake Ellendale, Lake Singara, Lake Ellerslie, Lake Ellicott, Lake Ellijay, Lake Ellithorpe, Lake Ellsworth, Lake Ellsbury, Lake Elmdale, Lake Elmhurst, Lake Elmont, Lake Slavi, Lake Elmsford, Lake Elmwood, oil burning vessels, 4,050 tons d.w.

Ashtabula Yard. — Cowanshannock, Cowboy, Cowee, Cowishe, Crabtreet, Craigrownie, Craigsmere, coal burning vessels, 4,200 tons d.w.; Lake Elnora, Lake Elon, Lake Elpueblo, Lake Elrio, Lake Elsah, Lake Elsmere, Lake Elva, Lake Elwin, oil burning vessels, 4,050 tons d.w.

Leatham and Smith Towing and Wrecking Co., Sturgeon Bay, Wisc.—Energy, Diligent, Active, Bison, Bullock, Ox, Bear, Burro, and four not yet named, steam tugs.

McDougall-Duluth Co., Duluth, Minn.—Cedar Spring, Ceralvo, Cerosco, Cerro Gardo, Chamberlino, Chamblee, Chaparel, Chantier, Chappell, Chautauqua, coal burning vessels, 3,500 tons d.w.; Lake Flagon, Lake Flagstaff, Lake Flambeau, Lake Flanders, Lake Flatonia, Lake Flattery, Lake Strymon, Lake Flaxman, Lake Flippen, Lake Floise, Lake Flomatch, Lake Floravista, Lake Florian, Lake Floris, Lake Flournoy, oil burning vessels, 4,050 tons d.w.

S. C. McLouth, Marine City, Mich.—Seafarer, Adventurer, Protector, Marine City, and four not yet named, steam tugs.

Manitowoc Shipbuilding Co., Manitowoc, Wisc.—Coperas, Coquina, Corapeak, Corcoran, Python, Cornucopia, coal burning vessels, 3,400 tons d.w.; Lake Gadsden, Lake Onawa, Lake Savus, Lake Gaither, Lake Galata, Lake Galewood, Lake Galien, Lake Galisteo, Lake Ikatan, Lake Galva, Lake Idria, Lake Gama, Lake Haresti, Lake Horus, Lake Hyas, Lake Hybla, Lake Hygeia, Lake Hypanis, oil burning vessels, 4,050 tons d.w.

Northwest Engineering Works, Green Bay, Wisc.—Cockamong, Cockeco, Toiler, Vanguard, Sampson, Mastiff, Guardian, Vallonia, Moositauke, Toopi, Menominee, Outagamie, Pylos, Salem, Ashwaubemie, Suamico, Tomah, Green Bay, Fort Howard, Allouez, Ousaki, Seymour, Kaukauna, Kellogg, and nine not yet named, steam tugs.

Saginaw Shipbuilding Co., Saginaw, Mich.—Lake Lilicusun, Lake Licoco, Lake Saba, Lake Canaveral, Lake Candelaria, Lake Cannonsburg, Lake Fear, Lake Girardeau, coal burning vessels, 3,500 tons d.w.; Lake Gando, Lake Furnas, Lake Gannett, Lake Gano, Lake Gara, Lake Gardeau, Lake Gardi, Lake Garlock, Lake Eaglerock, Lake Kaleta, Lake Gasconade, Lake Hebron, oil burning vessels, 4,050 tons d.w.

Toledo Shipbuilding Co., Toledo, Ohio—Lake Strabo, Lake Charlottesville, coal burning vessels, 3,500 tons d.w.; Lake Festina, Lake Festus, Lake Fibre, Lake Fielding, Lake Fife, Lake Figart, Lake Fighting, Lake Filbert, Lake Fillion, Lake Fillmore, Lake Filson, Lake Fincastle, Lake Fine, Lake Finkton, Lake Finney, Lake Firth, oil burning vessels, 4,050 tons, d.w.

Universal Shipbuilding Co., Sturgeon Bay, Wisc.—Commander, Commodore, Lieutenant, steam tugs.

Whitney Bros. Co. ,Wisc.—Hukey, Hulver, Humaconna, Humrick, Keshena, Kiokee, Kiron, Kitchi, Kolda, Kaleen, steam tugs.

Vancouver Harbor Improvements Suggested.

A. D. Swan, consulting engineer, Montreal, who was employed by the Dominion Public Works to report on Vancouver Harbor is said to have suggested the following improvements:—

A booming ground for timber in English Bay.

A timber export wharf.

A harbor terminal railway.

Provision for 6 new deep water berths or wharves at once.

Mechanical equipment at the new government wharf and other wharves when constructed.

Equipment for non-inflammable oil storage in some suitable site.

Provision of a fire tug, fitted with powerful crane, which tug shall be used as an auxiliary car ferry to serve immediate needs to North Vancouver.

Dockage facilities for passengers and other traffic in connection with the Canadian National Rys.

Removal of C.P.R. bridge across entrance of False Creek at Kitsilano reserve, and if necessary, construction of new bridge in a suitable location.

Suitable landing facilities at North Vancouver, for auxiliary car ferry, with railway connections.

Second Narrows bridge to be constructed as part of the complete scheme, if not immediately, at an early date.

Drydock to be built by government, if not arranged for by private interests, at early date.

Conference Between Shipbuilders and Employes.

Ottawa press dispatch states:— A conference of shipbuilders from Port Arthur to Halifax with representatives of their employes, has been in progress for the past two days at the Labor Department. The object was to arrive at a working agreement which would be satisfactory to both parties. The shipbuilding trades represented are amalgamated into a single organization called the Marine Trades Federation. The question of a working agreement was thoroughly discussed, but it was found impossible to formulate the terms of an actual agreement during the conference. It was arranged, however, that a further conference would be held shortly, after the points brought up at this one had been considered.

Aliens at Shipbuilding Yards.—The order in council, passed as a war measure, Sept. 17, 1917, prohibiting the entrance into any shipbuilding yard, of persons not natural born British subjects, has been rescinded.

The C.G.S. Montcalm's Winter Trips Between Quebec and North Sydney.

Canadian Railway and Marine World for March contained a copy of the Canadian Government Merchant Marine Ltd. s.s. Canadian Voyageur's log from her leaving Quebec, Jan. 20, to her arrival at Halifax, N.S., Feb. 4. She was convoyed from Quebec to Sydney, N.S., by the C.G.S. Montcalm, and we have been favored with the folllowing extracts from the Montcalm's log, on both the down and up trips, which will doubtless prove of interest, on account of the fact that the trips were unprecedented on the St. Lawrence at the season at which they were made:—

Jan. 20.—Ship at Pt. a Carcy wharf, Quebec, ready to leave in company of s.s. Canadian Voyageur. Weather cloudy, light n.e. wind. 9.50 a.m., cast off proceeded down. 10.50 a.m. returned to Quebec, snowing, Canadian Voyageur in tow. 12.45 p.m. Moored at Pt. a Carcy wharf. Capt. A. Fournier on board to assist Capt. P. A. Lachance; boiler maker on board, in case of trouble with boilers. Ship took 29 tons of coal and remained at Pt. a Carcy.

Jan. 21.—Cloudy, calm. Cast off from Pt. a Carcy wharf at 9 a.m., and proceeded, Canadian Voyageùr in company. 10.20 a.m., St. Laurent light abeam; 11.28 a.m. St. John light abeam; 1.20 p.m. Crane Island light abeam; 2.05 p.m. Stone Pillar abeam. Cloudy, light n.e. wind, 5.40 p.m. St. Irenee light abeam; stopped in the ice. 10 p.m. weather clearing, proceeded down; 10.45 p.m. Cape Salmon light abeam. 11.30 p.m. Cape Dog light abeam. Distance 98 miles.

Jan. 22.—Midnight, abeam White Island; course according to ice; 5.50 a.m., stopped waiting for daylight; ice thick; 6 a.m. light snow, full speed ahead; 8.30 a.m. Bicquette abeam; 10 a.m., came along side Canadian Voyageur took pilots Koenig and Pouliot, and Mr. Smith, on board as passengers; proceeded down, course n. 15 e.; light snow; 2 p.m. about Manikiagan buoy position; course s. 85 e. Light snow; 6 p.m. stopped in solid ice, cloudy, light wind, distance 87 miles.

Jan. 23.—4 a.m. About four miles south of Minikiagan gas buoy; proceeded in heavy ice; 8 a.m. ship laboring in heavy ice, making no progress; north wind, clear weather; 9 a.m. light s.e. wind; ship making no headway; noon Pt. Des Monts, bore n. 80 e.; Cape St. Nicolas bore n. 53 e.; 2 p.m. south east wind, headed ship south, to keep clear of Manicona; sign of storm coming; 4 p.m., cloudy; ship in thick ice; about ten miles south of Manikiagan gas buoy for the night. 10 p.m. strong s.e. wind, snow storm, n.e. gale.

Jan. 24.—Midnight, ship south of Maniconagan; 85 fathoms water; in solid [illegible] storm, n.e. gale; ship drifting with wind; 9 a.m., cast lead 65 fathoms; 11 a.m. cast lead; noon 67 fathoms; 1.30 p.m. Weather same, 75 fathoms; 2.30 [illegible], ship drifting with n.e. [illegible] nearly 2 miles an hour. 4 p.m. 70 fathoms; 5 p.m. 50 fathoms; [illegible] 7 p.m. 40 fathoms; [illegible] ship near North Shore, headed to south to try and keep [illegible] fathoms; wind north, light snow; ship remained stopped in ice for night.

Jan. 25.—Midnight, [illegible] solid ice, 80 fathoms; 6 a.m. weather clear; 100 fathoms; Pt. Neuf bore w.n.w., strong north wind; proceeded to s.s. Canadian Voyageur; east end of Bic Island bore s. 12 e. Weather clear; ship drifted in yesterday's gale about 46 miles in solid ice; working ship hard in heavy ice, to go to assist Canadian Voyageur one mile away; noon, moored alongside Canadian Voyageur; took 86 tons of coal.

Jan. 26.—Ship two miles n.w. off Bicquette Island; finished coaling; light north wind; proceeded course n. 87 e.; 6 a.m. Bersimis abeam; 8.30 a.m. 5 miles off Maniconagan; 9 a.m., slow engine, waiting for Canadian Voyageur; 12.55 p.m. Pt. Des Monts abeam; light west wind; course n. 60 e.; 2.25 p.m. Egg Island abeam; course n. 80 e.; light scattered ice; 5.40 p.m. Carousel abeam; 9 miles off; course s. 62 e.; 10 p.m., stopped engine for night; waiting for daylight to make West Point, Anticosti.

Jan. 27.—Long. 65, 16; west lat. 49.58 n.; 4.40 a.m. proceeded s. 62 e.; west wind, light ice; 7.15 a.m. West Point, Anticosti abeam, 7 miles off; 9 a.m. close packed ice everywhere; 9.15 a.m., slob ice from North Point, Cape Observation; 1.30 p.m. abeam, Carleton Pt.; 4.30 p.m. abeam about Cape Bear; 6.15 p.m. starboard rudder chain broke in heavy ice rudder came in port propeller engine; going slow astern; lost one propeller blade and broke hand steering gear; 8.30 p.m., rudder chain repaired, ship remained in heavy ice all night; crew removed 38 tons of coal from aft hold to bunker today; chief officer gave orders to steward and cook to be careful with water and provisions.

Jan. 28.—Ships position about long. 62.16; w. lat. 49.37 n.; ship drifting with ice; light west wind; 12.45 a.m. cast lead 95 fathoms; 2.45 a.m. 86 fathoms; 5.30 a.m. 80 fathoms; 6 a.m., trying to work ship, impossible to move; 7 a.m. stopped engine, no headway possible; weather clear; light west wind; noon 70 fathoms water; 2 p.m. 55 fathoms; lost deep sea lead in ice; tried to work ship. 3 p.m. stopped, impossible to move; 6 p.m. ship stopped in heavy ice; 9.30 p.m. 83 fathoms; ice moving to east slowly; crew removed 38 tons of coal from aft hold to bunker.

Jan. 29.— Ships position long. 62.14; w. lat. 49.39 n.; in heavy close packed ice, 49 fathoms; 4 a.m. 42 fathoms; 6 a.m. 52 fathoms; commenced working ship in opening, proceeded north to find condition of ice; 6 p.m. stopped; cast lead, 75 fathoms; heavy scattered ice; 8 p.m. proceeded s. 63 e.; heavy ice, scattered. Distance 60 miles.

Jan. 30.—Ships position about 30 miles north of Table Head; course s. 63 e.; weather clear, moderate n.w. wind; 2.50 a.m. stopped in thick ice, waiting for daylight; 6 a.m. proceeded s. by e.; light n.w. wind; 9 a.m. ship in heavy ice, making slow progress; 10.30 a.m., cast lead, 75 fathoms; Heath Pt. bore s. 20 w.; Canadian Voyageur in thick ice; impossible to go to her; stopped in the ice; ship about 10 miles off Anticosti; crew moved 18 tons of coal from fore hold to bunker; ship remained in ice; distance 24 miles.

Jan. 31.—Ship's position about 5 miles east of east end of Anticosti Island, weather clear; light west wind; 6 a.m., proceeded, trying to go to assist Canadian Voyageur in heavy ice; worked ship back and forth; 10 a.m. impossible to do anything; 10.15 a.m. proceeded e. to s.w.; 12.45 p.m. stopped, 75 fathoms water; 2.55 p.m. proceeded to west; 8 p.m. 46 fathoms water; stopped in ice; midnight 48 fathoms water; ship remained in ice for night.

Feb. 1.—Ship's position about 6 miles east of Anticosti in 48 fathoms water. 6 a.m. ship working, trying to go to assist Canadian Voyageur; 8 a.m. ship working in heavy ice, making good progress; 8.45 a.m. ship with Canadian Voyageur; 9.05 a.m. proceeding with Canadian Voyageur; noon, ship in loose ice; proceeeding, Canadian Voyageur following, steering according to ice, e. to s.w.; 1 p.m. light ice, course s. 20 w.; 6 p.m., cast lead 265 fathoms; 9.40 p.m. 260 fathoms; 11 p.m. 215 fathoms; sounding machine lead carried away by ice.

Feb. 2.—Ship about 10 miles north of St. Paul Island, in some heavy loose ice; 1.30 a.m. St. Paul light bore s. 45 w.; cast lead 285 fathoms; 3.35 a.m. St. Paul Island abeam about 4 miles off; in heavy loose ice, course s. 25 w.; 8 a.m., ship in light ice, wind s.w., light snow; 10 a.m. Flat Point abeam; 11.25 a.m. Moored at coal pier, North Sydney.

Feb. 4.—Diver on board, for examination of rudder and port propeller; reports ruddder shaft twisted, some bolts loose in rudder connections, one blade of port propeller lost, diver working at loose bolts.

The Return Trip From North Sydney to Quebec.

Mar. 11.—North Sydney, weather clear with strong n.w. wind. 5 a.m. left for St. Paul Island; 9.55 a.m., in heavy, close packed ice; 10.15 a.m. Cape North abeam; 12.30 p.m. anchored at St. Paul Island and landed provisions; 1.50 p.m., weighed anchor and proceded in heavy, close packed ice; 4 p.m., open ice. Altered course n. 4 e. Hours at sea 18, run 160 miles.

Mar. 12.—About 20 miles east of Heath Point; weather clear with light n.n.w. wind; 6 a.m., East Point Anticosti bearing s. 50 w.; heavy loose ice; 9 a.m., Cape Henry abeam, 6 miles off; noon Carleton Point abeam 9.30 p.m. anchored Thunder river; latter part snow with fresh s. wind, hours steaming 21½, distance 220 miles.

Mar. 13.—Thunder river, fair and snowing, with strong gale n.w.; 12.45 a.m. weighed anchor and proceeded westward; 3.30 p.m. Carousel Island abeam; 4 p.m., ship in solid ice for the night; Seven Islands Bay; latter part clear with strong n.w. gales, steaming 15 hours, 15 minutes.

Mar. 14.—Seven Islands Bay, in ice; distance 80 miles; weather clear with moderate n.w. wind; landed freight; 10.30 a.m., left for Thunder river; 11 a.m. Carousel abeam; course s. 70 e. 4.20 p.m. anchored off Thunder Bay, and loaded fish; latter part clear, with light n.w. wind, hours steaming 5½, distance 80 miles.

Mar. 15.—Thunder river; weather clear with light n.w. wind; 9 a.m., finished loading and weighed anchor for Ellis Bay; 12.25 p.m. anchored Ællis Bay; landed and received mail; 8.20 p.m., weighed anchor and left for Quebec 9.18 p.m. West Point abeam; course n.50w. Latter part clear with n.w. wind; time steaming 7 hours, 5 minutes, distance 65 miles.

Mar. 16.—35 miles west of West Point; 3.50 a.m. Carousel light abeam, 2 miles off; 7 a.m., anchored Shelter Bay, landed passengers; 12.10 p.m., weighed anchor and proceeded; 2 p.m., picked up fog alarm keeper at Pointe des Monts; 3.10 p.m. arrived Godbout and took passenger; 3.25 p.m. proceeded up; 4.15 p.m. arrived English Bay, landed passengers and freight; 10 p.m. proceeded on way up; midnight, course s. 72 w., time steaming 13½ hours, distance 142 miles.

Mar. 17.—Off Metis. Weather rainy and fog; 2.25 a.m. Father Point abeam; heavy scattered ice; 8 a.m., anchored off Baud Mills, on account of thick weather; 12.30 p.m. weighed anchor and left for Tadousac, but unable to stop there owing to thick weather; 2.50 p.m. Cape Salmon abeam; 4.40 p.m. anchored off St. Irenee; time steaming 16 hours, 40 minutes, distance 106 miles.

Mar. 18.—St. Irenee; first part cloudy, with light s.e. wind; 7.30 a.m.; left for Quebec; 9.44 a.m. Upper Traverse pier abeam; 12.15 p.m. Crane Island abeam; 4 p.m. arrived at Quebec and moored at Point a Carcy wharf; latter part cloudy with light s.w. wind; time steaming 8½ hours, distance 66 miles.

Government Operation of Steamships.

The Montreal Gazette says.—"State operation of steamships offers a new field in Canada, but not one which has been left untried elsewhere. In Great Britain, during the latter period of the war, the government controlled the shipping, and an instructive comparison of the results achieved under commercial control on the one hand, and state control on the other, is available. The question is dealt with clearly and exhaustively in the annual report of the Liverpool Steamship Owners' Association. Taking the year ended July 31, 1916, as the last complete period of commercial control, and comparing it with the year ended July 31, 1918, the first complete period of state control, it is found that in the latter period the costs increased while the service declined. The decrease in tonnage amounted to 13%, but the drop in the weight of imports carried amounted to 22%. Under commercial control the increase in cost over peace time figures was 46%, and under state control 163%. In the commercial period the weight of imported raw materials decreased 16%, and the cost increased 7%, while in the state period the volume decreased 31%, and the cost increased 56%. All imports decreased 15%, in the first period and 37% in the second. The proportion of exports to imports dropped from 61% to 44%. It is pointed out that under government control the use of 8,500,000 tons of foreign shipping was lost, and the concentration of British tonnage on the shorter routes, intended to offset this loss, meant the forfeiture of some of the best import and export markets, with a resultant rise in prices. The conclusions of this illuminating report are summed up as follows:

"'For the first two years of the war, commercial enterprise working in and with the markets of the world equipped the armies and provided for the needs of the nation and its allies. It is true that supplies decreased and prices advanced, but never to the point of imposing privation and suffering on the nation. In the last two years of the war, whilst the state was in control, the quantity and quality of our supplies were reduced, prices were forced up, our power to pay by means of our exports was crippled, and foreign debt was greatly increased. It has been demonstrated that even with the unlimited credit of the nation behind it the state cannot supply the needs of the nation as they were supplied through commercial enterprise, and that the first step towards the re-establishment of the industries and commerce of the nation must be the elimination of state control over both our oversea trade and shipping.'"

Telegraph Lines Statistics.

The following table is taken from the Public Works Department reports for the year ended Mar. 31, 1918, and gives the latest figures available:

Canada.	Length of Lines in Miles.				No. of
	Aerial	Underground	Submarine	Total	Offices
Great North Western Telegraph Co.	10,064	7	[illegible]	[illegible]	[illegible]
Canadian Pacific Ry. Co.'s Telegraphs	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Dominion Government Telegraph Service	[illegible]		[illegible]	[illegible]	[illegible]
Grand Trunk Pacific Telegraph Co.	[illegible]	1	1	[illegible]	[illegible]

Welland Ship Canal Construction.

In connection with the vote of $3,500,000 for construction on the Welland Ship Canal, the Minister of Railways and Canals, said in the House of Commons, April 22:

"The new Welland Ship Canal was under construction at the time war was declared. Work was carried on for a time afterwards, then was closed down. There were four sections under construction: No. 1, for dredging the harbor, completing the concrete work, and regulating the weir; that contract was with the Dominion Dredging Co., when work was closed down. Then there were sections 2, 3 and 5 also under construction. These were the four largest sections of this canal. When the war ended and demobilization took place, we felt it was necessary to go on with some of the work to provide employment. A great many of the men who had been working on the canal had enlisted, and there were also in that district a great many men who were thrown out of work owing to the closing of munitions plants. We therefore decided to go on with the work that we had under construction. We had, of course, settled with the contractors; the contracts had been cancelled. When we decided to start work again, we thought that the cost of materials and labor was so high that it would be almost impossible for the contractors to tender at a fair and reasonable price. We therefore put the old contractors at work on these four sections, which would employ a large number of men, and we decided to let them proceed with the work on a cost plus basis. We agreed to pay them 5%. These contractors understood the work, had their organizations, and we thought they would be able to do the work in the most economical way. The work goes on only from month to month, because we stipulated in the contract that we can stop work on the cost plus basis at any time and call for tenders, so that we could take advantage of conditions when they become normal again. We also stipulated in the order in council that the contract would not extend beyond Dec. 31, 1919, so that there could be no misunderstanding with the contractors or with the public. In section 1 we estimate that the total amount that could be expended would be $500,000; sec. 2, $600,000; sec. 3, $700,000, and sec. 5, $500,000. Then for the purchase of plant, cement, bridges, steel rails, engineering, etc., $1,200,000. They do not get any percentage on the $1,200,000, but only on the other. So that, although we have $3,500,000 in the estimates, we will pay a percentage only on $2,300,000 at the very most, if they do that amount of work."

The Schooner Francis J. Elkin Co. Ltd., has been incorporated under the New Brunswick Companies Act, with authorized capital of $99,000, and office at St. John, N.B., to acquire and operate the schooner Francis J. Elkin, and to carry on the business of managing steamships and other vessels of all kinds. The incorporators are, F. P. Elkin, W. E. Golding, G. R. McKean, St. John, N.B.

Telegraph and Telephone Line Estimates for 1919-1920.

The Public Works Department's estimates, for the year ending Mar. 31, 1920, submitted to the House of Commons recently, contain the following items:—

NOVA SCOTIA.	
Pictou Island telephone cable	$ [illegible]
PRINCE EDWARD ISLAND.	
Half cost of reconstruction of telegraph lines jointly owned by the Anglo-American Telegraph Co. and Dominion Government	[illegible]
QUEBEC.	
Improvements to repair service	[illegible]
SASKATCHEWAN AND ALBERTA.	
Peace River line office and dwelling at Grande Prairie	[illegible]
Peace River line woods clearance Edmonton to Peace River	5,000.00
Repairs and improvements to office buildings	1,000.00
BRITISH COLUMBIA.	
Mainland telegraph and telephone lines, general repairs and improvement	10,000.00
Vancouver Island lines repairs and renewals	[illegible]
	$ [illegible]

The following items are chargeable to collection of revenue:

Prince Edward Island and mainland [illegible]	[illegible]
Land and cable telegraph, Lower St. Lawrence and Maritime Provinces, including working expenses of vessels required for cable [illegible]	[illegible]
Saskatchewan	[illegible]
Alberta	[illegible]
British Columbia mainland	[illegible]
British Columbia Vancouver Island [illegible]	[illegible]
Yukon System (Ashcroft-Dawson)	[illegible]
Telegraph and telephone [illegible]	[illegible]
	$ [illegible]

Among the Express Companies.

G. J. Veigel has been appointed agent, Canadian Ex. Co., Saskatoon, Sask., vice E. S. Mitchell.

A. C. Hoare, heretofore agent, Dominion Ex. Co., Quebec, Que., has been appointed agent at Montreal.

The Canadian Northern Ex. Co. has opened offices at Camden East, Ont., and Madison and Glidden, Sask.

F. Fennell, heretofore agent, Dominion Ex. Co., Truro, N.S., has been appointed agent at Halifax, N.S., vice K. Copeman, transferred.

K. Copeman, heretofore agent, Dominion Ex. Co., Halifax, N.S., has been appointed agent at Quebec, Que., vice A. C. Thorn, transferred.

The Board of Railway Commissioners passed order 28168, Mar. 18, extending the area within which the tolls of express companies shall include the collection and delivery of express freight in Montreal, defined by order 18281, Dec. 2, 1912, at the Tail Race, or Butler Ave. so as to include the British Munitions Co.'s plant for the period of the war only.

Canadian Ex. Co.'s freight handlers, checkers, drivers, messengers, etc., struck work Apr. 10. The matters in dispute between the company and its employes had been referred to a board of conciliation, and the company not seeing its way to accept the award, had referred the matter to the Railway Board of Adjustment No. 1, but the men decided to strike without waiting for the board's decision on the points submitted. They returned to work Apr. 21, having accepted the board's decision, which provided for an eight-hour basic day, effective May 1, with a wage increase of $25 a month retroactive to Feb. 1, and based on the rates paid on Jan. 1, 1918. It is also provided that overtime pro rata be paid for the first two hours above eight hours, and at the rate of time and a half above 10 hours. A mileage rate of 1¼c is provided for messengers travelling upwards of 6,000 miles a month, and payment will be made for Christmas and New Year holidays. John Pullen, president of the company, is reported to have stated that the decision is practically along the lines established by the U.S. Railroad Administration.

Trade and Supply Notes.

The matter which appears under this heading is compiled in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will compel us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Safety Car Heating and Lighting Co.—Col. Robt. Andrews, a former president of this company, died at East Orange, N J., April 7, aged 84. After being on the Pennsylvania State and union canals as an assistant engineer he commenced railway engineering in 1857 as principal engineer of surveys and construction on the Sunbury and Erie Ry. In 1959 he went with the South Pennsylvania Rd. as principal engineer of surveys until the outbreak of the Civil War, when he was made a major of the 2nd Regiment, Delaware Volunteers, and became colonel in [illegible]. At the close of the war he was made principal engineer of Saratoga & Hudson River Rd. 1863-1865, was subsequently superintendent of Toledo, Wabash & Western Rd. 1865-1875, chief engineer of same road 1873-1875, and general superintendent and consulting engineer of Wabash system 1875-1884. From 1884 to 1885 he was consulting engineer of Wabash, St. Louis and Pacific, and in 1885 was made general superintendent and engineer of Virginia Midland Ry. In 1889 he left railway service to take the position of vice president of the Safety Car Heating and Lighting Co. In Dec., 1901, he was elected president, and from May, 1907 to 1915, he was chairman of the board of directors.

Transportation Conventions in 1919

May 6-8. Air Brake Association, Chicago, Ill.

May 19.—International Railway Fuel Association, Chicago, Ill.

May 26-29.—Master Boiler Makers' Association, Chicago, Ill.

June 11.—Railway Accounting Officers' Association, New York.

June 17-20.—American Train Despatchers' Association, Chicago, Ill.

June 18-21.—Master Car Builders' Association, Atlantic City, N.J.

June 23-25. American Railway Master Mechanics' Association, Atlantic City, N.J.

September. Master Car and Locomotive Painters' Association of the United States and Canada, Chicago, Ill.

September. Traveling Engineers' Association, Chicago, Ill.

Sept. 16-18.—Roadmasters' and Maintenance of Way Association, Chicago, Ill.

October.—American Railway Electric Engineers' Association, Chicago, Ill.

Oct. 21-23. American Railway Bridge and Building Association, Cleveland, Ohio.

Oct. 21-23. Maintenance of Way and Master Painters' Association, St. Louis, Me.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Belleville Railway Men's Educational Club. Meets each Tuesday, 7.30 p.m. F. A. Pingston, Belleville, Ont.

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines) G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 305 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Railway War Board W. M. Neal, Montreal.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Eastern Canadian Passenger Association G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Engineering Institute of Canada F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 556 Church Street, Vancouver, B.C.

OTTAWA, NORTHERN & WESTERN RAILWAY COMPANY.

The Ottawa, Northern & Western Railway Company hereby gives notice that it will apply to the Parliament of Canada, now in session, for an Act empowering the company to construct a line of railway extending from the present terminus of its so-called Waltham Branch at Waltham, in the Province of Quebec, thence through the Townships of Waltham, Chichester and Sheen, thence across the Ottawa River to a junction with the Canadian Pacific Railway at or near Chalk River, in the Province of Ontario, and to increase its bonding powers.

Dated at Montreal, this 7th day of April, 1919.

H. C. OSWALD,
Secretary.
Pringle, Thompson, Burgess & Cote,
Ottawa agents.

CANADIAN PACIFIC RAILWAY COMPANY.

NOTICE is hereby given that the Canadian Pacific Railway Company will apply to the Parliament of Canada, now in Session, for an Act authorizing it to establish, maintain and operate services by air-craft between such points and places within or without the Dominion of Canada as may be found desirable, and to exercise and enjoy such powers as may be necessary for such purposes.

Dated at Montreal, the 16th day of April, A.D. 1919.

E. ALEXANDER,
Secretary.
Pringle, Thompson, Burgess & Cote,
Parliamentary agents.

Canadian Railway and Marine World

June, 1919

Shops, Yard, Etc., Canadian National Railways, at Leaside, near Toronto.

Rapid progress is being made towards the completion of the Leaside shops, yard, etc., which the Canadian National Rys. are building for the handling of their Toronto traffic. In 1911, Canadian Northern Ry. interests acquired a large tract of land adjoining the C.P.R. Leaside Jct. station, the intention being to build large terminals there. The intention then was to make Leaside not only a railway terminal, but also to build there a railway town, and for that reason, the property acquired was considerably in excess of that needed for terminal purposes. The Town of Leaside was incorporated by the Ontario Legislature in May, 1913, and about the same time, much of the land was subdivided for building purposes, and a considerable number of dwellings were put up, but no railway development took place.

The terminal site is immediately to the east and north of Leaside Jct. station, where the C.P.R. Montreal-Toronto line divides, one line running to Toronto union station, and the other to the North Toronto joint station in which the C.P.R. and the Canadian National Rys. have equal rights. On the latter line, the Canadian Northern Ontario Ry. acquired running rights, and also the use of the joint North Toronto station. The Canadian Northern had no immediate connections to this line, but in 1913, authority was granted for to build a short connecting line from Duncan, on the Toronto-Sudbury line, to the C.P.R. line, some 1,200 yards east of the new terminal, and this line was built shortly afterwards. Authority was also granted for a connecting line from the Toronto-Ottawa line, to connect with the C.P.R. near the same point as the Duncan cut-off, but this line has not been built. The Canadian National Rys. have not commenced using the North Toronto station, but are still using the Toronto union station. Should it be decided to use North Toronto station for Ottawa and Montreal trains, it will be necessary to build the second cut-off line mentioned above.

The present Canadian National Rys. terminals adjoining their Rosedale station, in the Don Valley, 3.8 miles from Toronto union station, and some 3 miles south of where the Toronto-Sudbury and Toronto-Ottawa lines diverge. This site is very lowlying, being only slightly above river level, and each spring considerable trouble has been experienced by floods tying up traffic. In addition, the site, being practically surrounded by the high slopes of the Don Valley, is incapable of any considerable expansion, and the economical handling of motive power and car equipment has been impossible due to the congestion. The handling of traffic has been further made more difficult by the Don River, which runs through the center of this terminal. In consequence, it became necessary to look out for a site with better natural advantages, and which would also be capable of expansion as traffic required. For these reasons Leaside was selected, a big determining factor being the new joint station at North Toronto, into which it is expected all Canadian National passenger trains will run ultimately and the proximity of Leaside to it, 2.3 miles.

The Leaside site required very little grading, only 150,000 yds. in all. A start was made in the autumn of 1917, but it was not until May, 1918, that rapid progress was made, and the grading was completed the same year by Franceschini & Co. A general plan of the terminal layout is given herewith. Adjoining the C.P.R. double track line on the south, there is a C.P.R. freight yard. The whole area to the north required a certain amount of grading, a slight rise at the west end being despoiled to fill in the other end. This, and a side cutting for the west end approach track, were all the grading required. The soil is of a sandy nature, easily worked, but has a clay sub-base, which holds the water, and necessitated considerable draining to keep the site dry.

To the immediate north of the C.P.R. freight yard, provision is made for a 15-track freight classification yard, with capacity for 617 cars. With the exception of the west ladder and part of the second track, none of these tracks are being laid for the present, but the site is completely graded.

At the west end of the main part of the yard, is the locomotive house, the first unit of which, for 10 locomotives, is complete. It is solid brick construction, on concrete foundations, with stalls 14 ft. wide in front, 30 ft. wide at the rear, and 100 ft. long, and with tracks arranged for dropping locomotive and tender wheels. It will be steam heated, from a steam plant of 4 stationary Babcock and Wilcox boilers in an adjoining building. This boiler room is of the same type of construction as the locomotive house. A small adjoining building accommodates the locomotive foreman's office, and petty stores. There is also a small 12-bunk rest house adjoining, which is being used as the local office during construction. This is a one-story frame structure, 24 x 32 ft. on post foundations, and will be equipped with washroom, showerbaths, lavatories, and sitting and bedrooms.

All the leads to the turntable are not installed, but it is the present intention to put in five, two ingoing, two outgoing, and a coaling track between. Along these five tracks are the coal, water and ash handling facilities. The coal and water plants are complete, and the ash plant soon will be. The turntable, which is installed, is of steel, with an 80-ft. span, operated by an air motor. The coal handling plant is Fairbanks-Morse type, with a capacity for 200 tons, and is located adjoining the south outgoing track. The water tank is of wood on concrete foundations of a 60,000 gal. capacity, supplying a standpipe between the two outgoing tracks. The ash plant will be mechanically operated, and is located on the north incoming track.

The locomotive house is capable of extension to a 15-stall capacity, but pending this extension, it is the intention to put in 8 spurs from the east ladder track, for car repair work, and for storing snow ploughs, ditchers, etc.

To the north of the locomotive house are the locomotive shop, blacksmith shop, passenger car shop, and auxiliary buildings. The locomotive shop is completed, and is now having the machinery installed. It is a brick building, 151 x 300 ft., on concrete foundations, with a gallery for the lighter machinery along one side, and contains 12 pits, one of which will be equipped with a 200 ton electric pit jack for lifting a locomotive free from the drivers. The machinery will be laid out in groups, for the efficient handling of the repair work. The shop tracks are long enough to take a complete locomotive and tender.

In front of the locomotive shop, and running its full length, is a transfer table, 372 ft. long, with an 80-ft. span, electrically driven. The leads to this transfer table are at either end of the table pit, two to the south, and one to the north, both of which are being completed.

The passenger car shop also adjoins the transfer table, and is also served by it. It is also a brick structure on concrete foundations, and is 140 x 283 ft. with 12 tracks. It is complete, except for the machinery installation.

Back of the locomotive shop is the blacksmith shop, also a brick structure on concrete foundations, and is 70 x 100 ft. It is nearing completion, but none of the machinery is installed.

To the east of the passenger car shop, is the passenger car yard, of 15 tracks, with a capacity for 140 eighty-ft. cars. Only 4 of these tracks are being completed at present. There is a small store in connection with these yards, at the rear of the passenger car shop, and to the south of the yard, a small wheel shop and drop pit for passenger car work. These buildings are completed. The yard also contains a 2000-ton ice house, of frame construction, 176 x 30 ft., with ice doors along the side.

The stores and office building, between the locomotive house and locomotive shop, is nearing completion. It is of brick on concrete foundations, and is 60 x 180 ft. with a large storage platform at the east end. The stores part is two stories high, and the office section, three stories high. This office will accommodate the shop and stores officials.

At the east end of the yard are the operating offices, a two-story frame structure, 36 x 60 ft., on concrete foundations. The basement will contain a boiler room, coal room, vault, locker room and lavatories for train crews. On the first floor will be the yardmaster's office, agent's office, local office, supervisor's office, lunch room, officers' and men's lavatories, and on the upper floor will be offices for the superintendent, assistant superintendent, chief and other train despatchers, general office, rest room, and women's lavatories.

To the north of the present projected

buildings, provision is made for a freight car repair shop, 100 x 200 ft., and a planing mill, 100 x 100 ft., both with the necessary trackage as shown on the plan.

As mentioned above, only a small portion of the projected tracks have been laid. The accompanying plan shows in varying lines the tracks laid, those which it is the intention to lay as soon as possible and those which it is proposed to lay to complete the yard. A further development is also under consideration, but what additional tracks will be laid will doubtless depend upon whether the G.T.R. is taken over by the Dominion Government and made part of the Canadian National Rys. system, in which case the G.T.R. yards at York and Mimico would become available for the consolidated lines.

The terminals have been planned under the direction of A. F. Stewart, Chief Engineer, Eastern Lines. The plans for the buildings were prepared by G. C. Briggs, Supervisor of Buildings, and were built by the C.N.R., directly under his supervision. The yard construction is under the supervision of R. A. Baldwin, Assistant Engineer, Eastern Lines; W. Huffman, being the Resident Engineer on the work.

It is expected that the whole operating staff of the Toronto Division, including the Superintendent, Assistant Superintendent, Chief Dispatcher, Supervisors of Track, Bridge and Building Supervisors, Trainmaster, Yardmaster and Storekeeper, will move into the Leaside offices, sometime after July 1. The mechanical staff that will be located at Leaside has not yet been decided on. To meet the requirements of the staff and workmen who will have to live in Toronto for want of convenient housing, a special train will be operated between North Toronto station and Leaside.

Birthdays of Transportation Men in June.

Many happy returns of the day to:

Jas. Anderson, Vice President, Sandwich, Windsor & Amherstburg Ry., Windsor, Ont., born at Ayr, Ont., June 20, 1851.

F. F. Backus, General Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Rochester, N.Y., June 4, 1860.

W. C. Bowles, General Freight Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, June 3, 1875.

J. H. Boyle, Superintendent, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at Waterloo, Que., June 26, 1869.

F. P. Brady, General Manager, Eastern Lines, Canadian National Rys., Montreal, born at Haverhill, N.H., June 22, 1853.

H. W. Brodie, General Passenger Agent, lines west of Revelstoke, C.P.R., Vancouver, B.C., born at Fredericton, N.B., June 8, 1874.

J. A. Clancey, Trainmaster, Districts 27 and 28, Detroit Division, Grand Trunk Western Lines Rd., Durand, Mich., born at Walkerton, Ont., June 8, 1884.

G. W. Coburn, Resident Engineer, C.P.R., Brandon, Man., born at Upper Melbourne, Que., June 24, 1877.

E. P. Coleman, General Manager, Dominion Power & Transmission Co., Ltd., Hamilton, Ont., born at Taunton, Mass., June 14, 1867.

W. S. Cookson, General Passenger Agent, G.T.R., Montreal, born at Port Jervis, N.Y., June 12, 1871.

E. L. Cousins, Manager and Chief Engineer, Toronto Harbor Commission, Toronto, born there, June 11, 1883.

A. Craig, City Passenger Agent, C.P.R. Hamilton, Ont., born there, June 5, 1884.

A. E. Doucet, Quebec, ex-District Engineer, National Transcontinental Ry., born at Montreal, June 9, 1860.

Knowlson Elliott, City Freight Agent, C.P.R., Calgary, Alta., born at Gorrie, Ont., June 26, 1884.

J. M. R. Fairbairn, Chief Engineer, C.P.R., Montreal, born at Peterborough, Ont., June 30, 1873.

W. E. Foster, Solicitor for Ontario, G.T.R., Montreal, born at Belleville, Ont., June 27, 1866.

A. A. Goodchild, General Storekeeper, Eastern Lines, C.P.R., Montreal, born at Peckham, London, Eng., June 3, 1866.

L. R. Hart, General Agent, Passenger Department, C.P.R., Boston, Mass., born at Fairport, N.Y., June 3, 1877.

J. A. Heaman, Assistant Chief Engineer, Grand Trunk Pacific Ry., Winnipeg, born at Memphis, Tenn., June 3, 1874.

L. K. Jones, I.S.O., Assistant Deputy Minister, Department of Railways and Canals, Ottawa, born at Port Hope, Ont., June 9, 1849.

M. W. Kirkwood, General Manager, Grand River Ry., and Lake Erie & Northern Ry., Galt, Ont., born at Cheltenham, Ont., June 8, 1877.

L. Lavoie, Assistant General Purchasing Agent, Canadian National Rys., Toronto, born at Rimouski, Que., June 22, 1879.

A. C. Lytle, Assistant Superintendent of Construction, Montreal Tramways Co., Montreal, born at Hemmingford, Que., June 6, 1854.

J. D. McAuley, Commercial Agent, Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Ltd., Prince Rupert, B.C., born at Plantagenet, Ont., June 11, 1884.

R. S. McCormick, Chief Engineer and General Superintendent, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

S. J. McLean, Dominion Railway Commissioner, Ottawa, born at Quebec, June 14, 1871.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Chatham, Ont., June 7, 1861.

W. R. MacInnes, Vice President, Traffic, C.P.R., Montreal, born at Hamilton, Ont., June 7, 1867.

J. R. C. Macredie, Engineer, Saskatchewan District, C.P.R., Moose Jaw, born at St. John, N.B., June 13, 1880.

James Manson, Assistant to Vice President, C.P.R., Montreal, born at Thurso, Scotland, June 8, 1863.

J. D. Morton, General Auditor, Canadian National Rys., Toronto, born at London, Ont., June 15, 1857.

L. Mulkern, Division Freight Agent, C.P.R., St. John, N.B., born at London, Ont., June 18, 1871.

R. P. Ormsby, Secretary, Canadian National Rys., Toronto, born at Arklow, Ireland, June 26, 1869.

J. E. Pinault, General Superintendent Canada & Gulf Terminal Ry., Matane, Que., born at Rimouski, Que., June 24, 1884.

F. R. Porter, Assistant General Freight Agent, Grand Trunk Pacific Ry., Winnipeg, born at Stratford, Ont., June 13, 1875.

F. Price, Superintendent of Car Service, G.T.R., Montreal, born there, June 11, 1864.

Allan Purvis, General Superintendent, Ontario District, C.P.R., Toronto, born at Batavia, Java, June 29, 1878.

L. J. Reycraft, Solicitor, Manitoba and Saskatchewan Districts, C.P.R., Winnipeg, born in Orford Tp., Kent County, Ont., June 20, 1868.

W. F. Sawyer, Assistant Superintendent, Division 5, Quebec District, Canadian National Rys., Edmundston, N.B., born at Drummondville, Que., June 13, 1883.

J. R. Shaw, General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Hong Kong, China, born at Montreal, June 28, 1871.

J. L. Simpson, agent, C.P.R., Port McNicoll, Ont., born at Mount Forest, Ont., June 9, 1866.

H. H. Smith, Car Accountant, Canadian National Rys., Toronto, born at Quebec, Que., June 14, 1872.

N.Van Wyck, Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., June 29, 1883.

V. G. R. Vickers, ex-Manager, Foreign Department, and Superintendent, Atlantic Division, Dominion Express Co., now Vice President, The Holden Co., Ltd., Montreal, born at Toronto, June 1, 1866.

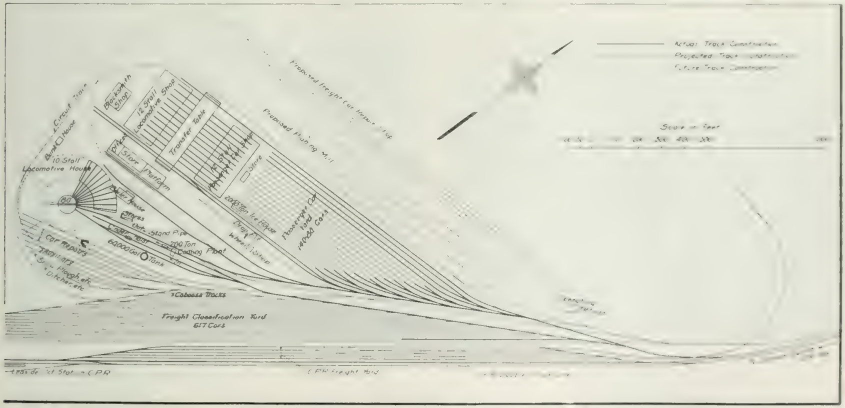
A. E. Warren, General Manager, Western Lines, Canadian National Rys., Winnipeg, born at Taunton, Eng., June 9, 1874.

Walter White, Trainmaster, G.T.R., Palmerston, Ont., born at Toronto, June 4, 1866.

The Victoria and Island Development Association is raising a special fund of $7,000 for publicity purposes to direct tourist travel to Vancouver Island.

Amended Regulations for Payment of Transportation Charges.

The Canadian Railway War Board's circular 97, issued Feb. 3, also supplement 1 thereto, both of which were published in Canadian Railway and Marine World for March, have been cancelled by circular 107, issued by the board May 7. We are advised that the change has been made in deference to numerous requests from representative sections of the shipping public in various parts of the country. While the original instructions were formulated after lengthy investigation and consideration, and obviously would have had the effect of removing certain objectionable features of railway transportation credit arrangements, which have existed in the past, by placing of railways and shippers on the same level, many shippers objected strongly to giving bonds as a matter of principle, their contention being that in many instance they are stronger financially than the surety company from which they would require to get a bond.



Leaside Terminals, Canadian National Railways, East End.

The new rules were worked out after several conferences between representatives of the board and the shippers, and it is believed they will prove satisfactory to all concerned. The new regulations are as follows:

Effective June 1, the collection of transportation charges (including demurrage, storage, and all charges incidental to transportation) by railways operating in Canada, for services rendered, shall be on a cash basis, and, effective as of that date, credit accommodations then in existence which may be in conflict with the following regulations shall be cancelled:

1. Tickets shall be sold only for cash in advance of service. Baggage charges are subject to the same rule as tickets, except c.o.d. baggage and storage charges, which must be paid in cash before delivery.

2. In cases where the enforcement of this rule with respect to freight will retard prompt movement or delivery of the freight or the prompt release of equipment or station facilities, carriers, upon receipt of the attached form of application from financially responsible firms for credit, may extend credit to such firms under the arrangement described hereunder:

(a) All bills or accounts rendered by the carrier to consignor or consignee, as the case may be, from the 1st to the 7th of each month (both dates inclusive), shall be paid on or before the 14th of that month.

(b) All bills or accounts rendered by the carrier to consignor or consignee, as the case may be, from the 8th to the 14th, of each month (both dates inclusive), shall be paid on or before the 21st of that month.

(c) All bills or accounts rendered by the carrier to consignor or consignee, as the case may be, from the 15th to the 21st of each month (both dates inclusive), shall be paid on or before the last day of that month.

(d) All bills or accounts rendered by the carrier to consignor or consignee, as the case may be, from the 22nd to the last day of each month (both dates inclusive), shall be paid on or before the 7th of the month following.

In all cases bills are payable within the prescribed period at the designated office of the carrier. Unless otherwise arranged between the interested parties the designated office shall be that of the carrier's agent from whom notice of charges due is received.

3. Credit arrangements shall be made with the treasurer or other duly authorized officer of the carrier, which officer shall state the amount of credit to be allowed and shall designate the nature of surety required, if any.

Upon completion of arrangement for credit as above, a carrier may accept and forward prepaid shipments or may deliver collect consignments in advance of payment of all charges thereon to the amount covered by the credit arrangement.

Failure to pay such charges within the time prescribed shall be considered sufficient cause for cancellation of credit.

4. When application for weekly credit has not been filed and the literal application of the terms of this order would involve undue delay to traffic or the congestion of facilities on account of holding shipments, either collect or prepaid, until cash is actually in the hands of railways, the carrier's agent may be authorized to grant 48 hours credit to responsible parties.

5. Cheques within the instructions issued by the individual railways to their agents will be considered as payment in cash. At points where there are no banking facilities or where firms have no accounting office, arrangements may be made, subject to the carrier's treasurer or other duly authorized officer, whereby representative of shipper or consignee may settle by giving the carrier's agent a sight draft on shipper or consignee. Where acceptance of draft as cash as herein provided is arranged, shipper or consignee, as the case may be, shall absorb the amount of exchange on such draft.

6. Transportation charges on freight placed in storage, either on property of carrier or in private warehouses, on order of shipper or consignee, after arrival at ultimate destination are due and payable when such freight is placed in storage. If charges are not collected from warehouse company, they should be collected from the consignee under the terms of this circular or immediately succeeding the time of the placement in storage, and not after final delivery to consignee.

7. In case of any question as to accuracy of charges, bills must be paid as rendered and claims presented for alleged errors. This will not prevent adjustments by agents of obvious error. An obvious error is one on which both railway agent and shipper or consignee are agreed, and which may be corrected without further investigation. In circumstances where the carrier's representa-

[illegible] to recognize the inaccuracy [illegible] by shipper or consignee prior [illegible] the ruling embodied in the [illegible] of this paragraph shall [illegible]. There is no objection to the [illegible] or consignee checking the bills and paying charges on the corrected basis, providing the practice is not abused and they proceed in good faith with a revision of the bill both for under-charges and over-charges. Consignor or consignee should make the change in red ink, and the tariff authority for the change should be indicated upon the bill.

8. Freight consigned "to order" or "to order notify," shall be delivered only upon surrender to the agent of the carrier of the original bills of lading for such freight and the payment of the freight charges thereon, as hereunder provided. Provided, however, if such bill of lading be lost or delayed, the freight may be delivered in advance of surrender of the bill of lading upon receipt by the agent of a certified cheque for an amount equal to 110% of the invoice, or upon receipt of surety bond, either individual or corporate, acceptable to the treasurer or other properly designated officer of the carrier.

9. In the event of cancellation of credit by one carrier for failure to pay transportation charges within the prescribed credit period, the carrier cancelling credit shall immediately notify other railways concerned, who shall make similar cancellation. Similar notice shall be given as between carriers in the event of the cancelled credit being re-established.

10. The foregoing regulations shall apply to shipments delivered to and received from consignors and consignees by cartage companies, as well as to shipments handled direct between consignor and consignee and carrier.

11. Until otherwise ordered, these regulations shall not apply to transportation service rendered: Departments of the Dominion Government; nations allied with Canada in war; the various provincial governments of Canada; counties and municipal governments; transportation and authorized cartage companies.

12. Advice of the foregoing regulations shall be given promptly to all to whom credit accommodations are now given, to the end that the regulations may be put into effect at the time specified with as little inconvenience as possible.

Application for Credit.

Railway

To [illegible] of Railway ....

Application is hereby made for credit accommodation in settlement of freight charges at......

Full name of applicant

Location of principal office

Reference: Bank with which business is transacted

Amount desired

It is understood and agreed that all bills will be paid in accordance with the following regulations:

(1) All bills or accounts rendered by the carrier to consignor or consignee as the case may be, from the 1st to the 7th of each month (both dates inclusive) shall be paid on or before the [illegible] of that month.

(2) All bills or accounts rendered by the carrier to consignor or consignee, as the case may be, from the 8th to the 14th of each month (both dates inclusive) shall be paid on or before the [illegible] of that month.

(3) All bills or accounts rendered by the carrier to consignor or consignee as the case may be, from the 15th to the 21st of each month (both dates inclusive) shall be paid on or before the last day of that month.

(4) All bills or accounts rendered by the carrier to consignor or consignee as the case may be, from the 22nd to the last day of each month (both dates inclusive) shall be paid on or before the [illegible] of the following month.

In all cases bills are payable within the prescribed period at the designated office of the carrier. Unless otherwise arranged between the interested parties the designated office shall be that of the carrier's agent from whom notice of charges due is received.

Failure to pay bills as prescribed by the foregoing shall be considered sufficient cause for cancellation of credit.

Applicant

To the .... (vice president, treasurer or other designated officer).

To the best of my knowledge and belief credit as applied for by .... as above may be extended without risk or loss, and I recommend that it be granted.

The average amount of freight bills for credit period is ....

.... Agent.

Canadian Government Railways Operating Results.

The report of the Railways Department, issued recently, contains information as to the operation of Dominion owned railways for the year ended Mar. 31, 1918. The lines then operated as the Canadian Government Railways were as follows:

	Miles.
Prince Edward Island Ry.	276.23
Intercolonial Ry.	1,521.44
Vale Ry (leased from Acadia Coal Co.)	5.95
New Brunswick and P.E.I. Ry.	36.05
International Ry. of New Brunswick	111.30
St. John and Quebec Ry.	119.87
National Transcontinental Ry.	1,811.28
Lake Superior branch, leased from Grand Trunk Pacific Ry	191.75
Total mileage operated	4,073.87

The following tables show the earnings and expenses and the principal traffic statistics of the several lines:

EARNINGS

Prince Edward Island Ry.	$ 656,227.22
Intercolonial Ry. (including N.B. and P.E.I. Ry.)	18,758,186.41
International Ry. of N.B.	140,900.44
St. John and Quebec Ry.	64,438.29
National Transcontinental Ry.	7,621,204.51
Total for year ended Mar. 31, 1918	$27,240,956.87
Earnings for year ended Mar. 31, 1917	$23,539,758.61

WORKING EXPENSES

Prince Edward Island Ry.	$ 1,123,291.12
Intercolonial Ry. (including N.B. and P.E.I. Ry.)	21,090,298.09
International Ry. of N.B.	385,508.92
St. John and Quebec Ry.	140,972.43
National Transcontinental Ry.	10,660,389.89
Total	$33,400,460.45
Working expenses for year ended Mar. 31, 1917	$21,029,898.48
Deficit for year ended Mar. 31, 1918	$6,159,503.58
Deficit for year ended Mar. 31, 1917	$ 490,139.87

TRAFFIC STATISTICS.

	P.E.I.	Intercolonial	International	St. John and Quebec	Nat. Transcontinental
Loco mileage	482,133.	11,299,693.	167,848	86,018	4,203,467
Train mileage	334,165	8,477,349	154,218	75,491	3,505,576
Car mileage	2,212,178	132,310,931	1,152,061	468,691	88,041,501
Ratio of expenses to gross earnings %	171.17	112.43	273.60	218.77	139.88
Earnings per mile of lines	$0.99	$1.64	$0.84	$0.75	$1.81
Earnings per train mile	$1.43	$2.18	$0.91	$0.85	$2.17
Expenses per train mile	c.269.95	c.246.69	c.249.98	c.186.74	c.304.10
Expenses per mile of line	$3,265.69	$13,376.04	$3,463.69	$1,176.04	$5,322.42
Passengers carried	417,570	4,578,783	35,034	48,785	943,663
Total mileage	10,698,269	287,984,379	1,483,746	1,249,885	52,220,476
Total freight, tons	244,521	7,837,310	156,013	66,930	3,900,920
Freight mileage	10,292,005	2,070,196,937	11,036,566	2,508,458	1,381,246,552

The following interest charges or rentals were charged in the operating accounts of the railways mentioned:—

Intercolonial Ry.:—	
Interest on purchase price New Brunswick and P.E.I. Ry.	$ 2,692.60
Rental Vale Ry.	1,200.00
International Ry. of N.B. interest	90,000.00
National Transcontinental Ry.:—	
Rental Lake Superior branch	600,000.00
	$693,662.60

In addition to the deficiency on operating account there was charged to income account $16,769.13 paid to the St. John and Quebec Ry. under the operating agreement with the New Brunswick Government for the April-Sept. half year, and there is $18,497.81 due the company for the Sept.-March half year, thus making a total deficiency of $111,801.08 on this line for the fiscal year.

Rails Lifted From Canadian Northern and Grand Trunk Pacific Railways for War Work.

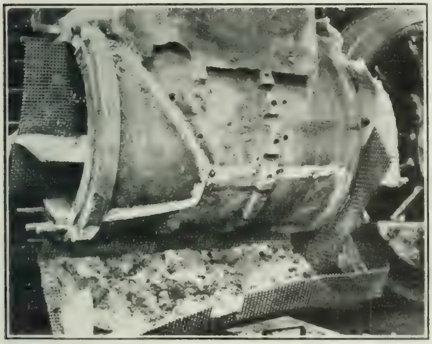
The Dominion Railways Department's report for the year ended Mar. 31, 1918, contains a report from A. Ferguson, engineer in charge of the work of lifting rails on the Grand Trunk Pacific Ry. and the Canadian Northern Ry. for use in France and Belgium. It states that the rails on the G.T.P.R. between Imrie and Leaman Jct., 13.6 miles; between Obed and Pochahontas, 42.25 miles, and between Geikie and Resplendent, 34.8 miles, a total of 90.65 miles, were lifted, and the rails and angle bars sent to Three Rivers, Que., for shipment overseas. The rails on the C.N.R. between Leaman Jct. and Obed, 79.9 miles, and between Snaring Jct. and Geikie, 22.05 miles, a total of 101.5 miles, were lifted and laid on the G.T.P.R. between Leaman Jct. and Obed, and between Snaring Jct. and Geikie, thus making one continuous line, used jointly by the two railways. The G.T.P.R. track between Pocahontas and Snaring Jct. was lifted and relaid partly with 60-lb. and partly with 80-lb. C.N.R. rails, in order to preserve rail connection with the coal miners at Pocahontas. This piece of line is being operated as a spur, and is as yet considered merely temporary. A rearrangement of the main lines may be found necessary in the interests of economy. The first shipment of the released rails left Edmonton for Three Rivers, June 17, 1917, and the last Oct. 26, 1917. The total shipment amounted to 23,408 gross tons of rails, and 1,110 gross tons of angle bars.

Interswitching, Etc., at Owen Sound.—A press report states that W. F. Tye, consulting engineer, Montreal, has been making an investigation into the most feasible means of securing interswitching between the C.P.R. and the G.T.R. at Owen Sound, Ont., and the building of a union station there.

Railway Mechanical Methods and Devices.

Welding Broken Cylinder at Canadian National Railways Winnipeg Shops.

An interesting instance of the usefulness of the oxy-acetylene process in the locomotive shop, has been supplied by L. Wedge, General Foreman, Locomotive Shop, Canadian National Rys., Winnipeg. One of the locomotives had developed a crack, extending from about the center of the cylinder, in a nearly straight line, towards the rear, and bifurcating towards the front, as shown along the patched lines in the accompanying illustration. This crack had been welded several times, but apparently, from the double nature of the crack, the weld did not prove a success. In consequence, the V-shaped piece shown was entirely removed, and a pattern made of the same shape, from which a casting was made and fitted into the cylinder, the whole being welded by oxy-acetylene.



Cylinder Patched by Oxy-Acetylene Process.

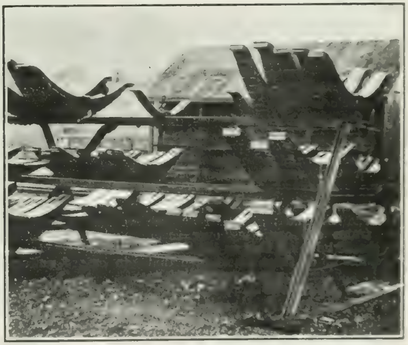
The mating edges of the new piece, and the single crack in the other end of the cylinder, were grooved in the approved manner. A charcoal fire was built under the cylinder, and the welding commenced on the rear end inside, continuing along towards the front, the welding edges meanwhile being maintained at a cherry red heat by the charcoal fire. On the completion of the inside welding, a charcoal fire was built inside on the wire netting framework shown, and the outside edges welded. The fire on the outside was rebuilt, and both fires maintained for about 12 hours, when the whole mass was allowed to cool off slowly by allowing the fire to extinguish, and the cylinder to cool down in the remaining ashes. After cooling for about 24 hours, the boring bar was applied, and the inside trued out.

National Tie and Timber Co. Ltd. has been incorporated under the Ontario Companies Act, with $20,000 authorized capital, and office at Sudbury, Ont., to carry on the business of lumbermen. G. J. Valin, F. Woods and A. J. Manley, Sudbury, Ont., are provisional directors.

Spring Storage Rack at C.P.R. Shops, Nelson, B.C.

A simple steel rack of novel design is used at the C.P.R. shops, Nelson, B.C., for storing locomotive and car springs, a wide assortment of which it is necessary to always have on hand at such divisional points. The construction and use are exemplified in the accompanying illustration.

The end frames are A-shaped, 4½ ft. high, of 2 in. angles, resting on ties buried in the ground. At intermediate points, there are 2 cross bars of the same section. Between these end frames, are 5 shelves, 12 ft. long, made up of 2 in. angles, the legs of which are inwards and upwards, supporting between them a wooden plank, 6 in. wide. These shelves are braced at the ends and midway in the manner shown. The lower and middle tiers have each two shelves, while the top, has one only.



Steel Rack for Storing Springs.

The springs, being summetrical, balance at their bands on these narrow 6 in. platforms. This is one of the special features of the rack, as it is possible to place a truck in front of the rack, and by a slight effort, upset a spring into it, for conveyance to the locomotive house or car rip tracks.

This rack was built by F. D. Warner, Locomotive Foreman, to whom we are indebted for the foregoing particulars.

A Railway Coal Freight Case—Judgment was given in the Ontario Court of Appeal May. 13, in Niblock vs. G.T.R. The original action was for $24,053.51 for coal sold, but the New York Central Rd. intervened with a claim for freight. On Mar. 20, Justice Falconbridge directed the payment into court of $19,283.17 with interest, less $60 cost of an interpleader action, the plaintiff to notify the New York Central Rd. before applying for payment out. After hearing arguments, the court on May 13, allowed the appeal and gave judgment for the plaintiff, but gave leave to the G.T.R. to apply for a new trial in respect of the claim for freight.

Reclaiming High Speed Steel.

All the tool steel over the entire Atchison, Topeka and Sante Fe Railroad is reclaimed, all such steel being returned to the Topeka shop for general inspection, the portion considered serviceable being held in reserve to be made up into small tools.

The practice with regard to short lengths of high speed steel is to make tips for lathe and planer tools, although a certain part can be used with patented tool holders. The tools on which the high speed steel tips are applied, are of ordinary tire steel. The tips are faced with Norway iron, and welded to the recessed tool ends by the oxy-acetylene process. These tools are said to have proved very satisfactory in service, and made possible the continuous operation of many of the tools which would have had to close down for want of the tool steel which was difficult to secure under war conditions.

These tipped tools are made not only in the plain forms, but also for form cutters, such as those used in wheel lathes, formed to give the finished contour of the wheel.

G.T.R. Bridge Assessment—The G.T.R. international bridge across the Niagara River at Bridgeburg, Ont., had heretofore been assessed in that municipality at $300,000. The assessor is reported to have increased the assessment for this year to $1,250,000, and it is reported that notice of appeal has been served upon the town clerk, by the G.T.R. on behalf of the International Bridge Co.

Steel Rails for Russia.—A press report of May 7, stated that [illegible] tons of steel rails, which had been stored at Vancouver, B.C., for the past two years, were being loaded on a steamship for Vladivostock, Siberia, their original destination. This is part of the large amount of railway material placed in America by the Imperial Russian Government and held up in transit at the time of the revolution pending an understanding

The Best Methods of Raising Railway Track.

At the Roadmasters and Maintenance of Way Association's last annual convention, Geo. Beckingham, Superintendent of Track, G.T.R., Montreal, presented the committee's report on the best method of raising track, which, after considerable discussion and some amendments was adopted was follows:

BALLAST GANG
Above covers only placing of ballast under track which has already been raised, and Tie renewals have been made

Tracks in ballast pit should be put in good condition and maintained in such while trains are operating over them. Care should be taken that as little curve as possible be on these tracks, and that there be sufficient track to operate pit to the best advantage and its full capacity.

All equipment such as steam shovel, lidgerwood, ploughs, ballast levellers, cars, locomotives, etc., should be in first class condition.

Before commencing to haul ballast, supervisors, trainmasters and all concerned should get together, with a view to making plans and having them thoroughly understood in order to get the best results as to the manner in which the ballast should be hauled and unloaded. At the end of each day's work a telegraphic report should be forwarded to all concerned, stating the number of cars loaded, delays, etc.

Supervisor should have it thoroughly understood as to the manner in which ballast is to be unloaded, that is, so many yards per mile, taking into consideration the height track is to be lifted.

Care should be taken in securing competent foremen to do the lifting and furnishing sufficient men for the work. The number of men is largely governed by existing conditions; that is, amount of track to be lifted, location, traffic, etc. Supervisor should see to it that good and sufficient tools (more particularly track jacks, as there should be at least two spare jacks), and good boarding cars well equipped, be furnished the men.

Before distributing ballast, all drains, both surface and tile, should be properly made or laid.

Slow orders properly designated by day and night signals should be put on as soon as work actually commences, and at night where necessary.

All tie renewing should be done before ballast is unloaded. Track should be lifted against current of traffic 3 in. or 4 in., or sufficient to facilitate the removing of ties. Track should receive a general good surface and remaining old ballast should be levelled evenly between the ties and used to build shoulder.

Shoulder stakes should be set in order to ensure uniformity in subgrade and shoulder. Track should be put in good line in order that it be moved as little as possible after being lifted with new ballast. After ballast has been unloaded, stake levels should be set to lift track "to."

In lifting track over new ballast 4 to 6 jacks should be used depending on the number of men to the gang, but no less than 4 jacks should be used. Both rails should be lifted simultaneously and jacks should be placed two ties ahead of the ones that are to be tamped. The rear jack should not be lowered until track where the two forward jacks are, has been raised level.

The raising of track should be done by sighting one rail and raising the opposite rail to a level. The same applied to elevation on curves. The elevation should be put in by placing the required size of block on the low side underneath.

Men should be assigned specially to the handling of jacks, also jack handles or levers. This, of course, applies to where there is a large gang of men, but the same can be followed with a small gang of, say, 30 men. Assigned men should tamp joints and centers, and a track jack should be used ahead of tamping to lift any low spots before dressing.

Before tamping the ties it is very necessary that all ties fit close to the rail, are spaced, and spikes properly driven.

Gravel and cinder ballast where track is being lifted 3 in. or more should be tamped with shovels and all joints tamped with a tamping bar, one foot inside and out. In stone ballast, the ties should be tamped with a tamping bar, tamping pick, or some approved mechanical device. The center of the tie for a space of 18 or 20 in. should be tamped lightly.

Gravel and cinder ballast should be dressed to slightly below top of tie as shown on appended print. Stone ballast should be dressed to 3 in. below top of tie and your committee is of the opinion when first placing stone ballast in track, there should not be less than 10 in. underneath the tie. The track should receive two lifts, one of 6 and one of 4 in. Track should be lined to center stakes and levelled before dressing.

Where there is a surplus of ballast after dressing, it can be moved by loading it on to push or flat cars, depending on the distance it is to be hauled.

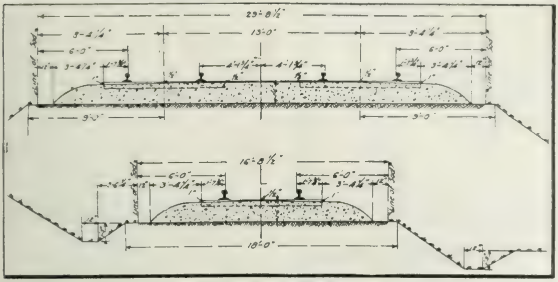
BALLAST GANG
Above covers raising Track, renewing Ties, and placing gravel ballast under Track.

Recommended Organization of Gangs. After the committee's report had been adopted, as above, Mr. Beckingham submitted the following recommendations for the organization of track raising gangs:—



Proposed Standard Ballast Sections.

Gang of 65 men raising track on high gravel ballast where ties are being renewed: 1 general foreman; 1 assistant foreman, raising track; 1 assistant foreman, supervising renewal of ties; 1 assistant foreman, tamping ties; 1 material clerk and timekeeper; 1 water man; 1 tool man; 2 men pulling spikes; 1 man collecting old spikes and placing spikes on new ties; 1 leverman; 2 men making jack holes; 1 or 2 flagmen; 4 jack men; 2 jack levermen; 1 man assisting engineer setting center stakes; 4 men tamping joints and centers; 2 men spacing ties; 6 men renewing ties; 6 men spiking; 2 men adzing; 28 men tamping ties.

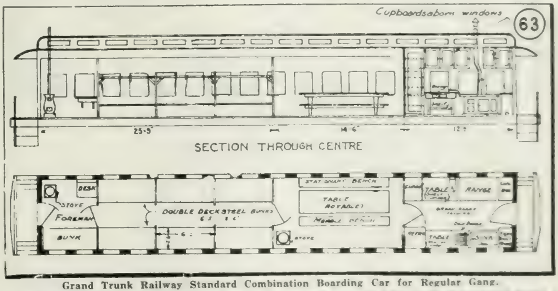
Flagmen are not always required. Track should be lined at conclusion of each day's work. Dressing of track should be done several days after being lifted.

Gang of 65 men raising track on old gravel ballast, where ties are being renewed, building shoulder, etc: 1 general foreman; 1 assistant foreman, raising track; 1 assistant foreman, supervising tie renewals; 1 assistant foreman, tamping ties; 1 material clerk and timekeeper; 1 tool man; 1 flag man; 1 water man; 1 level man; 4 men pulling spikes; 1 man collecting old spikes and placing on new ties; 6 men renewing ties; 6 men spiking; 6 jack men; 2 men spacing ties; 2 men adzing; 4 men tamping joints and centers with jacks; 29 men tamping and levelling old ballast between ties and shoulder.

Old ties to be put in piles each day. Track to be lined at conclusion of each day's work.

Gang of 80 men raising track on high gravel ballast after track has been lifted on old ballast and tie renewals made: 1 general foreman; 1 assistant foreman, raising track, 1 assistant foreman supervising, tamping of ties; 1 assistant foreman, lining; 1 assistant foreman, dressing; 1 material clerk and timekeeper; 1 water man; 1 tool man; 1 level man; 6 jack men; 2 men spacing ties and driving spikes to rail; 4 men tamping joints and centers with jacks; 4 men tamping joints with tamping bars; 30 men tamping ties; 10 men lining and lifting low spots; 20 men dressing.

Rough lining to be done at the end of each day's work, center stakes to be placed after track has been lifted. Dressing only to be done several days after lifting. The foreman and men doing the lining also to lift and tamp any low spots. See additional plans on pg. 296.



Grand Trunk Railway Standard Combination Boarding Car for Regular Gang.

Equipment for combination boarding car for 12 men—2 galvanized iron pails, 1 large tea kettle, 1 small tea kettle, 2 2-gal. graniteware saucepans, 2 1-gal. graniteware saucepans, 2 2-gal. iron saucepans, 2 roasting pans, 1 1-qt. graniteware sauce pan, 1 large dishpan, 1 large pastry mixing pan, 2 steel frying pans, 1 tea pot, 1 coffee pot, 1 doz. pie plates, 1¼ doz. graniteware plates, 1¼ doz. graniteware cups, 1¼ doz. graniteware soup bowls, 2 doz. graniteware saucers, 2 sets salt and pepper shakers, 2 sugar bowls, 4 pudding dishes, 2 meat dishes, 1¼ doz. knives, 1¼ doz. forks, 1 dipper, 1 2-qt. pitcher, 1 1-qt. pitcher, 1¼ doz. teaspoons, 1¼ doz. dessert spoons, 1 large butcher knife, 1 bread knife, 1 pastry board, 2 scrub brushes, 1 rolling pin, 2 large iron spoons, 1 can opener, 1 large fork, 2 doz. hand towels, 2 doz. dish towels, 3 wash basins, 1 6-hole range, 2 van stoves, 2 brooms, 28 pairs blankets, 14 mattresses to fit bunk 2 ft. 6 in. x 6 ft. 5 in., 14 pillows, 7 Tiger boltless double deck steel bunks.

Grand Trunk Railway Standard Dining Car for Track Laborers.

Equipment for dining car (25 men)—2½ doz. graniteware plates, 2½ doz. graniteware cups, 2½ doz. graniteware soup bowls, 4 doz. graniteware saucers, 2½ doz. knives, 2½ doz. forks, 2½ doz. teaspoons, 2½ doz. dessertspoons, ¾ doz. tablespoons, 2 sets salt and pepper shakers, 2 sugar bowls, 2 van stoves. When fitted up for winter use, cars to be lined with felt paper and ¾ in. sheeting.

Ties for United States Railways.—The U.S. Railroad Administration's purchasing department is ordering from Pacific coast tie lumbermen, 2,000,000 railway ties, aggregating 75,000,000 ft. b.m. Of these 500,000 ft. will be ordered from Oregon mills, while the remainder will be bought in the State of Washington. The ties will be no. 1 common lumber, running about 40 ft. to the tie. The purchase price is reported to be $20 to $21 per 1000 ft. b.m. The specifications require heartwood. The ties are to be used o nthe New York Central, Baltimore & Ohio, Pennsylvania and other eastern railways.

The Coquitlam Terminal Co. called a meeting of its bond holders to be held in London, Eng., May 28, to appoint the Colonial Trust Co. of Victoria, B.C., as trustee of its bonds, in the place of the British American Trust Co.

Alberta Provincially Aided Railways.

The annual debate in the Alberta Legislature on the provincial railway policy, was brought to a conclusion Apr. 17, when a motion reciting alarming conditions of the systems under provincial guarantee and expressing regret at the government's inactivity regarding the situation was defeated by 29 to 17, and an amendment moved by the Premier commending the government for taking over the Lacombe and Blindman Valley Electric Ry., expressing satisfaction at the government's railway policy which extended to excellent, but remote, portions of the province transportation facilities so urgently needed and recommending to the Dominion Government that further financial assistance to the railways guaranteed by the province, was adopted on a similar vote.

The Premier referred to negotiations being carried on with the Dominion Government for the taking over of the Edmonton, Dunvegan and British Columbia Ry., and its allied lines, stating there was a proposal that the system be leased on certain terms. The Canadian railway systems are desirous of having connection with the northland, but no proposals would be considered by the government, but such as would protect the province in regard to its guarantee. The province has a splendid asset in the system, which is worth every cent of the guarantee. He would not guarantee that the operation of the line would merit the cost of operation and all fixed [illegible] within the next year, but he did claim that it would prove to be a paying investment. He was not responsible for the initiation of the policy, but as a member of the legislature, he had [illegible] outlying districts were clamoring for railways and the government had taken the steps considered most advisable for giving this service. Without government aid the Blindman Valley area would still be without the measure of railway accommodation it had. The government, he was prepared to admit, could not successfully operate railways and negotiations were in progress for the sale of this Lacombe and Blindman Valley Electric Ry. to the C.P.R. As regards branch line construction generally, if the government policy of guarantee had not been adopted, many parts of the province now on railways would still be without these transportation facilities. He contended that the building of railways into the northland by the Edmonton, Dunvegan and British Columbia Ry., and its two allied companies, was justified in every essential. The cost of construction had been largely increased on account of the war, and for a portion of the distance built the route was none of the best. As to the Grand Trunk Pacific Ry., in the event of the province having to pay charges on the branch lines, under the guarantee, the government would insist on assuming control and having them operated by the province. He had an assurance that the Tofield-Calgary line, guaranteed by the province, was one of the best paying pieces of line of the G.T.P. R. system, and could take care of itself.

Grand Trunk Railway Standard Bunk Car for Foreign Labor.

Equipment for bunk car (8 men)—8 single-decked Tiger boltless steel bunks 2 ft. 6 in. x 6 ft. 5 in., 8 mattresses to fit bunks, 16 double blankets for winter use, 8 double blankets for summer use, 1 van stove. When fitted up for winter use, cars to be lined with felt paper and $^7/_8$ in. sheeting.

Railways and Canals Department Expenditures for 1917-1918.

The report of the Railways and Canals Department for the year ended Mar. 31, 1918, issued recently, shows that the total expenditure by the Dominion Government on railways for the year was $70,113,667.61, distributed as follows:—

Capital account:	
Rolling stock for C.G. Rys.	$24,392,985.80
Intercolonial Ry.	5,860,132.59
Prince Edward Island Ry.	378,433.29
New Brunswick and P.E.I. Ry.	120,663.61
International Ry. of N.B.	5,369.51
Quebec and Saguenay Ry.	1,371,334.97
National Transcontinental Ry.	690,543.19
Hudson Bay Ry.	1,879,699.00
Miscellaneous	345.00
	$34,699,416.96
Quebec Bridge account	931,278.01
Revenue account:—	
Working expenses	33,400,460.15
Miscellaneous	15,100.00
Income account	347,007.44
Subsidies	720,404.75
Total	$70,113,664.61

The expenditure on canals and their earnings is referred to in our Marine Department, elsewhere in this issue.

The miscellaneous expenditure made by the department amounted to $1,198,062.28, of which $846,305.53 was spent on restoration of railway property destroyed in the Halifax explosion; $350,545.35 for war appropriation, and $1,211.40 for sundries.

The Canadian Railway War Board on the Canadian Railway Situation.

The Canadian Railway War Board has issued a booklet "The Canadian Railway Situation," containing the following information:—

The first railway problem was finance; the second was construction; the third was salesmanship—the getting of traffic; the fourth, forced by the exigencies of war, was railroading.

In the organization of any Canadian railway, there are three main divisions: One department stirs up, builds up, and persuades traffic to use the lines of that company. It advertises, sends solicitors, and by various means, fosters new industries on its lines. It is called the traffic department. Next stands the department that keeps books, counts cash and arranges loans or investments. It is called the finance department. The third is the operating department.

Movement of Rolling Stock over Right of Way

The actual movement of traffic on any railway requires three main kinds of work: The upkeep of the roadbed; the supply and maintenance of locomotives and cars; the moving of the latter over the former with speed, safety, and economy.

Here, then, is the first unit of railway operation—the section. It varies in length from 4 miles to 6 miles. It is commanded by a section foreman. In winter he has one or two helpers. They watch the track for major defects, weak or broken rails, obstructions on the right of way. In summer he has from 4 to 7 men, replacing worn ties and rails, "shouldering up" the ballast, keeping grass and weeds from encroaching on the ballast, maintaining culverts and ditches to carry off rain or overflowing streams. As soon as the frost leaves the ground, the section gang begins replacing ties—a tie lasts from 6 to 10 years only. Low spots are forced up, by driving thin, flat pieces of wood (shims) between rail and tie. New rails replace worn rails. The precise spread between the rails is checked and corrected. The outer rail on a curve is kept properly lifted (aligned) so as to offset the side-thrust of engines and cars.

This is the first unit of the first part of railroad operation: maintenance of way.

The railway station symbolizes the first unit of the third part of railway operation—the movement of trains over the line. It is less significant as a building that as a sign that here two trains on a single track line may pass one another, and that here the trainmen receive their orders.

The sub-division, or district, as it is called on some lines, marks the beginning of officialdom, and the first unit of command in the second department of railway operation—locomotive and car repair shop. Maintenance of way is represented by the road master and the master of bridges and buildings; maintenance of rolling stock by the locomotive and car foremen; movements of rolling stock over right of way by a dispatcher. Cars may move from end to end of the continent. Locomotives are limited to the length of the sub-division or district, on which they are stationed. This sub-division may contain 15 or 20 stations and sections, and extend 90 to 120 miles or more. At each end are facilities for repair and replenishing of locomotive and car supplies.

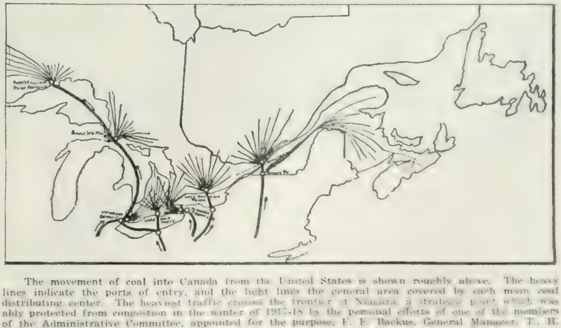
A division may contain few or many sub-divisions. Its three departments are controlled by resident engineer, master mechanic and chief dispatcher. Over, or in some cases beside them, is a general officer co-ordinating their work: a divisional superintendent. Here is the first senior official in the department of train control—the chief dispatcher. The resident engineer has his road masters and masters of bridges and buildings in the sub-divisions. The master mechanic has his locomotive and car foremen representing him in the sub-divisions. But real authority in the movement of trains is not found below the chief dispatcher.

A chief dispatcher finds and distributes, collects and disposes, passes out to the next divisions, or receives from them in turn—cars. The resident engineer having provided the right of way, the master mechanic having contributed the engines, the chief dispatcher moves, by means of the latter over the former, his constantly changing family of cars—freight and passenger. In his office he has deputies, the dispatchers and telegraphers. Along the line, on subdivisions, are his outer deputies, the station agents and their telegraphers. On his train sheets are recorded the respective positions of the locomotives as he and his staff move them and their cars one after another, and one past another, between the ends of the division. These sheets show passenger trains dropping and taking up travellers, mail, luggage, and express. They show, also, the way freights setting out full cars to be unloaded or empties to be filled, or leaving l.c.l. shipments on the station platform, or picking up full cars to be forwarded to the next division. There the chief dispatcher will pass them to the next, who will pass them to the next, and so on as far as that car must go. So emptied cars also, to be disposed of as the call for them may dictate. To this chief dispatcher come telegraphic reports once a day from his outside deputies, recording the orders placed by shippers for empty cars, or the empties on hand, or both. If the empties at a certain point are sufficient to supply the orders, local switching movement is sufficient. If the empties must be brought from another point on that division, the chief dispatcher's orders are issued to the necessary way freights to pick up and move said empties to the designated point.

When there are more empties than orders for them within any division, or vice versa, the chief dispatcher is supplied or relieved, as the case may be, by the authorities outside his district.

The superintendent is meantime patrolling his division, co-ordinating and directing the work of resident engineer, master mechanic, and his chief dispatcher.

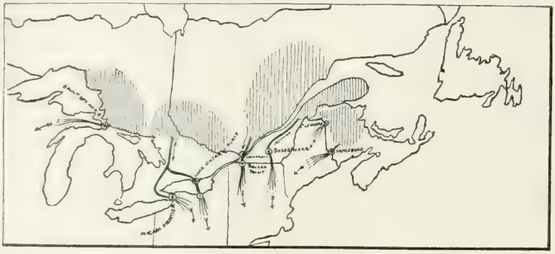
Next above the division comes a general division, or general superintendent's district. Here the master mechanic has become district master mechanic, the engineer is district engineer, and the chief dispatcher is now car service agent or superintendent of transportation. The latter is a magnified chief dispatcher. The actual movements of trains do not concern him now, but the juggling of



The movement of coal into Canada from the United States is shown roughly above. The heavy lines indicate the ports of entry, and the light lines the general area covered by each main coal distributing center. The heaviest traffic crosses the frontier at Niagara, a strategic point which was ably protected from congestion in the winter of 1917-18 by the personal efforts of one of the members of the Administrative Committee, appointed for the purpose, F. F. Backus, General Manager, T., H. & B. The heavy movement of coal comes in the hardest operating season—winter. The co-operation of importers in taking delivery of their stock in the summer of 1918, was of great assistance to the board in keeping a safe margin of track room.

cars has here become a very serious matter. Just as the chief dispatcher receives reports of cars wanted and cars available from the stations on his division, so the car service agent or superintendent of transportation receives reports from his chief dispatchers. If he can balance his empty cars with his cars wanted, so much the better. Otherwise he obtains extras or disposes of his surplus at the direction of the next highest order of car control official.

Two or more general divisions or general superintendents' districts may constitute a system. If it is called a system, the three main departments are controlled now by a general superintendent of motive power and car building, a chief engineer, and a general superintendent of transportation. A vice president, or two vice presidents, co-ordinate the three. In the case of transcontinental lines, two or more general superintendents' districts constitute only an eastern or western lines. The district master mechanic is here superintendent of motive power and car building; the district engineer is now assistant chief engineer; the car service agent is now superintendent of car service. A secondary vice president controls these three. The final operating unit of a transcontinental system lies under a senior operating vice president, whose three chief aides are: the chief engineer, the chief mechanical engineer, and the general superintendent of car service.

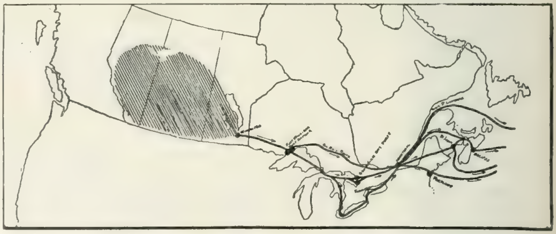


The above sketch is intended to indicate in a general way the areas from which the heavy movement of Canadian forest products is drawn; and the frontier points at which they cross into the United States.

Just as the chief dispatchers report their car supply to the car service agent, and the car service agent or superintendents of transportation, report these reports to the superintendent of car service, or general superintendent of transportation, so these in turn pass on the car situation every day to the general superintendent of car service. This is a complex and difficult office. Knowledge of trade conditions, of weather, of probable developments of traffic, influences this high officer in the strategic disposition of his empty cars. Loaded cars have definite moves to make. The empties must be shifted to let the loaded cars pass to the points where they are most likely to be wanted. He must decide whether to allow more cars to leave his lines for foreign lines. He must observe where they are bunching, and where they are thinly scattered. He must work his empties westward in the summer to be ready for the grain in the fall. So with the overseas export freight movement, and the movement of mine and forest products. He must have in his mind's eye a clear picture of the economic machinery of the Dominion.

The final unit of railway operation in Canada is the Canadian Railway War Board. Consider Canada as a railway division. The Canadian Railway War Board is the superintendent of the division. A special committee takes the place of the resident engineer and deals with questions of maintenance of way. For example, take the matter of a supply of rails for renewal purposes. The board was finally able to obtain an order from the Dominion Government for sufficient steel to renew the sections of line in greatest need.

Another committee represents the master mechanic, whose concern is chiefly with locomotives and other rolling stock. The board has provided locomotives to lines or parts of lines lacking power to carry special loads. It has supervised the locomotive power situation, arranged loans, exchanges, and even the sale of locomotives between Canadian roads.



The movement of wheat across Canada begins in the late summer and proceeds throughout the winter. It will be seen from the above map that indirect routing is practically impossible in this as in all other Canadian traffic.

The chief dispatcher of a division, or general superintendent of car service on a system, has his counterpart on the board in its transportation section. Like the dispatcher supplying cars to the stations in his division, the board's transportation section protects the car supply of the Dominion. The first measure taken in 1917, when car shortage was felt severely for the first time in recent years, was to stop the drain on the Canadian supply by refusing to allow Canadian goods for the United States to be loaded into Canadian cars. The shipper was supplied instead with returning U.S. empties. These, while sound enough for pulpwood or other materials, could not replace Canadian cars as grain carriers —the Canadian standard of repair being higher and better observed. Vigorous measures were taken to effect the return of Canada's 22,000 "lost" cars from the congested U.S. lines. In a few months the number "lost" had dwindled and it is normal today. The board undertook to persuade shippers to pack cars more skilfully, and thereby make better use of car space. As a result, the average load per car rose from 21.74 tons in Jan. 1917, to 26.71 tons in Nov., 1918. This represented a saving in cars, in track room, in tractive effort, in locomotive, and in fuel. The centralized control of cars enabled the board to supply empties from the nearest point in Canada rather than the nearest point on the system in question.

So much for the board's work in these three main departments of the railway operation. But in its general capacity as general superintendent of the transportation problems of Canada, it has undertaken other special problems. To help save fuel, it ordered the cutting down of passenger train service to bare necessity lines. By cutting off 12,000,000 passenger train miles, it saved 600,000 tons of coal. This end was further served by the heavier loading of freight cars above referred to. Fewer cars being used, the percentage of tare weight and the consumption of coal by engines were reduced. When the deliveries of coal to Canadian lines by U.S. lines at Niagara frontier became congested, the board opened an extra road to Toronto by arranging with the T., H. & B. R., C.P.R., and Michigan Central Rd. to co-operate in assisting the G.T.R. The general manager of the T., H. & B. volunteered as the direct representative of the board at the Niagara frontier, and by his efforts forced the traffic through in the face of great difficulties. When heavy shipments threatened to overwhelm one line between Toronto and Montreal, or on any other route, the board instructed the sister lines to share the load. In the west, a breakdown in the service from the Drumheller coal fields was minimized by sending prompt assistance from the other railways; and the chance of this embarrassment recurring was removed by adding special trade facilities in the summer of 1918.

In the labor field, trouble was prevented by the prompt application of the so-called McAdoo scale of wages (the U.S. scale), practically as soon as it was applied in the U.S.

To ensure the amicable adjustment of

the details of this scale, and of all other railway labor disputes, the board formed, with the consent of the labor unions concerned, the Canadian Railway Board of Adjustment No. 1, in which six officials from various railways meet six railway labor leaders and settle all questions.

To protect the country's transportation interests, the board obtained from Toronto University a free supply of anti-flu vaccine, for 45,000 western railway employes, and the same was administered through railway physicians.

The board's chief business is dealt with by the administrative committee, consisting of Grant Hall, Vice President, C.P.R. (chairman); M. H. MacLeod, Vice President, operation, etc., Canadian National Rys.; W. D. Robb, Vice President, transportation and maintenance, G.T.R.; S. R. Payne, Manager, Ottawa Division, New York Central Ry.; F. F. Backus, General Manager, Toronto, Hamilton & Buffalo Ry.; J. H. Walsh, General Manager, Quebec Central Ry.

One of the major problems of the board in recent months had to do with the return of the army from France. To meet this situation a special committee of experts in the handling of passenger traffic was appointed by the board, one from the Canadian National Rys., one from the C.P.R. and one from the G.T.R. The first problem of this committee has been to assemble colonist cars, tourist cars, and standard sleeping cars, to say nothing of commissary, dining, and baggage cars, at St. John, N.B., and Halifax, N.S., ready for the unloading of the ships. The second part of their work has been to ticket the home-comers to their respective demobilization areas—a long and complex clerical task which was made difficult by the scarcity of skilled ticketing clerks. Trains had then to be dispatched westward over whatever line could best handle them, the C.P.R. from St. John, or the Canadian National from Halifax. These trains had not only to be provisioned, "watered" at various divisional points, and provided with engines, but the empty equipment had then to be "worked back" ready for the next soldiers to arrive. Some cars could make the return trip in 3 or 4 days. Others must be absent 12 or even 20 days. Each train has to be slipped in, as it were, between the regular passenger and freight trains, whose schedules have to be maintained if the other vital business of the country is to be handled.

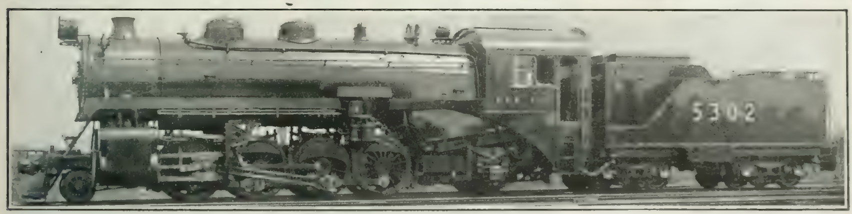
The chairman of the committee on demobilization is Walter Maughan, Assistant General Passenger Agent C.P.R. H. H. Melanson, Passenger Traffic Manager, and C. W. Johnston, Assistant General Passenger Agent, represent the interests of the Canadian National Railways and the Grand Trunk Railway respectively. This committee has handled about 30,000 returning soldiers every month since the winter commenced. The rate in summer time will probably be as high as 45,000 per month. The seriousness of this task may be judged, perhaps, by the fact that 14 shiploads, including some of the world's greatest ships such as the Aquitania and the Olympic, were handled between Nov. 27 and Jan. 4, involving 1123 locomotive trips and scores of special trains.

Railway Rolling Stock Orders and Deliveries.

The G.T.R. has received 7 six-wheel switching locomotives from its Montreal shops, leaving 7 of an order of 20 still under construction there.

Canadian National Rys. has received the following additions to rolling stock, 13 colonist cars, 9 Hart ballast cars, and 44 overhauled heater cars, and 25 repaired wooden box cars, from Canadian Car and Foundry Co.; 278 general service cars from Eastern Car Co.; 102 steel frame box cars from National Steel Car Co.; 18 cabooses from Preston Car and Coach Co.; 23 colonist cars from Pullman Co., and 6 six-wheeled switching locomotives from Canadian Locomotive Co.

The C.P.R., as stated in Canadian Railway and Marine World for April, ordered 10 mikado locomotives for heavy freight service, to be built at Angus shops, Montreal, one of which, no. 5302, completed recently, is illustrated herewith. The following are the principal dimensions:—



Mikado Locomotive, Canadian Pacific Railway.

Boiler pressure	200 lbs.
Cylinders	25½ x 32 in.
Driving wheels, diar	63 in.
Tractive effort	54,000 lb.
Firebox, inside	120 x 84 in.
Boiler, diam., front end, 80 in., back end	90 in
Flues, no. and diar	40-5½ in.
Tubes, no. and diar	211-2¼ in.
Length over tube sheets	18 ft. 6 in.
Firebox heating surface	274 sq. ft.
Arch tube heating surface	37.5 sq. ft.
Tube and flue heating surface	3,347.78 sq. ft.
Superheating surface approx	845 sq. ft.
Total equivalent heating surface	4,926.78 sq. ft.
Grate area	70.3 sq. ft.
Factor of adhesion	4.18
Weight on drivers	226,000 lb.
Weight on engine truck	25,000 lb.
Weight on trailing truck	49,000 lb.
Total weight, locomotive	323,000 lb.
Total weight, locomotive and tender	500,000 lb.
Total weight, tender loaded	180,000 lb.
Coal capacity, tons	12
Water capacity, imp. gal	8,000

The grates are moved by steam grate shakers. The cab is of the C.P.R. standard vestibule type, fitted with a 14 x 20 in. locker for enginemen's clothes, meal pails, etc. The locomotives are being built under the direct supervision of W. H. Winterrowd, Chief Mechanical Engineer.

The Inverness Railway and Coal Co.'s Position.

The Nova Scotia House of Assembly passed the following resolution unanimously recently, and directed that copies be sent to the Dominion Minister of Railways and to A. W. Chisholm, M.P., for Inverness: "That in the opinion of this house it would be in the public interest, and would help to solve the transportation problems in the Province of Nova Scotia if the Dominion Government were to purchase or lease the Inverness Ry. and Coal Co.'s railway and extend it to Cheticamp and make other necessary extensions in the County of Inverness, and that these lines be part of the Canadian National Rys."

The Inverness Ry. and Coal Co. was the title under which the Inverness and Richmond Ry. and the Inverness-Richmond Collieries and Ry. Co. of Canada Ltd., were consolidated and amalgamated in 1902. The Inverness and Richmond Ry. was incorporated by the Nova Scotia Legislature in 1887, and the railway was completed and opened for traffic, June 15, 1901. The line extends from Point Tupper to Inverness, 61 miles, with a total of 65.5 miles of track laid with 56 lb. steel. The company owns and operates collieries at Inverness, the output of which is shipped over its line to several points for water shipment.

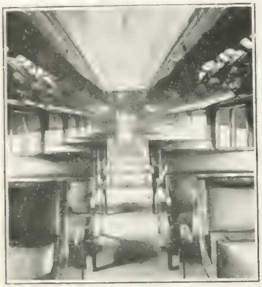
A meeting of the 5% first mortgage holders was held in Toronto, June 30, 1915, when a resolution was passed providing for the suspension of payment of interest on bonds and that payments of sinking fund be postponed until such time after the war as might be determined, and providing for the future operation of the property by the company. The company's general officers at that time were: President, Sir William Mackenzie; Vice President, Sir Donald Mann; Secretary and Treasurer, L. W. Mitchell, Toronto; General Manager, J. McGillivray, Inverness, N.S. Mr. McGillivray was in July, 1915, appointed Receiver and Manager of the property under an order of a Nova Scotia Court, granted on the application of the bondholders' trustee.

The funded debt consists of 1st mortgage 5%, 20 year, $500 gold coupon bonds, due May 1, 1922. The total issue was $3,000,000, of which at June 30, 1913, $869,000 was held in the treasury as security for outstanding loans.

F. L. Hutchinson, General Manager Hotels, etc., C.P.R., is reported to have stated in Victoria, B.C., recently, that the company believed in the future of Victoria as a tourist resort and is spending a large sum in a press campaign in the United States, specially directed to divert travel to Vancouver Island.

Colonist Cars, Canadian National Railways.

Deliveries are now being made of the 150 colonist cars under order by the Canadian National Rys., and which were briefly described in Canadian Railway and Marine World for Jan., 1919. Of these 100 were ordered from Canadian Car and Foundry Co., Montreal, and 50 from Pullman Co., Chicago, the order being divided in this way in order that an early delivery of the whole 150 might be made, as the cars are required primarily for handling troops from seaboard to inland demobilization points. The first of the cars were delivered early in May and were placed in service immediately they arrived, so urgent is the need for troop equipment. It is expected that the balance will be delivered before July. They are of steel construction throughout, with the exception of the interior fittings, and have the following general dimensions:



Seating Arrangements, Colonist Car, Canadian National Railways.

Length over end sills	73 ft. 6 in.
Length between truck centers	57 ft. 6 in.
Length over buffers, approx.	82 ft. 4½ in.
Width over side sills	9 ft. 9⅝ in.
Width over roof at eaves	10 ft. 1⅞ in.
Width of clerestory	5 ft. 11¼ in.
Height, rail to roof	14 ft. 2 in.
Height, rail to eaves moulding	11 ft. 2½ in.
Height, rail to sill at end	3 ft. 7⅝ in.

The steel construction embodies the Canadian National Rys. standard, 73½ ft. steel fish-belly underframe, which is to be a part of all steel passenger equipment for C.N.R. service. Along the top of the sides, is a very deep letter board, arranged for by dispensing with the usual oval windows above the main panes of glass. Part of this space is used to give a larger window depth than is normal, increasing the interior lighting arrangement. The roof is of the clerestory type, but without the usual narrow windows. In their places, are large ventilators, with air ducts along the sides, the ventilators being controlled from the interior. The windows have double sash, with provision on the outside for applying a third sash for winter service in the west.

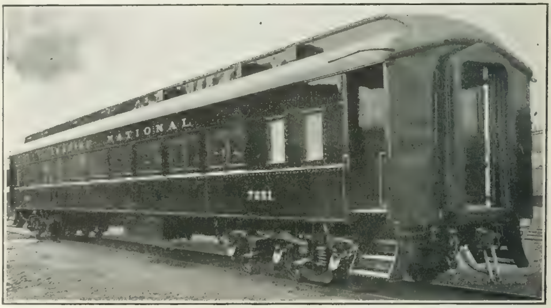
The vestibules are also of all steel construction, embodying the U-shaped I beam section, which minimizes the tendency to telescoping in wrecks. They are equipped with the latest type of friction draft gear.

The cars are mounted on commonwealth all-steel 6-wheel trucks, equipped with clasp brakes. The trucks have the safety center pin attachment, for preventing the bodies from parting from the trucks in case of derailment.

The seating arrangement is worthy of special note, the seats being arranged farther apart than usual, in order to give greater knee room, and incidentally a greater berth length. They have 18 sections, giving a berth accommodation of 72, with 2 persons in both the upper and lower berths. The berths are very similar to those in first class sleeping cars, but are not equipped with mattresses for this special service, the bedding being supplied by the Militia Department. The seats are upholstered with fabrikoid and pantasote, and filled with curled hair, which is an improvement on the usual colonist car wooden seats. The flooring is of flexolith composition. The interior finish of the cars is of birch-mahogany, with none of the steel work exposed on the inside. The clerestory is painted a light green shade.

At one end of the car is the men's water closet and lavatory, the latter equipped with three washbasins, of a superior type. The other end of the car has a women's lavatory and water closet on one side of the aisle, and on the other, a small cookstove room, for the preparation of meals en route. At both ends, there are also drinking water containers, arranged with separate compartments for ice and water, and attachments for new and used sanitary drinking cups.

The cars are equipped with the latest type of Vapor Car Heating Co.'s heating. In addition, the men's lavatory end is equipped with an auxiliary heating stove for use in case of emergency.



Colonist Car, Canadian National Railways.

The 100 cars being built by Canadian Car & Foundry Co. are being lit by Safety Car Heating & Lighting Co.'s system with body hung generators. The 50 being built by Pullman Co. are being lit by the U.S.L. system, with a truck suspended generator under the car, and controlled by a panel at the end of the car. All the cars have storage batteries with a 300 ampere-hour capacity, which is sufficient for 8 hours service without operating the generator. Lights are so arranged that at night half the light may be cut off, or each individual light may be extinguished. Individual berth lights are not applied, as they are not usual on this type of equipment.

The cars were designed under the direction of G. E. Smart, General Master Car Builder, Canadian National Rys., to whom we are indebted for the foregoing information.

London, Ont., Union Station Proposals—N. Cauchon, C.E., of Ottawa, addressed the Chamber of Commerce, London, Ont., May 12, on the railway situation in regard to town planning. The plan suggested so far as the railways are concerned is for the construction of a cross town line to link up the C.P.R. and the G.T.R., with a union station on Dundas St., the elevation of tracks and the erection of a purely industrial area wherein all the factories could be concentrated. An alternative plan is reported to have been suggested by Sir Adam Beck under which a union station would be provided in connection with hydro radial proposals, and in the event of the Dominion Government taking over the G.T.R., the electrification of the Huron and Bruce branch.

James Daniel Altimas, who was appointed Assistant General Superintendent of Car Service, C.P.R., Montreal, recently, was born there, Aug. 6, 1871, and entered C.P.R. service Sept. 13, 1887, since when he has been, to Nov. 1, 1889, record clerk; Nov. 1, 1889 to Nov. 1, 1890, statistical clerk; Nov. 1, 1890 to Dec. 1, 1891, chief statistical clerk; Dec. 1, 1891 to May 1, 1896, car tracer; May 18, 1896 to Feb. 1, 1903, chief clerk to Car Accountant; Feb. 14, 1903 to Mar. 23, 1909, chief clerk to Superintendent of Car Service; Mar. 22, 1909 to Nov. 1, 1918, Car Accountant, all at Montreal.

Herbert Gatje, who has been appointed Travelling Passenger Agent, C.P.R., San Francisco, Cal., was born at Willows, Cal., May 4, 1891, and entered transportation service in Sept. 1908, since when he has been, to Feb. 1909, report clerk; Feb. 1909 to May 1910, local ticket clerk; May 1910 to July 1912, Pullman ticket clerk, Southern Pacific Co., San Francisco, Cal.; July 1912 to Apr. 1913, agent, Pullman Co., San Francisco, Cal.; Apr. 1913 to Feb. 1919, interline ticket clerk, Southern Pacific Co., San Francisco, Cal.

Canadian Pacific Railway Co's Annual Meeting.

The C.P.R. Co.'s 38th annual meeting was held in Montreal, May 7. The company's chairman, Lord Shaughnessy, presiding, having on his right, E. W. Beatty, President, Grant Hall and I. G. Ogden, Vice Presidents, and on his left, E. Alexander, Secretary, Jno. Leslie, Comptroller, and H. C. Oswald, Assistant Secretary.

President Beatty, in moving the adoption of the directors' report, as published in Canadian Railway and Marine World for May, said:—

The results of the year's operations were, on the whole, and under the conditions which existed, satisfactory, notwithstanding the shrinkage in the net earnings of $12,043,630, due to the extraordinary increase in wage scales and cost of materials of all descriptions. Over 77% of the total increase in operating expenses was due to increases in wages alone. The volume, both of freight and passenger traffic, decreased in comparison with 1917, the increase in gross earnings of $5,148,363 being due to increases in rates granted in March and July, 1918. The fact that notwithstanding the heavy increases in the cost of operation there was a surplus after payment of all charges and dividends, is another satisfactory evidence of the foresight and wisdom of the shareholders in having approved substantial expenditures in previous years, which undoubtedly permitted the company's operations to be carried on with a cheapness which would not have been possible had such adequate facilities not been provided. A conspicuous example of the results of such foresight is found in the difference in the cost of rolling stock acquired during the years 1911 to 1914, and the approximate market value of an equivalent amount if required to be purchased in 1918. The rolling stock purchased during the former years, if required to be furnished at the 1918 prices, would have represented an increased cost of approximately $96,000,000. After four years of war, and the existence of times of the most severe climatic conditions, I am happy to say that the physical condition of your property is excellent, and it will not require more than usual maintenance expenditure to ensure its usual efficiency. The results of the operations of the three months subsequent to the conclusion of the fiscal year have been disappointing, but not unexpectedly so in view of the falling off of general traffic during February and March and the inevitable heavy costs of maintenance and operation due to high prices of materials.

In view of the uncertain conditions which succeeded the conclusion of hostilities and the need of providing as much employment as possible, your directors did not think it wise to make drastic reductions in the number of men employed and the company's shops have been maintained at full pressure, always on necessary work, but in some cases on work which might have been postponed if the general conditions had warranted it.

The company's financial position at the end of the fiscal year, as indicated in the annual report, was, on the whole, extremely gratifying.

Your directors are of the opinion that a reasonable amount of additional branch line construction should be gone on with as soon as conditions warrant, and the necessary statutory authority is obtained. Resolutions will be submitted for your approval for the construction of the lines which are most urgently required. In this connection, I should point out that in the matter of railway construction the country is faced with a condition quite unprecedented in the recent history of Canada, in that the Canadian National Rys. and your company are the only large companies with resources sufficient to enable them to provide additional railway facilities to any substantial extent. Serious and continuing blunders in railway policy have resulted in the government being required to assume the ownership at present of 11,400 miles of railway, with prospect of the acquisition of an additional 6,400 miles. When this acquisition has been accomplished, the principal competing systems in Canada will be your company and the Canadian National Rys. I have no apprehension as to your company's ability with its splendid facilities and equipment and loyal and efficient officers and men, to obtain a fair share of the traffic and to handle it expeditiously and well. I have no fear of government ownership, but government ownership apparently has some fear of private competition under equal conditions. It has recently been found necessary to give the Canadian National Rys, privileges in the matter of construction of railways not enjoyed by private companies and to exempt them from complying in other respects with the existing laws respecting railways. I sincerely trust that this policy of making one law for the Canadian National Rys. and one for the C.P.R. and other private enterprises will neither be continued nor extended, because nothing would, in my opinion, be calculated to destroy confidence in Canadian railway enterprise more than a policy which would confer exclusive and peculiar rights on the Canadian National Rys. designed to make the competitive conditions unequal.

The subject of government ownership has received much attention recently, but not nearly as much as the importance of the subject justifies. Notwithstanding our previous experience and that of the United States and Great Britain, government ownership and operation of railways is to be attempted on a large scale. The situation is full of danger, which cannot be avoided or even minimized except by rigorously independent and non-political administration, which is at least difficult of establishment under our system of government. This fact must, however, be obvious, that in no other way can the people of Canada obtain a correct appreciation of the results of government operation of the systems which are or which may hereafter come into its possession, than by their being administered in strict accordance with the laws of the country under which other companies have to operate, by their financial and accounting methods being made as precise and as accurate as the law now requires of private corporations, and by the exact financial results being submitted to parliament each year.

Different views may conceivably be held as to the wisdom of public ownership and operation of railways. My own views are sufficiently well known not to require repetition, but the fact is public ownership is already here, and experience only will show whether the difficulties I have mentioned in securing efficient and non-political administration can be overcome, and the country receive an adequate service at a minimum of loss. I am satisfied the government recognizes these difficulties and that a sincere and determined effort will be made to meet the situation. It would seem, however, to be obviously wise that the assumption of further obligations should at least be deferred until the practicability of government administration, or administration under the aegis of the government (which is quite inseparable from government ownership) has been demonstrated. In the end, the burden of the enterprises must be borne by the people, and the people are entitled to know whether the method of administration provided and the results of that administration are such as warrant their approval of the continuance or extension of them in the interests of Canada.

The returns from sales of land during the year just closed have been the largest in your company's history, and it is a matter of great gratification to your directors, as no doubt it is to the shareholders, that the company's incessant activities in the matter of sale and colonization of lands and the promotion of immigration to Canada has had such far-reaching and beneficial results. As a direct consequence of the company's efforts, more than 21,000,000 acres of land have been sold to settlers, and more than half a million settlers induced to come to Canada and settle in the Canadian West. The contribution to the country's exchequer has been thereby increased by many millions. With return to peace conditions I should expect a considerable increase in immigration, and with the vigorous development of the country's natural resources and the necessary extension of the markets of Canada we have every reason for confidence in the future prosperity of the country, even though the present year may be one during which the commercial expansion may be only moderate.

Your directors look forward with confidence to the development of your company's trans-Atlantic and trans-Pacific steamship business, particularly the latter, and adequate provision for the needs of the immediate future has been made, as indicated in the annual report.

It would not be proper that I should conclude my remarks without a personal reference to your former President, Lord Shaughnessy, who retired from the presidency during the last fiscal year. It is perhaps not necessary that I should reiterate the inestimable value of his services to the company from the beginning of his connection with it, but more particularly during the last 20 years, during which time he occupied the position of chief executive officer. It will, however, be gratifying to the shareholders to know that, great as had been the success of Lord Shaughnessy's administration of the company's affairs, viewed from a purely commercial standpoint, greater still has been the influence and force of his personal character and ideals and his high sense of duty on the company's officers and men, with the result that the C.P.R. enjoys an esprit and an ambition for efficiency among all ranks which I venture to think is unequalled and certainly not excelled, in any corporation in the world. It must be a source of great gratification to Lord Shaughnessy to know, on his retirement from the active work of the presidency to the more advisory work of chairman of the company, that not only was his administration extraordinarily successful, and that he leaves the property in excellent physical condition, but that he created during his tenure of office an organization the ambition of which, and every member of it, is to utilize that property in the closest co-operation and to the full extent of their powers for the benefit of the country and the shareholders.

The report was adopted unanimously.

Kaslo and Slocan Ry.—The shareholders approved a lease to the C.P.R. Co. for 99 years of branches which the K. & S.R. Co. has been authorized to construct, whether constructed or to be constructed, including the railway in operation from the junction with the N. & S.R. Whitewater Creek Branch at Retallack to Kaslo, 17.7 miles, and all such extensions, branches and additions to the railway as the K. & S.R. Co. is, or may be, hereafter authorized to construct, together with their appurtenances, at an annual rental of $1 and in addition thereto an annual rental equal to the interest payable on the outstanding bonds or other securities issued or which may be issued hereafter by the K. & S.R. Co. with the C.P.R.'s consent, the total of all such bonds or other securities unpaid or unredeemed not exceeding at any time $30,000 a mile, and to bear interest at not exceeding 5% payable half-yearly, the payment of such interest being guaranteed by the C.P.R.

Grand Trunk Pacific Ry.—The shareholders approved the agreement of Sept. 2, 1918, between the G.T.P.R. Co. and the C.P.R. Co. providing for the use by the G.T.P.R. Co. for 21 years, of the C.P.R.'s line from a point east of Sutherland to a point west of Saskatoon, together with the use of the C.P.R.'s passenger, express and freight facilities at Saskatoon station, which agreement amongst other things provides for the payment by the G.T.P.R. by way of rental of a sum equal to one-half the interest at the rate of 5% a year on the amount of the agreed value of the lands comprised in the joint section and of the improvements thereon and the payment of the maintenance and operaion expenses on a wheelage basis as defined in the agreement, be and the same is hereby approved and the execution thereof by the President and Assistan Secretary ratified and confirmed.

Branch Lines Construction.—The following resolution was adopted:—

Whereas an extention of the Moose Jaw Southwesterly Branch has been constructed from mileage 35 to mileage 66, and it is in the directors' view expedient that the following other branch lines and extensions of branch lines be constructed in the near future, viz.:

1. An extension of the Bassano Easterly Branch from Empress Northeasterly to Milden, 132 miles;

2. An extension of the Langdon North Branch from Acme, to the projected extension of the Swift Current Northwesterly Branch near Empress, 132 miles;

3. A part of the Moose Jaw Southwesterly branch from Vidora easterly, 35 miles;

4. A branch of the Manitoba and North Western Railway from Russell northerly known as the Russell North Branch, 15 miles;

5. A branch from Lanigan northeasterly and known as the Lanigan Northeasterly Branch, 150 miles;

It is therefore resolved that the construction of the said extension of the Moose Jaw Southwesterly Branch from mileage 35 to mileage 66 is approved, and that the directors are authorized to proceed with the construction of the said other branch lines and extensions of branch lines when in their opinion conditions warrant and after statutory authority, where any be necessary, shall have been obtained therefor, and that to aid in the construction and equipment of all such railways the directors are authorized to issue and dispose of consolidated debenture stock to such an amount as they may deem expedient, but not exceeding in respect of any of said lines the amount which the company is or may be empowered by statute to issue.

Bylaws—A bylaw passed by the directors amending the general train and interlocking rules, as required by the Board of Railway Commissioners, and amendments to several bylaws embodying verbal amendments made necessary by the separation of the positions of chairman of the company and president were approved.

Directors Elected.—R. B. Angus, Sir Herbert Holt, Brig.-Gen. F. S. Meighen, and Sir Edmund Osler, whose term of office as directors had expired, were reelected for 4 years.

Tribute to Lord Shaughnessy.—H. R. Drummond, speaking on behalf of the shareholders, paid a tribute to the services rendered by Lord Shaughnessy during the term of his presidency, and proposed the following resolution, which was carried unanimously:—"That there is inscribed in the record of this meeting an expression of the shareholders' appreciation of the great service rendered to the company and to the Dominion of Canada by the Rt. Hon. Lord Shaughnessy, who has recently retired from the presidency and assumed the chairmanship of the company.

"The outstanding position held by the C.P.R., not only in the markets of the world, but also in the respect and affection of the Canadian people, provides the greatest of all tributes to the genius with which Lord Shaughnessy has directed the company's affairs; but the shareholders cannot let this occasion pass without the further tribute of their thanks for the services he has rendered during the 36 years with which he has been associated with this enterprise.

"Through Lord Shaughnessy's financial skill and executive ability, an immense transportation system has been built up and consolidated with such efficiency and economy that the Canadian people have enjoyed efficient service at moderate rates, have seen their resources developed beyond all expectation, and have been encouraged during normal years by a steady flow of immigration, while the financial returns of the company itself have amply justified the confidence placed by investors in Canadian industry and management.

"It is particularly gratifying to the shareholders that under Lord Shaughnessy's presidency the C.P.R. Co. should not only have rendered such signal services to the cause of the allies during the recent great war, but should also have maintained its efficiency and financial standing in the face of the difficult conditions created by that war. The shareholders consider it due largely to his far-sighted policy that under such circumstances the C.P.R. Co. should not only have required no assistance from the Canadian Government, but should actually from its reserves have been able to provide substantial aid to that government in maintaining the high standard of Canadian credit.

"The shareholders deeply appreciate and honor the spirit of self-sacrifice with which Lord Shaughnessy maintained the arduous duties of the Presidency during the anxious years of the war, in spite of physical disabilities. They rejoice that these disabilities have been ameliorated, and that with renewed vision he can once more enjoy the beauties of that Canadian landscape which the C.P.R. has made accessible to the world.

"When the prospect of peace enabled him to hand over the more active duties of the presidency, with clear conscience to a younger man, it was with genuine pleasure that the shareholders heard of Lord Shaughnessy's decision to remain as Chairman of the Company, not only because they realized that the company would thereby continue to have the benefit of his counsel and advice, but also because they are proud to retain as their titular head one who is held in such universal honor.

"The shareholders trust that the indomitable spirit which has been so characteristic of Lord Shaughnessy's whole splendid career will be rewarded with many years yet to come of health, prosperity and happiness. That a copy of the foregoing resolution, suitably engrossed, and signed by the Secretary under the company's corporate seal, be forwarded to Lord Shaughnessy."

Lord Shaughnessy said:—I appreciate most heartily and thank you, Mr. President and fellow shareholders, for the complimentary remarks referring to myself in the President's address, and in the resolution adopted by the meeting. I would be lacking in candor if I failed to admit great pride in the company's progress during my presidency and in its present splendid position, physically and financially, and equal pride in the faith and confidence of the shareholders, who, with marvellous unanimity, responded to calls for new capital by subscribing for additional issues of stock, even on occasion when in deference to popular clamor the issue price was less favorable to the subscribers than it might properly have been. My predecessors, Lord Mount Stephen and Sir William Van Horne, who carried the responsibilities of the chief executive through the periods of construction and the first few years of operation, had a most difficult task, as is well known to our senior colleagues on the board of directors, Mr. Angus, Sir Edmund Osler, and Mr. Matthews, but it was my good fortune to become President just when the tide was turning and when Canada was coming into her own. The expansion in the country's business and the consequent increase of traffic compelled capital expenditure on a large scale, to furnish improved transportation facilities presently required and to anticipate the future, and the money for these purposes was provided year by year from 1900 to the outbreak of war. The policy of your directors was bold and forward. There was never any hesitation, and looking back over that period they are justified in the conviction that few, if any, mistakes were made; and that conviction is, I am sure, shared by the great body of the Canadian people and of the company's shareholders.

It was fortunate, indeed, that when the time arrived to transfer the responsibilities of chief executive to younger and more vigorous shoulders, your directors had available for the post a man so capable, so energetic, so conscientious and so well versed in matters relating to the company's policy as the new President, Mr. Beatty. I shall not hurl back at him such compliments as he paid me in great profusion, but I may be permitted to say that he enjoys the complete confidence and respect of the directors and of the Canadian people. The shareholders' interests could not be in safer hands. After so many years of business and personal association, it was somewhat of a wrench to my fellow directors, as it was to me, to alter our relations by permitting me to retire from the presidency, but they felt as I did, and as I hope you feel, that it was best for the company's future.

Executive Committee:—At a meeting of directors held immediately after the shareholders' meeting, Lord Shaughnessy, was elected chairman of the company; E. W. Beatty, President, and Grant Hall, Vice President, and the following were appointed the executive committee: R. B. Angus, E. W. Beatty, Grant Hall, Sir Herbert Holt, Sir Edmund Osler, Lord Shaughnessy.

Switching Locomotives, Grand Trunk Railway.

The 25 switching locomotives which the G.T.R. ordered about a year ago, to be built at its Montreal shops, were first referred to, and their general dimensions given, in Canadian Railway and Marine World for May, 1918. An illustration of one was published in our Apr., 1919 issue, but by an unfortunate mistake, the wrong dimensions were given, those used relating to locomotives built for the Canadian Government Rys. A few days after the May issue was published, G. Cavin, Chief Mechanical Engineer, Canadian Locomotive Co., very courteously called our attention to the error, and the correct dimensions, as originally published in our May, 1918 issue, were republished in our May, 1919 issue. Since then the following additional information has been supplied:—

These locomotives, which are of the A9 class, were designed under instructions from W. H. Sample, General Superintendent of Motive Power and Car Department, and a number of existing G.T. R. standards were embodied in the new design. Following is a comparison of the leading dimensions of these locomotives with previous designs, by which it will be seen that there is a considerable increase in the weight and power of these locomotives.

	Designs.	
	Present	Previous
Cylinders, inches	22 x 26	21 x 26
Driving wheels, inches	51	56
Steam pressure, lb	175	165
Grate area, sq. ft	50.62	27.44
Water heating surface, sq. ft.	1945	1428
Superheating surface, sq. ft	408	268
Weight on drivers, lb	166,000	139,500
Tractive effort, lb	36,708	31,460

The boiler is of the extended wagon top type, designed for 175 lb. steam, with a front end diameter of 68 9-16 in., and 76 in., at the dome course. The courses are fitted together with sextuple rivetted joints. The boiler contains a 28-element Schmidt superheater, and the firebox is equipped with a brick arch, supported on four 3 in. tubes. The boiler accessories include a power operated firedoor and double turret valves for the convenience of the locomotive men and fireman. The inspirators are of the Hancock type, and two Okadee blowoff valves are fitted to the throat sheet of the firebox. The boiler also has 2 sand boxes with Hanlon air sanders.

The frames are of the most substantial design, with jaws fitted with adjustable driving box wedges. The frames are braced with cast steel crossties and the front end has heavy cast steel deck castings and cast steel bumpers, making it very substantial. The driving wheel centers are also of cast steel, with 3½ in. tires shrunk on.

The smoke box has the M.M. Assoc. front end, with the exhaust pipe fitted with multiple nozzle. The cylinders have ample exhaust passages with easy bends. Hunt-Spiller iron is used for the cylinder and steam chest bushings, and for the packing rings in the piston heads and piston valves, and King metallic packing is used around the piston rods.

The cab is spacious and placed well back, providing ample deck space for the fireman, and special attention has been paid to the location of the cab fittings, in order to place brake valves, throttle handle, reverse lever, valves, etc., within easy reach of the crew, and the position of the steam, air, and water gauges is such that they can easily be read.

The tender is carried on two 4-wheel trucks of the equalizer design, with cast steel bolsters of ample proportion and is fitted with 5½ x 10 in. journals and cast iron chilled wheels. The tender frame is made up of 10 in. outside channels and 13 in. inside, and well supported on ends and top with steel plates rivetted to these channels. The back end is provided with cast steel bumper.

The tender tank is of the water bottom type, of 6,000 gal. capacity, fitted with coal space of 9 tons capacity and placed well forward. This coal space is designed so as not to obstruct the view of the locomotive man and fireman when backing up. The top of the tank is provided with hand railing for the convenience of fireman when taking water. The buffer between the locomotive and tender is of the radial type.

The leading dimensions of these locomotives are as follows:—

Fuel	bituminous
Tractive effort	36,703 lb.
Weight in working order and on drivers	166,000 lbs.
Weight of locomotive and tender in work order	296,000 lbs.
Wheel base, driving and total	11 ft 6 in.
Wheel base, locomotive and tender	45 ft 9½ in.
Weight on drivers tractive effort	4.5
Total weight tractive effort	4.5
Heating surface—grate area	38.42
Cylinders	22 x 26 in. simple
Valves	12 in. piston
Driving wheels, diam	51 in.
Driving wheels, tire thickness	3½ in.
Driving journals, all	9½ x 12 in.
Working pressure	175 lbs.
Outside diameter of first ring	68 9-16 in.
Firebox	96⅞ x 75¼ in.
Firebox plates ½ in. tube, ⅜ in. crown, side and back	
Firebox water space—	
Front	5½ in.
Back	4½ in.
Sides	4½ in.
Tubes	178, 2 in.
Flues	28, 5⅜ in.
Tubes and flues, length over sheets	12 ft. 4 in.
Heating surface, tubes and flues	1,751 sq. ft.
Heating surface, firebox, including arch tubes	194 sq. ft.
Heating surface, total	1,945 sq. ft.
Heating surface, superheater	408 sq. ft.
Grate area	50.62 sq. ft.
Tender weight	130,000 lbs.
Tender wheels	33 in.
Tender journals	5½ x 10 in.
Tender water capacity	6,000 gal.
Tender coal capacity	9 tons

We were officially advised May 19 that 18 of 25 locomotives had been completed.

Steel Rails for Canadian Railways.

We are officially advised that, up to May 2, the Algoma Steel Corporation had rolled 90,070 gross tons, and the Dominion Iron and Steel Co., 71,837 gross tons, of steel rails, on orders placed by the Dominion Government in Nov., 1918, the Algoma Steel Corporation's order being completed. The rails were shipped to the following railways:

Algoma Steel Corporation.

	Tons
Canadian National Rys	15,000
Canadian Pacific Ry	69,500
Kettle Valley Ry	2,670
Timiskaming and Northern Ontario Ry	2,000
Toronto, Hamilton and Buffalo Ry	400
Total	90,070

Dominon Iron and Steel Co.

	Tons
Canadian Government Rys.	25,357
Canadian Northern Ry	1,519
Canadian Pacific Ry	30,878
Grand Trunk Ry	13,922
Timiskaming and Northern Ontario Ry	161
Total	71,837
Grand total	161,907

Collection of Freight Charges Over Several Lines—Victor Nadeau bought two carloads of apples in Nova Scotia to be delivered in Quebec Province. The cars went over four lines of railway, the Canadian Northern Quebec Ry. being the final carrier. In making delivery, that company charged $144 as freight, but subsequently discovered that there had been an error of $120 in the freight bill. The company brought an action to recover this amount, but a court, sitting at Joliette, held that the error was due to the company's fault, and it must therefore bear the consequences. The Court of Review at Montreal, Apr. 28, reversed this decision, holding that the company had not lost its right of action by the delivery of the goods, and the acceptance of the amount of freight, which was subsequently found not to have included all the charges. Judgment was given for the company for $120.

Railway Lands Patented—Letters patent were issued during April, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres
Alberta and Great Waterways Ry	3.25
Canadian Northern Ry	790.22
Canadian Pacific Ry	.152
Canadian Pacific Ry. roadbed and station grounds	1.13
Edmonton, Dunvegan and British Columbia Ry	39.28
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co	320.00
Total	1,154.032

The National Steel Car Co. is making delivery of an order of 750 box cars to Canadian National Rys. It is also delivering rolling stock material to the Federated Malay States Government, and forgings for the Paris, Lyons and Mediterranean Ry. and the Midi Ry. of France.

Mainly About Railway People Throughout Canada.

John F. Aitchison, who has been appointed Auditor of Disbursements, G.T.R. and Grand Trunk Pacific Ry., Montreal, was born at Edinburgh, Scotland, May 28, 1880 and entered railway service in 1897, since when he has been, to 1898 junior clerk G.T.R., London, Ont.; 1898 to 1906, clerk G.T.R., St. Thomas, Ont.; 1906 to 1914, travelling accountant, Wabash Rd., Detroit, Mich.; 1914 to Oct. 16, 1918, special auditor, G.T.R., Montreal; Oct. 16, 1918 to May 1, 1919, acting Auditor of Disbursements, G.T.R., and G.T.P.R., Montreal.

Albert Geo. Albertsen, who has been appointed General Agent, Passenger Department, C.P.R., Minneapolis, Minn., was born at Copenhagen, Denmark, Dec. 31, 1887, and entered transportation service Apr. 1, 1908, since when he has been, to Nov. 1, 1909, junior clerk, Thos. Cook & Son; Nov. 1, 1909 to July 1910, Passenger Agent, White Star Line; July 1, 1910 to Mar. 1, 1911, in Passenger Department, Pacific Mail Steamship Co.; Mar. 1, 1911 to Feb. 15, 1919, City Passenger Agent, Travelling Passenger Agent, and City Ticket Agent, C.P.R., all at San Francisco, Cal.

John D. Barnett, who presented the Western University, London, Ont., with a valuable collection of books and who has been given the honorary degree of LL.D., was at one time Master Mechanic, G.T.R., Stratford, Ont.

E. W. Beatty, K.C., President, C.P.R., has been elected a director of the Bank of Montreal.

Sir George McLaren Brown was invested by the King at Buckingham Palace, May 12, as Knight Commander of the Order of the British Empire.

Sir George Bury, formerly Vice President, C.P.R., who has been elected President, Whalen Pulp & Paper Mills, Ltd., Vancouver, B.C., was born at Montreal, Mar. 6, 1866, and entered C.P.R. service in 1883, since when he was, to 1877, clerk in Purchasing Department, and in General Manager's office; 1887 to 1889, Secretary to Vice President, and afterwards to President; 1889 to Mar., 1890, acting Superintendent, sleeping, dining and parlor car service; Mar., 1890 to Sept., 1899, successively, Assistant Superintendent, Chalk River, Ont., and Superintendent, North Bay, Ont.; Sept., 1899 to Feb., 1901, Superintendent, Fort William, Ont.; Feb., 1901 to Feb., 1902, Superintendent Crowsnest Pass Line, Cranbrook, B.C.; Feb. to May, 1902, Assistant General Superintendent, Lake Superior Division, North Bay, Ont.; May, 1902 to 1905, General Superintendent same division, North Bay, Ont.; 1905 to Feb., 1907, General Superintendent Central Division, Winnipeg; Feb., 1907 to Mar. 1, 1908, Assistant General Manager, Western Lines, Winnipeg; Mar. 1, 1908 to Oct., 1911, General Manager, Western Lines, Winnipeg; Oct., 1911 to Dec., 1912, Vice President and General Manager, Western Lines, Winnipeg; Dec., 1912 to Dec., 1914, Vice President in charge of Western Lines, Winnipeg; Dec., 1914 he was appointed Vice President of the company at Montreal and also elected a director and member of the executive committee, which positions he resigned Oct. 10, 1918. He was created a knight bachelor, on the recommendation of the British Prime Minister, June 3, 1917, subsequent to a visit to Russia in connection with the proposed improvement of railway lines there. This work was nullified later by the revolution which commenced while he was in Petrograd. Sir George left Montreal for Vancouver at the end of May to take up his duties.

E. J. Chamberlin, formerly President, G.T.R., and Mrs. Chamberlin, returned to Ottawa towards the end of May, after spending most of the winter in California.

Frederick H. Clendenning, who has been appointed Assistant Foreign Freight Agent, C.P.R., Vancouver, B.C., was born at Montreal, Nov. 9, 1881, and entered transportation service Aug. 1, 1898, since when he has been, to June 30, 1902, junior clerk, Fourth Vice President's office, register clerk, and stenographer, successively, C.P.R., Montreal; July 1, 1902, to Mar. 31, 1903, stenographer and freight clerk, Commercial Agent's office, New York Central and Hudson River Rd., Montreal; Apr. 1, 1903, to Jan. 31, 1904, stenographer, rate and tracing clerk, General Freight Department, C.P.R., Vancouver, B.C.; Feb. 1, 1904, to June 30, 1905, chief clerk, City Freight Office, C.P.R., Victoria, B.C.; July 1, 1905, to Aug. 31, 1908, chief clerk, District Freight Office, C.P.R. and Esquimalt & Nanaimo Ry., Victoria, B.C.; Sept. 1, 1908, to Aug. 16, 1909, City Freight Agent, C.P.R., and District Agent, Esquimalt & Nanaimo Ry., Victoria, B.C.; Aug. 17, 1909, to Mar. 31, 1911, Assistant General Freight Agent, C.P.R., Vancouver, B.C.; Apr. 1, 1911, to Jan. 31, 1914, District Freight Agent, C.P.R., Vancouver, B.C.; Feb. 1, 1914, to May 1, 1919, Division Freight Agent, Steamship Lines, C.P.R., Vancouver, B.C. From Nov. 1, 1918, he was loaned to the British Ministry of Shipping (Canada).

J. F. Aitchison,
Auditor of Disbursements, Grand Trunk Railway.

Percy Acton Clews, appointed recently as General Agent, Freight Department, G.T.R. and Canadian Express Co., London, Eng., was born at Rock Ferry, Cheshire, Eng., Jan. 19, 1882, and entered transportation service in March, 1898, since when he has been, to Jan., 1907, with G. H. Fletcher Co., ship owners and forwarding agents, Liverpool, Eng.; Jan., 1907 to Jan., 1909, freight clerk, G.T.R., Liverpool, Eng.; Jan. to July, 1909, freight clerk, G.T.R., London, Eng.; July, 1909 to Apr., 1910, City Agent, G.T.R., London, Eng.; Apr., 1910 to Aug., 1914, acting Agent G.T.R., Antwerp, Belgium; Aug., 1914 to Dec., 1918, City Agent, G.T.R., London, Eng.

C. S. Cunningham, who died at Lansing, Mich., recently, aged 65, was in G.T.R. service from 1896 to 1913 and held the positions of Assistant Superintendent, London; Superintendent, St. Thomas, Ont., and Superintendent at Detroit, Mich. Latterly he occupied a position under the Michigan Board of Railway Commissioners.

Charles E. Dewey, Freight Traffic Manager, G.T.R., Montreal, died at Atlantic City, May 15, of Bright's disease, after a short illness. He was born at Cheshunt, Kent, Eng., Oct, 2, 1973, and entered railway service in Nov., 1888, since when he had been, to Apr., 1896, in G.T.R. service, Toronto; Apr., 1896 to Aug., 1897, chief clerk, Division Freight Agent's office, G.T.R., Stratford, Ont.; Aug., 1897 to Aug., 1899, chief clerk, Division Freight Agent's office, G.T.R., Hamilton, Ont.; Aug., 1899 to July, 1902, Division Freight Agent, G.T.R., Stratford, Ont.; July, 1902 to July, 1907, Division Freight Agent, G.T.R., Toronto; July, 1907 to Apr., 1908, Assistant General Freight Agent, G.T.R., Montreal; Apr., 1908 to May 1, 1911, General Freight Agent, Central Vermont Ry., St. Albans, Vt.; May 1, 1911 to 1913, General Freight Agent, Grand Trunk Pacific Ry., Winnipeg, and from 1913, Freight Traffic Manager, G.T.R. system, Montreal. A funeral service was held at Westmount, Que., May 18, and burial took place at Toronto, May 19, a large number of representatives of various departments of the G.T.R., Canadian Express Co., and other transportation companies, being present. The pallbearers were J. E. Dalrymple, Vice President, Traffic, G.T.R.; John Pullen, President, Canadian Express Co.; P. Paton, H. C. Martin, F. J. Watson, L. Macdonald. S. E. Dewey, General Eastern Freight Agent, G.T.R., New York, and F. E. Dewey of Robt. Reford Co., Toronto, are brothers.

Howard Alexander Dixon, who was appointed Chief Engineer, Western Lines, Canadian National Rys., Winnipeg, recently, was born at Sand Hill, Ont., Oct. 7, 1878. He was educated at Jarvis St. Collegiate School, Toronto, and School of Practical Science, Toronto University, graduating with the degree of B.A.Sc., with honors, in 1901. He qualified as Ontario land surveyor in 1903 and Manitoba land surveyor in 1906, and is a member of the American Railway Engineering Association. He entered Canadian Northern Ry. service in 1903, since when he has been, to 1904, draftsman, Winnipeg; 1904 to 1905, Resident Engineer, Winnipeg; 1905 to 1906, Resident Engineer, Fenton, Sask.; 1906 to 1910, Locating Engineer, Western Lines; 1910 to 1912, Division Engineer, Maryfield, Sask.; 1912 to 1915, District Engineer, Resplendent, B.C., 1915 to Apr., 1919, District Engineer, Vancouver, B.C.

Charles Flaherty, station master, G.T.R., Guelph, Ont., who completed 51 years of service with the G.T.R., May 7., is said to be the oldest employe of the company in point of continuous service. He will be 65 in August when he will be entitled to a pension. He and his wife have, for several years, had an annual pass over the entire G.T.R. system.

William H. Gordon, appointed recently as Trainmaster, C.P.R., Field, B.C., was born at Montreal, Sept. 21, 1875, and entered C.P.R. service Apr. 2, 1896, since when he has been, to 1901, carpenter and bridgeman, Field, B.C.; 1901 to 1905, Bridge Foreman and Shop Foreman, Calgary, Alta.; 1905 to 1907, Assistant Bridge and Building Master, Calgary, Alta.; June, 1907 to 1912, Bridge and Building Master, Medicine Hat, Alta.; June, 1912 to Oct., 1913, Trainmaster, Edmonton, Alta.; Oct., 1913, to Jan. 10, 1919, Trainmaster, Lethbridge, Alta.

C. R. Hosmer, of the C.P.R. directorate, who has been in the Royal Victoria Hospital, Montreal, for some three months, having had to undergo two operations, was reported May 26 to be improving satisfactorily and to have been able to go out for a couple of motor rides.

T. C. Hudson, who was recently appointed General Master Mechanic, Quebec District, Canadian National Rys., Joliette, Que., was born at Brockville, Ont., Feb. 20, 1873, and entered railway service May 1, 1886, since when he has been to Jan., 1887, messenger C.P.R., Carleton Jct., Ont.; Jan., 1887 to Jan., 1892, machinist apprentice, C.P.R., Carleton Jct., Ont.; Jan., 1892 to June, 1901, general machinist, C.P.R., Chapleau, Ont. and other points; June, 1901 to May, 1903, chargeman, C.P.R., Smiths Falls, Ont.; May, 1903 to Jan., 1906, Foreman General Repairs, C.P.R., Carleton Jct., Ont.; Jan. to Dec., 1906, Locomotive Foreman, C.P.R., Ottawa; Jan. to July, 1907, Shop Foreman, Canadian Northern Ry., Parry Sound, Ont.; July, 1907 to May, 1908, Master Mechanic, Canadian Northern Quebec Ry., Shawinigan Jct., Que.; May, 1908 to Aug., 1915, Master Mechanic, C.N.Q.R., and Quebec and Lake St. John Ry., Quebec Que.; Aug., 1915 to Dec., 1918, Master Mechanic, lines east of Ottawa, Canadian Northern Ry., Joliette, Que.

B. S. Jenkins, formerly General Superintendent, C.P.R. Telegraphs, at Winnipeg, returned there early in May, with Mrs. Jenkins, after spending the winter in California and British Columbia. He has resumed his farming operations in the Lake Manitoba district. His son, Major Roy Jenkins, Assistant Adjutant, 27th Battalion, is expected to return shortly from overseas.

George Frederick Knight, who has been appointed Superintendent St. Malo shops, Canadian National Rys., Quebec, Que., was born at Charlottetown, P.E.I., Apr. 3, 1879, and entered railway service Nov., 1896, since when he has been, to Nov., 1901, apprentice and machinist, Intercolonial Ry., Moncton, N.B.; Dec., 1901 to Sept., 1904, machinist, Albion Iron Works, Vancouver, B.C.; Apr., 1905 to 1908, draftsman, Intercolonial Ry., Moncton, N.B.; 1908 to 1909, engineer in charge of office staff equipping new I.R.C. shops, at Moncton, N.B., Riviere du Loup, Que., Halifax, N.S., and Charlottetown, P.E.I.; 1910 to 1911, draftsman, Mechanical Department, I.R.C., Moncton, N.B.; 1911, Mechanical Engineer, Chief Engineer's office, I.R.C., Moncton, N.B.; 1912 to 1914, Efficiency Engineer, Power Plant, Canadian Government Rys., Moncton, N.B.; 1915 to 1918, Assistant Engineer, under Signal and Electrical Engineer, C.G.R., Moncton, N.B.; Sept., 1918 to May, 1919, engineer in charge of equipping St. Malo shops, C.G.R.

Mrs. E. H. Lingo, who died at Denison, Texas, May 10, was mother of Mrs. H. G. Kelley, wife of the President, G.T.R. and Grand Trunk Pacific Ry.

J. D. McDonald, who has been appointed General Passenger and Baggage Agent, Grand Trunk Western Lines Rd. (U.S.R.A.), Chicago, Ill., was born at Toronto, Aug. 27, 1885, and entered G.T.R. service in 1868, since when he has been, to 1870, messenger, Toronto; 1870 to 1875, Assistant Ticket Agent, Toronto; 1875 to 1896, Ticket Agent, Buffalo, N.Y.; 1896 to May, 1902, City Passenger and Ticket Agent, Buffalo, N.Y.; May, 1902 to Mar. 1, 1911, District Passenger Agent, Toronto; Mar. 1, 1911 to Oct., 1918, Assistant General Passenger Agent, Chicago, Ill.; Oct., 1918 to May, 1919, Assistant General Passenger Agent, Eastern Regional District, U.S. Railroad Administration, Chicago, Ill.

J. D. McDonald.
General Passenger and Baggage Agent, Grand Trunk Western Lines Railroad.

Hamilton Grant McMicken, who died in London, Eng., recently aged 72, was at one time engaged in private business at Windsor, Ont., and afterwards at Winnipeg, and owned and operated the first steamboat for hire on Lake Winnipeg, the first propeller steamboat on the Red River, and the first omnibus line at Winnipeg. He entered Great Northern Ry. service in 1885, and was appointed Canadian Traffic Agent in 1897. In 1898 he was appointed European Traffic Agent at London, Eng

Miss Ethel Mackenzie, daughter of Sir Wm. Mackenzie, left Toronto early in May for France, to visit her sister, the Countess de Lesseps.

Wilmot D. Matthews, one of the C.P.R. directors, who died at Toronto, May 24, was born at Burford, Ont., June 22, 1850, and was engaged in the grain business since 1873. He was one of the promoters of the St. Lawrence and Chicago Steam Navigation Co. in 1890, the Toronto and Montreal Steamboat Co. in 1895, and the Montreal and Lake Erie Steamship Co. in 1905, and was at one time President, Kingston and Pembroke Ry. after it became owned by the C.P.R. He was also at various times on the boards of the Northern Navigation Co., Toronto Ry., Canadian General Electric Co., Steel Co. of Canada, Dominion Bank, and several other financial and industrial companies. The funeral took place at Toronto, May 27, amongst the honorary pallbearers being Lord Shaughnessy, chairman, and Sir Edmund Osler, director, C.P.R.; Hon. F. Nicholls, President, Canadian General Electric Co.; L. H. Clarke, President, Toronto Harbor Commission; J. H. G. Hagarty, formerly of the St. Lawrence and Chicago Steam Navigation Co.; R. Hobson, President, Steel Co. of Canada, and Jas. Carruthers, formerly President, Canada Steamship Lines Ltd.

William Mills, who had been employed in the Transportation Department, G.T.R., Belleville, Ont., continuously for 40 years, died at Brockville, Ont., May 12.

Jno. E. Muhlfeld, at one time Superintendent of Rolling Stock, Intercolonial Ry., Moncton, N.B. and latterly President, Pulverized Fuel Equipment Corporation, New York, N.Y., has resigned the latter position, and with other engineers, has formed the Railway & Industrial Engineers, Inc., with offices in New York, to act as consulting and advisory engineers between bankers, railways and industrial corporations.

Sir Augustus Nanton, one of the C.P.R. directors, went from Winnipeg to attend the company's annual meeting in Montreal, early in May.

Godefroy Pelletier, who was appointed Assistant Superintendent Canadian National Rys., Levis, Que., recently, was born at Isle Verte, Que., Nov. 28, 1872, and entered railway service Nov. 25, 1889, since when he has been, to Sept. 20, 1890, relieving operator, Intercolonial Ry., at various points; Sept. 20, 1890 to Jan. 20, 1897, operator and dispatcher I.R.C., Riviere du Loup, Que.; Jan 28. 1897 to Nov. 1, 1917, dispatcher, I.R.C., Riviere du Loup, Que.; Nov. 1, 1917 to Mar. 12, 1918, Assistant Chief Dispatcher, I.R.C., Riviere du Loup, Que.; Mar. 12, 1918, to Jan., 1919, Assistant Superintendent, Canadian Government Rys., Levis, Que.

William Phelan, appointed Car Accountant, C.P.R., Montreal, recently, was born there, Mar. 5, 1875, and entered C.P.R. service Nov. 29, 1889, since when he has been, to Feb. 1, 1890, office boy; Feb. 1, 1890 to Nov. 1, 1892, car record clerk; Nov. 1, 1892 to June 30, 1897, mileage and tonnage statistical accountant clerk; July 1, 1897 to June 30, 1902, chief mileage and statistical clerk; July 1, 1902 to Feb. 28, 1903, chief per diem clerk; Mar. 1, 1903 to Oct 31, 1918, chief clerk to Car Accountant, all at Montreal.

Alfred Price, General Manager, Eastern Lines, C.P.R., has removed from 457 Roslyn Ave., Westmount, to 45 St. Mark St., Montreal.

Lord and Lady Shaughnessy and Hon. Marguerite Shaughnessy, will go to their seaside house, Fort Tipperary, St. Andrews, N.B., about the middle of June.

Arthur L. Smith, who has been appointed Superintendent, Toronto Union Station, was born at Toronto, and was for some time in C.P.R. service as Superintendent, District 3, Eastern Division, Montreal; Superintendent, District

1, Lake Superior Division, Sudbury, Ont., and Superintendent, London Division, Ontario District, London, Ont., resigning the last named position in Mar., 1917, on his appointment as President and General Manager, Algoma Eastern Ry., Sudbury, Ont., which position he resigned in Jan., 1918.

Lieut.-Col. G. R. Starke, President, Dominion Transport Co., and Mrs. Starke, entertained Sir Robert and Lady Baden-Powell at a buffet tea, at the Ritz-Carlton, Montreal, May 23. Among those president being Lord and Lady Shaughnessy, Sir Thos. and Lady Tait, A. D. MacTier, Vice President, Eastern Lines, C.P.R., and Mrs. MacTier.

Wm. Herbert Thompson, who was appointed Chief Dispatcher, C.P.R., Edmonton, Alta., recently, was born at Bobcaygeon, Ont., Dec. 26, 1886, and entered railway service May 15, 1906, since when he has been, to July, 1909, operator and relieving agent, Northern Division, G.T. D.; July, 1909 to Aug., 1910, dispatcher, G.T.R., Lindsay, Ont.; Sept. to Dec., 1910, operator, C.P.R.; Calgary, Alta.; Jan. to Mar., 1911, operator, C.P.R., Red Deer, Alta.; Mar. to Aug., 1911, operator, C.P. R., Calgary, Alta.; 1911 to Aug., 1914, dispatcher, C.P.R., Calgary, Alta.; Aug., 1914 to Oct., 1918, dispatcher, C.P.R., Edmonton, Alta.

Ivan E. Vallee, whose appointment as Chief Engineer and Director of Railways and Harbors, Quebec Public Works Department, and Engineer, Quebec Public Utilities Commission, Quebec, Que., was announced in our last issue, was born there, Feb. 11, 1877, and graduated from Laval University, Montreal, in 1910, with the degree of B.A.Sc. in civil engineering, and as chemical engineer. He entered Quebec Government service in May, 1910 as first Assistant Engineer and Assistant Director of Railways and Harbors, and held that position to Apr. 17, the date of his present appointment.

H. H. Vaughan, formerly assistant to Vice President, C.P.R., and now Vice President and General Manager, Dominion Bridge Co., and Dominion Copper Products Co., Montreal, has been elected a director of Armstrong Whitworth of Canada, Ltd.

F. L. Wanklyn, General Executive Assistant, C.P.R., and Mrs. Wanklyn, have opened their summer house at Ste. Anne de Bellevue, near Montreal, for the season.

John Wardrop, whose appointment as General Agent, Industrial and Resources Department, Canadian National Rys., Winnipeg, was announced in a recent issue, was born at Montreal, June 21, 1888, and entered railway service in 1908, since when he has been, to 1910, Immigration Agent, 1910 to 1915, Assistant Industrial Commissioner, 1915 to 1919, Agent in charge of U.S. and European Immigration, all with Canadian Northern Ry., Winnipeg.

H. E. Whittenberger, who has been appointed Federal Manager Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich., was born at Peru, Ind., Nov. 9, 1869, and entered transportation service in 1885, since when he has been, 1885 to Feb., 1897, in various positions, Wabash Rd.; Feb., 1897 to May, 1902, Trainmaster, Middle Division, G.T.R.; May, 1902 to Sept., 1904, Superintendent, Denver & Rio Grande Ry.; Sept., 1904 to Jan., 1906, Superintendent, Cincinnati, Hamilton & Dayton Rd., Indianapolis, Ind.; Jan., 1906 to Sept. 30, 1907, Superintendent, Kansas City & Southern Rd.; Sept. 30, 1907 to Oct. 17, 1912, Superintendent, Eastern Division, G.T.R., Montreal; Oct. 17, 1912 to Jan. 14, 1913, Superintendent, Middle Division, G.T.R., Toronto; Jan. 14, 1913 to May 1, 1918, General Superintendent, Ontario Lines, G.T.R., Toronto; May 1, 1918 to May 1, 1919, General Manager, Grand Trunk Western Lines Rd. (U.S.R.A.), Detroit, Mich.

E. R. Wood, of the Canadian National Rys. directorate, returned to Toronto at the end of April, after spending most of the winter in California.

Traffic Orders by Board of Railway Commissioners.

Baggage Car Traffic Regulations.

General order 262, May 8—Re general order 151, Nov. 8, 1915, prescribing regulations governing baggage car traffic for observance of every railway company within the legislative authority of the Dominion Parliament as amended by general orders 179, 181 and 191, dated respectively, Jan. 29, Feb. 3, and May 26, 1917; and the C.P.R.'s application for an order further amending rule 26 (d) of the regulations: A question having been raised as to whether, in view of the punctuation of the section, the words "otherwise the carrier shall not be liable" apply only to the cause of damage or delay, as set out in the second sentence, and not to non-delivery, as set out in the first sentence of the rule; upon reading what is alleged in support of the application to amend, and to make the intention clear, it is ordered that rule 26, sub-section (d) of the regulations governing baggage car traffic be, further amended by striking out the comma, after the word "receptacle," and before the word "otherwise," in the last line of the sub-section, and substituting therefor a period, making the words, "otherwise the carrier shall not be liable," a separate sentence.

Freight Rate on Logs.

28289, May 2.—Re complaint of Adolph Lumber Co., of Baynes Lake, B.C., against rate charged by Great Northern Ry. on shipments of logs from Dorr, B.C., to Baynes Lake, B.C. Upon hearing the complaint at Nelson, B.C., on Feb. 21, 1919, the complainant and the Great Northern Ry. Company being represented, and upon reading the further written submissions filed on behalf of the complainant and of the G.N.R., and the report and recommendation of the board's Chief Traffic Officer, it is ordered that the complaint be dismissed.

Stencilling Inches on Inside Walls of Grain Cars.

28,316, May 14. Re application of the Grain Claims Bureau, Ltd., on behalf of grain shippers in Western Canada, for an order directing railway companies to show on bills of lading covering grain shipped from points in Manitoba, Saskatchewan and Alberta, the depth in inches ofthe grain loaded in the cars, or, if this information is shown on the bills of lading by the shippers, to authorize their agents, after examination of the cars, to isgn bills of lading whereon this record is shown; upon heading the matter at Winnipeg, March 3, 1919, in the presence of counsel and representatives for the Canadian Pacific, Grand Trunk Pacific, and Canadian National Railways, the applicant being represented and upon its appearing to the board, desirable that no action should be taken upon the application until a further opportunity shall be given of judging as to the practical effect of general order 205, Aug. 15, 1917, requiring railway companies to stencil inches on the inside walls of cars used in the grain traffic in Manitoba, Saskatchewan and Alberta, so as to show the depth in grain loaded therein, is set forth in the order; it is ordered that the application be dismissed.

Commodity Rates on Glass Bottles.

28,348, May 19. Re special commodity rates on glass bottles, in carloads, from Wallaceburg, Ont., to London, Kitchener, Hamilton, and Toronto and Montreal, effective under the board's judgment of July 30, 1904; the supplemental schedules filed by the Canadian Pacific and Grand Trunk Railways on June 24 and 27, 1918, respectively, announcing the cancellation on July 25 and 28 of the commodity rates on bottles from Toronto, Hamilton and Montreal; and the board order 27,438, July 17, 1918, made upon the application of the Montreal Board of Trade, suspending the operation of said supplemental schedules pending hearing at a date to be fixed by the board, and the later application of the Canadian Pacific and Grand Trunk Railways, for leave also to cancel the said commodity rates from Wallaceburg; upon hearing the matter at Ottawa, Sept. 10, 1918, in the presence of counsel for the C.P.R., the Canadian Manufacturers' Association, the Montreal Board of Trade's Transportation Bureau being represented at the hearing, and upon reading the exhibits filed in support of the application and in opposition thereto, and the report of the board's Chief Traffic Officer; it is ordered that order 27,438, July 17, 1918, suspending C.P.R. supplement 77 to tariff C.R.C. no. E 3,210, and C.P.R. supplement 73 to tariff C.R.C. no. E 3,426, cancelling the special commodity rates on glass bottles, in carloads, from Hamilton, Toronto and Montreal, Quebec, be rescinded, and that leave be granted the C.P.R. and G.T.R. to cancel the special commodity rates on bottles, in carloads, from Wallaceburg, made effective in pursuance of the said judgment of July 30, 1904; the said cancellations to take effect simultaneously.

Milk Tariffs.

28,355, May 28. The application on behalf of National Dairy Council for an order suspending C.P.R. tariff C.R.C. no. E 25, to take effect June 1, 1919, increasing rates on milk in passenger or mixed passenger and freight train service; and application of Toronto Board of Trade for an order suspending G.T.R., tariff 693, C.R.C. no. 22,756, effective June 1, 1919, and other similar tariffs, increasing rates for transportation of milk in baggage cars; upon reading what is filed in support of the application, and on behalf of the C.P.R. and G.T.R., and upon its appearing that other railway companies have filed with the board similar increased tariffs for the transportation of milk in baggage cars; it is ordered that the following tariffs, namely:—C.P.R. tariff C.R.C. no E 25; G.T.R. tariff, C.R.C. no. E 2,756; Canadian National Rys'. tariff, C.R.C. no. E. 29; New York Central Rd. tariff C.R.C. 249; Quebec, Montreal and Southern Ry. tariff, C.R.C., 271; Napierville Jct. Ry. tariff, C.R.C., 115, and Montreal and Southern Counties Ry. tariff, supplement 2, to C. R.C. 22, be suspended pending a hearing of the matter to be held in Ottawa, June 10, 1919.

Problems in Design and Maintenance of Car Trucks in Relation to Maintenance of Roadway.

The paper on the above subject, read by W. J. Hyman, Chief Draftsman, Car Department, G.T.R., before the Canadian Railway Club, and published in Canadian Railway and Marine World for May, elicited considerable discussion, in the course of which much data of interest was brought out. An abstract of the discussion is given as follows:—

E. J. McVeigh, General Storekeeper, G.T.R.—I do not know of any railway in America that makes a practice of grinding cast iron chilled wheels that are going under freight cars, although it is a fact that before the use of cast iron wheels was abandoned under passenger cars, some roads had all the cast iron wheels for passenger cars ground before application, so as to make the wheels more perfect, orders reading that the wheels had to be ground, centered and balanced. When the American Railway Engineering Association set out to make an investigation, it was only considering it from the standpoint of the road department. Its recommendation was that flat spots should be reduced, the maximum being 1½ in., and it actually did reduce it to ½ in. I have felt for a long time that the 2½ in. flat spot was much too great.

E. A. Cunningham, Efficiency Engineer, Vice President's office, C.P.R.—The Pennsylvania Rd. grinds its cast iron wheels, and has been doing so for years. The practice has become so common with it that it keeps no record of the wheels so ground.

W. J. Hyman (in reply to queries).—My information is to the effect that there are only two railways in America that grind cast iron wheels, the Pennsylvania and the Atchison, Topeka and Sante Fe, and it is the custom to take wheels with flat spots out of service and grind them once, but the Sante Fe claims that its has ground the same pair of wheels three times for flat spots, and has obtained good service from them after the third grinding.

In reply to a query as to whether the ground wheels operate under the same conditions as prevail on Canadian lines, he said:—We accept Sante Fe cars on our lines, and if we can do this and not have trouble with them, why should not wheels that have been ground and applied to our own equipment in this climate give good results?

W. H. Sample, Superintendent of Motive Power, G.T.R.—It is my understanding from information received, that the Sante Fe is not applying ground wheels to all its equipment, and the cars so equipped do not leave its line. I think there should be some regulated practice in regard to the grinding, and the depth of chill will govern the extent to which the flat spot may be ground out. If it goes beyond, or near the end of the chill, it would be unsafe to operate the wheel except in light service.

W. J. Hyman.—A 2½ in. flat spot will take 1-16 in. exactly to grind out. The chill on the wheel, according to M.C.B. specification, must be not less than ½ in., nor more than 1 in., and the average chill is ⅝ in. thick, although it runs down in some cases to ⅞ in., but it is very seldom we find a real good chill more than ⅝ in. deep, from which point it begins to string out into the softer metal. It would, therefore, be possible to grind a 2½ in. flat spot three times, and retain a factor of safety. But I think that if a wheel was ground twice for 2½ in. flat spots, it would be the maximum we could expect. If the flat spots were only 1½ in. instead of 2½ in., we would be able to grind the wheels four times with safety, as 1-32 in. will remove a 1½ in. flat.

E. A. Cunningham—In Pennsylvania Rd. practice, the wheels are ground on an ordinary grinder with two heads. The center of the axle is made to revolve the wheels against the grinder, which has from ¾ to 1 in. bearing against the wheel. The grinder moves across the face of the wheel, and a plentiful supply of liquid is used to prevent the wheel from becoming hot. 2½ in. flat spot is the limit to which they go. An air hoist is used for putting the wheels in and out of the grinder, and as soon as finished, they are put back in service. The cost of the work is about 26c. This practice has been followed for many years, and gives good results.

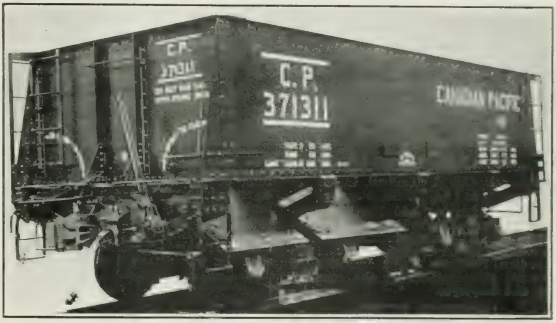
E. J. McVeigh—I made a test at Chicago on wheels having flat spots from 2½ to 4 in. We had them ground, and broke some across where the flat spot had been. With the 4 in. flat, we found the wheel had been burnt, but in the smaller spots, there was nothing to indicate that the wheels had received injury. The chills were found to average from ⅝ to ¾ in. But there is no difficulty in giving a 1 in. chill, and the manufacturers would do so if called upon, and as many grindings as desired might be given. Admitting the tendency to weaken, the inside of the tread might be strengthened by putting more metal there, should the practice of grinding be found to be practical and economical. I believe the day will come when we will put a cast wheel under a car until it has been ground smooth, because, in the tests mentioned, not a wheel was found to be true.

E. A. Cunningham—The M.C.B. Association has the question of reducing allowable flat spots from 2½ to 1½ in. under discussion.

W. J. Hyman—Sometime ago, a test was made by a western university, by means of an instrument which recorded photographically the force of the blow delivered by flat spots. In these tests, it was found that a 3 in. flat spot, under a car going 16 m.p.h., and carrying a load of 20,000 lbs., strikes a blow of 104,000 lbs. Under similar conditions, a 2 in. flat spot produces a blow of 2,000 lbs., and a 1½ in. flat spot, 20,000 lbs. This would prove the value of reducing the flat spots from 2½ to 1½ in.

General Service Cars, Canadian Pacific Railway.

The accompanying illustration shows one of the 140 Hart-Otis general service cars built for the C.P.R. by Canadian Car & Foundry Co. at its Montreal plant, as announced previously in Canadian Railway and Marine World.



General Service Car, Canadian Pacific Railway.

The floor of the car is composed of 8 drop doors, 4 on each side, hinged to the center sill, and operated in pairs. The operating gear is the Hart-Otis Car Co.'s latest improved rolling shaft type, the operating shaft being 2½ in. open hearth mild steel. The car floors have an apex 11½ in. high along the center line, by 2 ft. 4 in. at the floor line, and are built up of steel plates and angles, entirely covering the center sills. Following are the chief dimensions:—

Length inside coupler knuckles	[illegible] ft. 4½ in.
Length over end sills	[illegible] ft. 4 in.
Length inside	[illegible] ft. [illegible] in.
Width overall	9 ft. 11¼ in.
Height inside	[illegible] ft.
Height from rail	[illegible] ft. [illegible] 13-16 in.
Height from rail to floor	[illegible] ft. [illegible] 13-16 in.
Truck centers	[illegible] ft.
Wheel base of truck	5 ft. 6 in.
Wheel base of car	18 ft. 6 in.
Doors on each side	4
Width of door opening	[illegible]
Length of door opening, intermediate	[illegible] ft. 7 in.
Length of door opening, end	4 ft.
Capacity	[illegible] cu. ft.
Weight	[illegible] lb.

The Dominion Dredging Co., Ottawa, which has the contract for section 1, Welland Ship Canal, has opened a branch office in the Canadian Bank of Commerce Building, St. Catharines, Ont., and is getting its plant and machinery in order to resume operations, which will be in charge of E. A. Larmonth, Vice President, and H. A. Foster.

Canadian Transportation Men, Engineers, Etc. in the War.

The Canadian Military and Civil Engineers' Association has been formed by officers of engineering units of the Canadian Expeditionary Forces, according to a statement made by Maj. F. J. O'Leary, late Brigade Major, First Canadian Divisional Engineers, who arrived in Canada recently from France. The object of the association is announced to be to protect the interests of its members regarding pensions, war-service gratuities and civil re-establishment, as well as rendering financial assistance where required. The officers, elected in France, include the following: Gen. Sir A. C. MacDonnell, Col. A. McPhail, Lt.-Col. J. M. Rolston, and Lt.-Col. E. Peppler.

Railway yard at Bapaume, France, Nov. 29, 1917. From photograph loaned by C.P.R.

The Timiskaming and Northern Ontario Railway Men's Patrioti Association to Mar. 31, contributed $99,446.50 to the Canadian Red Cross Society and the Canadian Patriotic Fund, exclusive of personal subscriptions by the commission and employes.

PERSONAL NOTES.

Capt. P. Beasley, of the Royal Air Force, who returned to Victoria, B.C., May 14, after nearly four years in the Imperial Army, is son of H. E. Beasley, General Superintendent, Esquimalt and Nanaimo Ry. He enlisted early in 1915 and after preliminary training at Dayton, Ohio, completed his training in England, where he obtained a commission in the Royal Naval Air Service. He went to France in 1916 and participated in many of the raids over German territory, and was latter engaged with the bombing and coast patrol in the neighborhood of Dunkirk, France. He visited Victoria on a short furlough in 1917 and on his return to France participated in the Ostend and Zeebrugge episodes. He went to England later and was appointed commanding officer of the Marine Observers' School on the Isle of Sheppey in Kent.

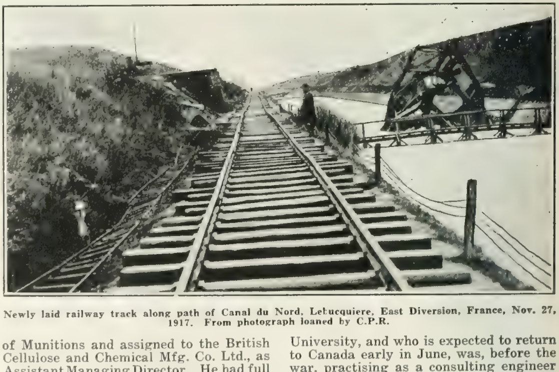
Major-General Garnet B. Hughes, C.B., C.M.G., D.S.O., who is Assistant Managing Director, British Cellulose and Chemical Mfg. Co. Ltd., Derby, Eng., is a civil engineer and was at one time in Mackenzie, Mann & Co.'s service and entered British Columbia Electric Ry. service, Sept. 4, 1911 as Resident Engineer on the construction of the Saanich Suburban line, and also took charge of extensive track reconstruction in Victoria, B.C. He also supervised track maintenance work for the company, on Vancouver Island. He resigned in March, 1914 on his appointment as District Engineer for the Dominion Government at Victoria, B.C. Prior to the war he held the rank of major in the 50th Regiment, Victoria, B.C., and on the outbreak of war was appointed Brigade Major, 3rd Canadian Infantry Brigade, at Valcartier, Que., went overseas early in the war, and held that position until after the second battle of Ypres. On the formation of the 2nd division, he was given command of a brigade and promoted to Brigadier-General. When the 5th division was formed early in 1917, in England, he was recalled from France and given command of that division with the rank of Major-General. He held this command until the 5th division was broken up early in 1918, when he was appointed General Officer Commanding troops at Witley Camp, Eng., which position he retained for about three months, when he was seconded to the Ministry of Munitions and assigned to the British Cellulose and Chemical Mfg. Co. Ltd., as Assistant Managing Director. He had full charge of the largest plant under erection for the manufacture of cellulose acetate, commonly called "dope," with which all aeroplanes had to be treated prior to going to France, to render them both fire and weather proof.

Col. B. N. Humble, D.S.O., who was appointed Manager, Empress Hotel, C.P. R., Victoria, B.C., recently, was, at the outbreak of war, Captain, 1st British Columbia Regiment. After being at Valcartier, Que., he proceeded to France in Mar., 1915. He was appointed Officer Commanding no. 1 Co., 7th Battalion, June 1, 1915, and Staff Captain, 2nd Infantry Brigade, Oct., 1915, and was promoted to Major the following month. He commanded the 7th Brigade temporarily on two occasions during the absence of the commanding officer while wounded. He was mentioned in dispatches Nov. 13, 1916 and was awarded the D.S.O. for services in the field, Jan. 1, 1917. He was appointed to command the Canadian Railway Troops in England, Mar. 18, 1917, promoted Lieut.-Col., Dec. 18, 1917, and Colonel, July 5, 1918. Prior to the recent war, he had served the Riel Rebellion, in the Northwest Territories, in 1885, was with the 7th Fusiliers, London, Ont., 3rd Victoria Rifles, Montreal, 1900 to 1912, and 6th Regiment Duke of Connaught's Own Rifles, 1912 to 1914.

Col. Hon. Angus McDonnell, C.M.G., who returned from France recently, is a partner in the firm of Grant Smith & McDonnell, general contractors, Vancouver, B.C. He was second in command of the Canadian Railway Troops under **Brigadier-General J. W. Stewart, C.B.,** of Foley, Welch & Stewart, railway contractors, who has also returned after long service in France and has since organized the firm of Jno. W. Stewart & Co., railway contractors, at Winnipeg, which has received several contracts from the Canadian National Rys.

T. McGuiness, who has been appointed acting Traffic Inspector, Regina Municipal Ry., Regina, Sask., was on active service with the 239th Construction Battalion, and prior to enlistment, was overhead foreman, Regina Municipal Ry.

Brig.-Gen. C. H. Mitchell, C.B., C.M.G., D.S.O., who has been appointed Dean of the Faculty of Applied Science, Toronto University, and who is expected to return to Canada early in June, was, before the war, practising as a consulting engineer as a partner, in C. H. and P. H. Mitchell, Toronto. He is a Toronto University graduate and went overseas as Major in the Intelligence Department of the C.E.F., and was shortly afterwards transferred to the Imperial Army and placed on the General Staff. On account of the acknowledged excellence of his work, his promotion was rapid, passing through the various grades to Brigadier-General, and first class staff officer in charge of the intelligence work



Newly laid railway track along path of Canal du Nord, Lebucquiere, East Diversion, France, Nov. 27, 1917. From photograph loaned by C.P.R.

for the Second Army. In addition to the decorations already mentioned, he has been awarded the following: Officer of the Legion of Honor, France; Croix de Guerre, and officer of the Order of Leopold, Belgium; Croci di Guerre and officer of the Crown of Italy, Italy. The Engineering Institute of Canada's Montreal Branch, has decided to entertain him at dinner on his arrival at Montreal.

Capt. D. J. Murphy Jr., formerly Superintendent, Dominion Atlantic Ry., Kentville, N. S., who is acting as Assistant Canadian Red Cross Commisioner for France will remain in France for some time owing to the volume of Red Cross work still to be done there. He went overseas in the spring of 1916 as captain with No. 1 Division Supply Company, from Halifax, N. S., and was latter transferred to No. 3 Canadian Field Ambulance. After taking an active part in this capacity through all the principal battles he was loaned to the Red Cross Sept. 1, 1918, and during the heavy fighting at Mons was in personal charge of Red Cross supplies, arriving at Jemappes, 2½ miles from Mons, the day before the signing of the armistice, later following the attacking parties into Mons on Nov. 11 with supplies for the posts and emergency hospitals. He has been made a life member of the Belgian Red Cross Society and was presented with its gold medal. He was also in charge of Red Cross supplies for Cambrai, Denham and Valenciennes. His duties necessitated his motoring many times over the entire battlefields of France and Belgium. Premier Clemenceau in speaking in the Trench Chamber of Deputies, on Marshal Foch's report on the last 100 days fighting, and the wonderful part of the British troops in feeding so many civilians in the captured towns, said, "In this work, I want to make special reference to the achievements of the Canadian Red Cross; this work, under the supervision of Capt. Murphy, reflects great credit on him, and for his work he has been commended to military headquarters by several of the most prominent generals."

Capt. R. S. Reford, who has been appointed aide de camp to Viscount French, Commander in Chief of the forces in Ireland and Lord Lieutenant, is a son of R. W. Reford of the Robert Reford Co., steamship agents, Montreal. At the outbreak of war, he was attending Oxford University, and joined the King Edward Horse, later being transferred to the Sherwood Foresters, with which regiment he served about 18 months in France. He was later transferred to the 1st Battalion, Irish Guards, was wounded in 1917, and rejoined his regiment in France about the time of the armistice.

Col. G. S. Rennie, M.D., returned to Hamilton, Ont., May 5, having been overseas since the commencement of the war, as commanding officer, no. 2, Canadian General Hospital. He is medical officer for the Toronto, Hamilton and Buffalo Ry., and also for the Dominion Power & Transmission Co., which controls the various electric railways in, and radiating from, Hamilton, Ont.

Major S. F. Workman, M.C., who returned to Canada recently, was, before the war, engaged in engineering on C. P.R. Western Lines. He went overseas with the 3rd Pioneer Battalion, arriving in France in Mar., 1916, where he remained until the signing of the armistice. When the Canadian Railway Troops were organized, he transferred to that branch and received the M.C. for gallantry in action and devotion to duty, and was mentioned in dispatches three times.

Lieut.-Col. S. C. Young, who was acting as Assistant Director of Railways and Docks, at Cherbourg, France, returned to Canada early in May. At the outbreak of war he was Mayor of Fort William and was gazetted Lieutenant-Colonel, and given authority to raise the 52nd Battalion. He was later commandant of the infantry school at Winnipeg for two years. Subsequently he went overseas to undertake the transportation duties at Cherbourg and Boulogne. He was in C.P.R. service for about 14 years.

Canadian National Railways' President and Vice President's Eastern Trip.

D. B. Hanna, President, and M. H. MacLeod, Vice President, Operation, etc., Canadian National Railways, have completed an inspection trip over the eastern lines. The principal feature of the trip was a meeting with a delegation representing the Moncton, N.B., City Council and Board of Trade, on May 17. The delegation presented their views at considerable length, urging, among other things, the maintenance of the management of the eastern lines at any rate at Moncton; suggesting that the proposed operation of steamships from Montreal to Newfoundland by the Canadian National Rys would operate against the freight traffic on the line from Montreal to Sydney, and asking as to the plans for second track construction from Moncton to St. John, and from Moncton to Halifax.

Capt. D. J. Murphy, Jr.,
Formerly Superintendent, Dominion Atlantic Railway.

Mr. Hanna is reported to have said in reply, that he could not definitely understand what the delegation desired. There had not been any one removed from Moncton, but in the way of promotion, and the railway's payroll in the city was larger than ever it had been before. All the traffic from the west by the Canadian National Rys. for Halifax would have to go through Moncton, which was not in any danger of becoming a mere flag station. The steamship routes were being opened up to create additional business and it was intended to establish regular lines to China, Japan, South America, Africa and the West Indies, but the Dominion subsidized line to Newfoundland was not one of the proposed Canadian Government Merchant Marine lines. Some sections of the line between Truro and Moncton would have a second track built, the work being started this year; something was necessary in the way of additional freight shed accommodation at Moncton, but no decision had been reached as to what would be done.

Messrs. Hanna and MacLeod visited Sydney, Halifax, St. John and Fredericton, prior to returning to Toronto.

Freight and Passenger Traffic Notes.

Gull Lake, near Lacombe, Alta., is being developed as a summer resort. The C.P.R. grants week end tickets at special rates from Edmonton, and a press report states that Calgary people have asked that similar facilities be granted them.

The Canadian Northern Ry. inaugurated its car ferry service between Port Mann, on the British Columbia mainland, and Patricia Bay, on Vancouver Island, May 1. The first trip was made in 7 hours, the car ferry steamship Canora, carrying 21 cars of freight.

The C.P.R. announced recently that the regular summer suburban train leaving St. John, N.B., for Welsford at 1.10 p.m., Wednesday and Saturdays, and reaching St. John on the return trip at 4 p.m., would be again put in operation May 26, and will be so run until July 12, when the service will be made daily except Sunday.

Representatives of the Western Canada Livestock Union, the United Grain Growers' Association and the Winnipeg Stock Shippers' Association, met representatives of the C.P.R., the Canadian National Railways, and the Grand Trunk Pacific Ry. in Winnipeg, recently, to discuss matters connected with the shipment of live stock in the prairie provinces. Several amendments were suggested in the restrictions as to the conditions under which live stock would be carried, and the compensation to be paid for loss of live stock during transit, etc. It was announced by the representatives of the companies that an extensive programme of stockyard improvement was being arranged for throughout the west.

The Board of Railway Commissioners has authorized the Bell Telephone Co. to increase its tolls for long distance service and on all rates for exchange telephone service, by 10%. The so called service in charge has been disallowed and the increase charges for exchange service already installed is effective July 1.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines, Ltd.—J. W. BLOSS has ben appointed District Passenger Agent, Cleveland, Ohio, vice H. W. Crawford, resigned.

R. A. CAMPBELL has been appointed Chief Dispatcher. Office, Toronto.

PERCY GRANT heretofore Assistant Traffic Manager, Toronto has been appointed Assistant Operating Manager. Office, Montreal.

J. W. GREINER, heretofore Mechanical Superintendent, has been appointed Marine Superintendent. Office, Montreal.

A. E. STINSON has been appointed Assistant Operating Superintendent. Office, Toronto.

Canadian National Rys.—G.COLLINS, Special Representative, Freight Department, has temporarily assumed the duties of acting Division Freight Agent, Ottawa Ont., M. A. Thompson, Division Freight Agent there, having resigned.

C. H. N. CONNELL, District Engineer, Quebec District, has had his office transferred from Montreal, to Champlain Bldg., Quebec, Que.

E. P. CRONK, heretofore City Freight Agent, Canadian Government Rys., Toronto, has been appointed City Freight Agent, Canadian National Rys., there.

W. A. CUNNINGHAM, heretofore Division Freight and Passenger Agent, Halifax and South Western Ry., Halifax, N.S., has been appointed Export and Import Freight Agent, Canadian National Rys. Office, Montreal.

L. C. DUPUIS has been appointed Resident Engineer, Saguenay Division, and Quebec to Shawinigan Falls, Montreal District. Office, Quebec, Que.

NEIL MARPLE, heretofore Master Car Builder, has been appointed General Foreman, St. Thomas, Ont., vice E. Mitchener, assigned to other duties.

Toronto Union Station—A. L. SMITH, formerly President and General Manager, Algoma Eastern Ry., Sudbury, Ont., has been appointed Superintendent, Toronto Union Station, vice J. J. Beck, deceased.

The Paravane in the War.

One of the secrets of the war most jealously and most successfully concealed was the paravane, and it was only recently that anything was made known about it. So complete is the protection which paravanes afford that squadrons of warships can now steam with impunity through the thickest mine fields.

The original paravane consisted of a long, buoyant, pear-shaped metal body. Ordinarily this would float on the surface of the water, but a plane placed under the broad end of the body and inclining downward serves, directly the paravane is towed through the water, to drive it below the surface. The principle is the same as that by which the pull on a string drives a kite upward in the air. Once down, the paravane is kept at a predetermined constant depth by a fishlike tail rudder, actuated by a delicate hydrostatic valve. The paravane at first carried a heavy charge of explosives, and when towed from the stern of a destroyer or trawler proved a deadly weapon against submarines.

The outcome of the explosive paravane was the twin paravane, with one side of the depressing plane weighted, causing it to tow, not in the ship's wake, but obliquely outward and away from the hull. These are towed in pairs, one on either side, and mine-mooring ropes, which are encountered as the ship moves forward, are forcibly deflected from the ship and along the whole length of the towing rope until they come to the paravane itself. Here a sharp saw set in a slot, into which the mine cable is forced by the rush of water, severs it instantly, and the released mine rushes to the surface, where it can be immediately detected and destroyed.

After the British fleet was equipped with paravanes only two ships were sunk by mines, and the Germans found the mooring ropes of their mines cut so frequently as to lead them in the latter days of the war to abandon mine-laying altogether. This valuable device was invented by Lieut. Dennis Burney, son of Admiral Sir Cecil Burney, Commander-in-Chief at Rosyth.—Toronto Globe.

The Canadian Steamship Agency Ltd. has been incorporated under the Quebec Companies Act, with $10,000 authorized capital and office at Quebec, Que., to act as steamship agent, and to own and operate steam and other vessels of every description, in the passenger, freight and other businesses. W. Q. Stobo, H. C. Thorn, C. St. J. Griffis, H. G. Deguise and J. Graham, Quebec, are the incorporators.

France and Canada Steamship Co. Ltd. has been incorporated under the Dominion Companies Act with $10,000,000 authorized capital and office at Montreal, to carry on a general navigation and transportation business. A company of this name has been carrying on a steamship business between France and North American ports for several years, but during the war the service was chiefly confined to operating sailing vessels to New York.

A bill was introduced into the House of Commons, May 21, to amend the act respecting the appointment of a harbor master for Halifax, N.S., to provide that the remuneration shall not exceed $3,000 a year, instead of $1,800 a year, as previously, and that such remuneration shall be by fees on vessels utilizing the harbor, but should the revenue from this source, not be sufficient, such sum shall be the remuneration for a year. Fees on vessels are fixed as follows: For vessels over 20 and under 50 tons register, 50c; 50 to 100 tons register, $1; 100 to 200 tons, $1.50; 200 to 300 tons, $2; 300 to 400 tons, $2.50, 400 to 500 tons, $3; 500 to 700 tons, $4; 700 to 1,000 tons, $5; and over 1,000 tons, $7. Vessels under 20 tons, and those trading between Canadian ports, are not subject to any duty.

The White Pass and Yukon Ry. and Navigation Co. expects to put its river steamers in operation between White Horse and Dawson, Yukon, June 2

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904 Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

[illegible]. Apr. 10.—Rescinding order [illegible], June [illegible], and limiting speed of G.T.R. trains between Brant and Durham Sts., Brantford, Ont., to [illegible] miles an hour.

[illegible]. Apr. 10.—Ordering Ottawa Gas Co. to pay G.T.R. only $3,058.50 as demurrage charges on [illegible].

[illegible]. Apr. 10.—Ordering G.T.R. to erect station at [illegible], Ont., plans to be submitted by May 1, and work to be completed by Sept. 1.

[illegible]. Apr. 10.—Approving Railways Department plan of bridge reconstruction over Trent Canal at Washago, Ont.

[illegible]. Apr. 12.—Authorizing C.P.R. to build reinforced concrete bridge over Seigneur St., Montreal, replacing existing bridge.

[illegible]. Apr. 11.—Approving Canadian National Rys. plan of permanent structure over Laronde River, replacing wooden structure there.

[illegible]. Apr. 11.—Authorizing Ottawa Electric Ry. to appeal to Supreme Court of Canada against board's orders [illegible], Nov. 6, 1918, and 28120, Feb. [illegible], 1919, which suspended and disallowed its tariff C.R.C. [illegible], upon a number of questions [illegible].

[illegible]. Apr. 12.—Authorizing C.P.R. to remove portion of Motherlode spur from mileage 3 to 5.46, near Greenwood, B.C.

28232. Apr. 14.—Declaring on complaint of Pacific Coast Shippers' Association that movement from Huntingdon to Vancouver, B.C., not being competitive within the meaning of the Railway Act, the lawful rate of lumber in carloads from Abbotsford to Vancouver on June 11, 1917, was [illegible] and authorizing reparation on that basis to Abbotsford Timber and Trading Co.

28233. Apr. 15.—Approving Canadian National Rys. plan of new abutments and approach spans at crossing of Shawanaga River, mileage 16.5 from Parry Sound, Ont.

[illegible]. Apr. 17.—Extending to May 15, time within which C.P.R. shall install automatic bell at crossing near Farrelton, Que.

28235. Apr. 16.—Authorizing C.P.R. to build spur for Canadian Axe & Harvest Tools Mfg. Co., Cote St. Paul, Que.

28236. Apr. 15.—Authorizing C.P.R. to build extension to spur for Brackman-Ker Milling Co., Calgary, Alta.

28237, 28238. Apr. 11.—Amending orders 7339, May 4, 1909, and 21288, Jan. 31, 1914, re crossings at [illegible] St., Lennoxville, Que., and Prince Edward St., Brighton, Ont., by C.P.R. and G.T.R., to provide for division of responsibility for accidents due to negligence of watchmen.

28239, 28240. Apr. 11.—Amending orders of the Railway Committee of the Privy Council, Nov. [illegible], and [illegible], Dec. 18, 1890, re crossings of Bay St., and Bloor St., Toronto, by C.P.R. and G.T.R., to provide for division of responsibility for accidents due to negligence of watchmen.

28242 to 28244. Apr. 11.—Amending orders 10508, May 6, 1910, 19232, May 9, 1913, and 23899, June 24, 1915, re crossings of William St., Brockville, Ont., King St., Weston, and Cobourg and Grafton Road, Ont., by C.P.R. and G.T.R., to provide for division responsibility for accidents due to negligence of watchmen.

28245. Apr. 14.—Authorizing C.P.R. to remove agent at [illegible], B.C., caretaker to be appointed to keep station clean, heated and lighted for passengers.

28246. Apr. 10.—Ordering G.T.R. to flag all switching movements over crossing of Niagara St., Hamilton, Ont.

28247. Apr. 22.—Extending to June 22, time within which C.P.R. shall install improved automatic bell at Horne Ave., Mission City, B.C.

28248. Apr. 19.—Amending order 28198, Mar. 31, re interchange track between C.P.R. and Canadian National Rys. at St. Leonards, N.B.

28249. Apr. 19.—Authorizing C.P.R. to build spur for Sheet Metal Mfg. Co., Calgary, Alta.

28250. Apr. 22.—Approving clearances of Pere Marquette Rd. spur for Acme Roofing Co., Walkerville, Ont.

28251. Apr. 22.—Amending order 25763, Dec. 22, 1916, closing road allowance by Canadian Northern Ry., between secs. 11 and 14 and secs. 11 and 12, Tp. [illegible], Range [illegible], west of principal meridian to provide that center lines of crossing be moved [illegible].

28252. Apr. 19.—Ordering Canadian National Rys. to stop trains [illegible] and 6 regularly at Portland, Ont.

28253. Apr. 22.—Approving agreement Apr. 1, between Bell Telephone Co. and Lake Shore Mutual Telephone Co., Bruce and Huron Counties, Ont.

28254. Apr. 22.—Amending order 25753, Dec. 22, 1916, re crossing of Church St., Weston, Ont., by C.P.R. and G.T.R.

28255. Apr. 25.—Ordering Grand Trunk Pacific Ry. to erect standard A station at Avonhurst, Sask., to be completed by Oct. 1.

28256. Apr. 23.—Amending Railway Committee of Privy Council's order of July 15, 1886, re crossing of Strachan Ave., Toronto, by C.P.R. and G.T.R. to provide for division of responsibility for accidents due to carelessness of watchmen.

28257. Apr. 24.—Ordering G.T.R. to install automatic bell at crossing near Aultsville station, Ont.

28258. Apr. 24.—Ordering Canadian National Rys. to appoint day and night watchmen at crossing of 115th Ave., Edmonton, Alta.

28259. Apr. 24.—Authorizing Canadian Northern Saskatchewan Ry. to build across highway between Sec. 5, Tp. 24, and Sec. 34, Tp. 23, Range 8, west 3rd meridian.

28260. Apr. 23.—Approving plan of reconstruction of interlocking plant at crossing of Lake Erie and Detroit River Ry. by C.P.R. at Walkerville Jct., Ont.

28261. Apr. 24.—Approving G.T.R. clearances for Maple Leaf Milling Co's sidings on Welland Canal reserve, Port Colborne, Ont.

28262. Apr. 24.—Authorizing Canadian Northern Saskatchewan Ry. to cross highway between Secs. 4 and 5, Tp. 24, Range 8, west 3rd meridian.

28263. Apr. 23.—Approving Canadian National Rys. plan of grade revision at Weir, Que.

28264. Apr. 8.—Authorizing G.T.R. to rebuild bridge crossing Weston Road, York Tp., over G.T.R., near West Toronto station, Ont.

28265. Apr. 28.—Amending order 27623, Sept. 3, 1918, providing that Canadian National Rys. stop trains 5 and 6 on flag at Clarence, Ont. instead of trains 7 and 8, which are to stop there on flag on Sundays only.

28266. Apr. 25.—Ordering G.T.R. to build stock pen by Sept. 30, with two loading chutes to load four cars at Thornby, Ont.

28267. Apr. 28.—Authorizing C.P.R. to build extension to spur for J. I. Case Threshing Co., Saskatoon, Sask.

28268. Apr. 28.—Ordering C.P.R. to provide station facilities at Corinne, Sask.

28269. Apr. 28.—Ordering apportionment of costs between the City of Edmonton, Alta., and C.P.R. re crossing of Whyte St.

28270. Apr. 29.—Extending to Dec. 31, time within which C.P.R. shall build spur for Western Canada Hardware Co., Lethbridge, Alta.

28271. Apr. 29.—Authorizing C.P.R. to divert road allowance on south boundary of s.w. ¼, Sec. 14, Tp. 35, Range 4, west 4th meridian, Alta.

28272. Apr. 30.—Ordering C.P.R. to provide additional station accommodation at Balcarres, Sask.

28273. Apr. 29.—Relieving C.P.R. from providing further protection at crossing of McDougal St., Port Arthur, Ont.

28274. Apr. 29.—Ordering C.P.R. to appoint a caretaker at Clair, Sask., to see that station is kept clean, heated and lighted for passengers.

28275. Apr. 30.—Ordering C.P.R. to build the main bodies of its standard A2 station as additional to freight shed at Prelate, Sask.

28276. Apr. 30.—Ordering Canadian National Rys. to build standard freight and passenger shelter and a one-car stock pen and chute at Katrine, Man.

28277. Apr. 30.—Relieving C.P.R. from providing further protection at crossing near Cabri, Sask.

28278. Apr. 29.—Ordering Canadian National Rys. to appoint caretaker at Runnymede, Sask., to see that station is kept clean, heated and lighted for passengers.

28279. May 2.—Approving crossing of Esquimalt & Nanaimo Ry. by Mayo Lumber Co., to spur at mileage 7.25, Sahtlawn District, Vancouver Island, B.C.

28280. May 3.—Ordering G.T.R. to limit speed of trains crossing Kingston Road, west of Port Union Station, Ont.

28281. Apr. 29.—Authorizing Canadian Northern Ontario Ry. to rebuild bridge over Farm Road, Whitchurch Tp., mileage 30.66, from Toronto.

28282. Apr. 28.—Authorizing Canadian Northern Ontario Ry. to build tie loading spur at mileage 74.46, Champagne Tp.

28283. Apr. 28.—Authorizing G.T.R. to build shelter at Perch, Ont.

28284. Apr. 25—Approving agreement between Bell Telephone Co., Apr. 7, and Tilbury West Tp., Ont.

28285. Apr. 29.—Authorizing Canadian Northern Ontario Ry. to build crossing over farm road, March Tp., mileage 17.13 from Rideau Jct.

28287. Apr 28.—Authorizing G.T.R. to operate over siding to be built in Toronto harbor industrial district by Toronto Harbor Commissioners.

28288. May 3.—Authorizing Canadian National Rys. to operate over crossing of Portage Ave., near Westside station, Man.

28289. May 2.—Dismissing complaint of Adolph Lumber Co., Baynes Lake, B.C., against rate charged by Great Northern Ry. on logs from Dorr, to Baynes Lake, B.C.

28290. Apr. 29.—Dismissing application of T. M. Kelly, Sebringville, Ont., for order directing G.T.R. to erect station between Ellice and Logan Tps., approximately midway between Sebringville and Mitchell, Ont.

28291. Apr. 28.—Authorizing C.P.R. to build reinforced concrete bridge near Atwater Ave., Montreal.

28292. May 5.—Approving proposed diversion of Rosebud River by Canadian National Rys. in n.w. ¼, Sec. 35, Tp. 27, Range 20, west 4th meridian, Alta.

28293. Apr. 25.—Authorizing C.P.R. to build spur for Canadian Tube & Iron Co., Montreal Parish, Que.

28294. May 5.—Approving Canadian National Rys. plan of proposed diversion of Rosebud River in Sec. 18, Tp. 28, Range 19, west 4th meridian, Alta.

28295. Apr. 28.—Authorizing Canadian National Rys. to divert and dam east branch of Severn River at Rattlesnake Island, mileage 88.3, Washago, Ont.

28296. Apr. 29.—Authorizing C.P.R. to build highway crossing between Secs. 1 and 2, Con. 3, of park lots, Sault Ste. Marie, Ont.

28297. Apr. 28.—Amending order 28177, Mar. 20, re Manitoba Government highway crossing over Canadian National Rys. between Secs. 14 and 23, Tp. 34, Range 23, Man.

28298. May 5.—Approving Canadian National Rys. plan for diversion of Rosebud River in Secs. 6 and 7, Tp. 28, Range 19, west 4th meridian, Alta.

28299. May 6.—Authorizing Vancouver, Victoria & Eastern Ry. & Nav. Co. (G.N.R.) to remove west leg of Y track at Colebrook, B.C.

28300. May 6.—Relieving C.P.R. and G.T.R. from maintaining signalmen to operate interlocking plant at Chatham, Ont., between 4 p.m. and 8 a.m. on week days during every month of each year excepting Sept., Oct., Nov. and Dec.

28301. May 5.—Extending to July 5, time within which C.P.R. is required to install automatic bell at crossing of Bull St., Woodstock, N.B.

28302. May 7.—Authorizing C.P.R. to build spur for Robin Hood Mills Ltd., Moose Jaw, Sask.

28303. May 6.—Ordering that gates at crossing of Eastern Ave., Toronto, by C.P.R. and G.T.R., be operated by watchmen appointed by the companies and in case of disagreement, matter to be settled by the board.

28304. May 8.—Amending order 4819, May 18, 1918, re crossing of Church St., Toronto by the G.T.R. and C.P.R.

28305. May 7.—Ordering G.T.R. to instal automatic bell at crossing of Muskoka Road, near Orillia, Ont.

28306. May 5.—Approving Canadian National Rys. plan of diversion of Rosebud River, Sec. 24, Tp. 27, Range 21, west 4th meridian, Alta.

28307. May 7.—Authorizing Montreal Tramways Co. to cross C.P.R. at Cote St. Paul, the Canal Bridge and St. Patrick St., Montreal, also G.T.R. on north bank of said bridge.

28308. May 12.—Extending to Aug. 12, time within which C.P.R. shall build spur for Rob Roy Mlls Ltd., Durham, Ont.

28309. May 12.—Relieving G.T.R. from providing further protection at crossing of first public road east of Lawrence Station, Ont.

28310. May 9.—Amending order 28343, Apr. 11, re crossing of King St., Weston, Ont., by G.T.R. and C.P.R.

28311. May 9.—Authorizing Alberta Government to build public highway crossing over Grand Trunk Pacific Ry. in northeast ¼, Sec. 26, Tp. 52, Range 3, west 5th meridian, Alta.

28312. May 8.—Approving rearrangement of G.T.R. spurs on Lachine Canal Reserve for Dominion Flour Mills Ltd., Montreal Parish, Que.

28313. May 9.—Approving location of G.T.R. shelter at Stewarttown, Ont.

28314. May 12.—Approving plan hsowing work to be done on the McIntyre-Zavitz drain, in Brooke Tp., under G.T.R.

28315. May 14.—Dismissing application of Grain Claims Bureau Ltd., on behalf of grain shippers in Western Canada, for order directing railways to show on bills of lading covering grain shipped from points in Manitoba, Saskatchewan and Alberta, the depth of inches of grain loaded in cars.

28316. May 14.—Approving Niagara, St. Catharines and Toronto Ry. plans of standard concrete culberts and standard flat top culverts of various openings.

28317. May 14.—Authorizing Canadian National Rys. to build spur for J. McMillan, Fort Rouge, Winnipeg.

General order 262. May 8.—Amending regulations governing baggage car traffic.

General order 263. May 7.—Standardizing railway regulations governing guard rails, vestibule doors and platforms on passenger cars.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

The British America Nickel Corporation has, a press report states, completed location surveys for a line from its works at Nickelton into Sudbury, Ont. Nickelton is a station on the Algoma Eastern Ry., 6 miles out of Sudbury, and the located route is reported to be between the A.E.R. and the C.P.R. Sudbury-Sault Ste. Marie line.

Burrard Inlet Tunnel and Bridge Co.—A press report states that a local committee has been formed to revive this projected enterprise, that a meeting of the local reconstruction committee was held at North Vancouver, B.C., May 5 and that it was decided to have the municipalities of North Vancouver—city and district—and West Vancouver appropriate $1,000 towards an educational campaign. The building of a bridge across the second narrows of Burrard Inlet, at North Vancouver, has been under consideration for some years, and the charter for its construction, with connecting railways, etc., is held by the cities of North Vancouver, and Vancouver, and adjoining municipalities. A considerable sum has been expended upon plans, and in making foundation tests, etc. The building of such a bridge is one of the recommendations contained in the Swan report on the development of Vancouver harbor. (July, 1918, pg. 285).

Dolly Varden Mines Ry.—Subsequent to the appointment of Justice Clement as arbitrator to fix the amount due the Taylor Engineering Co. for the construction of the railway under the terms of the act passed recently by the British Columbia Legislature, an agreement was reached by which the company admits the Taylor Engineering Co.'s claim of $462,628.08 without reference to the commission. The straightening out of this matter will confirm the company in its charter rights, and give it additional time within which to complete the railway and develop its mining property. (May, pg. 253).

Edmonton, Dunvegan and British Columbia Ry.—J. D. McArthur, President, is reported to have said in the course of a recent interview at Edmonton, Alta., that extensive improvements in the line are to be carried out at once; that the first 164 miles from Edmonton to Sawridge, will receive attention first; that a large number of new ties will be placed, and that the roadbed will be generally improved so as to permit of a more rapid and more satisfactory service being given; that between Sawridge and Burnt River, there is considerable work of a miscellaneous character to be done; that from Burnt River to Spirit River, mileage 357, ballasting is to be carried forward, and continued along the branch from Rycroft to Grande Prairie, 49.8 miles, and that these improvement works will be rushed to completion.

With regard to extensions of the time, Mr. McArthur is reported to have said that construction from Peace River to Varena cannot be proceeded with this year unless the Dominion Parliament will vote a subsidy. This extension would reach 50 miles beyond the crossing of the Peace River.

In connection with the foregoing, it should be borne in mind that it has been persistently reported recently that Mr. McArthur could not carry on his railway enterprises much longer and that they would have to be taken over, either by the Dominion Government, or by the C.P.R.

W. R. Smith, General Manager and Chief Engineer of the McArthur lines (the E.D. and B.C.R., the Alberta and Great Waterways Ry., and the Central Canada Ry.) completed a trip of inspection recently over the lines in operation, under construction and projected, in company with a party stated to represent the C.P.R.

R. A. Hazelwood, C.E., is reported to have arrived in Edmonton, May 4, in connection with the company's work. (May, pg. 253).

Esquimalt and Nanaimo Ry.—After a number of conferences between representatives of the C.P.R., which operates the E. and N.R., considerable progress was reported to have been made, May 13, in the settlement of the Johnson St. bridge matter, which has been the subject of negotiations between the Victoria City Council, the company, and the British Columbia Government for three or four years past. The C.P.R. was represented at the most recent conference J. M. R. Fairbairn, Chief Engineer, and P. B. Motley, Engineer of Bridges, and the E. and N.R. by H. E. Beasley, General Superintendent, and R. A. Bainbridge, Engineer. A press report states that the only notable change decided upon is a decrease in the span of the proposed bridge from 150 ft. to 120 ft. and a slight decrease in the width of the superstructure. The city's plan procides for a curved vehicular approach by way of Johnson St. The City Engineer is reported to be engaged in remodelling the city's original bridge plans in accordance with the agreements reached at the conference.

The C.P.R. is reported to have advised the city and the B.C. Government that while $60,000 would represent the actual value of a new bridge to its railway, it was willing to contribute $100,000 towards the cost of a new structure such as the city desired. The British Columbia Government, it is reported, has promised to contribute $200,000. The estimated cost of the railway and general traffic bridge, with approaches for vehicle and pedestrian traffic asked for by the city, is about $600,000.

The mayor of Victoria, is reported to have said, May 13: "When the plans have been completed and formally approved by all parties concerned—as a matter of fact, they are being drawn up to suit the wishes of all and as soon as we have interviewed the B.C. Electric Ry. Co. on its possible contribution, and the Dominion Government, we shall be in a position to prepare a bylaw. We will make the best bargain possible and then leave the question in the hands of the people. Before the summer is over, I am sure, the ratepayers will be given an opportunity to vote on it." (Apr., pg. 190)

Essex Terminal Ry.—A press report states that the company will lay a track between two structures being built by the General Motors Corporation, Windsor, Ont. (Mar., pg. 134).

Lacombe and Northwestern Ry.—The Alberta Government will, according to a press report, ask for tenders shortly for the grading of the projected extension from the present terminus, Bentley, to Rimbey, 17 or 18 miles. Plans and specifications were on May 7 reported to be in preparation. The estimated cost of the completion of the work done by the Lacombe and Blindman Valley Electric Ry. Co. beyond Bentley, and of the new grading, etc., was recently stated by the premier in the legislature to be $319,785. (Mar., pg. 254).

Grand Trunk Ry.—The Ottawa City Council has appointed a committee to interview the Dominion Government in regard to the removal of the G.T.R. crosstown tracks.

Grand Trunk Pacific Ry.—Application is being made to the Dominion Department of Public Work, for approval site and plans of a car ferry slip and works proposed to be built by the G.T.P.R., in front of waterfront Block C, Prince Rupert, B.C. (Near pg. 134).

The Maritime Coal, Ry. and Power Co. Co., has applied to the Dominion Department of Public Works, for approval of plans of piers proposed to be built at River Hebert, on the Hebert River, and at Maccan, on the Maccan River, N.D., along the company's railway. Tenders were received to May 24 for the construction of three timber crib railway bridge piers, ballasted with rock on pile foundations, 2 to be built at Maccan and 1 at River Hebert, N.S.

Michigan Central Rd.—In reference to a press report that the company was planning extensive developments and improvements at Niagara Falls, Ont., involving the building of a new station, etc., we are officially advised that the company is not considering any large improvements there, but is making preliminary investigations towards the rebuilding or strengthening of the cantilever bridge across the Niagara River, but nothing definite has been decided in regard to this. J. F. Demling, Detroit, Mich., is Chief Engineer. (Apr., pg. 191).

Montreal Central Terminal Co.—C. N. Armstrong, who is interested in the promotion of this enterprise, submitted plans of the projected station and its connections to the Montreal Board of Trade's council, Apr. 30. He is reported to have said in the course of his explanation of the plans that the carrying out of the company's project would get rid of the present G.T.R. tracks between St. Henri and Bonaventure station, and avoid level crossings in the city or suburbs, while the tunnel would afford prompt and economical communication with the south shore. The council referred the plans to its harbor and navigation committee.

Pacific Great Eastern Ry.—The Premier of British Columbia returned to Victoria, May 7, after a trip of inspection over the line. A press report states that rails are expected to be laid as far as Williams Lake near 160 mile house by September, and as far as Deep Creek by next winter. A site for the station to be built at Williams Lake was selected and a question of location at Deep Creek, or Deep Cove crossing, in the vicinity of Soda Creek, was discussed. At this point there is a hole 280 ft. deep, and 1,200 ft. wide, across which a bridge costing approximately $500,000 would be necessary. At Quesnel, the question of relocating the line was discussed with the board of trade. The suggestion is that the line be relocated south of Quesnel at a lower level, so as to connect with navigation on the Fraser River, and do away with the necessity of building a half mile bridge and trestle crossing of the Quesnel River. The present location would also require the construction of a bridge 3,000 ft. long and 315 ft. above water level across the Cottonwood River. The Premier is reported to have said that a careful resurvey and re-examination of the route would be made by the provincial railways department's engineers before any definite conclusion was reached.

The Premier's party was accompanied by A. F. Proctor, Chief Engineer, and C. C. Worsfield representing the Dominion Government. They travelled from Squamish, to deep water terminus, to the railhead in autos, lashed to flat cars, and from the end of railhead to Quesnel by autos. (May, pg. 254).

Reid Newfoundland Ry.—Answering questions in the Newfoundland Legislature, May 1, the Colonial Secretary said the company sent in a statement to the government in connection with the branch lines contract of 1910, up to Aug., 1917. The account was divided into three sections:—(1) Balances unpaid on general contract, in which it was alleged that the government had retained a larger percentage of the guarantee than was warranted; (2) As to extra work on the branch lines in respect of which there were differences of opinion between the government and the company's engineers. and (3) As to items not considered as extras by the government engineers. The total amount of these claims was $668,041.28, of which the government subsequently paid the company $132,546.94, without prejudice. As to the amount to be retained out of the guarantees, the government engineer was to be the sole judge under the contract. As to the other two points, the matter was argued out before the government by both parties, and the government engineer was given directions how to act. The company also made a request that it be paid in cash for lands to which it is entitled at the price fixed by the contract, and the government exercising its option under the contract had acceded to the company's request.

On the same day the Premier, replying to another question, said the matter of calling upon the company to proceed without further delay to construct the branch lines to Fortune Bay and to Bonne Bay, contracted for in 1910, was under consideration, as also was the question of the general state of repair of the railway.

A petition was presented in the legislature recently, asking for the extension to Lead Cove of the branch line now terminating at Heart's Content.

St. John and Quebec Ry.—Construction equipment was reported to have been delivered, Apr. 30, for ballasting and other completion work on the Gagetown-Westfield section. The work is to be done, it is reported, by the Canadian National Railways construction staff. It is expected that the work will be completed in order to permit of the operation of trains early in July. (May, pg. 254).

The House of Commons passed a resolution May 19, declaring it to be expedient to extend the time for the construction of the St. John and Quebec Ry. from its present northerly terminus at Centerville to Andover, N.B., to Dec. 31, 1921, both with respect to the agreement as to operation, and as to subsidy, provided that such extension of time shall only be granted with the New Brunswick Government's consent. The necessity for the additional legislation, the Minister of Railways explained, was that the N.B. Government had called attention to the fact that this provision had been omitted from the act of 1918. A bill to give effect to the resolution was read a first time May 19. (May, pg. 254).

Timiskaming and Northern Ontario Ry.—We are officially advised that the engineering party which has been sent out for the collection of additional information with reference to the general physical features and economic resources of the country between Cochrane and James Bay, is in charge of W. R. Maher, Locating Engineer, T. and N.O.R. The work to be done by the party is in connection with the project for the extension of the line from its present northerly terminus at Cochrane to James Bay.

The party is reported to consist of 24 men, most of whom have seen active service at the front. They were reported to have left Cochrane, May 20, for Clute, and the route from there, it was expected, would be to the foot of the Long Sault Rapids, on the Abitibi River, where the first camp will be set up. (May, pg. 255).

Toronto, Hamilton and Buffalo Ry.—The Hamilton, Ont., Board of Control is reported to have appointed a committee to negotiate with the company for the removal of its coal dock at the west end of Herkimer St. (Jan., pg. 26).

Regulations for Handling Guard Rails, Vestibule Doors and Platforms on Passenger Cars.

The Board of Railway Commissioners passed general order 263, May 7, as follows:

Whereas, the board's attention has been called to a number of accidents, in some instances fatal, caused by failure to keep vestibule doors on passenger cars closed; upon reading what has been filed by the Canadian Railway Association for National Defence, on behalf of railway companies operating in Canada, and upon the report and recommendation of the board's Chief Operating Officer, and in pursuance of the powers conferred upon it by sections 30 and 269 of the Railway Act, and all other powers possessed by the board in that behalf, it is ordered that every railway company subject to the legislative authority of the Dominion Parliament, operating a railway by steam power, shall strictly conform to the following rules and regulations governing the handling of guard rails, vestibule doors, and platforms on passenger cars which are hereby approved, viz.:

"Through and local (except suburban) trains, double track, right hand operation. When running, all doors and platforms except those on rear right hand side of last car are to be kept closed. When standing, the right hand doors and platforms, only, are to be opened, except when necessary to open left hand doors to receive or discharge passengers.

"Through and local (except suburban) trains, double track, left hand operation. When running, all doors and platforms except those on rear left hand side of last car are to be kept closed. When standing, the left hand doors and platforms, only, are to be opened, except when necessary to open right hand doors to receive or discharge passengers.

"Through and local (except suburban) trains, single track. All doors and platforms, except those on rear of last car, are to be kept closed when running.

"Suburban trains, double track, right hand operation.—Doors and platforms on right hand side of train may be kept open, and when open are to be securely fastened. Those on left hand side must be kept closed, except when necessary to open them to receive or discharge passengers.

"Suburban trains, double track, left hand operation. Doors and platforms on left hand side of train may be kept open, and when open are to be securely fastened. Those on right hand side must be kept closed, except when necessary to open them to receive or discharge passengers.

"Suburban trains, single track.—All doors and platforms may be kept open and when open are to be securely fastened.

"Movable guard rails. When there are movable guard rails on non-vestibule or open vestibule cars, guard rails must be kept closed, except that when trains are standing they are to be opened only on the side at which passengers are to be received or discharged.

"Vestibule curtains. When cars are equipped with vestibule curtains, these appliances are to be kept closed, and are not to be uncoupled until trains stop at terminal, or when change is to be made in consist of train.

"Observation cars. When rear car is observation car, side gates and platforms must be kept closed when running.

"Tail gate, chain or bar. At rear of last car in train must invariably be kept closed."

2. "Suburban trains," as used in this order, means, and applies only to, trains within commutation limits when carrying commutation traffic.

The C.P.R. Recreation Club of Toronto has been organized to promote athletics and general social entertainment among the employes. The following officers have been elected: President, W. Fulton; Vice Presidents, T. Collins, F. M. Rutter and F. Ronaldson; Secretary, W. Henderson; Treasurer, F. MacGregor.

Jamaica Railways—A. Kingston, Jamaica, cablegram, states that owing to the high cost of coal, the Colonial Government is having a survey of the available water powers made to see if it would be possible to operate the railways on the island by electric power.

C.P.R. Pensions Raised — Montreal press dispatch, May 14.—Owing to the high cost of living the C.P.R. directors have authorized a special allowance to remain in force until the end of 1920, representing an increase of 25% on all pension payments to officers and employes on the pensions roll. According to the last annual report the pension allowances for the year ended Dec. 31, amounted to $267,097.43, there being 854 officers and employes on the pension roll, of whom 411 were over 70 years of age and 404 between 60 and 70.

Canadian National Railways Shops, St. Malo, Que.

It is the intention to place in service the Canadian National Ry. shops at St. Malo, Quebec, in the near future, the passenger car shops towards the end of June, and the locomotive shops, sometime in the autumn. These shops were built by the National Transcontinental Ry. Commission, the contract being let in 1913, and a description of the layout with plan appeared in Canadian Railway and Marine World for Sept., 1913. The shops were built during 1914, but have not been used.

The shops are located in St. Malo, a suburb of Quebec about 2 miles from, and almost due west of, the center of the city. The National Transcontinental Ry. main line enters Quebec from the west over the C.P.R. tracks from Cadorna, 3.3 miles from Quebec, and the shops adjoin these tracks. From Cadorna, the Canadian National Rys. have built a parallel line about a mile long on the south side of the C.P.R. line for the shop approach of the C.P.R. line, for the shop approaches.

The shop buildings are arranged along a midway, with those handling the heaviest equipment adjoining, and with the others located back from it. The midway, which extends the full length of the main part of the shop area, is 75 ft. wide, and is served by a 20-ton travelling crane, the track for which is supported on the building abutments and steel columns. Most of the buildings are of the same type of construction, a self-supporting steel frame, with brick walls, the whole supported on a concrete wall carried up to the windowsills. The roof of each building is of double wood sheathing, with ventilators and skylight, and covered with a prepared roofing. Most of the floors are of 6 in. concrete, overlaid with a 1½ in. layer of special grease resisting mastic asphalt. The heating of all but the locomotive and boiler shop is by direct radiation, the locomotive and boiler shop having an indirect fan system.

The locomotive and boiler shop is 603 x 152 ft., containing both locomotive and boiler departments in opposite ends, there being no divisional walls in the length of the building. The building is divided into 3 longitudinal bays, and into 26 traverse bays, at 23 ft. centers; 18 of these bays contain locomotive pits and the other 8 are for boiler work. The longitudinal bays are as follows: erecting bay, 75 ft. wide; large machine bay, 55 ft.; small machine bay, 18½ ft. Over the small machine bay, there is a gallery extending the full length of the shop, containing the lighter equipment and heating plant. The shop space gives an area of 3,400 sq. ft. per pit. The locomotive shop has two entrance tracks with provision for two more, and the boiler shop, one track. The locomotive shop erecting bay has a 120-ton travelling crane for placing the locomotives, as well as two 10-ton cranes. The boiler shop has a 20-ton crane, as well as smaller cranes.

The shop offices are in a 3 story and basement building, 60 ft. square, near the end of the locomotive shop, and back from it, and all the shop officails will be located in it, dispensing with the smaller shop offices.

The stores building is of reinforced concrete throughout, 104 x 79 ft., flush with the midway, and with a 10 ft. platform extending along three sides, with ramps leading up from the ground level at two corners. It also contains a basement. The platform on the midway side is served by the midway crane.

The forge shop is 155 x 107 ft., with a cinder floor, the steel work being designed to support jib cranes. It will contain the usual complement of forges, hammers, etc.

The power house is 125 x 107 ft., divided by a fire wall into engine and boiler rooms, with a pump pit running along the fire wall in the engine room, and a basement extending under the whole area of the boiler room to accommodate the coal and ash handling apparatus. The engine room is served by a light travelling hand crane. The power house is close to the midway, and centrally located to minimize power losses.

The oil house is a reinforced main floor and basement building at the rear end of the plant. The oil house is 30 x 40 ft., standing on a 50 x 70 ft. platform, which forms the roof of the basement.

The passenger car shop, 265 x 130 ft., is the principal of the car department buildings, and is located back from the midway. It is divided into 3 bays, 2 of which are served by cranes, and contains 4 through repair tracks, and a fifth stub track.

The planing mill, 82 x 265 ft., is at the rear of the car shop, and near the power house, to which the mill shavings will be forced by a fan system.

The dry kiln, to the rear of the planing mill, is 38 x 50 ft.

The lumber shed, 40 x 225 ft., is of wooden frame construction on concrete foundations. The whole of the car department buildings are so located as to give a continuous forward movement of the lumber through to the car shop.

The iron store and scrap bin, 140 x 24 ft., is between the forge shop and stores.

The crude oil store, 42 x 20 ft., is located between the boiler shop and oil house.

G. Fred Knight has been appointed Superintendent of the shops.

Orders for the equipment of the shops will be placed shortly as specifications from manufacturers showing the types of machines which they can supply, as well as information on delivery dates, etc., is now in the hands of Shop Superintendent Knight, who is making the necessary selection from the lists submitted.

The Canadian Ticket Agents' Association's executive committee met in Toronto, May 8, W. Jackson, C.P.R. Ticket Agent, Clinton, Ont., presiding. It was decided to hold the 33rd annual business meeting at the Prince George Hotel, Toronto, Sept. 23. The members and their wives will leave Toronto, Sept. 24, in the morning, by special G.T.R. train for Muskoka Wharf, and from there by a Muskoka Lakes Navigation and Hotel Co.'s steamboat to the Monteith House, Lake Rosseau, where the night will be spent. The party will leave there early on Sept. 25, proceeding down the lakes and return either by Muskoka Wharf and the G.T.R., or by Bala and the C.P.R., so as to reach Toronto in time to allow members to take night trains for the east, and possibly for Western Ontario points. E. de la Hooke, the Association's veteran secretary, is in charge of the general arrangements as he has been for so many years.

The Canadian Pacific Railway's New Transcanada Trains.

We are officially advised that in order to handle the increasingly large volume of trans-continental travel, and to give business travellers a faster service to and from the west, the C.P.R. has arranged to put on new daily limited express trains to be known as Trans-Canada Limited. These trains, which will start running June 1, will reduce the journey between Montreal, or Toronto, and Vancouver, to less than four days and save a full business day. They will be strictly limited; i.e., will have space for sleeping car passengers only. In addition to the ordinary sleeping cars, compartment cars and dining cars, will be run out of both Montreal and Toronto.

Train 7 will leave Montreal at 8.30 p.m. and train 9 will leave Toronto at 7.15 p.m. They will be consolidated at Sudbury and will be operated as train 7 from there to Vancouver. Passengers leaving Montreal or Toronto, say on a Sunday, will leave Sudbury at 4.20 a.m. Monday, reach other points as follows: Fort William, 9.30 p.m. Monday; Winnipeg, 9.05 a.m. Tuesday; Regina, 7.15 p.m. Tuesday; Calgary, 9.30 a.m. Wednesday, and Vancouver, 10 a.m. Thursday. The schedules of the Trans-Canada Limited, show a running time of 93 hours, 30 minutes, westbound, from Montreal to Vancouver, and 92 hours, 15 minutes, eastbound, from Vancouver to Montreal. From Toronto to Vancouver, 89 hours, 45 minutes; from Vancouver to Toronto, 88 hours.

The eastbound train no. 8, which will leave Vancouver at 7.30 p.m., is arranged with equal convenience for the business man. A Toronto man with business to do in Winnipeg, could leave Toronto on Monday evening, spend a full day in Winnipeg, and be back in Toronto at 1.30 p.m. on Friday.

These new trains will be particularly convenient for tourists from eastern Canada and the United States, desiring to reach the mountain resorts at Banff and Lake Louise. They will also be a great convenience for passengers to the Orient, who will be able to save a full business day in connecting with the C.P.R. Express steamships from Vancouver.

Canadian Northern Ry. Earnings, Etc.

The Minister of Railways in reply to questions in the House of Commons, May 15, said the fixed charges of the Canadian Northern Ry. system for the year ended Dec. 31, 1918, were $17,[illegible]-522.31. Included in this was the interest payable to the government, $3,000,-529.15. In the statement [illegible] made recently, showing that the net earnings for the C.N.R. system for the calendar year, 1918, were $3,562,303.40, no provision was made for the payment of this interest. The deficit for 1918, after fixed charges had been provided for over $14,-333,085.07. The Dominion Government is a shareholder of the C.N.R., but as such does not necessarily assume all its liabilities.

E. W. Beatty, K.C., President, C.P.R., left Montreal, May 15, on his first official trip over the company's Western lines since his appointment to that position. Owing to the strike situation in Winnipeg, his movements have not been fully reported. He is said to have accepted an invitation to address the Canadian Club at Victoria, B.C., during his visit.

Aerial Transportation for Canada.

Canadian Pacific Railway's Application to Parliament.

As stated in Canadian Railway and Marine World for May, the C.P.R. Co. has applied to the Dominion Parliament for an act to authorize it to establish, maintain and operate services by air craft between such points and places within or without Canada as may be found desirable, and to exercise and employ such powers as may be necessary for such purposes.

Grant Hall, Vice President, is reported to have stated in this connection as follows:—

"The C.P.R.'s application for an air charter is only natural when one considers that we are approaching a new epoch in air transport as applied to commerce. Even before the war a dirigible airship maintained a regular passenger service between Frankfort and Berlin for two years, and during the war the progress in aerial transit has been phenomenal. Much of that progress has been due to the skill and daring of Canadian fliers. General Seeley, in the British House of Commons, recently, acknowledged the indebtedness of the allies to Canada in securing aerial supremacy and said: 'Canada gave the largest contribution in numbers and of her services those who know what Canadian airmen did need not be reminded—they were second to none.'

"The British Government has allowed no less than $300,000,000 in the estimates for the coming year for air service, of which $10,000,000 has been set aside for experimental research and civil aviation. Bonar Law owns his own aeroplane, which is used for his frequent visits to Paris, and there is a regular daily service of a 17-passenger Handley-Page machine between London and Paris. Although at present aerial transport is a distinctly expensive matter, the progress being made, both in aeroplanes and dirigibles is so rapid that it is quite in order for a company such as the C.P.R. to be ready to enter the field as soon as air transportation comes within the range of practical politics.

"Although there are areas in Canada which will for a long time present difficulties, particularly to aeroplanists, there are other areas which conform to the requirements of the experts. Take, for instance, the western prairies, which offer the conditions described by General Seeley as vital, viz.: that they are regions 'where there are wide spaces with almost complete absence of the airman's real enemy—mist and fog—not wind.' It is there where air travelling might be made profitable.

"There are, however, many costly features about an air service by means of aeroplanes which will militate against any hope of very low rates—particularly the necessity of suitable landing spaces at frequent intervals, in case of engine trouble. Orville Wright maintains that to make flying reasonably safe, good landing places should be provided at 10 or at most 15, miles interval. A landing space must be about a quarter section in size and the surface must be of level, smooth, hard sod. Then, in the case of airships, the cost of sheds is a very considerable item. Thus, for instance, a shed to house two of the new rigid R-80 British dirigibles is about $2,000,000—so that anyone who is under the impression that air transportation in the near future will reduce either rail or steamship rates is likely to be disappointed.

"In a word, the future of commercial air transportation is bound up in the question of cost, but we are of the opinion that with the engineering and operating resources which the C.P.R. has always been able to command, we should be able to enter the field with confidence when the time seems ripe."

Act to Authorize the Appointment of An Air Board for the Control of Aeronautics.

The Air Board Act to authorize the appointment of an air board for the control of aeronautics was passed by the House of Commons, May 6.

In introducing the bill Apr. 29, Hon. A. K. Maclean, acting Minister of Naval Service, said, owing to the development of aeronautics in Canada and in other countries, it is necessary to administer these services in this country. The bill proposes the establishment of an air board to consist of not less than 5 and not more than 7 members to be appointed by the government. It is intended that the chairman shall be a minister of the crown, and that the Militia and the Naval Service Departments shall each be represented on the board by one member. The purpose of the bill is to control and regulate and to prescribe laws for the conduct of aeronautics in Canada. It is deemed advisable to constitute a board for the time being as the most practicable method of dealing with this new subject. Possibly after a year's trial it may be found that some other legislation is necessary.

In the committee stage of the bill, May 5, it was stated that provision would be made for the services of the air board in the supplementary estimates; that the operations of the board would largely relate to commercial activities, as it was anticipated that naval and military activities would be limited for the next few years; that up to the present it is not the fixed or settled policy of the government to establish a school where practical or theoretical instruction will be imparted so as to render a man thoroughly competent to take charge of an aeroplane. Hon. A. K. Maclean, in charge of the bill, said the Militia and Naval Service Departments, during the period of the war, carried out a programme of education, but it has now practically ceased. It is necessary to first enact legislation before any fixed policy can be adopted by the government in respect of any form of aeronautical activity. Many applications have been received from commercial companies for the establishment of aeronautical routes throughout Canada. It is open to the government to embark upon various forms of aerial activity, such as the conveyance of mails, the survey of forest, fire protection, patrols by the mounted police, and so forth, but at the present time the government has reached no definite policy in respect of any of these matters. The immediate purpose of this legislation is chiefly to control aeronautics in Canada, established by any government department or by private corporations. For example, it is not within the right of any individual to fly in the air with aeroplanes or hydroplanes or any other machine of the kind, although there is no statutory law which directly prohibits it. It is unknown to both the common law and the statutory law. Consequently nobody can legally engage in flying today, and in none of the provinces or in Canada, as a whole, is there any statutory authority for anybody to grant licenses for the purpose. The board must establish aerial routes; the machines used must be licensed and inspected, just as a steamship is; the flyers and the crews must be licensed; regulations must be enacted compelling flying machines to use telephone or wireless apparatus. A very close parallel to the control of aerial navigation is the control exercised by the government over shipping. Generally speaking, the object of this legislation is to put the government in a position to control aeronautics chiefly commercial, as that is the form it will have to be dealt with in the immediate future in Canada.

A question was raised as to the rights of the provinces, but Mr. Maclean pointed out that any doubt entertained did not affect the competency of parliament to pass the legislation, although later it might be held by the courts to be only intra vires in so far as it affects interprovincial aeronautics.

The bill as passed by the House of Commons, provides that the members of the air board shall be appointed for three years; they shall be eligible for reappointment, and shall be paid salaries to be fixed by the government. The board's duty will be to supervise all matters connected with aeronautics; to study the development of aeronautics in Canada and other countries, and to undertake such technical research as may be requisite for the development of aeronautics, and to co-operate with other institutions in carrying out such research; to construct and maintain all government aerodromes and air stations, including all plant, machinery and buildings necessary for their efficient equipment and upkeep; to control and manage all aircraft and equipment necessary for the conduct of any of His Majesty's services; to operate such services as the government may approve; to prescribe aerial routes; to co-operate with other officers of His Majesty, and to assist in the carrying on of any service under their jurisdiction which may require aerial work of any nature, and to collaborate with the officers employed in existing air services of His Majesty in such extension of their present work as the development of aeronautics may require; to take such action as may be necessary to secure by international regulation or otherwise the rights of His Majesty in respect of the Dominion Government in international air routes; to co-operate with officers of the Militia and of the Naval Service Departments on all questions relating to the air defence of Canada; to co-operate with the air staffs or authorities of other governments or countries for any purpose pertaining to air services; to investigate, examine and report on all proposals for the institution of commercial air services within or partly within Canada or the territorial waters of Canada; to consider, prepare and draft for approval by the government such regulations as may be considered necessary for the control or operation of aeronautics in Canada or within the limits of the territorial waters of Canada and to perform such other duties as the government may impose. The board is empowered to make regulations, subject to the government's approval for licensing of pilots and other persons for the navigation of air craft; for the registration, inspection and licensing of aircraft; for licensing, inspection and regulation of aerodromes and air stations; the conditions under which aircraft may carry goods, mail and passengers; the conditions under which goods, mail and passengers may be imported or exported; the prohibition of navigation of aircraft over prescribed areas; the areas within which aircraft coming from places outside Canada are to land and the conditions to be complied with by such aircraft; the institution and enforcement of such laws, rules and regulations as may be deemed necessary for the safe and proper navigation of aircraft in Canada, or the territorial waters of Canada, and the organization, discipline, efficiency and good government generally of the officers and men employed under the air board. All regulations made are to become valid upon publication in the Canada Gazette. Persons found guilty, upon summary conviction, of violating any of the regulations, are liable to a fine not exceeding $1,000, or to imprisonment for not exceeding six months, or to both fine and imprisonment. The board may employ such officers and men as may be required, at rates of pay, together with such arrangements for housing, boarding, clothing, etc., as may be approved by the government.

Aerial Transportation Notes

The Aerial League of Canada, is reported to be arranging for a flight across the Rocky Mountains and to have selected Vernon, B.C., as one of the points of call.

A press report states that work is in progress on laying out an "air port" at Atlantic City, N.J., and that an area of 160 acres is being developed, with landing places, hangars, and service stations.

A Sudbury, Ont., press report, May 11, states that a hydroplane service will be put in operation shortly between there and the new gold mining district of West Shining Tree. The report also states that Sudbury will be a station on a route the promoters expect to be able to develop to include Toronto, Fort William, Port Arthur and other points.

Two seaplanes given to Canada by the Imperial Government, are reported to have been turned over by the Minister of Marine to the St. Maurice River Forestry Protection Association, for use in connection with its work of forest protection in the St. Maurice River Valley. It is expected that the seaplanes will begin their work June 1, Three Rivers, Que., being their starting point. The work is being done by the association in close co-operation with the Quebec Government.

Major J. Inwood, Secretary of the Aero Club of Canada, who has been touring Canada in the club's interests, is reported to have said in Vancouver, May 7: "After the armistice was signed, 7,000 air mechanics of the R.A.F. in Canada were demobilized, besides 4,400 cadets discharged in various stages of training, 3,300 cadets who had been trained and sent to England as flying officers, and between 3,400 and 4,000 men who transferred from the C.E.F. to the flying forces. All these and 2,500 employes of Canadian Aeroplanes Ltd., are now seeking employment or have temporarily taken employment in some calling where they are unable to make use of the technical knowledge and training they possess. Vancouver, by its position on the coast, is bound to have a great future as a station in the multiplicity of passenger and commercial flying stations that will, within the next few years, be employed in carrying mail and other important matter and passengers across the Dominion. The Vancouver people are alive to the vast possibilities of this new industry, and are ready to encourage those who are interested in the future of flying, and are working for an immediate development that will provide remunerative and congenial occupation for the large number of Canadian flying men and mechanics trained in the technology of this new business." The Aerial League of Canada, which has recently been organized in Vancouver, will, it is reported to have been arranged, become the provincial governing body of the Aero Club of Canada in British Columbia.

Timiskaming and Northern Ontario Railway Report.

The Timiskaming and Northern Ontario Ry's report for the year ended Oct. 31, 1918, has been issued by the commission which operates it and the Nispissing Central Ry.—an electric line—for the Ontario Government. Following are extracts:—

MILEAGE.

Main line, North Bay to Cochrane	252.29
Branch lines (three)	76.21
Nipissing Jct. spur, leased to G.T.R.	2.10
Yards and sidings	113.89
Second track	1.70
Total mileage operated	446.19
Leased to Nipissing Central Ry.	13.16
Total mileage owned	459.35

ASSETS

Cost of road	$18,478,510.12
Cost of equipment	2,871,693.83
Investment Nipissing Central Ry	492,123.31
Empire Lumber plant, Latchford	1,007.60
Working assets	1,300,119.95
Deferred debit items	16,634.72
	$23,163,119.53

LIABILITIES.

Provincial loan account	$21,822,744.13
Working liabilities	618,581.97
Deferred credit items	325,696.04
Balance profit and loss	396,097.39
	$23,163,119.53

EARNINGS AND EXPENSES

Revenue from transportation	$2,688,658.36
Revenue other than transportation	123,652.26
Total operating revenue	$2,812,310.62
Maintenance of way and structures	$462,526.51
Maintenance of equipment	486,055.18
Traffic expenses	19,376.52
Transportation expenses	1,260,079.90
Miscellaneous operations	52,641.27
General expenses	111,097.85
Transportation for investment (cr.)	586.63
Total operating expenses	$2,390,202.60
Net operating revenue	$422,108.02
Ore royalties	96,579.78
Rent from joint facilities	14,118.11
Rent from lease of road	12,802.18
Interest (dr.)	3,459.15
Miscellaneous income	8,931.73
Total income	$551,080.67
Deductions from income	121,661.03
Net earnings	$429,419.64

Compared with the year ended Oct. 31, 1917, the total operating revenue increased $480,404.83; the operating expenses increased $508,906.31, and the net operating revenue decreased $28,501.48. The income from other sources also decreased, making a total decrease of income of $49,346.69, while the deductions from income increased $37,934.23, thus making a decrease of net earnings of $87,280.92. From profit and loss, $300,000 was paid to the Treasurer of Ontario, certain adjustments were made and $396,097.39 was carried forward.

TRAFFIC STATISTICS

Revenue passengers	476,084
Passengers carried one mile	25,548,424
Passengers carried one mile per mile of road	73,749
Average distance carried (miles)	53.44
Average amount received	$1.48
Passenger train revenue per train mile	$1.75
Revenue freight carried (tons)	1,284,210
Tons carried one mile	237,088,877
Tons carried one mile per mile of road	721,764
Average distance of haul of one ton (miles)	182.16
Average revenue per ton	$1.77
Average amount received per ton per mile	0.009
Freight revenue per train mile	$2.95
Freight originating on the line (tons)	514,717
Received from Canadian lines	644,422
Received from U.S. lines (tons)	84,261
Total (tons)	1,284,210
Mileage of revenue passenger trains	378,572
Mileage of revenue mixed trains	41,687
Mileage of revenue freight trains	605,297
Total revenue train mileage	[illegible]

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—A press report of May 16 stated that an issue of $7,500,000 of 6% equipment trust certificates was being placed on the United States markets, at prices yielding from 5½ to 6%. The certificates are to be issued against new rolling stock, costing $10,724,705 on account of which $3,224,705 has been paid by the company.

Guelph Jct. Ry.—The Guelph Jct. Ry. are reported to have declared a dividend of 6¾%, May 17. The line is owned by the City of Guelph, but is leased to the C.P.R., and is operated as part of a through line from Toronto to Goderich, connection also being given with Hamilton, by a line from Guelph Jct., on the Toronto-Windsor line.

Reid Newfoundland Co.—The Colonial Secretary laid before the Newfoundland Legislature May 1, a report of the railway operations of the Reid Newfoundland Co. for the year ended June 30, 1918. A local paper in summarizing the report, says the gross earnings of the railway were $1,253,565.99, and the operating expenses, $1,600,190.84, thus showing a deficit of $346,624.85. The detail figures given show the gross earnings to be as stated, but do not agree with the expenses as given.

Timiskaming and Northern Ontario Ry.—Passenger earnings for Feb., $49,624; freight earnings, $167,392.48; total earnings, $217,016.48; passenger earnings for March, $68,195.08; freight earnings, $166,515.87; total earnings, $234,710.95, against $38,859.37, passenger earnings;earnings; $109,393.20, freight earnings; $148,252.57, total earnings, for Feb., and $51,403.97, passenger earnings; $214,884.14, freight earnings, and $266,288.11, total earnings, for March, 1918.

The Board of Railway Commissioners has ordered the C.P.R. to resume the two trains daily service between Calgary and Macleod, Alta., commencing June 1

Canadian National Railways Construction, Betterments, Etc.

Halifax Terminals—The Minister of Railways replying to a question in the House of Commons, May 14, said the total cost to Mar. 31, of the Halifax terminals, including the cost of the branch railway connecting the terminals with the Intercolonial Ry. main line, was $14,502,655.11. The estimated cost, at present prices, of the work necessary to complete the first unit of 9 berths, including permanent station, train shed, passenger landing and immigration facilities, 2 story permanent sheds at berths, not now equipped with sheds, and leaving 4 temporary wooden sheds as they are, grain elevators, and conveyers, tracks, roadways, subways, etc., and completion of existing contracts, together with new locomotive facilities at Fairview is $8,000,000.

Truro-Painsec Jct. Second Track—In Canadian Railway and Marine World for May, reference was made to a press report, crediting W. A. Kingsland, Assistant General Manager, Eastern Lines, with having stated that this year's construction programme will include the building of a second track between Truro, N.S., and Painsec Jct., N.B., from which point there is a double track to Moncton. We are officially advised that Mr. Kingsland did not make such a statement but merely said that a certain amount of second track would be laid. We are also advised that it is intended to lay some second track in both directions from certain stations between Truro and Painsec Jct.

Moncton Freight Shed—We were officially advised, May 8, while certain changes will have to be made in connection with the Moncton, N.B., freight sheds, owing to the T. Eaton Co. having located a distributing warehouse there, nothing definite has yet been decided.

Fredericton-McGivney Jct. Track Improvements—Fredericton, N.B., press report, of Apr. 30, stated that work had been started on the Fredericton-McGivney Jct., section of the old Canada Eastern Ry., to bring it up to main line standard, for use in handling through traffic from the National Transcontinental Ry. to and from St. John, N.B.

The New Brunswick Minister of Lands and Mines is reported to have said recently, that the building of a spur line of about 5 miles from the National Transcontinental Ry. to the Grand Lake coal fields had been discussed with Canadian National Rys. directors, and was being considered. The district is now served by the Fredericton and Grand Lakes Coal and Ry. Co.'s line, which is operated by the C.P.R.

Levis Station—A press report of May 16, states that the location of the proposed new station for Levis, Que., is to be looked into by the Minister of Railways, upon representations made in favor of building it on the site of the one burned down.

The question of building a temporary station at a cost of about $100,000 was [illegible] on in the Senate, May 7, [illegible] urging the Minister of Railways [illegible] upon a temporary station and arrange for a meeting of the [illegible] with the Levis people [illegible] matter.

St. Malo Shops, Quebec—It was reported May 6, that the rails to give these shops connection with the National Transcontinental Ry. main line, were being laid, and that the shops would be ready for opening early in July. They are dealt with in a separate article in this issue.

Ontario Lines—We are officially advised that contracts have been let for bridge and culvert work as follows:—Trenton Subdivision, Pillsworth and Daly, Cobourg Ont.; Rideau Subdivision, Doran and Devlin, Ottawa; Muskoka Subdivision, Jas. Bogue, Peterborough, Ont.; Pembroke Subdivision, Hyland Construction Co., Toronto; North Bay Subdivision, Wallace and Angus, North Bay, Ont.; Nipigon Subdivision, Campbell and Lathmore, Toronto.

Port Arthur and Duluth Ry.—A Flint, Ont., press report, May 1, states that a delegation of business men along the branch from Twin City Jct. to North Lake, Ont., was informed recently by Superintendent Moodie, that $40,000 will be expended during this year on this branch, in putting in new ties and ballasting.

Western Lines Betterments, Etc.—Tenders were received up to May 26 for the supply of all labor and materials for the erection and completion of the following:—Port Arthur, Ont., 5 stall additions to locomotive house, and turntable foundation, Winnipeg; addition to freight car shop and addition to power house; Kamsack, Sask.; a 10-stall addition to locomotive house and a machine shop; North Battleford, Sask., 15-stall addition to locomotive house and a machine shop; Prince Albert, Sask., no. 4 stores building; Kindersley, Sask., cinder pit; Edmonton, Alta., 5-stall addition to locomotive house, and a cinder pit; Hanna, Alta., 5-stall addition to locomotive house; Calgary, Alta., no. 4 stores building; Big Valley, Alta., no. 4 stores building. J. Schofield is the company's architect, at Winnipeg.

Tenders have been received for the erection of standard fineing on the Oliver, Crooked Lake and Elrose Subdivisions.

A Port Arthur, Ont., press report of May 12, stated that fully 35% of this year's work on the line from Port Arthur to Winnipeg for this year had been completed. The report added that 250 men were relaying track between Port Arthur and Emo, and that this work would be completed at an early date.

An Edmonton, Alta., press report of May 8, stated that 80 lb. rails were being laid between Warman and Prince Albert, Sask., to replace lighter rails.

A press report states that the building of a second track from Wayne to Manson, in the Drumheller-Colbery district, Alta., will be completed this year.

Extensions in Prairie Provinces—In reference to the matter under this head, published in Canadian Railway and Marine World for May, we are officially advised that the following corrections should be made:—

Lampman-Peebles line — Lampman, Sask., is on the Maryfield extension, where it intersects the Bienfait branch, and Peebles is on the Brandon-Regina line, not on the Prince Albert line, as stated previously. The extension is not from Peebles northerly, but from Peebles southerly, for 21 miles.

Leech Lake extension is a continuation from Elrose Jct. for 35 miles from Dunblane, 13 miles of which were build previous to this year.

Acadia Valley line, 25 miles, is to be built from at or near Alsask, Alta., on the Elrose extension southwesterly.

Gibbs Bros., Lumsden, Sask., who have the contract for the Swift Current extension, which is for continuing for some 25 miles on the Avonlea-Gravelbourg line from Gravelbourg, Sask., towards Swift Current, are farmers as well as railway contractors, the three members of the firm being W.C., Frank and David Gibbs.

The Canadian Construction Co. Ltd., which contracts for grading and culverts on the Lampman-Peebles line and the Hanna-Medicine Hat line, will have its headquarters for the latter contract at Millicent, Alta. The company's officers are J. D. McArthur, President; W. A. Dutton, Vice President and General Manager; E. J. Rankin, Treasurer, and D. N. McLeod, Secretary. Its head office being at Winnipeg.

A press report of May 8 stated that track had been laid on this branch to mileage 73, and that as soon as track laying is completed on the finished grading, ballasting will be started. The rails being laid on this line were lifted from the main line west of Battleford, Sask., where 85 lb. rails are being laid.

Kamloops-Vernon-Lumby Branch—A press report of May 8 stated that H. F. Silverthorne, of the C.N.R. engineering staff, had opened an office in Vernon, B.C., and had a survey staff going over the location. A Vancouver press dispatch of May 9 referred to the assembling of the contractor's plant, and quoted J. W. Stewart, the principal member of the contracting firm, as stating that work would be started at once.

New Westminster to Vancouver—A press report states that the building of a line from New Westminster to Vancouver, is contemplated, and that as soon as plans are prepared construction will be started. It is stated that the line will run through New Westminster, and down the North Arm, to South Vancouver, this year, and that eventually it will, in all probability, be continued on to Vancouver, and that it will probably be operated by electricity.

Victoria, B.C., Terminals—We are officially advised that the management is arranging for a car ferry slip at Patricia Bay on Vancouver Island, and for the erection of a 5-stall locomotive house at Victoria.

A recent press report stated that the electric equipment for he slip at Patricia Bay had been delivered, and that as soon as it was installed the slip would be equipped with 3 aprons, to enable the car ferry steamship Canora to be operated at any stage of the tide.

The same report also stated that the temporary terminal buildings at Victroia would be erected on the north side of Point Ellice bridge, and that this would make it possible to put in operation the track between Esquimalt Road and Alpha St., also the new bridge across the Selkirk water. Until entrance can be secured to the Songhees Indian Reserve, secured for permanent terminal purposes, the passenger station will remain, it is said, north of Esquimalt Road. Another report says that the management will go ahead with some of the permanent buildings on the Songhees Reserve, and with the erection of a car ferry slip to give access to the new government docks at Ogden Point. (May, pg. 246).

Canadian Pacific Railway Construction, Betterments, Etc.

Chateau Frontenac Improvements—A press report states that Mapes and Maxwell, architects, have prepared plans for the erection of an extensive addition to the Chateau Frontenac, Quebec, at an estimated cost of from $1,500,000 to $2,000,000. The report says the addition will be 10 stories high with a 15 story tower.

Quebec District—An unconfirmed press report states that tenders will be asked at an early date for the electrification of the branch line from Three Rivers to Shawinigan Falls and Grand Mere, Que., 27 miles.

Ontario District — Automatic signals are being installed between Galt and Woodstock, Ont., mileage 57.7 to 88. There are 3 positions, upper quadrant, top first mechanism, low voltage d.c., with d.c., track circuits; the type of control known being absolute permissive block. The work is being done by the General Railway Signal Co. of Canada, and it is expected to have it completed by the end of August.

Manitoba District—Tenders are under consideration for the construction of 4 concrete arch culverts on the Neudorf subdivision, and for new standard A-3 station at Harding, Man., and Marchwell, Sask.

A press report states that a considerable amount of ballasting will be done during this year between Virden and Broadview, Man., 84 miles, and that about 11 miles of new 85 lb. rails will be laid west of Virden.

Saskatchewan District — A Regina press dispatch, May 9, stated that the Saskatchewan Government had received a telegram from D. C. Coleman, Vice President Western Lines, C.P.R., announcing that work would be started immediately upon the construction of a line from Victoria or Govanlock, Sask., easterly. These stations are on the Weyburn-Lethbridge line, which has its present western terminus at Altawan, on the Saskatchewan-Alberta boundary, Govanlock being 7 miles and Vidora 28 miles east of that point. The line is projected to run easterly a few miles north of the International Boundary, and finally effect a function with a line running easterly from Estevan. Surveys were made some years ago, and Grant Hall, then Vice President and General Manager Western Lines, made a trip through the country to be opened up.

Western Branch Lines—The C.P.R. made application to the Dominion Parliament this session for authority to build a number of branch lines in Saskatchewan and Alberta. A bill providing for the building of seven branch lines has been passed by the House of Commons, and is now before the Senate. The bill provides that the company may within two years begin, and within five years, complete the construction of any of the specified lines, at the end of which period the powers of construction shall be null and void in respect of so much of any of the lines remaining uncompleted. The company is authorized to issue securities for $40,000 a mile in respect of the lines, such issues to be made in accordance with the terms of the Company's Special Act as defined by the Railway Act, sec. 2. By consent of the shareholders, the company may issue consolidated debenture stock to the same amount, in lieu of the securities authorized by the present act. The following are the various branches:

From near Tp. 7, Range 29, west 2nd meridian, Sask., generally southerly to Tp. 5, Range 30, west 2nd meridian, thence generally westerly to Range 7, west 3rd meridian. This branch will probably be located from between Willows and Assiniboia on the Weyburn-Stirling line, and run south and then west, just north of Wood Mountains, midway between the Weyburn-Stirling line and the International Boundary.

From near Lanigan, Sask., on the Pleasant Hills branch, Tp. 33, Range 22, west 2nd meridian, a generally north easterly to near Watson, and thence in a generally northerly through Melfort to Tp. 48, Range 17, west 2nd meridian. Lanigan is the junction of a line from Virden, Man., with the Manitoba North Western Ry. extension into Saskatoon, and the projected line will cross the Canadian Northern Ry. main line at Watson, and the Canadian Northern Ry. Prince Albert line at Melfort, to the Carrot River Valley.

From the Manitou Lake branch, Tp. 43, Range 21, west 3rd meridian, Sask., generally northwesterly through Lloydminster to Whitford Lake, Tp. 56, Range 15, west 4th meridian, Alta. The section with regard to this line provides that for the purpose of avoiding duplication of construction of the portion of the line west of Lloydminster the approval of the route map shall be made subject to joint construction or operation with the Canadian Northern Ry., on terms to be agreed upon by the companies or settled by the Board of Railway Commissioners. The Manitou Lake branch terminates 29 nine miles from Wilkie, at Cutknife, in Tp. 43, Range 21, west 3rd meridian, consequently the projected line is an extension of the branch across the Grand Trunk Pacific Ry. branch, to Lloydminster on the Canadian Northern Ry., thence on the Whitford Lake.

From near Archive, Sask., on the Moose Jaw Southwesterly branch, in Tp. 15, Range 27, west 2nd meridian, Sask., southwesterly to near Weymark, on the Swift Current Southeasterly branch in Tp. 13, Range 13, west 3rd meridian. Archive is 10 miles from Moose Jaw, being the second station on the branch named, and Weymark is 17 miles from Swift Current, being also the second station on that branch. The line will run between Chaplin and Johnson's Lakes.

From Rosetown, Sask., on the Moose Jaw Northwesterly branch, in Tp. 30, Range 15, west 3rd meridian, generally southerly for 50 miles, then generally easterly for 30 miles to Tps. 20, 21 or 22, Range 10, west 3rd meridian. Rosetown is near the point where the Canadian Northern Ry., Saskatoon-Calgary line crosses the C.P.R., and the projected line will cross the South Saskatchewan River, on its southerly stretch, and on its easterly stretch will probably effect a junction with the main transcontinental line near M[illegible].

From near Leader, Sask., on the Swift Current, Northerwestly branch, Tp. [illegible], Range 26, west of the 3rd meridian, generally southwesterly for 50 miles, thence generally easterly to near Success or Cantaur, Sask. Leader is at mileage 94 from Swift Current on the line to Bassano, and the projected line would run 50 miles southwesterly, and then working easterly would rejoin it near Success or Cantaur, which are 20 and 13 miles respectively out of Swift Current.

From near Duchess, Alta., on the Bassano Easterly branch, in Tp. 20, Range 14, west 4th meridian, in a generally northerly direction to Tp. 25, Ranges 14, 15 or 16, west 4th meridian. Duchess is 25 miles east of Bassano. This projected branch would cross the Red Deer River and terminate south and east of the Hand Hills.

The Moose Jaw Southwesterly Branch was originally built from Moose Jaw to Expanse, 35 miles, and was extended subsequently to a junction with the Weyburn-Stirling line at Assiniboia, mileage 66. This section of line was apparently built without the shareholders' authority having been first obtained, as at the company's recent annual meeting a resolution was passed approving of the building of this line, and authorizing the directors to proceed with the construction of certain other branch lines, and extensions of branch lines referred to hereafter, when in their opinion conditions warrant, and after statutory authority, where any be necessary, shall have been obtained, and that to and in the construction and equipment of all such lines the directors may issue consolidated debenture stock to such an amount as they may deem expedient, but not exceeding in respect of any of the said lines the amount which the company is or may be empowered by statute to issue. The lines specifically mentioned in the resolution are:—

Branch of Manitoba and North Western Ry., Russell North branch, from Russell, Man., northerly, 15 miles. This is in operation from Hazelcliffe to Russell, 11 miles.

Lanigan, Northeasterly Branch from Lanigan, Sask., for 150 miles. This is the line from Lanigan through Watson and Melfort, and beyond for which the company has obtained parliamentary sanction recently.

Part of the Moose Jaw Southwesterly branch from Vidora, Sask., easterly, 35 miles. Vidora is 28 miles east of Altawan, the present western terminus of the Weyburn-Stirling line, and then 35 miles of extension would probably connect with the projected line for which parliamentary authority has just been obtained, to start somewhere near Assiniboia or Willows, and to run south and east.

Extension of the Bassano easterly branch from Empress, Alta., south easterly to Milden, 142 miles. Empress is equidistant, 118 miles, from both Bassano and Swift Current, and Milden is at mileage 142 on the Moose Jaw, northwesterly line to Kerrobert and Macklin.

Extension of Langdon North branch from Acme, Alta., to the projected extension of the Swift Current Northwestern branch near Empress, [illegible] miles. The Langdon branch serves the irrigation area between Langdon and Acme, 40 miles, and the projected extension from Acme would connect with the line now located due northerly from Empress. The line from Duchess, authority for which has been obtained from the Dominion Parliament, would apparently connect with this line.

British Columbia District.—A New Westminster, B.C., press report, states that H. Rindal, District Engineer, C.P.R., Vancouver, has received instructions to prepare plans and specifications for the extension of the C.P.R. wharf at New Westminster to the harbor line. (May, pg. 258.)

United States to Return Railways, Telegraphs and Telephones to Owning Companies.

The message of President Woodrow Wilson, read at the opening of the United States Congress, May 20, contained the following reference to railway, telegraph and telephone utilities:—

"The telegraph and telephone lines will, of course, be returned to their owners so soon as the retransfer can be effected without administrative confusion—so soon, that is, as the change can be made with least possible inconvenience to the public and to the owners themselves. The railroads will be handed over to their owners at the end of the calendar year. If I were in immediate contact with the administrative question which must govern the retransfer of the telegraph and telephone lines, I could name the exact date for their return also. Until I am in direct contact with the practical questions involved, I can only suggest that in the case of the telegraph and telephone, as in the case of the railways, it is clearly desirable in the public interest that some legislation should be considered which may tend to make of these indispensable instrumentalities of our modern life a uniform and co-ordinated system which will afford those who use them as complete and certain means of communication with all parts of the country as has so long been afforded by the postal system of the government and at rates as uniform and intelligible. Expert advice, of course, available in this very practical matter, and the public interest is manifest. Neither the telegraph nor the telephone service of the country can be said to be in in any sense a national system. There are many confusions and inconsistencies of rates. The scientific means by which communication by such instrumentalities can be rendered more thorough and satisfactory has not been made full use of. An exhaustive study of the whole question of electrical communication and of the means by which the central authority of the nation can be used to unify and improve it if undertaken by the appropriate committees of Congress, would certainly result, indirectly even if not directly, in a great public benefit."

Commenting on the foregoing, the Railway Review, says:—

"The President did not wish to spend money in cabling to Congress about railways, on the operation of which the government is now losing somewhere about half a billion dollars a year, so he limited consideration of that subject to 16 words which fixed the end of the calendar year for returning them to their owners. He acknowledges that he is, owing to his absence from the country, out of touch with the practical questions involved and proves it by saying that legislation should make telegraphs and telephones and railways 'afford those who use them as complete and certain means of communication' as the postal system. This certainly is proof incontestible that he is not 'in direct contact' with home affairs. The postal system as at present administered is the acme of uncertainty and disservice. Just while these words are being penned, comes to the writer's desk a roll of blue-prints which has taken five days to come from an eastern city. Such events and worse are of daily occurrence. When we are paying 13c for letter postage to insure any certainty of service, we look longingly for the old 2c days. The fact that the 10c for special delivery does insure some promptness and accuracy, shows incontrovertibly that the postal administration alone is to blame. Time was when complaint brought inspection, investigation and correction, now it brings only resentment or acknowledgement of general inefficiency."

Amendments to the Railway Act re Location of Railways.

The Dominion Parliament has under consideration a measure to repeal sec. 157 and 159 of the Railway Act, 1906, as amended by sec. 4, chap. 22 of the statutes of 1911, and to substitute a new section therefor. The bill was introduced in the Senate, Apr. 30, and was passed through its different stages May 8, when it went to the commons.

On the second reading of the bill in the Senate, May 6, Sir James Lougheed stated that the section of the bill was taken from the bill to consolidate the Railway Act, now under consideration. It had been thought desirable that these clauses should be passed in a separate bill in the event of the railway bill not passing this session. The clauses in the present bill refer to the location of railways, and the policy is that there should not be a duplication of roads if that duplication can possibly be prevented. Therefore, particularly in the western provinces, roads paralleling each other which have been practically built at the public expense, and which are within a stone's throw of each other. This being a waste of public money and failing to develop or serve a section of country, which might well have been served had the railways been built within a reasonable distance from each other, it is desirable that this policy should be put into operation at the earliest possible date. It is proposed that the location of roads should be determined by the Board of Railway Commissioners.

When the bill came up in the committee of the House of Commons, May 16, the Minister of Railways said that in the bill to consolidate the Railway Act, which is before a special committee, these clauses have been changed so as to vest in the Board of Railway Commissioners the authority to approve of route maps, this authority having in the past been exercised by the Minister of Railways. When a charter was granted by parliament before construction could be proceeded with, a route map had to be approved by the minister. It was proposed to change that to provide that the Board of Railway Commissioners shall have this power of approval. It is the intention to have this bill put through in case the bill to consolidate the Railway Act does not go through this session. If the general railway bill now before the special committee was passed he would not proceed further with the location bill. In the event of the general railway bill not being passed at this session, he wished to provide that the authority for approving of route maps be placed in the Board of Railway Commissioner's hands. The reason for this is that practically speaking there are only two railway systems in Canada, and it is advisable that the Board of Railway Commissioners should decide on the route maps to be approved of. The Canadian National Railways or the Canadian Pacific Ry. might be involved and there might be a conflict of the two interests.

The new section, 157, provides that plans shall be prepared, showing the general location of the proposed line, on a scale of not less than 6 in. to the mile, covering such towns, railways, navigable streams, etc., within a radius of 30 miles and be submitted to the board. Before approving of the plan the board may, subject to the company's special act, make such alterations therein as it may deem expedient, and upon approval, the plan shall be filed in the Railway Department. The board may approve of the whole or any portion of the map submitted. The provisions of the section shall only apply to the main line and to branches over 6 miles in length.

Sec. 159 provides for the sanction by the board of plan, profile and book of reference, the effect of which is that the location of the railway, the grades and curves as shown are approved, but that the company is not thereby relieved from otherwise complying with the act; the board may sanction deviations of not more than one mile from the general route as previously approved. In granting such sanction, the board may fix the period within which the right of way may be acquired, and notices may be given.

Canadian Railway Club's Annual Meeting.

The Canadian Railway Club's annual meeting was held in Montreal, May 13, T. C. Hudson, President, in the chair. Jas. Powell, who had been Secretary for the 14 years, and who retired recently from the G.T.R. service to take up work in connection with vocational classes for returned soldiers, tendered his resignation. The President, on behalf of the membership, presented him with a solid silver epergne, as a mark of appreciation for the lengthened services.

The following officers and committee were elected for the current year:—President, J. Hendry, Master Car Builder, G.T.R.; First Vice President, W. H. Winterrowd, Chief Mechanical Engineer, C.P.R.; Second Vice President, C. H. N. Connell, District Engineer, Canadian National Rys., Quebec; executive committee, E. A. Nix, acting Assistant Works Manager, Car Department, C.P.R.; B. F. Shortley, recently Terminal Agent Canadian Government Railways; E. R. Battley, Superintendent Motive Power, G.T.R.; R. A. Pyne, Superintendent Motive Power and Car Department, C.P.R.; W. H. Sample, General Superintendent Motive Power and Car Department, G.T.R.; W. H. Langridge, Auditor of Stores and Mechanical Accounts, C.P.R.; G. M. Wilson, Superintendent Motive Power Shops, G.T.R.; R. M. Harvey, Safety Car Heating and Lighting Co.; Secretary, W. A. Booth, Chief Draftsman, Motive Power Department, G.T.R.; Treasurer, E. E. Lloyd, Auditor of Disbursements, C.P.R.

The retiring President was presented with a gold past president's badge.

The Grand Trunk Pacific Ry. is having 1,500 wooden box cars, 30 tons capacity, repaired by the Canadian Car and Foundry Co. at Fort William, Ont.

Electric Railway Department

Electric Railway Employes' Wages, Working Conditions, Etc.

Edmonton Radial Ry.—Towards the end of April it was stated that employes had applied to the Labor Department for a board of conciliation. Early in May we were officially advised that an application had been received, but that a board had not been established, as where the employer is a municipality a conciliation board can only be established by mutual consent and that the city had not concurred in the application. The Labor Department's Calgary officer was then at Edmonton trying to arrange a settlement. On May 28 it was reported that the employes had struck, probably sympathetically.

Fort William Municipal Ry.—The conductors and motormen asked recently for large advances in wages, the following table showing the present rates and those asked per hour:—

	Present	Asked
First six months	35c	50c
Second six months	"	55c
Second year	"	60c
Second 18 months	37½c	.....
Third year	40c	.....
One-man car operators extra	2c	5c

Overtime is now paid only when employe is working on his day off. Time and a half is asked for all over 8 hours and for time worked on day off and on legal holidays. The present average day is 9¾ hours. An 8 hour day is asked with overtime beyond that. Four cents an hour extra is asked for training students, and 5 minutes is asked for carrying fare boxes to office.

Employes now pay 25% of cost of uniforms and overcoats. These are asked to be supplied free. Seats for conductors and heaters in rear of car are also asked for.

The other employes are asking for increased pay according as follows:—Painters, union scale of wages; pitmen, 62½c an hour; handy men and laborers, 55c; trackmen, 45c. Day to be eight hours, and time and a half to be paid for all overtime.

The Fort William and Port Arthur Public Utilities Commissions held a joint meeting at Fort William, May 14, to discuss the wage schedules and conditions of employment. A press report states that no joint decision was reached, it being thought advisable that each committee should treat with its own employes, separately.

Guelph Radial Ry.—A press report states that a conference took place May 14, between Alderman Westoby, chairman of the Guelph City Council committee in charge of the Guelph Radial Ry., and J. Gibbons, Toronto, representing the men, relative to differences as to wages and hours of work of the Guelph Radial Ry. employes. The men asked for an 8 hour day and an increase of pay time and a half for overtime, and double pay for Sundays. The president and secretary of the local union are reported to have been dismissed by the management. Alderman Westoby is reported to have said that with a loss of $11,000 on the line for 1918, there could not be any increase of wages.

A press report of May 21, stated that the matter was settled at a further conference that day, by increasing the wages 4c an hour, the hours to remain unchanged.

Hull Electric Co.—A board of conciliation was appointed in April, the company's representative being Geo. Kelley, of Ottawa, and the men's representative, Fred Bancroft, of Toronto. The Minister of Labor appointed D'Arcy Scott, K.C., of Ottawa, formerly a member of the Board of Railway Commissioners, as chairman. Up to May 30, the award had not been made public.

London and Port Stanley Ry.—Employes of some of the departments expressed dissatisfaction with conditions under which they work, and placed their grievances before the commissioners, April 30. Sir Adam Beck, chairman, met a delegation of employes, May 3, and a press report states he offered to advance linemen's wages from 45c to 50c an hour, and trackmen's wages from 37c to 40c an hour, for an 8 hour day. The trackmen asked for 55c an hour for a 9 hour day, or 60c an hour for an 8 hour day. The conductors and motormen, who are now getting a maximum rate of 45c, are reported as asking for an increase. Another press report states that a board of conciliation may be appointed.

Port Arthur Civic Railway—See Fort William Municipal Ry.

Regina Municipal Ry.—The employes application for increased wages has been under consideration by the City Council for some time. The council was asked by the union to deal with the matter at its meeting May 6, but no advice of the result has been received.

Sandwich, Windsor and Amherstburg Ry.—The board of conciliation appointed to investigate matters in dispute between this company and its employes, consisted of Judge Wallace, Woodstock, Ont., chairman; F. H. McGuigan, Toronto, representing the company, and A. E. Hooper, Windsor, representing the men. The board held its first sitting Apr. 16, and presented a majority report Apr. 24, a minority report being submitted subsequently by Mr. Hooper. The report did not recommend any change in the hourly rates of wages, which were as follows:

First 6 months	35c
Second 6 months	37c
Second year	38c
Third year	40c

A material change was, however, recommended in the overtime rate, viz.: 20c an hour, instead of 6c as formerly, and the extra pay for training new men was advanced from 40c to 50c a day. A schedule attached to the report also set out regulations governing the conditions of work, etc., while in the report certain matters with respect to particular employes were dealt with.

The company filed an acceptance of the majority award with the Labor Department, but the men, according to a press report, insisted on full recognition being given to the union; that F. E. Hayes, Superintendent, be dismissed, and 8 hour day, with a minimum wage of 50c and a maximum of 55c an hour. They are reported to have expressed their willingness to compromise on all points, but Mr. Hayes' dismissal. Attempts to reach a settlement were unavailing, and the men struck May 3. The company made an attempt to operate its cars May 9, when considerable disorder occurred. An order was obtained from the Ontario Railway and Municipal Board, May 12, directing the immediate resumption of the service, and with the assistance of soldiers taken from London, Ont., a partial service was put in operation.

An understanding was reached on the evening of May 13 under which the men agreed to return to work at the old rate of wages, pending the submission of bylaws to the several municipalities affected to grant an increase of fares. In Windsor a straight 5c fare, with 1c additional for transfers, will be asked in lieu of the present rate of 6 tickets for 25c with free transfer.

The vote will be taken in Windsor, Walkerville and Sandwich on June 14. The increase of wages to be given should the fares be increased, will be a minimum of 40c for the first 6 months, and a maximum of 50c to date from May 15.

In future, men's grievances are to be submitted to Jas. Anderson, Vice President, representing the company; M. Bell, President of the Trade and Labor Council and a third person to be selected by them.

Winnipeg Electric Ry.—We are officially advised that towards the end of April the street railway men's union presented a proposed schedule in which they asked for changes in working conditions, including an 8 hour day, a closed shop, and that the term of any agreement must not exceed 30 days, and for wages at th erate of 60c an hour for new men and 70c an hour for 2-year men. The management agreed to the 8 hour day, offered an increase of wages ranging from a minimum of 44c to a maximum of 53c an hour, but refused to agree to a closed shop and to a 30 day agreement. Ninety per cent of the men voted in favor of a strike to enforce their demands. The company applied to the Labor Department for a board of conciliation and named I. Pitblado, K.C., as its representative. This was granted and the men were asked to name their representative. The union declined to have anything to do with arbitration proceedings, but the union's business agent stated that if the board took action at once the men would wait for its decision. The Labor Department then appointed R. S. Ward, Winnipeg, who asked for the men on the board which sat in Oct., 1918. Owing to Mr. Pitblado's illness, the company named J. B. Coyne, K.C., as its representative, and on May 6, Justice Metcalfe of Winnipeg was appointed by the Minister of Labor as chairman. The board held its first meeting May 13, but the union was not represented.

In the meantime the employes of the general machine shops and of the various building trades in the city, struck and May 12, it was reported, that the street railway men's union had voted unanimously in favor if a strike of their demands were not immediately granted. The strike situation in the city became general after May 13, the street railway men going out along with nearly all the other union men in the city. Newspapers ceased publication, and rumors of all kinds were circulated, including one of the establishment of a soviet government of the city which was denied subsequently. Up to the time of writing, May 2[illegible] the operation of the railway had not been resumed.

Toronto Eastern Railway Construction and the Hydro-Electric Radial Railway Plans.

The question of the construction of a system of electric railways east of Toronto under the Hydro-Electric Power Commission of Ontario, has assumed a somewhat different phase since the partially constructed Toronto Eastern Ry. passed from the ownership of Sir Wm. Mackenzie and his associates to the Dominion Government through the Canadian National Rys.

Representatives of the Lake Shore municipalities met at Whitby, Ont., May 5, at which E. W. Oliver, General Superintendent Niagara, St. Catharines and Toronto Ry., attended, representing D. B. Hanna, President, Canadian National Rys. We are advised that the meeting was called by the Whitby Board of Trade and was attended by representatives of all the municipalities from Whitby to Scarborough. About two months ago Mr. Hanna informed a delegation that it was intended to electrify, that year, the line from Bowmanville easterly to Pickering, on most of which mileage track has been laid, and that it was intended to proceed with the construction of the line easterly to Toronto as soon as possible. This statement, Mr. Oliver reported at the meeting, and a resolution approving of the proposed work was passed. Mr. Oliver is also reported to have intimated that there was no possibility of diverting the road northerly from Pickering to Cherrywood, the present location running south of the Kingston Road, having been located and approved by the Board of Railway Commissioners.

Representatives of municipalities east of Toronto interested in the building of electric railways under the Ontario Hydro-Electric Railway Act, met at Whitby, Ont., May 8, when a resolution was passed by a majority to the effect that a hydro-electric railway be built from Toronto east to the St. Lawrence River region, and that the Dominion Government be requested to transfer on just terms the Toronto Eastern Ry. to the Hydro-Electric Commission to form a portion of such hydro-electric municipal railway.

A second resolution, passed unanimously, was to the effect that the Dominion Government be petitioned to co-operate with the Hydro-Electric Power Commission of Ontario, so that municipalities, through the commission, may acquire by lease, purchase or otherwise, such branch lines of the Grand Trunk and Canadian National Railway systems as will enable the municipalities to carry out the [illegible] scheme to the best advantage throughout Ontario.

The campaign for the building of electric railways under the Ontario Hydro-Electric Railways Act, is being carried on at various points east of Toronto. The residents of South Hastings at a meeting at Warkworth, May 5, passed a resolution asking for the building of a line from [illegible] Jct. in Rawdon Tp. through Campbellford and Warkworth and other places to Cobourg, Ont., and Sir Adam Beck, speaking at a meeting at Picton, on May 20, is reported to have said that the Minister of Railways has actually offered the Hydro Electric Power Commission of Ontario the Toronto Eastern Ry. on condition that the commission pay the cost of the same to the government plus carrying charges to date. The meeting passed a resolution calling on the Dominion Government to turn over to the commission the surplus branches of steam lines, approved of the construction of hydro-radial railways to the St. Lawrence, and asked that the commission be given an opportunity to acquire one of the railways that parallel between Toronto and Napanee, and the C.N.R. branches between Trenton and Picton.

Authority to Board of Railway Commissioners to Over-ride Franchise Agreements.

Bill A—An Act to Consolidate and Amend the Railway Act introduced in the Senate, Feb. 20, 1919, proposes to amend the Railway Act, Consolidated Statutes of Canada, 1906, by substituting the following as sec. 325 for sec. 323 in the original act:

"325. (1) The Board" (of Railway Commissioners) "may disallow any tariff or any portion thereof which it considers to be unjust or unreasonable, or contrary to any of the provisions of this act, and may require the company, within a prescribed time, to substitute a tariff satisfactory to the board in lieu thereof, or may prescribe other tolls in lieu of the tolls so disallowed.

"(2) The board may designate the date at which any tariff shall come into force, and either on application or of its own motion may, pending investigation or for any reason postpone the effective date of, or either before or after it comes into effect, suspend any tariff or any portion thereof.

"(3) Except as otherwise provided, any tariff in force, except standard tariffs hereinafter mentioned, may, subject to disallowance or change by the board, be amended or supplemented by the company by new tariffs, in accordance with the provisions of this Act.

"(4) When any tariff has been amended or supplemented, or is proposed to be amended or supplemented, the board may order that a consolidation and reissue of such tariff be made by the company."

At a meeting of the House of Commons special committee, May 7, the Minister of Railways moved to add another subsection, which had been drafted by Sir Henry Drayton, Chairman Board of Railway Commissioners, as follows:—

"(5) Notwithstanding the provisions of sec. 3, the powers given to the board under this act to fix, determine, and enforce, just and reasonable rates, and to change and alter rates as changing conditions or cost of transportation may from time to time require, shall not be limited or in any manner affected by the provisions of any act of the Parliament of Canada, whether general in applcation or special and relating only to any specific railway or railways, and the board shall not excuse any charge of unjust discrimination, whether practised against shippers, consignees, or localities, or of undue or unreasonable preference, on the ground that such discrimination or preference is justified or required by any agreement made or entered into by the company."

The amendment was opposed by representatives from Hamilton and Burlington, Ont., but was adopted by the committee.

Glasgow and Winnipeg Electric Railway Conditions Compared.

The Winnipeg Electric Public Service News, issued by the Winnipeg Electric Ry., had the following in a recent number: "In many of the public discussions on local transportation matters, reference has been made to Glasgow and its tramway system which is claimed to be a 'pattern.' We do not deny the justice of the claim, but we do suggest that when the fares charged in Glasgow are being compared with the fares charged in Winnipeg, some attention should be paid to the contrast in operating conditions.

"For instance the motormen and conductors in Glasgow start in at slightly more than 25½c an hour, and work up to 29½c an hour at the end of seven years. The women employes, who constitute more than half of those who work on the platform, receive somewhat less because, the men are more steady in showing up for duty and expect to stay in the business. The women conductors start in at 14c an hour, and work up to 22c an hour. The motoresses earn about 1¼c an hour more.

"Winnipeg, at present, the motormen and conductors start in at 39c an hour, while men who have been with us two years receive 47c an hour. The men are now asking 50c an hour for the first six months, 55c for the second six months, and 60c an hour for the second year and thereafter. The average time worked in Glasgow by motorman or conductor is 9 hours and 14 minutes a day. In Winnipeg the 8-hour day is asked.

"One large item of operating expense which the Glasgow system is spared, is that of car heating; nor does the public expect the cars to be heated. In order to heat the cars adequately in Winnipeg last winter, we spent well over $40,000.

"There are always two sides to a story!"

The Mexico Tramways Returned to the Owners.

The system of electric railways operated by the Mexico Tramways Co., in the City of Mexico, and surrounding area, which was taken over by the then government of the Mexican Republic, in Oct., 1914, and operated by that government and its successors was handed back to the company May 7.

The Mexico Tramways Co. is organized under Canadian law and has an underlying company, the Mexico Electric Tramways Ltd., whose lines are operated by the M.T. Co. The company had in 1910, a total of 179.93 miles of track of which 158.62 miles were operated by electricity, and on 21.31 miles, of which the cars were hauled by mules. This was the property taken over and operated by the Mexican Government, and now handed back to the owners.

The M.T. Co. controls through stock ownership the Mexican Light and Power Co. Ltd., which in turn operates the Mexican Electric Light Co.'s property under a lease agreement. The companies' properties have not been interfered with in the way of operation by the Mexican Government, but have been throughout under the control of the Receiver of the Mexican Light and Power Co., G. R. C. Conway, M.I.C.E., acting in conjunction with the bondholders' committee in London, Eng., and through the board of directors.

Increases in Electric Railway Freight and Passenger Rates.

Calgary Municipal Ry.—The Calgary Alta., commissioners had under consideration, May 5, proposals for the revision of the fare schedule on the Calgary Municipal Ry., and press reports state that the suggested new schedule will be a straight 5c fare, or 5 tickets for 25c; school children's tickets, 8 for 25c, and workmen's tickets, 6 for 25c. The question was not settled, but the report said it was expected that a recommendation would be made along the lines suggested at the next council meeting. Commissioner Graves is reported to have stated that there was an increase of $287 a day in operating expenses, and before any marked improvement could be made in the service at least 25 new cars would have to be purchased.

The new schedule was put in force May 14. It provides for a 5c cash fare. Tickets are sold 5 for 25c instead of 6 for 25c as heretofore; or 22 for $1 instead of 25 for $1 as heretofore. Workmen's tickets, heretofore sold 8 for 25c and good during limited hours in mornings only, haxe been abolished. Children's tickets are sold 8 for 25c, instead of 10 for 25c as heretofore. The new rates went into effect May 14.

Edmonton Radial Ry.—The Edmonton City Council passed a resolution, Apr. 14, stating that having considered the question of fares, and having taken it up with the commissioners and traffic manager, and having regard to the increased cost of operation, the price of tickets should be increase on Apr. 21. The cash fare remains as before, viz.: 7c until 11 p.m., after which it is 10c. Tickets were, up to Apr. 20, sold 4 for 25c if bought on the cars, or 5 for 25c if bought at stores throughout the city. They are now sold 5 for 25c, good only to 8.30 a.m. and 4 for 25c, good only to 11 p.m. Children's tickets remain as before, 10 for 25c. Night fares can be paid by 2 tickets instead of cash.

We are officially advised that for the first 10 days of the new fares being in force, Apr. 26 to 30, the number of passengers carried was 297,254, and the revenue therefrom, $17,298.04, against 278,307 passengers and a revenue of $13,113,30 for the corresponding 10 days of April, 1918.

The Hamilton and Dundas Ry. is reported to have refused to consider a suggestion by the Hamilton, Ont., City Council's street railway committee that a fare of 5c be put in operation as far as Ainslie's Woods.

Hamilton Radial Ry.—One of the amendments to the Consolidated Railway Act under consideration by the Dominion Parliament, provides for the granting of authority to the Board of Railway Commissioners to over-rule any agreement made between a company and a municipality and ratified by parliament insofar as such agreement debars an increase of rates as times and conditions may warrant. The amendment was opposed before the special committee of the House of Commons, May 6, by representatives of Hamilton and Burlington, Ont., which places are interested in an agreement with the Hamilton Radial Ry., which was the subject of considerable controversy during the winter. The Board of Railway Commissioners granted an increase of rates, subject to the franchises from the municipalities. The amendment to the act was approved by the committee and is given fully elsewhere in this issue.

London St. Ry.—The London, Ont., City Council is reported to have passed a bylaw, May 19, fixing the fare for the Sunday operation of cars on the company's lines in the city at 5c straight, from May 1, 1919 to April 30, 1920. C. Currie, President, attended the meeting and explained that the company's employes are paid one-third more for Sunday work, representing about $25,000 a year. If the men would forego the increase in wages, the company could carry passengers on Sundays at the same rate as on week days. If the increase in fares was not granted the company could be compelled to cut off the Sunday service. The bylaw was passed by six votes to three. The Sunday fare hitherto has been 7 tickets for 25c. The question of fares for the Sunday operation of cars on the Springbank line, which is outside the city, has not been settled.

Nova Scotia Tramways and Power Co.—See "The Street Railway Situation in Halifax, N.S."

The Street Railway Situation in Halifax, N.S.

A. S. Pratt, of Stone and Webster, Inc., the newly elected President of the Nova Scotia Tramways and Power Co., was reported to have returned to Boston, Mas., May 19, after having spent several days in Halifax, N.S., inspecting the company's properties. In the course of an interview prior to leaving, he is reported to have said: "My investigation of the company's affairs assures me that there is real need of large expenditures of money in order to secure for the people the adequate facilities which a city of this size should have. The problem before us is how to provide these facilities. To do this means the raising of a very large sum. The investor must be assured of his investment and a fair return thereon. With the rising costs in material and proper increases in wages, the company is faced ith a problem very difficult of solution. The company as a whole is not earning a fair return on the actual cash investment. In many ways, however, the tramway department is the worst off, because it employs more labor in proportion to its earnings than do the other departments. It is perfectly manifest to any thinking man, especially to one who has followed electric transportation results in other communities, that the fare here, which averages four and thirty one hundredth cents a passenger, must ultimately be increased, if operating costs are to remain at the present high level. If the necessary money for improvements is to be raised it will be because the investor has faith that the people of Halifax are willing to pay a higher rate for service, assuming always as a necessary precedent that the service is improved from what it is today. If we are able to go on with our plans we hope to deserve and receive the co-operation of the public. We must, however, ask them to realize that track reconstruction cannot go on without some interruption of service, and that new cars cannot be bought like some other things, but are built to order, and take a good many months to construct."

British Columbia Public Utilities Commission.

Major John L. Retallack has, as stated in Canadian Railway and Marine World for April, been appointed Public Utilities Commissioner for British Columbia under the new Public Utilities Act. He went overseas as Quartermaster of the 48th Battalion. Later he was transport officer in the Railway Corps. He is a mining engineer. He was born in Quebec Dec. 2, 1863, and was educated in England. He served for five years with the Royal North West Mounted Police before going to British Columbia in 1890.

Major Retallack's appointment came after several days of public clamor, when the government's first appointment of R. H. Gale, Mayor of Vancouver, met with such opposition from the returned soldiers' organization, that Mr. Gale tendered his resignation.

Several weeks ago it was reported that Mr. Gale was slated for the position. Returned soldiers' bodies immediately protested, pointing to the government's promise to give returned men preference for any positions. When Mr. Gale's appointment was announced on Apr. 17, gatherings in Vancouver denounced it in such terms that he went to Victoria to consult the government. On his return on Apr. 19, he announced that he had resigned. He had been active in opposition to the B.C. Electric Ry., the largest public utility in the province. Immediately on Mr. Gale's resignation, the government appointed Major Retallack. He is to be paid $7,000 a year.

Calgary Municipal Railway Operating Results.

The report for the calendar year, 1918, shows the following results, compared with those for 1917:

Revenue:	1918	1917
Car earnings	$606,[illegible]	[illegible]
Miscellaneous earnings	10,9[illegible]	[illegible]
Bank interest	[illegible]	[illegible]
Total	[illegible]	[illegible]
Operating expenses	$419,[illegible]	[illegible]
Fixed charges, etc.	[illegible]	[illegible]
Total	[illegible]	[illegible]
Deficit	$7,118.34	
Surplus		[illegible]
Car miles	[illegible]	[illegible]
Car hours	[illegible]	[illegible]
Fare passengers	[illegible]	[illegible]
Transfers	[illegible]	[illegible]
Total passengers	[illegible]	[illegible]
Average fare revenue per passenger	[illegible]	[illegible]
Average fare of passengers	[illegible]	[illegible]
Average daily receipts	[illegible]	[illegible]
Average daily operating expenses	[illegible]	[illegible]
Average [illegible]	[illegible]	[illegible]
Percentage of operating expenses to revenue	[illegible]	61.1%
[illegible]	[illegible]	[illegible]

The report shows that all taxes were paid and that allowances were made for sinking fund and depreciation. During 1918 unlimited tickets were sold 6 for 25c and 25 for $1; workmen's tickets, good 6 to 8 a.m., 8 for 25c; school children's tickets, 10 for 25c. In consequence of the deficit, fares were raised May 14, particulars being given elsewhere in this issue. T. H. McCauley is General Superintendent.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—A press report states that construction on the extension of the city lines into the Terrace Hill district, approved by the ratepayers in January, will be started at an early date. The commission has, says the report, decided to run the loop around the east ward manufacturing districts also, tapping a section which is progressing rapidly industrially, even though this will make the time longer for the round trip, and though the Terrace Hill residents wanted a more direct route. The commission's viewpoint is that this plan will provide an extension which would have to be built within a short time in any event. The work will, it is reported, be done by the city's labor department. The rails for the extension were expected to be delivered by the end of May. The estimated cost of the work, together with the purchase of some additional equipment, is $125,000. (Feb., pg. 90).

The British Columbia Electric Ry. on May 8 cut in its new Point Grey substation, which serves part of Vancouver and all the municipality of Point Grey, both for railway and light and power, and which has been under construction for the last year. It was formerly a temporary structure, and while in operation, the permanent concrete building was completed over it. It also has an enlarged capacity and will render unnecessary a portable substation the company had been using.

British Columbia Electric Ry.—A press report states that the company has prepared plans for the erection of a station at Langley Prairie, B.C.

The bridge carrying the company's line over the Kitsilano Creek was reported, May 3, to be undergoing repairs, and traffic was being routed over the Grenville St. bridge. (Mar., pg. 143).

Calgary Municipal Ry.—The St. Andrews Golf Club has asked the Calgary Alta., City Council, to extend the Calgary Municipal Ry. so as to provide a service to the golf grounds.

The city commissioners are reported to have provided in the estimates for this year $50,000 for improvements and extensions of the electric railway. (May, pg. 267).

Calgary Municipal Ry.—We are officially advised that it is proposed to build approximately a mile of new track in the city, using thereon rails, etc., from the line which was laid to serve the military camp on the Sarcee Indian Reserve. A recent press report stated that it was intended to extend the city's line as a loop to Mewata Park, south of the Armories. Another report refers to an extension of the Killarney line as having been approved by the council, May 12. (Feb., pg. 88).

Cape Breton Electric Co.—A delegation from New Waterford, N.S., appeared before the county council, recently and asked for co-operation in securing an electric railway service from Sydney. A committee was appointed to co-operate with the town committee to see what can be done. (Feb., pg. 88).

Hamilton St. Ry.—Negotiations are reported to be in progress between the city council's special street railway committee and the company with a view to having some extensions built. Extensions on Queen St. via Aberdeen and Dundurn Sts., and Charlton Ave. to the present Locke St. line; and on York St. to the end of the cemetery, have been discussed. It is also suggested that the Queen St. line be extended to Aberdeen St., and then west to Ainslie Woods.

Hull Electric Co.—We are officially advised that the company is replacing 56 lb. rails on 1.5 miles of its belt line in Hull, Que., with 85 lb. rails.

The company is in the market for two 60 k.v.a. oil cooled, single phase transformers, 10,000 volts to 2,300 volts. G. Gordon Gale is Vice President and General Manager. (Jan., pg. 40).

International Transit Co.—We are officially advised that the company proposes to lay a second track for about 6,400 ft. in the central part of Sault Ste. Marie, Ont., the work to be done in advance of the city laying permanent paving. A. E. Pickering is Manager.

The Levis County Ry. is, we are officially advised, proceeding with the track reconstruction which was left incompleted last year. Contracts for rails, ties, etc., were let in June, 1918, in connection with the reconstruction of the entire line, and the building of about two miles of additional line. New ties were to be put in on the whole line, and stone ballasting provided. Several miles of reconstruction had been completed when work was suspended for the season in Nov., 1918. (Dec., 1919, pg. 561).

Montreal Tramways Co.—A press report states that the company is preparing plans for building a second track on 10 miles of line on Lawrence St. to Gouvin Boulevard, and through Bordeaux Village to Park Ave. This work does not appear to be part of the construction specified in article 33 of the company's contract with the city. The contract specified six lines upon which construction was to be done between June and Nov., 1918, that year. The length of each of these lines with details of construction was given in Canadian Railway and Marine World for Aug., 1918, pg. 348. The time for construction of the lines was extended to this year, owing to the difficulty of obtaining rails, etc.

Niagara, St. Catharines and Toronto Ry.—We are officially advised that the company has the following works in progress: On Ontario St., St. Catharines, Ont., the city is continuing the paving to the crossing of the Port Dalhousie line, as a result of which the company will have to pave between the rails and for 18 in. on the outside thereof; On James St., St. Catharines, the company is relaying the rails and putting down new pavement on its portion of the street. The company is reconstructing its transmission line between Thorold and St. Catharines, and carrying out spring repairs at Dalhousie Park, Port Dalhousie, which has been leased to the Colonial Amusement Co. of St. Catharines, which intends to add a great many amusement features. (May, pg. 267).

The Quebec Ry. Light and Power Co., we are officially advised, contemplates the construction of about a mile of new track on the Beauport Road in Limoilou Ward, between the Canadian Northern Ry. tracks at Mastai Village at the city limits. In 1916 an agreement was entered into between the company and the city with reference to street railway extension, when it was decided to extend the existing line from the corner of 3rd Ave. and 6th St. in Limoilou Ward to the city limits, Beauport Asylum. This extension should have been completed by Dec. 31, 1917, but, due, however, to the abnormally high cost of labor and material, an understanding was reached with the city for delaying the work. The city is about to commence building a permanent highway on the location above referred to, and has insisted that the company construct its line at the same time, in order to prevent cutting up the highway after it has been built. The company has agreed to undertake the work, but the line to be built will be different from that originally planned. Instead of building a line on the Beauport Road from the corner of 3rd Ave. and 6th St., it is the intention to form a loop and build on 8th Ave. across the Beauport Road, along 10th St., and down 3rd Ave., and then build on the main road from the Canadian Northern Ry. tracks to the city limits. The total line to be built will be approximately 1.5 miles. This will mean the construction of a line from the corner of 3rd Ave. and 10th St. along 10th St. across Beauport Road, and down 8th Ave. to a junction with the present line at the corner of 5th St., the lifting of the present rails on 3rd Ave. and 5th St., thus making a belt line, and the construction of a stubline from the crossing of the C.N.R. to the city limits. By this means the company will save approximately $10,000 in not laying tracks and diamonds over the C.N.R., and will also save approximately $3,100 a year upkeep on account of the diamond crossings. (Dec., 1918, pg. 561).

St. Thomas St. Ry.—A press report states that a bylaw will be submitted to St. Thomas, Ont., ratepayers at an early date to raise money for improving the street railway. The amount involved is $45,000, distributed as follows: New rails and track equipment on Talbot St., $18,587.80; repairing tracks on other streets, $16,126.64; changing and improving cars, etc., $10,285.56. (Mar., pg. 143).

Winnipeg Electric Ry.—The Assiniboia Ratepayers' Association on May 6 decided to ask the Manitoba Public Utilities Commission to order the company to place its tracks in the center of Portage Ave., and not at one side as at present. (May, pg. 267).

Beer and Wine for Quebec.—Among the committee of moderation, who appealed to the people of the Province of Quebec recently, to vote in favor of the use of beer and wine, were: Lord Shaughnesy, who is one of the honorary presidents; Sir Herbert Holt, another C.P.R. director; W. W. Butler, President, Canadian Car & Foundry Co.; R. F. Jones, Manager, Eastern Division, Bell Telephone Co.; W. F. Angus, director, Dominion Bridge Co.; A. Archibald, member of Montreal Tramways Commission; A. Lacombe, President, Street Railway Employes Union; and Alex. Dick, General Agent, Dominion Coal Co.

The Winnipeg Municipal Hospitals Commission is discussing with the Winnipeg Electric Ry. a plan for putting on, with the city's consent, a bus service to the King George Hospital.

Ontario Hydro-Electric Railway Legislation.

The Ontario Legislature at its recent session passed the Hydro-Electric Railway Act, 1919, which amends the previous Hydro-Electric Railway Acts in several particulars, and comprises a number of contracts and bylaws.

The act first of all repeals sec. 9 of the Act of 1916, amending the original Act of 1914, which prohibited the issuing of bonds for the construction of any electric railway for which agreements had been entered into between the Hydro-Electric Power Commission of Ontario and local municipalities until after the war, and provided that no bonds should be issued or work undertaken except under the authority of the Lieutenant-Governor in Council, and made provision for the purchase of right of way for such lines.

Section 3 confirms bylaws passed by the municipalities interested in the construction of the projected line from Port Credit to St. Catharines, and also bylaws passed by the municipalities interested in the projected Welland, Port Colborne, and Bridgeburg radial line. Sections 4 and 5 authorize the municipalities to complete the bylaws, and sec. 7 confirms an agreement between the commission and Blanshard Township Council for the construction of an electric railway.

A new section, 17a, is added to the Act of 1914 as follows: "(1) Where a municipal corporation has entered into an agreement with the commission for the construction and operation of a railway under the provisions of this act, the corporation shall not enter into any agreement or arrangement with, nor grant any bonus, license or other inducement to any railway or transportation company without the written consent of the commission, and where any such corporation controls or holds share or stock in a company operating a railway, an electric railway or street railway, the transfer of the control of such company or of stock or shares therein or securities thereof to any person or corporation shall be deemed to be an agreement or arrangement within the meaning of this section; (2) Every agreement or arrangement entered into by a municipal corporation in violation of subsection 1 shall be null and void."

Other new sections are as follows: Sec. 9:—"(1) Notwithstanding anything in the Hydro-Electric Railway Act, 1914, or any amendments thereto, or in any contract or bylaw made or passed, or purporting to be made or passed under the authority of the said act or the amendments thereto, where any municipal corporation named as a party to any such agreement has failed to pass the necessary bylaw and to execute the agreement, and it appears to the Lieutenant-Governor in Council that the amount for which such municipal corporation would be liable under the agreement does not exceed 10% of the estimated cost of construction and equipment of the railway, and that the remaining municipal corporation parties to the agreement have by resolution of their respective councils, expressed the desire to proceed with the undertaking notwithstanding the failure of such first mentioned municipal corporation to execute the agreement, the Lieutenant-Governor in Council may authorize the commission to proceed with the construction, equipment and operation of the railway provided for in the agreement, and to issue bonds from time to time for the amount required for the undertaking and may authorize the Treasurer of Ontario for and on behalf of the province to guarantee such bonds, as provided in the Hydro-Electric Railway Act, 1914, and amendments thereto, and in such case the municipal corporations which have executed the agreement shall deposit with the commission additional debentures in the respective proportions in which they undertook by the agreement to contribute to the cost of the undertaking, to the amount required to replace the debentures which would have been deposited by the first mentioned municipal corporation."

"(2) Should any municipal corporation which has failed to execute the agreement subsequently execute the same and deposit debentures as required by the Hydro-Electric Act, 1914, and amendments thereto, the commission shall return to the municipal corporations the debentures deposited under subsec. 1, and such debentures may be cancelled by the respective corporations.

"(3) Until a municipal corporation party to any agreement for the construction and operation of a railway under the Hydro-Electric Railway Act, 1914, has executed the agreement and deposited debentures with the commission as required by the said act, and the agreement, the commission shall not be bound to construct, maintain, equip or operate within the limits of the corporation any works contemplated by the agreement except such as may be necessary for the construction, equipment and maintenance of the railway in passing through the municipality, to and from municipalities the corporations of which have executed the agreements and deposited debentures to the amount stated therein."

A formal request is reported to have been made by the commission to the Ontario Government for an order in council authorizing the immediate starting of work on the projected lines from Toronto to Niagara Falls, and from Toronto to London. A local report from Bridgeburg states that the first part of the Toronto-Niagara Falls line, which will be built, will be the section from Port Colborne to Bridgeburg.

Proposed Large Street Railway Expenditures of Toronto.

The Mayor of Toronto moved at a board of control meeting, May 28, that a recommendation be made to the city council favoring the submission of a bylaw at the next municipal election providing for the expenditure of $5,000,000 on track extension, rolling stock, and other equipment, preparatory to the taking over of the Toronto Ry. in 1921. He also asked that the Finance and the Works Commissioners, be directed to make a report on the suggestion and to submit plans therefor, together with a recommendation as to whether the work, if authorized, be done by day labor or under the contract system. The controllers thought more time was required to consider about such an extensive enterprise, and decided to refer the matter to the Transportation Commission for a report.

Moose Jaw Electric Railway's Negotiations With City.

Negotiations were reported to have been reopened Apr. 28, between the Moose Jaw Electric Ry. and the Moose Jaw, Sask., City Council. The company is reported to have submitted an offer that the city and the company become partners, and that out of the receipts of each year the company pay all operating expenses, interest charges, set aside a fair amount for insurance and depreciation and pay 6% interest to the shareholders. The balance would be distributed in the proportion of 80% to the city and 20% to the company. The city is asked to undertake the cost of the repairs to the Fourth Ave. bridge, and to relieve the company of all charges until the end of the franchise; to authorize the operation of one-man cars, and to increase the fare to 6c cash or 6 tickets for 35c; workmen's limited hour tickets 8 for 35c, and school children's tickets, 40 for $1.10. The company, under this proposal, would operate the partially constructed line on Hill St. As an alternative, the company advised the council it was still willing to recommend its shareholders to accept an offer from the city to take over the line under the terms of the present franchise and to accept in payment city bonds bearing interest. The council referred the matter to the special Street Railway Committee. (Mar., pg., 143).

The Rule of the Road in British Columbia.

The rule of the road in British Columbia follows that of Great Britain, and is therefore at variance with that prevailing practically everywhere else in Canada. A plan is under consideration by the B.C. Government for changing the rule so as to conform to the more generally adopted practice in America, and it is suggested that the new plan be put in force July 1, 1920. The B.C. Electric Ry. is very much interested in the proposal as its lines were laid out, and its rolling stock built to suit existing conditions. W. G. Murrin, Assistant General Manager, Vancouver, and A. T. Goward, Local Manager, Victoria, had an interview with the B.C. Premier on May 9. While expressing no objection to the proposed change, if desired by the people, they contended that the expense should be borne by those requesting the change, and not by the company.

Mr. Murrin estimated that to change the company's tracks and equipment would cost $600,000, and he reminded the Premier that the company had been put to an expense of between $100,000 and $200,000 several years ago by the Provincial Tramways Act, which prescribed certain changes in equipment. The Premier asked the company's representatives to submit a memorandum, setting out the company's views as to the payment of the cost of making the change.

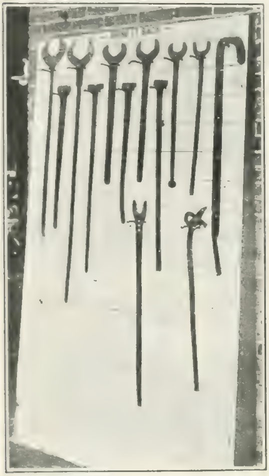
A Motor Passenger Omnibus has been placed on the Toronto-Hamilton highway and is making regular trips between Sunnyside, Toronto, and Stop 31.

In connection with a recent strike of building trades employes at Ottawa, it was reported May 8, that Ottawa Electric Ry. employes had voted in favor of a sympathetic strike.

Wrench Rack, Winnipeg Electric Railway Shops.

The many different special wrenches and larger tools necessary, where pit work is being done, pinions remover and put on armature shafts, etc., makes it a problem not where to put the tools—but where to find them when wanted.

In the Winnipeg Electric Ry. Shops, this problem is solved by the provision of a tool board or rack, as shown in the accompanying illustration. The front of the board is painted a light grey, and the exact outline of each tool is painted in black, so that one always knows where the tool belongs. No tools were on the board at the time the photograph, from which the illustration was made, was taken. Note the brief instructions on the top of the board, "Bring it back".



Trailer Cars for Toronto Railway.

The Toronto Ry. is completing in its shops, the conversion of a number of open motor cars, into closed trailers. The open motor cars were rendered no longer serviceable by the order Ontario Railway and Municipal Board's order of Nov. 22, 1915, forbidding their use, and the bodies are being used for this present purpose.

The whole body, with the exception of the frame work, is being practically rebuilt. They have the standard flat sides, with large sash, and with vestibules enclosed except for the step side. The interior layout comprises longitudinal rattan seats, the heating stove being mounted midway in one side. The finish inside is light colored varnished hardwood. The motor undergear is not being used, entirely new trailer undergearing being made in the company's shops.

The bodies are 22 ft. long, and the overall length of the cars is 32 ft. Some 30 trailers are now completed and in operation, and it is the intention to convert some 16 or 17 more, some of which are nearly ready for operation.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	1919	1918	9 mons. to Mar. 31, 1919	9 mons. to Mar. 31, 1918
Gross	$649,120	$510,892	$5,390,119	$4,495,271
Expenses	457,600	381,234	3,724,249	3,462,714
Net	191,520	129,658	1,665,870	1,032,557

For the calendar year, 1918, there was an increase of 27.05% in gross earnings, the percentage of working expenses to gross earnings being 74.6%. For the first three months of 1919, the percentage of working expenses to gross earnings was 70.4%.

Cape Breton Electric Co.—

	Mar., 1919	Mar., 1918	3 mons. to Mar. 31, 1919	3 mons. to Mar. 31, 1918
Gross	$42,924.29	$39,516.74	$138,078.43	$117,239.52
Expenses	32,558.33	30,123.82	103,415.83	92,379.63
Net	10,365.96	9,392.92	34,662.60	24,859.89

Edmonton Radial Ry.—The city comptroller in reporting upon the Edmonton, Alta., public utilities for the three months, Mar. 31, is reported to have said: The gross earnings of the civic utilities were $503,768.60, against $459,979.37 for the first quarter of 1918, an increase of 9.5%. The combined operation and maintenance expenses on the other hand showed a composite increase of 13.5% over 1918. The deficit on the municipal railway was $765.66 more tha nin 1918. The railway's gross earnings show an increase of 11.3%, while the cost of operation increased 17.7%.

Hamilton St. Ry.—Hamilton, Ont., City Treasurer reported Apr. 30, that the receipts of the Hamilton St. Ry. for the three months ended Mar. 31, were $217,606.92, against $204,157.38 for the corresponding quarter of 1918. The city's share of the receipts was $17,408.55, against $16,332.59 for the corresponding quarter of 1918.

Ottawa Electric Ry.—Under the provisions of the mortgage trust deed of June 29, 1987, fifteen debentures of $1,000 each have been drawn for redemption, payable July 5, on which date all interest ceases.

Toronto Ry., Toronto and York Radial Ry. and allied companies:—

	1919	1918	3 mons. to Mar. 31, 1919	3 mons. to Mar. 31, 1918
Gross	$1,083,285	$1,113,472	$3,205,922	$3,163,724
Expenses	647,053	581,747	1,902,546	1,720 890
Net	436,232	531,725	1,303,376	1,442,834

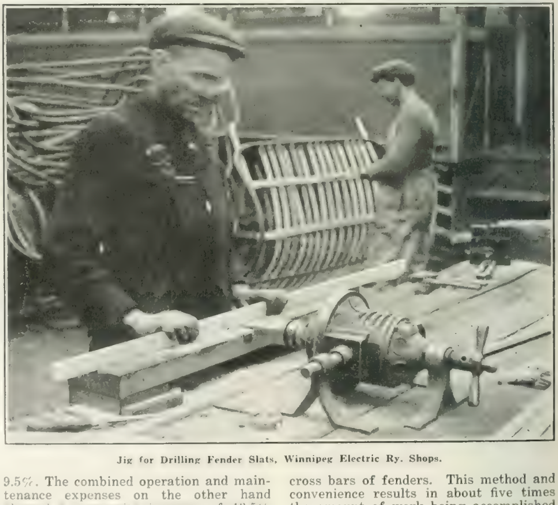
Winnipeg Electric Ry. and subsidiary companies:—

	1919	1918	3 mons. to Mar. 31, 1919	3 mons. to Mar. 31, 1918
Gross	$387,841	$307,289	$1,119,542	$940,830
Expenses	287,944	240,628	842,868	723,974
Net	99,897	66,661	306,674	216,856

The surplus after payment of fixed charges for March, was $40,954.88.

Drilling Fender Slats, in Winnipeg Electric Railway Shops.

Severe operating conditions in Winnipeg keep car fender work active. The accompanying illustration shows an electric drill, used formerly in some other branch of the service, recovered and placed on a bench, with jig and stop for drilling and counter-sinking slats and cross bars of fenders. This method and convenience results in about five times the amount of work being accomplished as was formerly done by hand.



Jig for Drilling Fender Slats, Winnipeg Electric Ry. Shops.

The Reid Newfoundland Co.'s steamships are reported to be making regular trips between Port aux Basques, Nfld., and Sydney, N.S., and are moving much of the freight that accumulated during the winter at Port aux Basques and elsewhere. At one time during the winter the train service from Port aux Basques to St. John's, Nfld., was not operated for about a month.

Electric Railway Notes.

The Winnipeg Electric Ry. is employing some 400 returned soldiers.

The Quebec Ry. Light and Power Co. has asked prices for the supply of 10 double truck p.a.y.e. type of cars, 41 ft., for its city service.

The Regina, Sask., City Council decided recently to ask the City Commissioners to report on the question of operating the municipal railway cars on the skip stop plan in certain sections.

A Hamilton press dispatch of May 28 said that commencing June 1 the Hamilton St. Ry. cars would stop before crossing street intersections and that some 30 stops would be cut off.

The London and Port Stanley Ry. is reported to be considering a suggestion to operate a car service on Sundays from London to Pond Mills, where it is proposed to lay out a public amusement park.

The Hydro Electric Power Commission of Ontario has ordered an additional electric locomotive, similar to the 6 ordered previously and illustrated in our May issue, from Canadian Car and Foundry Co.

The Regina, Sask., City Council's special committee on May 16, directed that an account of Eli Parrish for $300 for investigating the street railway department and for his work during the recent judicial investigation of the railway's affairs, be laid on the table.

The Regina Municipal Ry. has, it is reported, erected a galvanized metal waiting room at the terminus of its Eastview line. It is stated that if this building proves satisfactory, the present wooden waiting rooms will be replaced by galvanized metal ones.

The Regina Municipal Ry. is reported to have installed a new type of power recorder in its power station in Regina, Sask. It is claimed that the new device has proved efficient in saving power where it has been installed—the saving being said to be about 17%.

The Calgary, Alta., City Commissioners, have, according to a press report, practically agreed that there shall be no special taxes on the municipally owned utilities. For the latter half of 1918, the tax levied on the Calgary Municipal Ry. was reported to be approximately $25,000.

A list of employes of the City of Edmonton, Alta., compiled by the city comptroller, shows a total of 755 with a total monthly pay roll of $73,985.31. The Edmonton Radial Ry. has 214 of the total on its list, the average monthly pay roll being $19,176.33. Of the total number of employes, 690 are Canadian or British, the remaining 65 being of 12 different nationalities.

J. L. Retallack, who has been appoint- Public Utilities Commissioner for British Columbia, is reported to have said in a recent interview: "It is not likely that any investigation will be undertaken until I have had an opportunity of examining the scope and methods of public utilities commissions elsewhere. The great point to be kept in view is to make the commission as easy of access to the public as possible."

The Regina, Sask., City Council was to have considered a bylaw to authorize the operation of one-man cars in the city, at its meeting, May 6, but the matter was not reached when the council adjourned. The bylaw was on the agenda for a first and second reading May 20. The bylaw has to be approved by the ratepayers before it becomes operative. The employes' union has issued a statement urging that the bylaw be not passed.

The Regina, Sask., City Council, held a further lengthy session in committee Apr. 30, to discuss the suggestions of City Commissioner Thornton, as summarised in Canadian Railway and Marine World for May, pg. 262. The only conclusion arrived at was the adoption of a recommendation for the appointment of an additional inspector, for which appointment T. McGuinness, a returned soldier, formerly in the department's employ, was suggested. The meeting adjourned without adopting the report as a whole.

The question of standard time or daylight saving is responsible for a good deal of discontent in London, Ont. The London St. Ry. is being operated on standard time, but the company wishes it to be operated on daylight saving time. The men want the matter settled one way or the other, and asked the City Council to refer it to a vote of the ratepayers on May 31. At a meeting of the council, May 19, this was refused by seven votes to three, but a resolution was passed, asking the men to agree to starting the cars half an hour earlier.

The Quebec Court of Appeal on May 2, confirmed a judgment of the Court of Review giving A. Bergeron judgment for $283.18 against the Montreal Tramways Co. for damages to an auto. Bergeron's auto became stalled on the track while being backed out of the garage, at the time it was struck. At the first hearing the action was dismissed, the court being of opinion that Bergeron was at fault, but this decision was reversed by the Court of Review. Justice Martin, in confirming this decision, held that the M.T. Co.'s employes could and should have seen the auto on the track and so prevented the accident.

The Toronto and York Radial Railway and the City of Toronto.

The acquisition of the Toronto and York Radial Ry.'s Metropolitan Division, within the city limits, was again discussed by the Toronto Board of Control, May 15, when a conference was held with representatives of the company and of the Hydro Electric Power Commission of Ontario. The agreement which had been arrived at between the company and the city, fell through, as the Hydro Electric Power Commission of Ontario would not consent to the city concluding it. A counter proposal made by the commission would not have required legislation to make it effective, but owing to the late date at which the bill was introduced into the legislature, the private bills committee threw it out. The city's negotiations now appear to have been started de novo, and the mayor stated recently that it was his desire to "clean the Metropolitan off Yonge St." W. H. Moore, General Manager, T. & Y.R.R., in replying to the mayor's question as to whether the company was prepared to sell, stated that a few years ago the city obtained legislative authority to expropriate the portion of the line within the city limits; the company is operating under a franchise, and he felt that it had nothing to sell, except according to the terms and conditions of the franchise, which gave it certain powers and also certain obligations, and it could only sell if the city was prepared to indemnify it against any claim which might be made relative to the company's obligations, particularly to the York County and in regard to the transportation of freight.

After considerable fruitless discussion, a committee was appointed representing the City of Toronto, York County and the company, to discuss the matter further, and to see if an arrangement could not be arrived at. A further meeting took place May 26, and a report was made to the Board of Control, May 28, to the effect that the company will not submit any offer, unless the city agrees to take care of the freight between the city limits and Farnham Ave., where the company's receiving station is at present located. The mayor stated that he had desired the company to submit some offer, but the city would only purchase, if the price was right and reasonable, and the title to the property free of all claim and encumbrances, and freight franchises of all kinds eliminated within the city limits. The board deferred action.

Mainly About Electric Railway People.

Thos. Boden, Superintendent, Brandon Municipal Ry., has also been appointed City Electrician, the former City Electrician and City Purchasing Agent, Mr. Skead, having left the city's service. The head of each city department now does the purchasing for his respective department.

James Gunn, Superintendent, Toronto Ry., completed 50 years of continuous service with the company and its predecessors, May 15, when he received numerous congratulations from associates and other friends.

T. McGuinness, a returned soldier, formerly in the Regina Municipal Ry.'s employ, has, according to a press report, been appointed Traffic Inspector for the line. This is a new position just authorized by the Regina, Sask., City Council.

A. S. Pratt of Stone and Webster, Inc., Boston, Mass., has been elected President Nova Scotia Tramways and Power Co.

E. F. Seixas, Official Representative and General Manager, Monterey Railway, Light & Power Co., Monterey, Mexico, visited St. Catharines, Ont., and Toronto, towards the end of May to arrange for his wife and family, who have remained in St. Catharines, since he went to Monterey, spending the summer on the Atlantic coast.

George Lee Snelling, who has been acting Secretary Treasurer, Ottawa Electric Ry., since the death of Jas. D. Fraser, has been appointed Secretary-Treasurer. He was born at Ottawa, Mar. 2, 1880, and entered the company's service, Aug. 1, 1898, since when he has been, to Feb., 1902, junior clerk; Feb., 1902 to Aug. 1, 1912, timekeeper, stenographer and storekeeper; Aug. 1, 1912 to Dec. 23, 1918, accountant, and from Mar. 2, 1914, during various absences of the late Secretary Treasurer, acting Secretary-Treasurer

Bell Telephone Co. Authorized to Increase Rates.

The Board of Railway Commissioners passed general order 264 May 13, as follows:— Re application of Bell Telephone Company of Canada, for an order permitting an increase in rates of 20% on all tolls, rates, and charges for exchange telephone service; for a revised schedule of long distance tolls; for a charge to be known as "service connection charge"; and a charge for moving telephone stations and other equipment; all as set forth in tariffs of tolls accompanying the application. Upon hearing the application at Ottawa, Jan. 8 and 22 and Feb. 12, 1919, and in Toronto and Montreal on Janfl 13 and 16, 1919, respectively, in the presence of counsel for the applicant company, the Union of Canadian Municipalities, and the corporations of the following cities and towns: Montreal, Toronto, Hamilton, Ottawa, Quebec, London, Windsor, Brantford, Outremont, Westmount, Levis, Granby, Brockville and Verdun; the boards of trade of Toronto, Montreal, and Cornwall, the municipalities of North Gower and Marlborough, and the Proprietors' League of Montreal being represented at the hearings, the evidence of experts offered both in support of and in opposition to the application, and what was alleged; and upon reading the written statements, reports, and submissions of experts filed on behalf of the applicant company and the respondent corporations, as well as the reports of chartered accountants, made after examination of the applicant company's books which were available to them by the direction and under the authority of the Board's order; no objection being made to the long distance tolls as filed.

It is ordered that (a) the revised increased tolls for long distance service, (b) an increase of 10% instead of 20% on all tolls, rates, and charges for exchange telephone service and charges incidental thereto, and (c) the charges for moving telephone stations and other equipment, all as set out in the application filed with the board, be, authorized and allowed. That the "service connection charge," so-called, as applied for be disallowed. That where exchange services are at present installed, the increased tolls hereby authorized and allowed may become effective July 1, 1919. That the increased tolls hereby authorized and allowed for long distance service, for moving telephone stations and other equipment, and where new exchange services are installed subsequent to the date of this order and prior to July 1, 1919, may become effective on one week's notice.

Jurisdiction Over Grand River Ry.—The Dominion Parliament has been asked to amend Chap. 47 of the statutes of Canada, 1904, by repealing sec. 3, which enacts that the acquisition by the company of the Galt, Preston and Hespeler St. Ry., and the Preston and Berlin St. Ry. shall not make such railways subject to the Railway Act or works for the general advantage of Canada, but that they shall remain subject to Ontario jurisdiction. (May, pg. 267).

It All Depends.

"Is your place within walking distance of the cars?"

"I dunno," answered Farmer Corntossel. "How far kin you walk?"—Washington Star.

The Death of Duncan McDonald.

Duncan McDonald, formerly General Manager, Montreal Tramways Co., who died at Ste. Agathe, Que., May 8, from tubercolosis. He was born at St. Thomas de Montmagny, Que., June 17, 1859, and removed to Montreal in 1875. He entered Montreal St. Ry. service in 1881, as a driver, in order to acquire a thorough knowledge of street railway work from its veyr commencement. He was soon changed to conductor and after about a year in that capacity, was appointed roadmaster. In 1886 he severed his connection with the company and engaged in other business. Anticipating the progress that the trolley system would make, he went to St. Paul and Minneapolis, Minn., in 1889, and secured a practical knowledge of electric railways. He returned to Montreal in 1892 and re-entered Montreal St. Ry. service as inspector, and in 1894 was appointed Superintendent of Transportation, which position he held until 1898, when he resigned to become General Manager, Parisian Tramways Co., Paris, France, in which position he organized the Parisian system to a high degree of efficiency. In 1903 he returned to Montreal, having been offered the position of Manager, Montreal St. Ry., which position he held to Nov., 1910, when he was appointed General Manager, and on the organization of the Montreal Tramways Co., in 1912, he was appointed General Manager of the new company, resigning in July, 1912, after which he devoted his time to his other interests, including the Montreal Tunnel and Terminal Co., the Prepayment Car Sales Co., of which he was President, and which controls the pay as you enter cars, of which he was one of the patentees, and also the pay within car. He was a director of the Dominion Park Co., the Automobile Club of Canada, a member of the Civil Engineers' Society of France, a member of the Institution of Electrical Engineers of England, and was connected with the Canadian Street Railway Association, now Canadian Electric Railway Association, from its inception until his retirement from actual street railway service, being President for two years and member of the executive committee for several years. For two years he was a city controller of Montreal, and was an unsuccessful candidate for the mayoralty in 1916. In 1917 he acted as the Toronto Ry.'s representative on a board of conciliation appointed under the Industrial Disputes Investigation Act, to deal with wages, questions in dispute between the company and its employes.

Duncan McDonald.
Formerly General Manager, Montreal Tramways Company.

Mr. McDonald had a most extensive circle of friends, and was especially well known to electric railway officials. He was most generous and hospitable, and exceedingly popular with all classes.

One-Man Cars in Edmonton. — Edmonton, Alta., Municipal Ry. union employes passed the following resolution recently:—"That owing to the increased responsibility caused by the city in changing the fare, in that almost every passenger is purchasing tickets from the motorman-conductor, also the fact that those who pay cash fares have to receive change, and that the department insists that the crews keep on schedule time, we hereby declare that we will not be responsible for any accidents that may occur, owing to the fact that our attention has to be given to so many matters at one time it is impossible for us to run the cars in the interest of public safety, and we would recommend that the city commissioners and council in the interest of the travelling public place two men on each car; also that it was promised that at the time that the one-man car was introduced it was done as a war time necessity, now that the war is over and the day of reconstruction has arrived, we would ask in the interest of the returned soldiers that this be done at once."

The Montreal Harbor Commissioners' report for 1918 shows that the cost of work was $28,000,000. The accommodation in the harbor includes 100 steamship berths, 350 to 750 ft. long, with depth of wate from 20 to 35 ft. There are 2 modern fire proof elevators, with a conveyor system to 15 steamship berths; 21 permanent fireproof sheds and 51 miles of railway. The channel from Montreal towards the sea has been deepened and widened and during the year there was never less than 30 ft. of water available. The number of trans-Atlantic vessels arriving at the port during 1918 was 674, the greatest on record. Merchandise exported was valued at $496,793,000 and imports, $178,021,000. The exports included 962,000 tons of grain, 490,000 tons of flour, 394,000 tons of packing house and dairy products, 500,000 tons of lumber, 209,000 tons of fluel oil and 492,000 tons of munitions. In addition to this, there were the cargoes of about 250 vessels sailing under allied or neutral flags. The harbor revenue was $2,104,191, and expenditure $2,026,542, including $903,585 interest on debentures.

The Victoria and Sidney Ry., on Vancouver Island, a line owned by the Great Northern Ry., U.S., ceased operating Apr. 30. Since the company announced that it intended to cease operating, residents of the area served have been petitioning the Premier of British Columbia to take steps to have a service provided on the line, and the government has been negotiating with the Canadian National Rys. management. It was reported in Victoria, May 16, that the C. N.R. is ready to operate the line as soon as the necessary legal formalities can be complied with.

Marine Department

The Dominion Government's Shipbuilding Programme Discussed in the House of Commons.

When the House of Commons went into committee of supply, May 8, on the item of $30,000,000 required for the construction of ships in accordance with the government's shipbuilding programme, the Minister of Marine, Hon. C. C. Ballantyne, said: "A year ago I had the honor of introducing the government's merchant marine shipbuilding policy. A great many changes have taken place since the armistice has been signed, and it seems to me to be an opportune time to furnish to this house all the information that I have on the subject for which the vote is now asked. I think it would be well for us to look at the shipping conditions of the world, and particularly as they existed in Canada when the government deemed it wise to embark on its shipbuilding policy.

"Up to about Feb. or Mar., 1918, the Imperial Munitions Board was occupying all the vacant steel shipyards in Canada, building ships for England. The British Government is to be congratulated for its energy and foresight in not only having ships built to the fullest capacity of the immense shipyards of the United Kingdom, but also for utilizing all the available yards in Canada. But, when I became Minister of Marine I could not see what particular value the steel ships that were being built in Canada for England could be to our own country, and after considering the matter from every point of view, I thought the time had come when Canada should have her own merchant marine. Therefore I recommended to my colleagues in the government that we should utilize our own yards to build up a national merchant marine, and, much as we admire the old country and desire at all times to render her every assistance possible, more particularly when she is engaged in war, I consider that we were doing not only our full duty to Canada, but also to the Empire when we took that course. There was an immense total loss of shipping at that time, about 15,000,000 gross tons, the war being at a very serious and critical stage, and the success of Great Britain and her allies depending very largely on the extent of their merchant marine. So pressing was the need for tonnage that all Canadian ships under Canadian register and all ships plying in Canadian waters under British register, were commandeered by the British Ministry of Shipping, a fact which left Canada devoid of a merchant marine.

"At that time, all of our allies, with the exception of our neighbor to the south, were coming to me constantly to know if I would allow them to build ships in our yards—I refer particularly to France and to Italy, and also to Norway, one of the neutral powers. I had to reply to the overtures made to me that the policy of the Canadian Government was to utilize to the fullest extent our own steel shipyards, and that therefore we could not look with favor upon building ships for them. It was not so much a matter of price. Many of our allies were willing to pay from $20 to $25 per ton more than this government was paying for the ships it was having built under contract. The policy of the Imperial Munitions Board was to build wooden as well as steel cargo vessels. The Canadian Government did not think it good policy to have wooden ships built. Not that either I or the government had anything to say against wooden ships, but we thought it was a sounder policy, having in view that sometime peace would come, to confine our efforts to the building of steel ships only, which accounts for our not having built any wooden ships. The money for the ships that were being built by the Imperial Munitions Board for Great Britain was being loaned by the Canadian Government. As these ships were being built with Canadian money, it seemed to me to be a wise and sound policy that they should be Canadian ships, for the use of the Canadian people.

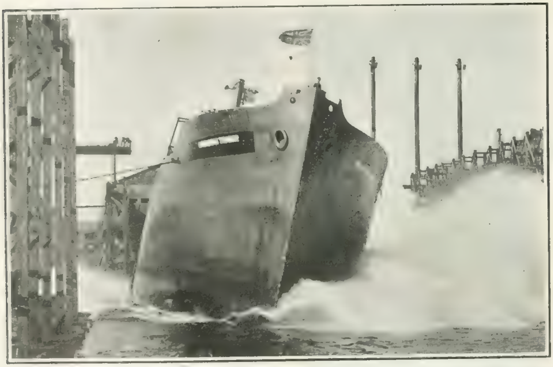
Hon. C. C. Ballantyne, M.P.
Minister of Marine and Fisheries

"There were three reasons why the government adopted the policy of building up a mercantile marine. The first for reasons arising out of the conditions brought about by he war, and to which I have already alluded. The second was the desirability of building up our export trade. At no time in our history have the prospects been so favorable as at present for the building up, the extending, and the expanding of our export trade. The third reason was that Canada has a vast railway system, and it was proper that the government, in order to complete the chain of transportation and to place our railways on as favorable a footing as possible, should supply those railways with the necessary steamship service. Parliament and the people generally will, I am sure, agree as to the wisdom of the policy of having these splendid cargo ships work in co-operation with our railways and carrying on a service somewhat similar to that operated by the C.P.R. Co. We hope to see our ships on the Atlantic and on the Pacific oceans, plying to England, to Australia, to New Zealand, to South Africa, to South America and to all the ports with which Canada can carry on a foreign trade. At present we have under contract 45 steel ships, orders for which have been placed in yards from Prince Rupert to Halifax."

The minister then read a summary statement of orders placed, the particulars of which have been given in considerably more detail in each issue of Canadian Railway and Marine World for several months past, and he proceeded as follows:—"The total tonnage of these 45 ships is 263,850 dead weight tons. We have at present ready to go into service the Canadian Ranger and the Canadian Pioneer, both of 8,100 tons dead weight; we have the Canadian Voyageur, 4,350 tons, which has been doing splendid service for some months; and we have the Canadian Warrior, 3,750 tons. Two more will be ready in May, 5 in June, 3 in July, 2 in September, 4 in October, 7 in November, and 2 in December, making 25 ships that we expect to put into service during this year. The value of the contracts which have been placed is, in round figures, about $52,000,000 and up to the end of the present fiscal year $20,000,000 of that will have been paid. The item that we are asking the committee to pass is for $30,000,000, which with the $20,000,000, constitutes, in round figures, the total amount of all the contracts, $52,091,450.

"I stated in the house a year ago that it was the policy of the government to utilize only existing steel shipyards. But there existed at Prince Rupert a large ship repairing plant and floating dry dock, and considerable pressure was brought to bear upon the government, especially as the war was proceeding at that time in a way that did not look favorable to us, and tonnage was very badly needed, to place some orders out there. I took the ground that the government was not investing money in shipyards, but that if any firm would come along with the necessary capital the government would be willing to give it a share of their business. That accounts for the placing of orders for 2 ships of 8,100 tons at Prince Rupert. Victoria, B.C., did not have a modern shipyard. The Victoria Machinery Depot had a small place there, and our Victoria friends, especially the late Premier Brewster, were very anxious that we should give Victoria part of the government business. We therefore placed an order with the Victoria Machinery Depot for two ships of 8,100 tons each. Enterprising capitalists, J. W. Norcross and R. M. Wolvin, said that they were prepared to put $5,000,000 into a modern shipyard at Halifax, if the government would give them some business. I shall not weary the committee with an account of all the interviews that I had and of the requests that these gentlemen made and which the government could not see its way clear to grant. They wanted us to allow them to bring in free of duty what plant they required; I told them we could not agree to do that. They also wanted a very large order for ships, as their capital expenditure was great; but I told them that all we could do would be to give them an order for four ships, which we have done. When that yard is fully completed—and it will be completed shortly, because the keels of two vessels have already been laid there—it will be one of the finest and best equipped yards in the country.

"As regards the type of ships, after consultation with the technical officers of my department, we decided it was wise not to build too expensive a freight ship, but at the same time to make our ships as efficient as possible. And I am proud to state to the committee that in no other country in the world, not even in the old country, are any ships being built better than those which our Canadian shiypards have so far turned out for the Dominion Government.



Launching of Steel Cargo Steamship, Canadian Trader, 3,400 tons d.w., for Canadian Government Merchant Marine Ltd., by Port Arthur Shipbuilding Co., at Port Arthur, Ont., May 5, 1919.

"I now wish to refer to the matter of price which ranges all the way from $180 to $215 a ton dead weight, and I hope members will fully realize that when the government commenced their shipbuilding programme a year ago, everything was at its height; labor was very high, the rate of wages was constantly increasing, as was the cost of boilers, engines, and all the auxiliary equipment that goes into a ship. I am pleased to state that the 45 ships that we have under contract for the Dominion Government are being built at a considerably lower cost than the ships on the vast programme of shipbuilding which the United States Emergency Fleet Corporation is carrying out. Its ships have cost considerably more than ours, notwithstanding the fact that it has turned out so far 555 steel ships. I do not like to say anything but what would be pleasant about our neighbors who are our allies, and who have helped us in every way possible, but according to the information I have received, their price, taking all the ships they have ordered from the various shipyards, would be at least $25 a ton higher than the 45 contracts we have entered into in Canada.

"The other night the leader of the opposition (D. D. McKenzie) stated that the Canadian Government ships under contract cost 400% more than they had any right to cost, the comparison made by him being between the pre-war price in England of $50 a ton and the prices the Canadian Government have made with the various shipyards throughout the country. The correction I wish to make is that he overlooked stating that his price was a pre-war price. The most reliable information I can get from England, Ireland and Scotland is that all of their yards are busy; that they are building ships rapidly for themselves, and that they are also building a certain number of ships for their allies in Europe. Consequently, no one can get a firm price for ships over there. If any one in Canada wanted to build a ship of any size and approached any of the old country yards, he would be told that they would enter into a contract with him on a cost plus basis, but that they could not give him a firm price per ton. He would also be told that they could not make deliveries before at least the spring of 1920. In this connection, I may quote a well known shipbuilder, Sir G. B. Hunter, of Swan and Hunter, a firm distinguished for its shipbuilding. In an interview which was reported in the Newcastle Journal on Apr. 6, 1919, he stated that ships cost at present three times as much to build in England and Scotland as they did before the war. Therefore, if we take Mr. McKenzie's figure of $50 a ton, and if we take the well known and reliable authority, which I have quoted, viz. Sir G. B. Hunter, ships built in the United Kingdom at the present time would cost $150 a ton."

J. H. Sinclair, M.P., for Antigoish, etc., N.S., having quoted a Canadian paper as stating that ships are being built on the Clyde for $55 a ton, Mr. Ballantyne continued:—"If the member can give me the name of any firm on the Clyde that will build ships for $55 a ton the Canadian Government will be glad to give it a large contract. I do not know of any firm in the old country that would undertake to build ships at any such price, although I give the member credit for making a statement which he believed was accurate at the time. I merely want to clear this point up, because I do not want the public to think that, in order to build ships in Canada, we are compelled to pay $180 to $215 a ton when they could be built in the old country for $50 a ton. I sent cablegrams to four different firms, in order that the information which I am now giving might be accurate and up to date. It will interest members to know that one of our great allies is having 30 wooden ships built in Canada at $200 a ton d.w., so that if $200 a ton is being paid for a wooden ship I do not think the government has paid too high a price when it pays from $180 to $215 for steel ships."

Mr. Ballantyne stated, in answer to a question that the wooden ships are being built at Victoria, whereupon W. Duff, M.P., for Lunenburg, N.S., said that wooden ships are being built in Nova Scotia for about $75 a ton d.w. Mr. Ballantyne continued:—"The type of ship built at Victoria for $200 a ton, is, I imagine, entirely different from the ships being built in the Maritime Provinces for $75 a ton. I wish to explain why the government found it necessary to pay British Columbia shipbuilders $10 a ton more than eastern shipbuilders. First of all, I endeavored to place contracts with B.C. shipbuilders at eastern prices, but they pointed out that the labor cost is $7 a ton more in B.C. than in the east, and that freight rates are very much higher. After a great many interviews, extending over some months, the government agreed to pay the B.C. shipbuilders $10 a ton more than the eastern price for a similar type of ship. For instance, if an 8,100 ton ship was being built by Canadian Vickers of Montreal for $180 a ton, the price for a similar ship in the B.C. yards would be $190 a ton.

"There has been some criticism of me, especially by B.C. shipbuilders, because I would not allow them to take foreign contracts. When the war was on, France, Norway, and Italy were urging us to allow ships to be built here for them. I would gladly have consented had we been able to get sufficient ship plates, marine engines, boilers, and the other necessary equipment for our own needs, and at the same time have a surplus for ships to be built on foreign accounts; but unfortunately, notwithstanding that we had an agreement with the United States for 80,000 tons of plate, up to the time of the signing of the armistice, we had only been able to get some 6,000 tons. So I could do nothing else than say that Canada could not afford to delay her own shipbuilding programme by building ships on foreign account.

"With regard to the slowness of the construction of some of our ships, I admit that the yards have taken very much longer than I anticipated, but the delay has been unavoidable owing to the shortage of skilled and unskilled labor, and the great difficulty in getting shipbuilding plate from the U.S., as well as engines, boilers, and other equipment. The ships are coming along more rapidly now than when the war was on.

"Quite recently there has been a great demand for space. Our ships are going to be operated by Canadian Government Merchant Marine Ltd., and naturally manufacturers and firms who have large orders for shipment abroad have been coming to the Marine Department to know whether or not they can get the tonnage. The Dominion Coal Co. told me that all its ships had been requisitioned by the British Minister of Shipping, and it wanted tonnage to send 1,000,000 tons of coal to Montreal. It said that unless the Canadian Government could provide the tonnage it might have to close down its mines, which would be almost a catastrophe. The steel men, the pulp men, the sugar men and the general produce merchants, all want to know what tonnage the Canadian Government can provide. The British ships that are plying from Canadian ports at present have 70% of their available cargo space reserved for the British Minister of Shipping, which leaves only 30% for the Canadian export trade. While in England last year I did everything I could to meet the Dominion Coal Co.'s requirements. I have since sent many cables to the British Minister of Shipping. The Canadian High Commissioner, Sir George Foster, and Lloyd Harris, Chairman of the Canadian Mission, have all done their very best, but I am sorry to say they have been unable to get the tonnage. To illustrate the great necessity of our having ships at the present time, I will read a cable received by the Canadian Manufacturers' Association from the secretary of the Canadian Mission in London, Mar. 1:

"'Our work here practically futile unless additional ocean space can be secured. Commercial shipments Canada to Great Britain now three times quantity space available, and rate of freight on many lines practically prohibitive, amounting in many instances to 75% invoice value. Steamship companies in many instances charging double published rate. You may make statement that unless the matter of shipping is immediately attended to Canadian trade will suffer tremendous loss.'"

In answer to a question as to by what right the British Admiralty could requisition Dominion Coal Co.'s vessels, which are on the Canadian register, Mr. Ballantyne said: "Before a Canadian registered ship can be so requisitioned, application has to be made to the Canadian Government through the Minister of Marine. When the war was on and tonnage was required to transport munitions and foodstuffs and soldiers across the seas, the Canadian Government could not refuse to release the ships on Canadian register."

In answer to another question, Mr. Ballantyne stated that all the plate used on Dominion Government ships to date has been imported from the United States, the plate mill at Sydney not being ready.

Mr. Ballantyne continued: "I think it will interest the house to know what Australia is doing is not only building her own merchant marine, but war ships too, so their Minister of Naval Service, informed me when I was in London. Australia has during the war erected a plate mill. Besides the ships Australia is now building, she bought ten in 1915 or 1916 and these have proved to be very profitable. It is now building 20 ships more. The acting Minister of the Australian Navy, announced on Apr. 10 that the Australian Government would remain in the shipping business and would continue its shipbuilding programme. He said that the present programme contemplated the building of 20 steel ships, and war ships as well.

"I now come to the government policy for the future. I have already stated that we have 45 ships under contract. There are at present certain yards in Canada that require business. Berths are becoming vacant, and many more will become vacant in the very near future. The government has not finally decided how many additional ships it will order, but I will bring down in my supplementary estimates the amount that the government will think it wise to ask approval for. The $30,000,000 I am dealing with now is to complete the contracts we have already let, but in view of the fact that there is a great demand for ships and also that we could sell some of our ships under contract at present if the government deemed it wise to do so, we are not going to discontinue shipbuilding for the moment. We realize that there are 30,000 men engaged in the shipyards throughout Canada, from Prince Rupert to Halifax, and there are fully 10,000 more engaged in making engines, boilers, etc., and to cause 40,000 men to be out of employment at this time would be rather a dangerous thing. It is therefore not the government's intention to cease its shipbuilding programme now. We are going to order additional ships, at least to keep the yards that are requiring work busy throughout the balance of 1919, and probably for a few months in 1920. I do not want this house or the shipbuilders to think that the government can go on forever ordering ships, because there must be a limit to the number of ships that the government can use, and we are getting very near to that point. So that when I say that it is the government's intention, subject to parliament's approval, to order more ships, the shipbuilders must not expect that there will be many more orders to follow, and they must therefore look for orders for their shipyards in the same way as any other industry in the country would.

"There is no protection whatever given to Canadian shipbuilders in the way of duty and bonus, and when the yards of the United Kingdom are free a year and a half hence to take orders, it will be most difficult for Canadian shipbuilders to compete unless some form of assistance is given by the government. What that form of assistance will be has not been determined, but between now and the next session of parliament we hope to have a policy ready to present. Naturally when the shipyards complete the building of the ships that are ordered by the government now, and a few more that will be ordered, it will be a problem that the government will have to deal with, as to whether it will let these shipyards go out of existence altogether or give them a fair amount of protection the same as other Canadian industries are enjoying and have been enjoying for some years.

"Over a year ago the government entered into a contract for 250,000 tons of ship plates at $4.15 per 100 lb. based on the price of steel billets at $25.50, and as the price of steel billets would go down, so would the price of ship plates. For a few months the government placed auditors in the steel company's plant to check up the costs. The total amount of plate that we contracted for was 250,000 tons. What caused the government to give this contract was the scarcity and the impossibility of getting ship plates from the U.S. in order to carry on our shipbuilding programme. No one at that time could foresee the end of the war. It might be a year or more before the conclusion of hostilities, and when a country is at war, as Canada was, it is necessary to prepare for an indefinite continuance of war conditions. The shipyards at that time were paying for plate all the way from 4c a lb. up to 10c. The ruling price in the U.S. outside of the plates, required for the government ships, was from 4 to 5½c. I called into competition the great U.S. steel companies, besides inviting all the steel companies in Canada to tender and the best price I could get was $4.15, the U.S. steel price being 4¼c per lb. Since the letting of this contract the armistice has been signed, and the price of steel plates has dropped to 2¾c in the U.S. and may possibly go lower. I therefore interviewed the officials of the steel company recently and pointed out to them that this was a war contract that we had entered into with them, and that in view of the price of steel plates having declined so much in the U.S. and for other reasons, I wanted to negotiate with them for a modification of the existing contract. I met the President and the Vice President of the Dominion Steel Corporation, who could not have met me in a more broad and patriotic spirit than they did; and they said that

Launching of steel cargo steamship Canadian Recruit, 3,750 tons d.w., for Canadian Government Merchant Marine Ltd., by Collingwood Shipbuilding Co., at Collingwood, Ont., May 3, 1919.

they were prepared to make any modifications that I, as a responsible minister would care to propose with the approval of the government. These negotiations are being carried on, and the contract will either be modified or be entirely cancelled. The government has not yet got the necessary information before it to decide what action they will take, but I am free to state now that we can modify the contract or, if we prefer, as the company met us in a broad spirit, we can cancel it. The Dominion Steel Corporation has its plant partially up. There is no machinery or plant in it at all, and it is very far from completion. I understand it is only barely started."

W. Duff, M.P., interrupted and said: "The minister informed us earlier in his remarks that contracts had been entered into with different shipyards at from $180 to $215 a ton. I presume this price was made in view of the fact that either the shipyards or the government would have to pay to the Dominion Steel Corporation or other steel manufacturers, $4.15 per 100 lb. If, as the minister has just told us, the government makes a new contract with the Dominion Steel Corporation, or if the steel company modifies its contract to meet U.S. competition at $2.25, will the government pay the shipbuilders $215 a ton d.w. for these ships?"

Mr. Ballantyne replied:—"The gentleman could not have understood me correctly. As I said, the contract price was not based on the price of steel that we contracted for with the Dominion Steel Corporation, but on the price of steel that we contracted for with the U.S. Government at 3½c. It has really nothing to do with that price. I hope to receive the approval of the house for the $30,000,000 that I am now asking and I trust that when my supplementary estimates come down for the additional sum, for the reasons that I have explained this afternoon to the best of my ability, members will give the government their unanimous support. I hope they will not look upon this as a party question at all. I consider that our shipbuilding programme is a large, national question.

"I did not explain how these ships are going to be operated. At one time I thought I would organize a shipbuilding branch under the Marine Department and engage a capable manager to operate the ships. But after careful and serious thought I could not see how I could keep the operation of these ships free from political influence, as it was desirable that we should, and therefore, I thought the best policy for the government to pursue would be to follow the good example of the C.P.R. Co., which has its own steamships, while owned by the same shareholders as the railway, operated separately under the name of Canadian Pacific Ocean Services Ltd. Therefore I recommended to the government that D. B. Hanna and his board of directors should be responsible to the government for the operation of the government ships the same as they will for the government railways. In order that parliament and the public may know what profits and losses these ships might make I proposed that a steamship company be formed and it has been formed under the name of Canadian Government Merchant Marine Ltd. The operations of the ships are going to be kept separate from those of the railway. Mr. Hanna promised that he would procure one of the best steamship managers that he could get and an efficient organization. In addition to that, as so many enquiries come into the Marine and Trade and Commerce Departments, there will be an advisory committee here that will not in any way interfere with the management of the ships by Mr. Hanna and his board of directors, but will act more in an advisory capacity. The Deputy Minister of Marine and the Deputy Minister of Trade and Commerce, will consult as often as necessary with the general manager of the government ships in regard to what cargoes should be moved because there is more cargo available than the government has ships to carry. As these ships are built for Canada alone, Mr. Hanna understands full well that they are not to be used in any foreign trade if there is business available in Canada.

"As to whether the government will retain in its service the 45 ships ordered already and such additional ships as may be built, or, inasmuch as the work is largely for the purpose of giving employment, whether it will sell some of these ships and build others, will depend altogether on the business offered. At present it would not be wise for the government to sell any of its ships, especially those that are ready to go into service now. I had an offer from a New York firm today at $190 a ton which I have refused. It may be possible that some of the ships will not be completed until a later date and if we find the demand for ships and the volume of business falling off the government might possibly sell some of the ships.

Steel Cargo Steamship, Canadian Volunteer, 4,300 tons d.w., for Canadian Government Merchant Marine Ltd., immediately after launching by Wallace Shipyards Ltd., North Vancouver, B.C.

Trawlers and Drifters — Sir Sam Hughes asked if the Minister of Marine had considered the advisability of the government, assisting Canadian corporations in the construction of trawlers in government yards, or under some other system, so that Canada may have its own fleet of trawlers engaged in the fishing industry in this country with ocean ships to convey the products to the nations of the world. Mr. Ballantyne replied:—"Of the trawlers and drifters built in this country, only 6 were built for Canada. These trawlers and drifters were built probably more for war purposes than anything else. A large number of trawlers and drifters, which some people think belong to the Canadian Government, are at Liverpool at present. The British Government has sold some and might possibly sell more. The Canadian Government has only 6 trawlers on hand for the time being. There would never be any demand for trawlers except by fishermen, and I am quite sure that they would not pay the price of these expensive war trawlers. The sum they would want to pay would be so small that no one could build a similar type of trawler for it. I hope our friends in Canada will build the type of trawler that our fishermen need and at a price which they can pay."

Control of Rates, Etc.—J. E. Armstrong, M.P., for East Lambton, Ont., asked whether as the government railways are under the Board of Railway Commissioners' control as to rates, tolls and tariff agreements, it is the government's intention to place the ships under the same commission in regard to rates and tolls? Mr. Ballantyne replied: "That would be a matter for D. B. Hanna and his board of directors to consider more than it would be a question for the government. It would be a very difficult problem for any government to undertake to control rates for ocean traffic, but if it is at all feasible, the government would be willing to join in with the others."

United States Shipping Board's Policy—Mr. Ballantyne said:—"Chairman Hurley, of the U.S. Shipping Board, says that they have built 555 ocean going steel ships, that they have contracts for 1,336 similar ones yet to be built, and that when the programme is finished they will have 16,732,700 tons of shipping. Mr. Hurley's proposal, which he is going to submit to Congress, is that the U.S. Government shall sell these ships to private persons. He goes so far as to say that he is willing to recommend to the U.S. Government that they be sold, not at the cost of construction to the government, but at the cost of construction at the time the sale was made. He also states that he hopes the U.S. Government will be able to control rates, but I do not see how it can very well do so. He further states that they are going to set aside $15,000,000 for what he calls a merchant marine development fund, so that if any of their ships are in a trade route that does not prove to be profitable, the U.S. Government will come to their aid. He also states that the U.S. is striving to be the leading maritime nation of the world; and consequently we must recognize the keen competition that we are going to have from the U.S."

Shipbuilding at Sorel and Toronto—In answer to questions, Mr. Ballantyne stated that the government had not given any orders to build ships at Sorel, Que., as the yards there could not build the types of ships which have been ordered. The government has not placed any orders with any of the Toronto shipyards, because the two shipyards there had their berths all occupied either by ships they were building for the Norwegian Government before the Dominion Government's shipbuilding programme was undertaken, or by ships they were building for Canadian register. They have berths vacant now, but whether the government will be able to place any orders with them or not will depend on the amount that will be brought down in the supplementary estimates, and the approval of the house thereto.

Government's Policy Criticized—J. H. Sinclair, M.P. for Antigonish, N.S., said he thought the government was building the wrong class of ships. It was not following the policy of the C.P.R., which had never built tramp vessels, but liners which make regular trips, connect with its railway system and undertake to route goods to certain places and to deliver them on certain dates. The slow tramp vessels being built by the government will never be suitable for that class of work. It will be of no advantage to Canada to have its goods carried by a tramp vessel owned by the government, instead of by a private owner. The vessels already owned by the government are not developing Canadian trade. The s.s. McKee was chartered by a New York firm to carry coal from New York to Chili and to carry an ore cargo back. The s.s. Canadian Voyageur was carrying sugar from the West Indies to New York. Mr. Sinclair contended that ships are now being built in Great Britain at about $115 a ton d.w., and that Canada is paying too much. The government would lose heavily by its policy. When it ceased giving orders shipbuilding in Canada would stop. It should find some way by which Canadian investors could put their money into shipbuilding and compete successfully with the outside world.

Steel Cargo Steamship, Canadian Warrior, 3,750 tons d.w., built for Canadian Government Merchant Marine Ltd., by Collingwood Shipbuilding Co., Collingwood, Ont.

Mr. Ballantyne said in reply:—"If the ships we are building are tramp ships, then all cargo vessels that ply the various waters are also tramp ships. I cannot see why a ship, of say 11 knots sea speed, leaving Montreal for Liverpool should not make her schedule time just the same as a passenger ship can. Cargo ships are necessarily for carrying cargoes, and it would not be an economical policy for the government to built palatial passenger vessels to carry the cargoes that these ships are designed to carry. Mr. Sinclair went on to say that there is no difference between the freight ships built in the United States, in England, or in Canada. He must know that there is a vast difference in the design, speed and types of ships, just as there is in the various kinds of automobiles that are made. I cannot understand him when he classes all freight ships together, as regards cost and design. He is at a loss to know what particular use the government is going to make of its merchant marine ships to co-operate with the railways, and suggests that instead of having these freight ships we should have passenger ships plying on the various oceans. Every one knows that a passenger ship has not as much available space for cargo as a cargo ship, and therefore the government's policy is a sound business policy. These ships were never designed to carry passengers at all, but were designed and are being built to carry cargoes. They are what the Canadian National Rys. want, because they will carry freight from the Orient to Vancouver, and the Canadian National Rys. will carry the freight to whatever point in Canada it may be destined for. Rates are very high and profitable now, but as market rates drop it would not be supposed that the general manager of the steamship company for the government would ask for higher rates than those ruling at the time. These ships are being built in order that the people of Canada and the government may control the freight from the time that it leaves the port from which it is shipped to the time it reaches its destination in Canada, and they will carry export cargoes from mine, field, and forest, and from our industries here. The U.S. Government has put a ban on the export of wheat from Baltimore, New York, and Boston. What would this government do to carry the wheat of our great western prairies if we had not the ships we have now? Cargo ships are built for the very purpose of carrying freight, and the government shipbuilding programme does not include a passenger service. Whether we shall build passenger ships and have them ply on the Pacific and Atlantic is a subject that has not yet engaged the government's attention. The ships we are building are modern up to date cargo ships, and I do not think they should be referred to as ordinary tramp ships. They are built for the purposes of Canadian trade and to assist the Canadian National Rys., and I am sure the majority of the members of this house will support the government policy."

Michael Clark, M.P. for Red Deer, Alta., hoped the government would very seriously consider its shipbuilding programme before giving a very wide extension to it. He argued that ships could not be built and operated successfully under a high protective tariff. There had only been one great shipping country in the world, Great Britain, and that under free trade. Before the war Great Britain owned 60% of the world's ships. He did not believe that under its present tariff system Canada could compete successfully with Great Britain in shipbuilding.

Lieut.-Col. Currie, M.P. for North Simcoe, in replying to Mr. Clark, made a strong protectionist speech, and stated that Germany had built up its maritime trade by subsidizing shipbuilding. The German Government provided that inland manufacturers in Germany should have the same freight rate of the world's ports as those paid by manufacturers on the sea coast. The same policy should be adopted in Canada. He urged the establishment of a number of steamship lines, particularly to the East Indies, to Australia and New Zealand, and to South America.

Steel Plate Manufacture—D. D. McKenzie, M.P., for Cape Breton North and Victoria, urged the government to see that the projected steel plate mill at Sydney, N.S., be erected and put in operation and that ship plates may be made in Canada.

Mr. Ballantyne, in reply to a question as to the price to be paid for ship plates to be made at Sydney, said:—"The best price for the government that could be agreed upon over a year ago was $4.15 per 100 lb., based upon the price at which steel billets were selling at that time, viz.: $25.50 a ton. Ship's plates are made from steel billets, and in talking with the President of the company, I learned that steel billets would not in any event decline in price more than $10 a ton. When the government entered into the contract with the Dominion Iron and Steel Co., it was as a war project; we could not get steel from the U.S. and notwithstanding that we had placed an 80,000 ton contract there, we were only able to obtain 6,000 tons. Other countries at war, such as Britain and France, were depending on the U.S. for steel, and Japan was also getting steel from that country. The U.S., having a huge mercantile marine programme to carry out, naturally were going to serve their own necessities first before they supplied the needs of others; therefore, to make shipbuilding a self-contained industry in Canada, and to enable this country to get ships during the war, it seemed to the government that there was no other course open but to enter into the best contract we could to have the steel plates made here. It is greatly to the credit of the Dominion Iron and Steel Corporation that it was able to place before the government a more favorable proposal than we could get from the U. S. The ore used by the company to make the pig iron originates in British territory, and comes from Newfoundland, so that all the materials used in production are obtained on British soil. But after the armistice had been signed, the price of ship's plates being 2½c in the States, against possibly a minimum price of $3.75 under the Dominion Iron and Steel Co.'s contract and the government being obligated to take no less than 50,000 tons a year for a period of five years, making 250,000 tons in all, it seemed to the government that we could not very well afford to pay that price. The arrangement looked very favorable a year ago when plates were selling at from 4c to 10c a pound, but it does not look so favorable now. I agree with the leader of the opposition that to make Canada's shipbuilding programme permanent, the industry must be on a self contained basis in this country, and that we ought to make our own ship's plates. I am quite satisfied that the Dominion Steel Corporation could carry out the contract, and I am also well satisfied that Sydney is a very good point at which to make these plates. No definite conclusion has been arrived at, but the company's fairly stated that if it had completed its plant and installed the machinery necessary, it would have been at a capital cost of $[illegible],000,000. Therefore, if it is to meet the N.S. price, it would take it many years before it could do so, and possibly it might never be able to write off the initial cost of the plant, .or a portion of it. If the Dominion Iron and Steel Co. give us a more favorable price, the government would be more inclined to go on with the proposition than it is to cancel it. If, however, the company cannot see its way clear to modify the price, I think it is in the best interests of the country to cancel the contract.

"In regard to the 45 ships under contract for the government, the prices were zased, not on the contract made with the Dominion Iron & Steel Co., but on the agreement made with the United States at 3¼c a lb. The Dominion Iron and Steel Co. has not imported any of the required machinery at all. All it has done so far has been to partially erect the building; it contains no plant in the way of machinery, engines, and boilers."

Free Trade vs. Protection—In the course of further discussion, Michael Clark, M.P., for Red Deer, Alta., contended that, prior to the war, Great Britain had imported steel plates from Germany, used them in shipbuilding and then sold the ships to Germans at a profit.

J. H. Burnham, M.P., for West Peterborough, Ont., having made some protectionist remarks, D. D. McKenzie said: "While I am not a very high protectionist, I am not in favor of the tremendous wall that the Peterborough member would like to build; but I cannot help knowing that protection of certain industries has done much for this country. I cannot help knowing that in connection with this very plate industry we are talking about the institution of the steel works at Sydney those works have furnished a market for Nova Scotia coal and employment for thousands of colliers who today would not be employed were it not for the assistance which the government in the early stages gave to the development of our steel and iron industry.

"If there is to be a further development of that industry and of the coal industry by the manufacture of plate and the building of ships in this country, I think it is a wise move. I do not think any one is preaching any political heresy when he advocates the development of whatever resources we have within our own country and making ourselves as far as possible self sustaining and independent. I have no doubt the day is not far distant when we shall have a navy of our own, and I want this country to be able to build its own warships from stem to stern, with what we can ourselves produce. I am not a high protectionist, but I am prepared to deal with facts and circumstances and not with any theory which may suit somewhere but not elsewhere."

Great Lakes Service—J. E. Armstrong, M.P., for East Lambton, urged the minister to place one of the government steamships on the upper Great Lakes to control freight rates, and added:—"In 1909, wheat was taken from Port Arthur to Montreal for 2½c a bus., while in 1919, steamships on the upper lakes charged 11c for carrying wheat between those two ports, and the rates are constantly increasing, despite the fact that since 1909 we have been spending millions of dollars on our waterways."

Mr. Ballantyne said, in reply:—"We intend to have ships, not only on the Pacific and the Atlantic, but on all the principal trade routes, and certainly on the Great Lakes, so that our transportation chain will be complete."

Encouragement for Shipbuilding—A. McMaster, M.P., for Browne, Que., said that Canada could not establish shipbuilding on an artificial basis and that no interest in the country would be served by attempting to do so. He argued that the United States merchant shipping had decreased as a result of a protective policy.

W. S. Middleboro, M.P., for North Grey, Ont., pointed out that Germany had subsidized shipbuilding in order that it might be done more cheaply there than in England.

Mr. Ballantyne, in replying to Mr. McMaster, said:—"He would have Canadians simply hewers of wood and drawers of water. Canadians and drawers of water. - Canadians have demonstrated that with the very moderate protection they have had for a number of years they can hold their own with the people of any other country in the world. I am sorry Mr. McMaster was not in his seat yesterday, when I explained to the committee that Canadian yards have turned out ships equal in design and efficiency, and in every other respect to ships built in any part of the world. A few years ago some people in this country thought that ships could not be built in Canada, but it has been amply demonstrated during the last two years that they can be built here successfully. According to the opinion of Sir Geo. Hunter, of the shipbuilding firm of Swan & Hunter, of the ships built in England, Ireland and Scotland at present are costing three times as much as ships built in pre-war times. No one believes for a moment that wages in the United Kingdom will ever reach again the low level prevailing before the war. Both skilled and unskilled laborers in the old country are asking for a higher rate of wages, and I think they are perfectly justified in doing so. In view of the marvellous development that has taken place in Canada during the last few years, and the skill which Canadians have exhibited in turning out ships equal to similar ships turned out in the United Kingdom, I take issue with Mr. McMaster when he says that Canada will not be able to compete with the United Kingdom and other shipbuilding nations. As I stated yesterday, between now and the next session we are going to consider if it will be necessary to render any aid to our shipbuilders when the days of keen competition arrive, and there will be plenty of time to deal with this matter at the next session of parliament.

"Mr. McMaster has referred to the U.S. and apparently he has not kept abreast of the times. The U.S. has constructed 555 steel ships of various kinds and tonnage. Chairman Hurley, of the U.S. Shipping Board, states that they are going to build 1,136 more ships, and that when their entire mercantile marine programme has been completed they will have the enormous tonnage of 16,000,000 tons. The U.S. Government is going to aid that vast mercantile fleet. With a fleet like that next door to us, Mr. McMaster's advice to the government is that we should sit down with folded arms and go out of the shipbuilding business. That is not the policy of this government."

Several other members having spoken, Mr. Ballantyne said:—"Of course the government believes that shipbuilding will be a permanent industry in this country. If the house passes the suplementary estimate that I shall bring down in the very near future to have a limited number of ships constructed in addition to the 45 we have under contract, for the reasons that I gave yesterday, the cost of these ships will be very materially less than the cost of the 45 that are under contract. I have not had any firm offers because I have not yet received the authority of the house to order any more ships, and I will not have such authority until the supplementary estimate is approved. But, I firmly believe that I can buy an 8,000 ton ship for $160 a ton, and probably less.

"I explained to the house yesterday that for a year and a half to come no ships could be purchased from any of the yards in the United Kingdom. In answer to a member's question as to a comparison today between the price for a ship built in Canada and a similar ship built in England, the authority being cited of Sir George Hunter that there is only a difference of $10 a ton, it may be when I start negotiations with Canadian yards we may be able to build ships in this country at as low a rate as in any of the yards of the United Kingdom. However, I do not want to be too optimistic, and that all business men are trained to be most cautious, especially when they have the responsibility of office, such as I have. In respect to whatever further outlays are required on shipbuilding, the money will be expended on a thoroughly conservative and business-like basis.

"In reference to the 80,000 tons of steel contracted for n the U.S., we do not need to take the balance of the contract unless we desire to. This country has nothing to fear in shipbuilding competition from our neighbors to the south. I made a very conservative statement yesterday when I said that the ships built by the Emergency Fleet Corporation cost at least $25 a ton more than the 45 ships which the Canadian Government has under construction. A member talks about building ships at $200 a ton. In the plainest language possible I stated yesterday that our contracts ranged from $180 to $215 a ton. So far as we have gone with our shipbuilding programme, our prices compare favorably with those paid by the U.S. Government, which has built a vastly greater number of ships than we have contracted for. I have stated over and over again that when it comes to competition with the United Kingdom you cannot get a fixed price there that everything is on a plus cost basis. The information I obtained from England is that $150 a ton would be the cost, provided you could get your ships built there now; but it is quite impossible to get any built for a year and a half, and I have given as my authority the well-known shipbuilder, Sir George Hunter, of Swan and Hunter. Why a member wants to make it appear that the cost of a Canadian-built ship is so much more than that of a ship built in the U.S., and is basing on that supposition his argument that we can get ships built in the United Kingdom at present, is more than I am able to follow.

"I took the precaution of communicating with several of the leading shipbuilding firms in England before I came to this house to ask for approval of the $30,000,000 vote, and I submit that the information I gave to the committee yesterday and today is certainly based on facts. I suppose members noticed in the press some weeks ago that the famous firm of Yarrow and Co., said that it were going to establish a shipyard in British Columbia, and gave as the reason for leaving the old land, so famed for shipbuilding, that the cost of labor, material and everything else had gone up so high that it could build ships in British Columbia at a price to compete with the rest of the world.

"In view of that statement from such eminent authority, I do not see why we should feel so very uneasy about Canadians being able to build ships in competition with the world when the competition gets keener than it is now."

Atlantic and Pacific Ocean Marine.

The C.P.R. s.s. War Beryl, outbound from Montreal, collided with barge 8 at Beaujeau, Crane Island, about 40 miles below Quebec, May 21. Both vessels were badly damaged and the barge was docked at Levis for examination and repair.

The s.s. General Currie built recently by the Dominion Shipbuilding Co., Toronto, arrived at Montreal, May 14, and later sailed for New York, where she is to take a cargo for Great Britain. This vessel was not, as stated in a Montreal press dispatch, built under order of the Imperial Munitions Board.

The Jamaica Steamship Co. brought action against the U.S. steamship American in the Admiralty Court at Halifax, May 21, on the basis of a $100,000 mortgage on the vessel. It was decided that the vessel be sold after her cargo was removed. The master and crew are claiming against the ship for $11,000 wages.

The steamships Jiul and Principessa sailed from Montreal early in May with cargoes for Galatza, Rumania, these being the first of a number of sailings established through the efforts of the Canadian Trades Commission to develop

Vessels Registered in Canada During January and February, 1919.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing vessels of less than 100 tons register.

trade between Canada and Rumania. Galatz is about 140 miles up the River Danube, which debouches into the Black Sea.

The steamship service between Montreal and the River Plate, which the Houston Line of Liverpool, Eng., was to inaugurate during May, as mentioned in our last issue, under the Canadian management of McLean, Kennedy & Co., Montreal, has been postponed, owing to labor conditions in South America. It is announced that until conditions improve on the River Plate no further steps will be taken to establish the service.

The 100th anniversary of the sailing of the s.s. Savannah from Savannah, Ga., to Liverpool, Eng., was celebrated May 22. The Savannah is claimed to be the first steamship to cross the Atlantic Ocean. She was built in New York and launched Aug. 22, 1818. Her dimensions were, length 98½ ft., beam 26 ft., depth of hold 14½ ft., 319 tons. She was equipped with an inclined, direct connecting, low pressure engine of 98 h.p. with a single cylinder 40 in. diameter. Her bunker capacity was 25 tons of coal and 25 cords of wood. It is told of the trip that while at sea, June 17 of that year, she was stopped by a British cutter, whose captain thought she was on fire. The voyage took 20 days, during which steam was utilized for 80 hours.

Maritime Provinces and Newfoundland.

Lightship 15, after having been overhauled and repaired, has been replaced on her station on the Sambro Island outer bank, off the south coast of the Halifax, N.S., harbor entrance.

A St. John, N.B., press dispatch of May 15, stated that arrangements had been made with the Minister of Marine for the taking over of St. John harbor by the Dominion Government.

The Dominion Steel Corporation has acquired the s.s. Hochelaga from Furness, Withy & Co., for the coal and ore trade. The Hochelaga, during the war, was attacked by a German submarine, which she was successful in sinking, and she is stated to be the only vessel now in Canada with this honor.

The Newfoundland Government has awarded contracts to Bowring Bros., Ltd., for 2 steamship services, one to northern and the other to southern and western Newfoundland ports for a total of $100,000 a year. The steamships Portia and Prospero will be operated for 19 fortnightly trips to the north, and 26 fortnightly trips to the south and west, respectively, for 10 years from May 1. These vessels have been performing similar services during the past 15 years.

The Marine Department received tenders to May 31, for the purchase of the s.s. Lansdowne, lying at Dartmouth, N.S. She will be sold as she now lies, without any warranty as to condition of hull, boiler, machinery or equipment, and no additional equipment will be supplied by the department. She was built at Maccan, N.S. in 1884, and is screw driven by engine of 80 n.h.p. Her dimensions are, length, [illegible] ft.; breadth, 32.1 ft.; depth, 15.8 ft.; tonnage, 680 gross; 463 net. The engine is of the compound, surface condensing type with cylinders, 24 x 43 x 36 ins., supplied with steam by a tubular boiler, 13 x 10 ft.

Province of Quebec Marine.

Cie. de la Navigation Montreal-Valleyfield-Soulanges, has been granted a winding up order.

The Dominion Public Works Department received tenders May 30, for rebuilding the wharf at Magog.

The Dominion Public Works Department is receiving tenders to June 4, for rebuilding the lower entrance pier at lock 25, Galops Canal.

The Louise Docks, Quebec, which were considerably damaged by the storms and high tides of last autumn, were repaired by the Quebec Harbor Commissioners during May.

The House of Commons has voted $25,000 to the Quebec Salvage and Wrecking Co., to aid it in maintaining a plant for the assistance of vessels requiring salvage service in the St. Lawrence.

The ferry service between Montreal and St. Helen Island opened May 24. The contract has been given to J. O. Normand & Co., and covers the privilege of operating amusements, etc., on the island, until Sept. 1, 1921.

The Quebec Harbor Commission intends to complete the building of the grain conveyors from the elevators to the steamship piers and to lay railway track on the back lines along the river front, as well as raise sheds 26 and 27 by 2 ft. and also the railway tracks there.

Ontario and the Great Lakes.

The s.s. Avon, which has been purchased from foreigners by the Montreal Transportation Co., has had its name changed to Stormount.

The Public Works Department will receive tenders to June 25, for the construction of an extension to the breakwater at Bare Point, Port Arthur.

The Massey Steamship Co.'s s.s. Schlesinger, Superior, Wis., sprang a leak and sank near Passage Island, near Port Arthur, May 26. The crew were taken off by the C.P.R. s.s. Assiniboia and landed at Fort William.

The steam tug Michipicoten, operated formerly by the Owen Sound Tug Line, Owen Sound, Ont., is now operated by the North American Bent Chair Co., Owen Sound. Capt. G. T. Dunn is master and J. N. Bellmore is chief engineer.

The Chats Falls Navigation Co., Ottawa, has appointed Capt. John Chartier, Aylmer, Que., as master, and H. E. Shaver, Ottawa, Ont., as chief engineer of the steamboat which it has under construction at Hull, Que., for operation between Britannia on the Bay and Fitzroy Harbor, Ont.

The s.s. D. R. Hanna, owned in Cleveland, Ohio, downbound with wheat, was sunk in collision with the s.s. Quincy A. Shaw near Thunder Bay Island, Lake Huron, May 16, and she lies in 140 feet of water. She was built in 1906, and with her cargo was valued at $1,800,000. The crew of 31 were saved.

The Public Works Department received tenders, May 26, for the purchase of the steamboat Cingalee as she lies at Midland, Ont. She was built at Toronto in 1905, her dimensions being, length, 65.5 ft., breadth, 13 ft., depth, 5ft., tonnage, 59 gross, 23 net, and she is screw driven by engine of 10 n.h.p.

The Collingwood Steamship Co.'s s.s. City of Meaford, was burnt in Collingwood harbor, May 17. She was valued at $12,000, and was partly insured. The fire is reported to have been incendiary. She was built at Meaford, Ont., in 1906, her dimensions being, length, 111 ft; breadth, 24 ft.; depth, 8.5 ft.; tonnage, 328 gross; 223 net. She was screw driven by engine of 28 n.h.p.

Canada Steamship Lines opened its Toronto-Niagara service May 17, with the s.s. Cayuga. The s.s. Chippewa will be added to the service June 14, when two trips a day will be run. The Thousand Islands service will be opened June 14, the steamship Kingston and Toronto, running from Toronto, making three trips a week until the end of June, when a daily service will be started.

The Minister of Public Works stated in the House of Commons recently, that it is the intention to start the extension of the breakwater on the Port Arthur side of Thunder Bay, and to continue the construction of a revetment wall near the G.T.P.R. terminals on the Fort William side. About $300,000 will be spent during this season. Tenders will be received to June 5, for the construction of the breakwater extension.

A motion was made in the House of Commons recently for the resumption of the work of improving the French River waterway connecting Georgian Bay kith Lake Nipissing. The Minister of Public Works stated that he had received deputations from North Bay and district and pointed out to them that although they did not put forward claims for the carrying on of this work as a part of the Georgian Bay Canal cheme, but more as a claim by itself, he felt that if the government made up its mind to start on constructing the French

River end, it would be adopting the policy of constructing the Georgian Bay Canal, it being the first link in the chain. He did not feel like asking parliament to start out on an expenditure on work of this nature during this year.

British Columbia and Pacific Coast

Navigation was opened on the Yukon River between Lake Labarge and Dawson, May 13.

The White Pass and Yukon Ry. and Navigation Co. expects to put its river steamers in operation between White Horse and Dawson, Yukon, June 2.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert had the blades stripped from her propeller, May 15, and was docked at Victoria, for repairs.

Frank Waterhouse & Co., shipping agents, Vancouver, B.C., and Seattle, Wash., are reported to have given all employes a bonus equal to 100% of their salary for 1918.

The British Columbia Salvage Co., Esquimalt, will receive $10,000 as a subsidy from the Dominion Government, for this year. This subsidy is granted annually to aid the company in maintaining a service for vessels which may require assistance along the coast.

Admiral Sir Charles Kingsmill inspected the s.s. Stadacona recently, prior to her sailing for the Pacific coast, and which with the steamships Armentieres, Thiepval and Givenchy have left the Atlantic coast for Esquimalt, B.C., via the Panama Canal. On arriving on the Pacific coast they will be employed on fisheries protection duties.

Copies of a resolution passed recently at Victoria, B.C., urging the Dominion Government to build a dry dock at Esquimalt, have been sent to the acting premier, and other political leaders, with the view of having the matter brought before the House of Commons on the discussion of the Marine Department estimates. The resolution calls attention to the advantages of the port's location, and to the fact that the Dominion Government already owns land there, which was acquired for such a purpose.

Compagnie Canadienne Transatlantique Ltee., has been incorporated under the Dominion Companies Act, with $1,000,000 authorized capital and office at Montreal, to carry on a general navigation business for the transportation of passengers, mail and general merchandise. Those chiefly interested in the matter are Canada Steamship Lines Ltd., Montreal, and Cie. Generale Transatlantique, of France. Details of the organization are not complete at the time of writing, but arrangements have been made for the sailing of the steamships Bilbster, May 25, and Honduras, June 15, both from Montreal, for Havre, France.

Dominion Towing and Wrecking Co. Ltd., has been incorporated under the Dominion Companies Act, with $250,000 authorized capital and office at Midland, Ont., to carry on a general towing and wrecking business, and to build, own and operate steam and other vessels, wharves, docks, etc. J. Playfair, President and Managing Director, Great Lakes Transportation Co., D. L. White, President, and D. S. Pratt, Vice President, Midland Shipbuilding Co., all of Midland, are among the provisional directors.

St. John, N.B., Harbor Development and Dry Dock.

In connection with the vote for $750,000 for improvements in the St. John harbor, the Minister of Public Works stated in the House of Commons recently, that the work which is under contract involves also the construction of a dry dock. The harbor improvements and the dry dock are both under contract to the St. John Drydock and Shipbuilding Co., really the Canada Dredging Co., which has carried out works at Port Arthur, Fort William and other places. The dry dock is being built under the Dry Dock Subsidies Act to cost at least $5,500,000 and the contractors are to receive, not a subsidy of 4½%, but interest on an amount up to $5,500,000 at 4½% for 35 years. The principal of the bonds, of course, has to be taken care of by the contractors. When the work is completed the harbor improvements will belong to the government and the dry dock will belong to the company, so that two distinct propositions are incorporated in the same contract.

The contract calls for the construction of a dry dock and ship repairing plant, which latter comes under the Dry Dock Subsidy Act, but the money will be furnished by the company and not by the government. The expenditure on this will be about $3,250,000. The company is also laying out a large shipyard, but that is entirely its own affair with which the government has nothing to do. Under the contract the dry dock is to be ready for operation in 1922, but from the progress being made and from the engineer's report, it will probably be ready a year ahead of time. The dry dock will be one of the largest in existence, the dimensions being, length, 1,150 ft.; width, 125 ft.; width on sill, 100 ft. with 40 ft of water at high tide. There are only three other dry docks on this continent to compare with it, the Champlain dry dock at Levis, Que., one at Boston, Mass., and one at the Panama Canal's Atlantic entrance.

The Naval Service Department's drifter no. 35, has been sold to A. N. Smith & Co., Halifax, N.S. Her dimensions are, length, b.p., 84 ft.; breadth extreme, 18¼ ft.; depth moulded, 10 ft. 11½ in. She is built of wood, to equal Lloyd's 100 A1 class, for a speed of 9 knots an hour, on a consumption of 4½ tons of coal a day, and has bunker capacity of 25 tons. The propelling machinery consists of compound surface condensing engine, with cylinders 12 x 24 x 16 in. stroke and 24 n.h.p., supplied with steam by a Scotch boiler, with two plain furnaces equipped for natural draft. The boiler dimensions are, length, 9 ft., diameter, 9½ ft.; working pressure, 140 lb a sq. in She has large circulating feed and bilge pumps working from main engine, duplex tank pump, injector and bilge syphon.

Quebec Towing and Transportation Co. Ltd. has been incorporated under the Quebec Companies Act, with $140,000 authorized capital and office at Quebec, Que., to carry on a general transportation, towing and wrecking business, and in connection therewith, to own and operate steam and other vessels. J. S. Thom, H. L. Thom, R. Guay, C. Fremont and A. Boivin, Quebec, Que., are the incorporators.

General Shipbuilding Matters Throughout Canada.

Cholberg Ship Co., Victoria, B.C., launched, May 8, the first of several auxiliary powered schooners to be built for Norwegian interests. She was named Gunn, by Mrs. Hansen of Porsgrund, Norway. To mark the occasion of the first launch at the yard, the employes presented the manager, C. Cholberg, with a case of silver, and the owners of the first vessel presented Mrs. Hansen with a gold ring set with five pearls. The Gunn is owned by the Porsgrund Damp and Seil Co., Porsgrund, Norway, and is built of wood, and equipped with Diesel auxiliary power. It was expected that she would be completed and ready to take her cargo of 1,200,000 ft. of lumber from Hastings Mills, by the end of May. A second vessel for the same owners is under way.

Foundation Co., Victoria, B.C.—Of the 20 full powered wooden steamships which this company is building for the French Government, details of which have been given in previous issues, seven have been launched and named, respectively, Strasbourg, Metz, Mulhouse, Canada, Montcalm, Winnipeg and Ontario. Names have been selected for the remaining 13 as follows:—Wilfrid Laurier, Trois Rivieres, Vancouver, Victoria, Quebec, Montreal, Ottawa, Frontenac, Le Salle, Acadie, Montmagny, Alberta and Nouvelle Ecosse.

Grant & Horne Ltd., St. John, N.B., are building a 4-masted schooner of 650 tons for trans-Atlantic and South American trade. She is expected to be ready for service about September.

C. T. White and Sons, Alma, N.B., launched a four masted schooner, Bessie A. White, May 3. Her dimensions are, keel, 151 ft.; beam, 36 ft.; depth of hold, 12½ ft.; cargo capacity, 600 tons. She is equipped with auxiliary power supplied by a Wolverine gas engine. She took on a cargo of lumber at St. John, during May, for Great Britain. A similar ship is in frame at the same yard, and is expected to be ready for launching in August.

Sale of Trawlers and Drifters—Canadian Railway and Marine World for May gives some information as to the purchase by the Anderson Co. of Canada, Montreal, of a large number of trawlers and drifters built in Canada during the war. We are advised that there are 60 of these steel steam trawlers and 89 wooden steam drifters. The majority of these vessels are at the Halifax dockyard and in the northwest arm of the harbor. Twenty-two drifters are at Liverpool, N.S. There are 7 steam trawlers still under construction, 5 of which are expected to be completed in June, 4 are being built at Port Arthur; 2 at Quebec and 1 at Kingston

Canals Expenditures and Revenues—The Railways and Canals Department report for the year ended Mar 31, 1918, issued recently, shows that the expenditure on canals for the year was $3,327,556.55 of which $1,781,957.07 was on capital account, $111,552.28 on income account, and $1,434,047.20 on revenue account The revenue from the canals for the year was $414,868.22, made up of rents, harbor dues, etc., $163,164.82, and receipts from Port Colborne elevator, $414,868.22. No tolls have been collected for the use of the canals since 1903.

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Keels Laid.—Since the publication of the full page table in Canadian Railway and Marine World for May, and which is repeated in this issue with additions up to date, we have been advised of the laying of keels for steamships for Canadian Government Merchant Marine Ltd., as follows:

Marine Department contract 6, builder's yard no. 101, Wallace Shipyards Ltd., Vancouver, B.C., s.s. Canadian Aviator, 5,100 tons, Apr. 5, 1919.

Marine Department contract 27, builder's yard no. 71, Canadian Vickers, Ltd., Montreal; s.s. Canadian Spinner, 8,100 tons, Apr. 23, 1919.

Marine Department contract 28, builder's yard no. 72, Canadian Vickers, Ltd., Montreal; s.s. Canadian Planter, 8,100 tons, May 10, 1919.

Marine Department contract 31, builder's yard no. 15, Collingwood Shipbuilding Co., Kingston, Ont.; s.s. Canadian Beaver, 3,750 tons, Apr. 7, 1919.

Marine Department contract 34, builder's yard no. 11, J. Coughlan & Sons, Vancouver, B.C.; s.s. Canadian Importer, 8,100 tons, Apr. 26, 1919.

Marine Department contract 35, builder's yard no. 12, J. Coughlan & Sons, Vancouver, B.C., 8,100 tons, May 3, 1919.

Names of Vessels—Since Canadian Railway and Marine World for May was published, we have been advised of the following additional names having been chosen for steamships, ordered for Canadian Government Merchant Marine Ltd.

Marine Department contract 13; builder's yard no. 5; Tidewater Shipbuilders Ltd., 5,100 tons; s.s. Canadian Settler.

Marine Department contract 14; builder's yard no. 6; Tidewater Shipbuilders Ltd., 5,100 tons d.w.; s.s. Canadian Rancher.

Marine Department contract 15; builder's yard no. 7; Tidewater Shipbuilders Ltd.; 5,100 tons d.w.; s.s. Canadian Fisher.

Marine Department contract 16; builder's yard no. 8; Tidewater Shipbuilders Ltd.; 5,100 tons d.w.; s.s. Canadian Forester.

Marine Department contract 17; builder's yard no. 459; Davie Shipbuilding & Repairing Co., 5,100 tons d.w.; s.s. Canadian Trapper.

Marine Department contract 18; builder's yard no. 460; Davie Shipbuilding & Repairing Co.; 5,100 tons, s.s. Canadian Hunter.

Marine Department contract 19a; builder's yard no. 41; Port Arthur Shipbuilding Co., 3,400 tons d.w.; s.s. Canadian Adventurer.

Marine Department contract 20a; builder's yard no. 42; Port Arthur Shipbuilding Co.; 3,400 tons d.w.; s.s. Canadian Cadet.

Marine Department contract 21; builder's yard no. 1; Halifax Shipyards Ltd.; 8,100 tons d.w; s.s. Canadian Mariner.

Marine Department contract 22; builder's yard no. 2; Halifax Shipyards Ltd.; 8,100 tons d.w.; s.s. Canadian Explorer.

Marine Department contract 34; builder's yard no. 11; 8,100 tons d.w.; J. Coughlan & Sons; s.s. Canadian Importer.

Marine Department contract 35; builder's yard no. 12; J. Coughlan & Sons; 8,100 tons d.w.; s.s. Canadian Exporter.

Marine Department contract 36; builder's yard no. 13; J. Coughlan & Sons; 8,100 tons d.w.; s.s. Canadian Inventor.

Marine Department contract 37; builder's yard no. 14; J. Coughlan & Sons; 8,100 tons d.w.; s.s. Canadian Prospector.

Launchings of Steamships—Since Canadian Railway and Marine World for May was published, we have been advised of the following additional launchings:—

Marine Department contract 10, builder's yard no. 62, Collingwood Shipbuilding Co., Collingwood, Ont.; s.s. Canadian Recruit, 3,750 tons, d.w., May 3, 1919.

Marine Department contract 19, builder's yard no. 39, Port Arthur Shipbuilding Co., Port Arthur, Ont., s.s. Canadian Trader, 3,400 tons, d.w., May 5, 1919.

Tonnages of Ships—Three of the steamships built have had their respective tonnages obtained by actual measurement as follows:

Marine Department contract 1; builder's yard no. 66; Canadian Vickers Ltd.; s.s. Canadian Voyageur; 4,300 tons d.w.; 3,099 tons gross, 1868 tons net.

Marine Department contract 2; builder's yard no. 67; Canadian Vickers Ltd.; s.s. Canadian Pioneer; 8,100 tons d.w.; 5,758 tons gross, 3,548 tons net.

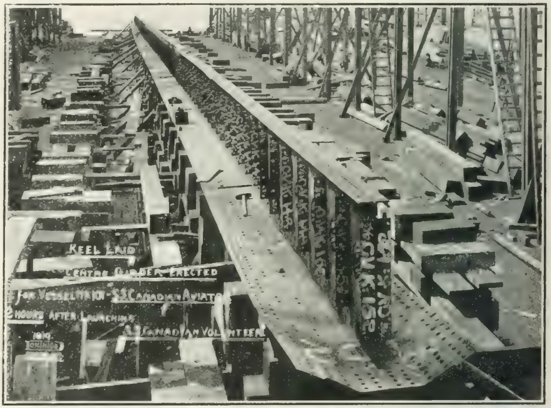
Marine Department contract 3; builder's yard no. 61; Collingwood Shipbuilding Co., Collingwood; s.s. Canadian Warrior; 3,750 tons d.w., 2,409 tons gross, 1,452 tons net.

Prices for Building Steamships—Ottawa press dispatch, May 19:—As the price of steel plates which the Dominion Government contracted for with United States firms has gone down from $3,25 a hundredweight to $2.75; the government will, on that account, get its ships a little cheaper than it had anticipated. The government's contract with the Pittsburg firms called for a maximum of $3.25 and for anything less if the price goes lower. It is possible that the price will go still lower. The government will buy the steel at the Pittsburg price and sell to shipbuilders throughout Canada at $3.25 a hundredweight. This will mean a profit of $10 a ton, which the government can apply to reducing the cost of its ships. For one of the standard 8,100-ton ships 2,800 tons of steel plates will be used, so that on each ship the government will save $28,000. As many of the Pittsburg furnaces have been closed down for lack of orders to keep them running there will be no difficulty for some time in the governmen tsecuring any steel it may need, for shipbuilding steel is the only material used in shipbuilding on which a drop in price has been reported.

Ships for Pulp and Paper Trade—Ottawa press dispatch, May 26.—The Dominion Government has been approached by pulp and paper manufacturers with a view to having the government turn over to them two of the government steamships built during the war. These steamships would supply a bi-monthly service and would pick up most of their cargoes at the various pulp and paper mills on the St. Lawrence.

The s.s. Canadian Pioneer, 8,100 tons, d.w., the second ship built by Canadian Vickers Ltd., at Montreal, under the Dominion Government's programme, and which was launched Dec. 3, 1918 and afterwards taken to Quebec, was finally completed at the Canadian Vickers' works, Montreal, May 9 and proceeded up the harbor to take on cargo for Buenos Aires, and sailed from Montreal, May 22. After discharging cargo at Buenos Aires she will load a general cargo from South America for a return trip to Montreal.

The s.s. Canadian Ranger, 8,100 tons d.w., was delivered to Canadian Government Merchant Marine Ltd. at Canadian Vickers Ltd. yard at Montreal, May 23, and at once went up the harbor and commenced loading general cargo for Liverpool, for which port she was expected to sail May 29. She is to bring back a general cargo from Liverpool to



Keel and Center Girder for Steel Cargo Steamship, Canadian Aviator, 5,100 tons d.w., for Canadian Government Merchant Marine Ltd., under construction by Wallace Shipyards Ltd., North

Montreal.

The s.s. **Canadian Warrior**, 3,750 tons d.w., built by Collingwood Shipbuilding Co., Collingwood, Ont., was delivered to Canadian Government Merchant Marine Ltd., Apr. 26, and left Collingwood, Apr. 30, for Port Huron, Mich., where she loaded coal for Montreal. After discharging the coal at Montreal, she loaded a general cargo for Barbadoes, Trinidad, and Havana, and sailed May 20. After discharging her cargo she will load a full cargo of sugar at Havana for Montreal.

British American Shipbuilding Co., Welland, Ont., which has contracts from the Marine Department for 2 steel cargo steamships of 4,350 tons d.w., each, laid the keel for Department contract 44, builder's yard no. 4, Mar. 29, as previously stated in Canadian Railway and Marine World. The company advised us May 14 that it expects to launch its builder's yard no. 3, the s.s. War Racoon, 3,500 tons d.w., for the British Government, between May 26 and 31, and as soon as possible thereafter it will lay the keel for Marine Department contract 45, builder's yard no. 5, 4,350 tons for Canadian Government Merchant Marine Ltd.

Canadian Vickers Ltd., Montreal, finally completed the s.s. Canadian Pioneer, 8,100 tons, d.w., May 9, and delivered her to the Marine Department at Montreal.

Canadian Vickers Ltd. has laid keels for 2 more 8,100 ton steamships for Canadian Government Merchant Marine Ltd., viz.: Marine Department contract 27, builder's yard no. 71, s.s. Canadian Spinner, Apr. 23, and Marine Department contract 28, builder's yard no. 72, Canadian Planter, May 10. The latter is the last contract placed with this builder by the Marine Department.

Collingwood Shipbuilding Co., Kingston, Ont., laid the keel of the s.s. Canadian Beaver, Marine Department contract 31; builder's yard no 15; 3,750 tons d.w.; Apr. 7, and expects to have her ready for launching in September.

The trial runs of the s.s. Canadian Warrior; 3,750 tons d.w.; Marine Department contract 3; builder's yard no. 61, were made on Apr. 23, and the ship was accepted by the Marine Department, Apr. 26. The company launched the s.s. Canadian Recruit; 3,750 tons d.w.; Marine Department contract 10; builder's yard no. 62, May 3.

J. Coughlan & Sons, Vancouver, B.C., who have contracts from the Marine Department for 4 steel cargo steamships, 8,100 tons d.w., each, laid the keel for Marine Department contract 34, builder's yard no. 11, Apr. 26, and the keel for Marine Department contract 35, builder's yard no. 12, May 3. They advised us May 8 that the keel for Marine Department contract 36, builder's yard no. 13, will probably be laid during the first week in June, and the keel for Marine Department contract 37, builder's yard no. 14, about the end of June or early in July.

Port Arthur Shipbuilding Co., Port Arthur, Ont., launched the s.s. Canadian Trader, Marine Department contract 19, builders' yard no. 39, 3,400 tons d.w., May 5, the ship being christened by Mrs. A. W. Roberts, wife of the President, Port Arthur Board of Trade. This ship is a full canal sized ocean freighter of 3,400 d.w. tons, steel, screw, single deck type, with a straight stem and semi-elliptical stern, built on the transverse system with poop, bridge and forecastle. The principal dimensions: Length over all, 260 ft.; length, between perpendiculars, 251 ft.; breadth, moulded, 40½ ft.; depth, moulded, 23 ft. The ship is built to British Lloyds 100 A1 classification, fit-out in accordance with British Board of Trade rules. The propelling machinery is placed amidships. The main engine is of the triple expansion vertical inverted type, with cylinders 20½, 34, 56 x 40 in. stroke, developing about 1,500 i.h.p. The auxiliary machinery includes a feed pump evaporator of 15 tons capacity per 24 hours; auxiliary condenser, with attached air and circulating pumps, vertical duplex ballast pump and auxiliary feed pump. A steam ash hoist is located in boiler room. Steam is to be supplied by two Scotch boilers, 15 x 11 ft.; construction, according to Lloyds and Canadian rules, having working pressure of 190 lbs. The 3,400 ton type is very similar to the 3,750 ton type ordered by the Marine Department, a full description of which was published in Canadian Railway and Marine World for Sept., 1918.

Prince Rupert Dry Dock and Engineering Co., Prince Rupert, B.C., which has contracts from the Marine Department for 2 steel cargo steamships, 8,100 tons each, has been delayed in getting started, owing to the non delivery of steel, but we were officially advised May 9 that the company expects to lay the keel for one between June 15 and July 1, and for the other about a month later.

Tidewater Shipbuilders Ltd., Three Rivers, Que., which has orders from the Marine Department for 4 steel cargo steamships, 5,100 tons d.w. each, and which, as already announced in Canadian Railway and Marine World, has laid keels for 2, viz.: Marine Department contract 13, builder's yard no. 5, Jan. 8, 1919, and Marine Department contract 14, builder's yard no. 6, Jan. 10, 1919; it expects to lay the keel for the other two as follows: Marine Department contract 15, builder's yard no. 7, about Sept. 1; Marine Department contract 16, builder's yard no. 8, about Oct. 1.

Victoria Machinery Depot Co., Victoria, B.C., has contracts from the Marine Department for 2 steel cargo steamships, 8,100 tons d.w. each, the approximate delivery dates being Jan. 31 and Nov. 30, 1920. We were officially advised by the department May 22, that the keels had not then been laid. As stated in Canadian Railway and Marine World for April, the Harbor and Marine Co. Ltd. is reported to have been organized as a subsidiary company to carry out the contracts.

Wallace Shipyards Ltd., North Vancouver, B.C., which is building four steel cargo steamships for Canadian Government Merchant Marine Ltd., 2 of 4,300 tons d.w. each and 2 of 5,100 tons d.w. each, launched the first one, the s.s. Canadian Volunteer, of 4,300 tons, Marine Department contract 4, builder's yard no. 100, on Apr. 5, as stated in Canadian Railway and Marine World for May, the keel having been laid Oct. 1, 1918. Within two hours after the Canadian Volunteer's launching, the keel for the s.s. Canadian Aviator, Marine Department contract 6, builder's yard no. 101, of 5,100 tons d.w., was laid complete with center girder in the same berth.

We were advised May 1 that the builders expected to launch the s.s. Canadian Trooper, Marine Department contract 5, builder's yard no. 106, of 4,300 tons, about May 20, and that immediately thereafter the keel would be laid for the s.s. Canadian Scout, Marine Department contract 7, builder's yard no. 102, of 5,100 tons d.w.

Details of the Different Types of Steamships for Canadian Government Merchant Marine Ltd.

The following are comparative details of the six different types of steamship being built for Canadian Government Merchant Marine Ltd.:

	2,800 ton	3,400 ton	3,750	4,300 ton.	5,100 ton.	8,100 ton.	10,500 ton
Length, overall	—	260 ft	260½ ft	333 ft. 7 ins.	344½ ft	413 ft. 1 in

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out
The following contractions are used in the column giving the type of the vessel to be built: s.d., single deck; 2 d., two deck; 3 d., three deck; lake, lake type; p., poop; b., bridge; f'c's'le, forecastl

Contract	Contract date	Builder	Yard no.	Tons d.w.	Price per ton d.w.	Total price	Type	Classification	Speed, knots	Approximate delivery date	Keel laid	Launched	Name

Cargo Steamship Building in Canada for British Government.

Steamships Launched and Under Construction—Since the information given in our last issue, covering launchings of steamships under construction in Canada for the British Government was published, 2 steel steamships have been launched as follows: May 1, War Magic, Midland Shipbuilding Co., Midland, Ont.; 3,400 tons d.w.; May 3, War Column, J. Coughlan & Sons, Vancouver, B.C., 8,800 tons. This makes a total of 34 steel steamships of 169,300 tons, and 45 wooden steamships of 138,600 tons launched, an aggregate of 79 vessels and 307,900 tons.

Following is a list of the vessels under construction:

Steel Steamships.

Builder.		**Tons d.w.**
British American Shipbuilding Co. Welland, Ont.	War Racoon	3,500
Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont.—	War Vixen	3,500
"	War Wallaby	3,500
"	War Wombat	3,500
J. Coughlan & Sons, Vancouver, B.C.—	War Chariot	8,800
"	War Company	8,800
Midland Shipbuilding Co., Midland, Ont.—	War Fury	3,400
Polson Iron Works, Ltd., Toronto, Ont.—	War Algoma	3,500
"	War Halton	3,500
	9 steel steamships	53,000

Wooden Steamships.

Grand & Horne, St. John, N.B.—	War Moncton	3,080

Total—9 steel steamships, 1 wooden steamship, 56,080 tons.

Names of Ships Changed—As stated in Canadian Railway and Marine World for April, Canadian Allis-Chalmers Ltd., Bridgeburg, Ont., launched on March 3 a steel cargo steamship of 3,500 tons d.w., for the British Government, under order from the Imperial Munitions Board, and she was christened War Leveret. Subsequently by order of the I.M.B. the name was changed to War Magic. On May 1 the Midland Shipbuilding Co., Midland, Ont., launched another steel cargo steamship of 3,400 tons d.w., also for the British Government, which was christened War Magic. Subsequently this name was changed to War Leveret.

J. Coughlan & Sons, Vancouver, B.C. Work on vessels under construction for the British Government in this yard was reported May 9, to have been temporarily suspended owing to steel shortage. The vessels under construction affected by this are War Chariot and War Company. The steamships War Convoy and War Cavalry, built at this yard for the British Government, are reported sold to New York interests. The War Convoy sailed from Vancouver early in May for New York, where it is said she is to take on cargo for Greece. The War Cavalry will also go to New York, both vessels taking the Panama route.

Grant & Horne Ltd., St. John, N.B.—The s.s. War Moncton, the last of the wooden steamships to be built in Canada for the British Government under order from the Imperial Munitions Board, was expected to be launched May 29 with boilers installed, and after launching, to be towed to Sandy Point where the engines are to be installed. The launching of this vessel completes the wooden shipbuilding in Canada for the British Government through the Imperial Munitions Board.

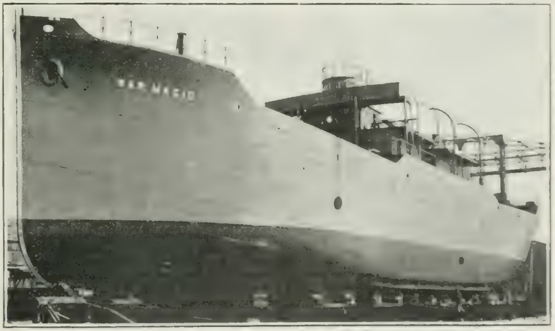
The Midland Shipbuilding Co., Midland Ont., launched, May 1, War Magic, the second of three steel cargo steamships cook and assistant, 2 mess rooms, wash of 3,400 tons each d.w., ordered of it by the Imperial Munitions Board for the British Government. The first ship, War Fiend, was launched Oct. 24, 1918, and the third one, War Fury, is being built. The following are the principal dimensions:

Length over all	261 ft.
Length between perpendiculars	251 ft.
Depth moulded to main deck	23 ft.
Load draft	19½ ft.

The vessels are built to Lloyd's highest class and are of the ocean going type, with raised forecastle, bridge and poop decks, the propelling machinery being placed amidships. The deckhouse containing the officers' quarters is on the bridge deck, accommodation being provided for the chief officer, second and third mates, chief engineer and assistants, wireless operators and steward. The saloon, dining room, pantry, storeroom, galley and other offices are also contained in this house. Above these quarters are the captain's cabin and chart room, which are surmounted in turn by the pilot house and the navigating bridge. The layout of accommodations under the poop deck provide for 6 seamen, 6 firemen, room and shower, while the boatswain and the donkey-man are located in the forecastle, as is also the hospital. Coal bunkers are fitted along side the engines and boilers, with coal chute above, and three coaling hatches each side on main deck; the space in 'tween decks can also be utilized for bunker coal.

A complete double bottom of the cellular type, 42 in. deep, runs for the entire length of the ship, constructed with solid floors on every frame, and one longitudinal girder on each side of the center line. Four watertight bulkheads, all extending to the main deck, divide the peaks and machinery space from the cargo holds of which there are two. There are 4 main cargo hatches, two 26 x 18 ft., one 22 x 18 ft., and one 18 ft. square. The hatch coamings are 42 in. high, with extra stiffening to withstand heavy water; the web beams are spaced about 4½ ft apart, and fitted 'thwartship with fore and aft hatch covers. For loading and discharging cargo, the whole of the working gear is of the most modern type. Four steel derrick posts, 30 ft. high, are provided, each with 2 cargo booms, having a lifting capacity of 4 tons to each boom. Eight 7 x 10 in. steam winches, of the latest type are supplied.

The steering engine is on the main deck at the aft end of bridge erection, and is of the usual type for ocean freighters; the control shafting being run alongside the casing top on boat deck to the engine, with rods and chain to the quadrant. There are 2 metallic lifeboats 24 ft. x 3¼ ft. deep, each boat being capable of accommodating the entire crew; one 16 ft. working boat is also provided for. The propelling machinery consists of triple expansion engines with cylinders 20½, 33, 54 x 40 in. stroke, steam being supplied by 2 single-ended Scotch boilers 15¾ ft. diameter by 11 ft. long, built by John Inglis Co., Toronto. The War Magic will be fitted out in accordance with the latest Board of Trade requirements. Her construction has been under the personal supervision of Capt. E. E. Tedford, representing the British Government.



Steel cargo steamship, War Magic, 3,400 tons d.w., for British Government just before launching by Midland Shipbuilding Co., Midland, Ont., May 1, 1919.
(The name of this vessel was subsequently changed to War Leveret).

Victoria Machinery Depot Co., Victoria, B.C. Work is progressing satisfactorily on the laying out of the shipbuilding yard for the Harbor Marine Co. Ltd., on the south side of the Songhees Reserve, where 2 steel steamships of 8,100 tons each will be built for Canadian Government Merchant Marine Ltd. It was expected that the plant would be ready for the laying of the first keel by the end of May, when delivery of steel was expected. The outbuildings are nearly completed, but have been somewhat delayed owing to non delivery of lumber, the first shipway is completed with the exception of the keel blocks and considerable progress has been made on the second shipway.

Spier Ship Co., has been incorporated under the Dominion Companies Act, with $30,000 authorized capital and office at Montreal, to carry on a general steamship and navigation business and to own and operate steam and other vessels.

Canadian Ocean Steamship Subsidies, Cargoes, Etc.

Of the total amount of $2,467,120.67 provided in the Dominion Government estimates for mail subsidies and steamship subventions for the year ending Mar. 31, 1920, the greater part, or $1,716,666.66, is for services operating to and from Canada on the Atlantic Ocean; $492,142.34 for Pacific Ocean services, and the rest for local services. For most of the Atlantic services the votes are double those for 1918, they remain the same for the Pacific services and also for the individual local services, although some extra allowances are made for encouraging services on the St. Lawrence River, from Quebec to points on the north and south shores, and to local services from Sydney, Cape Breton. The increase in Atlantic subsidies is a cheering sign that this year the government expects something like a normal service to be restored.

The subsidy for the New Zealand Shipping Co. to make a monthly sailing from Montreal in the summer and St. John and Halifax in the winter to New Zealand and Australian ports, is $140,000, and is paid at the rate of $11,666.66 a voyage, if an average cargo of 5,000 tons is maintained. Deductions at the rate of $2 a ton are made at the end of the year for anything short of this. The principal articles of Canadian origin exported are: lumber automobile and parts thereof, calcium carbide, chair stock, paper, sole leather, agricultural implements, rubbers, iron pipe, hardware, cattle, clothes pins, seed, fruit jars, corsets, cereal foods, wire, steel rails and organs. About 15% of the cargoes carried were of U.S. origin, including, besides the above products, cereal foods, machinery, roofing paper, shoe polish, wire and sewing machines. They also carried from our ports coffee, cocoa, pimento, ginger and cassava, products of West Indian origin.

The $400,000 subsidy in 1918-19 for the ocean and mail service between Canada and Great Britain by the White Star-Dominion Line, the Canadian Pacific Ocean Services, Ltd., and the Cunard Line is increased to $1,000,000, for the year ending Mar. 31, 1920. These services in 1918 carried 11,268 jassengers, 36,305 tons of freight, 60,937 locked bags of mail and 45,912 tied sacks of mail into Canadian ports, in 49 round trips; and 39,309 passengers, 293,538 tons freight, 138 head of live stock, 214,079 locked bags of mail and 86,923 tied sacks of mail, out of Canadian ports to Great Britain, the total subsidy paid being $574,928.61. Of this $408,992.88 went to the C.P.O.S. Eighty-five per cent. of the cargo exported was of Canadian origin, consisting of asbestos, copper-nickel matte, silver ore, silver ingots, aluminum ingots, lumber, meats, leather, cheese, wheat, flour, oatmeal, apples, zinc dross, salammoniac skimmings, raw furs, scrap brass, pulpboard, wool, salmon, rags, bacon, hay, organs and parts thereof, agricultural implements, acetate of lime and linseed cake.

As an indicator of Canada's export trade and the possibilities for further expansion by the way of these various subsidized steamship services, the following additional particulars may be helpful with regard to the various services:

Canada and Newfoundland boats of the Reid Newfoundland Co., Ltd., subsidized $70,000 a year, carried flour, oats, oatmeal, hay, bran, feed, potatoes, leather, furniture, oil, cattle, pigs, sheep, beef, pork, iron and steel bars, stoneware, wire mats, fresh meal, condensed milk, trunks, machinery, pulpboard, stoves and felt of Canadian origin, valued at $2,392,697 in 1918, and flour, cornmeal, oats, dried fruits, pork, beef, leather, feathers, broom corn, glue and machinery of U.S. origin, valued at $2,182,497.

Canada, West Indies and South America.—The Royal Mail Steam Packet Co.'s subsidy has been raised from $250,666.66 to $340,666.66. The vessels employed carried in 1918 no goods of U.S., but carried fish, canned salmon, canned salmon, canned goods, flour, feed, meal, oilmeal, hay, oats, cheese, butter, eggs, apples, potatoes, split peas, vegetables, groceries, beef, live stock, mineral water, tea, soap, sulphate of ammonia, fertilizer, lumber, shingles, shooks, laths, furniture, chairs, brooms, brushes, stoves, trunks, rope, cordage, nails, paper and biscuits, of Canadian origin, valued at $6,259,594.

Canada and South Africa—The Elder-Dempster Co. is having its subsidy raised from $73,000 to $146,000 a year, for monthly sailings, the goods of Canadian origin carried in 1918 being flour, agricultural machinery, calcium carbide, binder twine, automobiles, paper, cattle, lumber, wax, carriageware, cereal foods, eggfillers, chairs, woodenware, wheat and furniture, valued at $2,714,870 in 1918, goods of U.S. origin carried being valued only $74,670, and consisting of automobiles, mining machinery, fruit jars, lumber, mules, wax, condensed milk, chairs and wheelbarrows.

Halifax, N.S.; St. John's, Nfld., and Liverpool—Furness, Withy & Co. Ltd., steamships, with a subsidy of $20,000 and none last year when no service was given, carried goods of Canadian origin valued at $848,535 in 1917, taking to St. John's, Nfld., apples, fruits, peas, canned vegetables, hay, flour, cheese, condensed milk, confectionery, meats, fish, medicines, tea, dry goods, rubbers, paper, stoves, smallwares, roofing, bricks, paint, nails, cordage, sacks, tripoli and naphtha, and on to Liverpool lumber, boxboards, wood tops, wood shanks, apples, cider, canned apples, canned lobsters, canned beef, fish, seal oil, cod oil, tallow, oats, cheese, furs, machinery, lawn mowers, wire fencing, scrap brass, metals, lead ashes, leather, flour, wheat, sacks and bone black, and carrying in 1917, also goods of U.S. and West Indian origin, valued at $41,615,602, those taken to St. John's consisting of boots and shoes, shoe manufacturing material, furniture, hardware, canned and pickled meats, lard, provisions, groceries, flour, feed, corn, rolled oats, meal, seeds, earthenware and bottled beer, and those taken on to Liverpool being flour, pork, shoes, lamp chimneys, brass discs, motor cars, meats, lard, oak timber; the goods of West Indian origin going to St. John's being greenheart, mahogany, rum, bay rum, sugar and molasses, and on to Liverpool lignum - vitae, satinwood dye extract, oranges, rum, sugar, cocoanuts and lime juice.

Canada and Australia or New Zealand.—The Union Steamships Co. of New Zealand, Ltd., is being subsidized at $180,509 yearly for a monthly service to Honolulu, H.I., Suva, Fiji, Auckland, N.Z., and Sydney, N.S.W. In 1918 it carried canned salmon, fresh fruit (in cold storage), potatoes, onions, leather and rubber goods, lumber, codfish, whisky, bicycles and parts thereof, chairs, corsets, suspenders, sewing machines, hardware and machinery of Canadian origin, valued at $3,913,672 and drugs, sewing machines, automobiles, gas engines and other machinery, soap and scouring powders, leather and rubber goods, cash registers and scales, cereal foods, telephone material, adding machines, vacuum cleaners, motor cycles and corsets of U.S. origin, valued at $2,615,177.

Canada, China and Japan.—The Canadian Pacific Ocean Services Ltd., is getting a subsidy of $375,000 or $12,000 a round voyage. It carried in 1918 automobiles, aluminum, durgs and chemicals, provisions, spelter and hardware of Canadian origin, valued at $1,431,233; and automobiles, aluminum, dry goods, boots and shoes, hardware, machinery, provisions, tabacco, drugs, leather, tin plate, iron and steel, electrical goods and rubber goods of U.S. origin, valued at $12,620,537.

Victoria B.C., and San Francisco.—The Pacific Steamship Co., is getting a subsidy of $3,000, and carries liquors, automobiles, household goods coal tar, rice meal, plants and bulbs of Canadian origin, the export value being only $28,948 in 1918, and empty cylinders of U.S. origin, whose value last year only reached $4,475. Ottawa correspondence, Toronto Globe.

Pilotage to Be Controlled From Ottawa.

Ottawa press dispatch, May 26:—The Minister of Marine, in the House of Commons today moved a resolution, preceding a bill, authorizing the government to appoint the Minister of Marine to be the pilotage authority for any pilotage district. Mr. Ballantyne said that the Montreal and Quebec districts were already under the Marine Department. The administration had been so successful that it was proposed to place the other pilotage districts likewise under the authority of the department. A royal commission had recommended such a course and Mr. Ballantyne thought it would mean increased efficiency in the pilotage systems.

J. H. Sinclair, M.P., for Antigonish and Guysborough, N.S., doubted whether placing the other pilotage districts under the Marine Department would lead to increased efficiency. Ottawa was too far from the sea coast and he would hesitate to take the authority out of the hands of the local commissioners. The resolution carried and a bill based upon it was introduced.

Control of Navigation Rates—The amendments to the Railway Act to place the control of freight rates on inland and coastwise waters under the Board of Railway Commissioners, details of which were given in our last issue, were defeated in the commons special committee, May 14, by five votes. When the bill was under consideration by the committee of the whole house, Mr. Armstrong again moved the amendments which were defeated by 61 to 36.

U.S. Government Requisitions Steel—A press dispatch by the U.S. Navy Department has decided to exercise its authority under war emergency legislation and requisition steel for battleship construction, the price to be paid to be fixed later on a basis of market conditions and quotations, rather than on an examination of the steelmakers' books.

Mainly About Marine People.

Sir Montagu Allan, formerly of the Allan Steamship Line, and Miss Allan, returned to Montreal, May 13, after having been in England since early in the war. Lady Allan, who is Staff Commandant at the Canadian Red Cross Officers' Rest Home at Moor Court, Sidmouth, Eng., has been appointed an Honorary Serving Sister of the Society of St. John of Jerusalum, and will not return to Canada until the home closes at the end of August.

Sir Alfred Booth, Chairman, Cunard Steamship Co., is visiting North America and is expected to spend some time in Canada.

G. J. Desbarats, C.M.G., Deputy Minister of the Naval Service, had V. Stefansson, the Arctic explorer, staying with him in Ottawa, recently.

Herbert George Dring, who has been appointed European Passenger Manager, Canadian Pacific Ocean Services, Ltd., London, Eng., was born at Easton, Northamptonshire, Eng., Mar. 8, 1881 and entered C.P.R. Passenger Department service in London, Mar. 1, 1897, since when he has been, to Sept. 30, 1897, junior clerk; Oct. 1, 1897 to Dec. 31, 1898, clerk; Jan. 1, to Dec. 31 1899, shorthand clerk; Jan. 1, 1900 to June 30, 1901, general and correspondence clerk; July 1, 1901 to Mar. 31, 1904, booking and correspondence clerk; Apr. 1, 1904 to Aug. 31, 1905, chief booking and correspondence clerk; Sept. 1, 1905 to Mar. 31, 1907, chief clerk to General Passenger Agent; Apr. 1, 1908 to Dec. 31, 1915, Assistant General Passenger Agent; Jan. 1, 1916 to Mar. 1, 1919, General Passenger Agent, C.P.R., London, Eng.

James T. Duke, an assistant engineer, Public Works Department, engaged on the harbor improvement works at Courtenay Bay, St. John, N.B., died as the result of an injury sustained in the course of a heavy dynamite blast, in the course of his work, May 23. He was a graduate of New Brunswick University in civil engineering.

John Eadie, Vancouver, manager for Dingwall, Cotts & Co., steamship owners of Great Britain, died at Vancouver, B.C., May 5, following an operation for appendicitis. He went to Vancouver a few years ago to represent his company in the handling of the steamships of the War series, which were built on the Pacific coast for the British Government through the Imperial Munitions Board.

Mrs. C. Gardner Johnson, wife of Lloyd's Agent for British Columbia, left Vancouver recently for a visit to England.

J. W. Greiner, Marine Superintendent, Canada Steamship Lines Ltd., Montreal, was laid up with typhoid fever, at Buffalo, N.Y., during May.

Capt. P. L. Lachance, heretofore Superintendent of Pilots for Quebec and Montreal District, has been appointed harbor master for the port of Quebec, succeeding Capt. Jas. Murray, who lost his life in the Halifax disaster, Dec. 6, 1917. He has been associated with sea life since the age of 14, received his pilot's certificate when 21, and was for some time in the Quebec Steamship Co.'s service. Subsequently he became Examiner of Masters and Mates, and during the war was Superintendent of Pilotage for Quebec and Montreal District.

James T. Mathews, Vice President, Mathews Steamship Co., Toronto, died there, May 19, aged 69, after a long illness, of Brights disease. He was born at Niagara-on-the-Lake, Ont., and was at one time station agent, G.T.R., London, Ont. With his father he formed the firm of J. & J. T. Mathews, and operated the schooner Heather Bell, in the lakes trade. On his father's death in 1900, he and his brother, A. E. Mathews, established the Mathews Steamship Co. The funeral was attended by representatives of several lake steamship companies.

H. Milburne, Superintendent, Canadian Government Merchant Marine Ltd., left Montreal May 30, on a business trip to Vancouver.

W. Grant Morden, M.P., one of the members of the Canada Steamship Lines, London, Eng., advisory committee, arrived in Montreal, from England, in May.

Capt. W. Murphy, who died at Kingston, Ont., May 4, was in Montreal Transportation Co.'s service for the last 15 years, latterly as master of the tug Laura Grace, which was wrecked Dec., 1918.

J. W. Troup, Manager, British Columbia Coast Steamship Service, C.P.R., has returned to Victoria from California, where he has been recuperating after an illness.

James T. Walsh, who has been appointed Manager, Canadian Pacific Ocean Services Ltd., Montreal, has had a variety of seagoing experiences. He was, for some time, Superintendent, Elder Dempster & Co., Liverpool, Eng., and when the C.P.R. acquired the Beaver Line from that firm, he transferred to C.P.R. service, and was, successively, Superintendent, C.P.R. steamships, Chief Marine Superintendent, C.P.R., and Assistant Manager, Canadian Pacific Ocean Services Ltd., all at Montreal. He has served in the Royal Naval Reserve, and for special services in embarkation work with the Ashantee Expedition he was mentioned in dispatches. He holds the rank of Commander, R.N.R., is a Fellow of the Royal Geographical Society, and during the recent war, conducted considerable responsible work in shipping under the British Ministry of Shipping (Canada), and the Admiralty.

Canada's Naval Policy.

Ottawa press dispatch, May 26: The Minister of Marine, in speaking in the House of Commons today, incidentally announced that when parliament is summoned next year the government will submit a naval policy for the Dominion which will meet with unanimous approval. The Niobe and the Rainbow had given efficient service, steaming 80,000 miles between them and convoying vessels laden with passengers, troops and rich cargoes.

A bit of news hitherto kept secret was given by Mr. Ballantyne when he told the house that on the outbreak of war, and again in 1915, the Canadian Government inquired of the British Admiralty whether in its judgment steps should be taken to increase Canada's naval forces and enlarge the service. The reply was in the negative, the imperial authorities adding that Canada's effort should be concentrated on recruiting and equipping troops for the battlefields.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered, respecting casualties, as follows:—

Stranding of s.s. War Toronto.

Held at Quebec, May 9, into the cause which led to the stranding of the s.s. War Toronto, May 1, near Cape St. Michel, River St. Lawrence, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and C. Koenig, as nautical assessors. The s.s. War Toronto is one of the wooden steamships built at Toronto for the British Government under order of the Imperial Munitions Board. The master, Capt. A. J. Low, in his evidence, stated that from Toronto to Montreal, he found the steering gear worked stiffly, but not unusually so. A pilot was taken on at Montreal, the master being a stranger in those waters, and subsequently his attention was called to a defect in the steering gear. The telegraph was rung for full speed astern, and immediately after, the ship grounded while going full speed ahead, the order full speed astern having no effect on the vessel, which had canted to port before grounding. She was refloated May 6, and proceeded to Quebec, where a small leak was discovered. The court, after a thorough examination of the pin, which was stated to be the direct cause of the defective steering, came to the conclusion that the grounding was not due to any lack of examination of the steering gear, but to an unforeseen happening, and therefore exonerated the pilot and officers of the vessel from blame for the casualty.

Loss of the s.s. Princess Sophia.

Held at Victoria, B.C., before Mr. Justice Morrison, assisted by Capt. E. Martin, C.M.G., R.N., and Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, as nautical assessors, into the causes of the loss of the C.P.R. s.s. Princess Sophia in the Lynn Canal, Oct. 24, 1918, with all passengers and crew. The report of the commission, which was somewhat delayed, was laid on the table of the House of Commons recently. Owing to the fact that the vessel was lost in Alaskan waters, outside Dominion jurisdiction, and that all the witnesses who were in a position to describe the conditions existing in the vicinity of the wreck at the tmes material to the enquiry, were residents of Alaska, difficulty was experienced in making progress at the various sittings at Victoria and Vancouver, where all the evidence of witness who voluntarily came within the jurisdiction, was exhausted, and two sittings were held at Juneau, Alaska.

The evidence disclosed that the vessel was seaworthy and well found in every respect, and at the time of her departure, from Skaway, the weather was fine. From the lighthouse records it would appear that heavy squalls of snow were met about 30 miles from Skagway with strong northerly winds, which continued until some hours after she struck on the Vanderbilt Reef, about 54 miles from Skagway. The weather subsequently moderated and remained so until the afternoon of the same day, during which, passengers could have been transhipped to the several craft standing by, and landed without much, if any, risk to life. During the afternoon the wind freshened, and the master wired to one of the vessels that it was impossible to get passengers off owing to the high seas running but that they could probably be taken off on the following morning. After this, and during the following day, it appears that vessels which were standing by were unable to render any assistance. In the meantime, J. W. Troup, Manager, C.P.R. British Columbia Coast Service, was endeavoring to ascertain the exact conditions prevailing, and wired the master enquiring what assistance he was getting and asking what disposition he had made of the passengers. This wire was not delivered until the day following the grounding.

During the time the Princess Sophia was visible, she appeared to be resting firmly on an even keel, and considering the wireless messages as a guide, she must have been forced off the reef in the late afternoon of the day following the grounding, the snowstorm then being at its reight, when she apparently founered, leaving no survivors. It is entirely a matter of conjecture as to how she came to leave the reef after holding firmly during two periods of high water, with decreasing tides, but it was ascertained tha at the time there was an abnormally high tide from various causes.

As to why passengers were not landed, there is room for conjecture, and the commission submitted that from he evidence of the surrounding circumstances, such as the vessel being staunch and well officered, other craft being in the vicinity and approaching, the inhospitable shore and lack of shelter sufficiently near, the time of year and the weather conditions, it is not prepared to find that it was unreasonable for the master not to land his passengers, and it therefore arrives at the conclusion that the vessel was lost through peril of the sea.

The commission notes, in securing witnesses and affording facilities in the course of the investigation, the untiring and effective services rendered by Hon. Thos. Riggs, Jr., Governor of Alaska, and his staff, and W. C. Dibrell, Superintendent of U.S. Lighthouse Service, Bremerton Navy Yard, Washington, as well as Juneau, Seward and Fairbanks citizens.

Report on Pilotage for Maritime and Quebec and Montreal Districts.

A commission was appointed by the Dominion Government, Feb. 1, 1918 to enquire into and report on the pilotage system and its administration in the pilotage districts of Miramichi, Sydney, Louisburg, Halifax, St. John, Montreal and Quebec, the commissioners being Thos. Robb, Manager, Shipping Federation of Canada, Chairman; Capt. J. N. Bales, Port Warden, Montreal; and Capt. J. W. Harrison, Marine Superintendent, Furness, Withy & So., Halifax, N.S. Sittings were held at Halifax during Feb., 1918, and pending a final disposition, it was recommended that the Halifax Pilotage Commission be abolished, and the pilotage for that district placed under the administration of the Marine Department. Sittings were held at other points concerned during the year, and the report was presented, Sept. 10, 1918, and laid on the table of the House of Commons during the current session.

The commission reported that the commissions administering the pilotage service at Miramichi, Sydney, Louisburg and St. John, had outrun their usefulness, and recommended that the Minister of Marine be appointed the pilotage authority. It also recommended that a superintendent, having seagoing experience, be placed in full charge of the Sydney and Louisburg districts combined, and a similar superintendent for St. John, with a qualified assistant for the Miramichi district, the assistant being responsible to the superintendent, and the superintendents being directly responsible to the Minister; that the testing of eyesight be standardized, and tests for pilots under 65 be made annually, and semi-annually for pilots between 65 and 70; licenses for pilots to be at the discretion of the Minister, and all pilots to be compulsorily retired at 70; that the use of intoxicating liquors by pilots be prohibited, any infraction to be punishable by fine or suspension, and for a second offence by dismissal; that no intoxicating liquors be permitted at any pilot station, or on any pilot vessel, any infraction to entail instant dismissal; that solicitation of gratuities by and from pilots be prohibited; that no pilot be allowed to perform any pilotage duties outside his own district; that the apprentice system as in force in the Maritime Provinces pilotage districts, not having proved satisfactory, be discontinued, when the present apprentices shall have had sujcient training, and have received their certificates as branch pilots, any vacancies subsequently arising to be advertised and examinations held, this system to apply to the Maritime Province and Quebec Pilotage District, but not to the Montreal District, as it is felt that apprentices are necessary for the last named; that the Minister take over the pension funds; that the pooling of earnings be abolished, that pilots be placed on salary to be adjusted to meet the requirements of the local districts, and that pilots be permitted to draw a certain amount each month, adjustments to be made quarterly after deducting expenses, and not less than 5% to go to the pension fund, the busier districts aiding the poorer ones; and that all pilotage earnings be collected by and paid to the Marine Department.

In regard to the Montreal District, which was dealt with entirely separately, the commission came to the conclusion that the administration was carried out efficiently. One of the questions at issue was the pilots' demand for an increased charge for moving vessels in the harbor. The present rate of $5 was made when Longue Pointe was outside the harbor limits, and this charge has been maintained since the extension of the limits as far down as Bout de l'Isle. Increases on the following graduated scale were recommended: For moving vessel from Lachine Canal to Victoria pier, $5; for moving any inland or lake vessel from Lachine Canal to sec. 50, $5; for moving any inland or lake vessel from sec. 50 to the eastern limits, $10; for moving any seagoing vessel from any place above Victoria pier to sec. 50, $10; for moving any seagoing vessel from above sec. 50 to Canadian Vickers' dry dock, $15; for moving any seagoing vessel from above sec. 50 to the explosives ground, $15; and should any pilot be detained on board more than 24 hours, an additional $10 a day, these charges to be over and above the ordinary pilotage charge between Montreal and Quebec.

It is also recommended that the Quebec harbor tariff be increased to allow for a charge of $5 for each moving on the Quebec or Levis side of the river, and $10 for each moving entailing crossing the river from either side, and that the pilotage tariff on outward bound vessels from Quebec to Father Point, between May 1 and Nov. 10, be inoreased from $3.40 to $3.65 a ft. draft, and that pilots provide their own board while waiting at Father Point or Chicoutimi, and that other rates remain as at present.

The Kirkwood Steamship Co., a recently organized concern, is reported to have purchased the s.s. Glen Allen from the Ottawa Transportation Co., for operation in freight service between Montreal, Quebec and Chicoutimi. The Glen Allen was built at Kingston, Ont., in 1912, and is screw driven by engine of 22 n.h.p. Her dimensions are length, 112.8 ft.; breadth, 26.4 ft.; depth, 8.5 ft.; tonnage, 276 gross; 113 net. T. M. Kirkwood, formerly of Toronto, who started the Three Rivers Shipbuilding Co. and who has been associated with several shipbuilding proposals, is chiefly concerned in the company.

Canadian National Railways Steamships—The Canadian Government Rys., when placed under the Canadian National Rys. management, were operating the steamships Drummond, McKee and Sheba, which have been used largely in carrying coal for the C.G.R. and have been under the jurisdiction of the General Superintendent of the C.G.R. at Moncton, N.B. It is probable that they will be operated in the near future under the direction of the Canadian National Rys. Marine Superintendent, M. Milburne, Montreal.

The Montreal Transportation Co. Ltd. has closed its Kingston, Ont., office. The Superintendent, Capt. H. N. McMaster, and the Superintending Engineer, H. McClymont, have been removed to Montreal. E. A. Turner, heretofore agent at Kingston, has left the company's service to enter business for himself in Montreal.

Richelieu Transportation Co. Ltd., which has been incorporated under the Dominion Companies Act, with $50,000 authorized capital and office at Montreal, is in process of organization, and proposes to purchase a number of barges for the transportation of lumber between Montreal and New York.

Acadia Shipping Co. Ltd., the incorporation of which was announced in a recent issue, with $128,000 authorized capital and head office at Sussex, N.B., is controlled by C. T. White & Sons Ltd., lumber merchants, which has built a number of sailing vessels and intends continuing in that business.

The Lights in Hudson Strait and Hudson Bay, on Button Islands, Hatton headland Wales Island, Ashe Island, Nottingham Island, Digges Island, Mansell Island, Coats inlet, Charles Island and Cape Tatnam, will not be operated during this navigation season.

Tower Ship Co. Ltd., has been incorporated under the Dominion Companies Act, with $30,000 authorized capital and office at Montreal, to carry on a general steamship and navigation business and to own and operate steam and other vessels.

Cancellations of Shipbuilding Orders in United States.

In addition to 2,000,000 tons of steel ships the contracts for which have been cancelled since last November by the U.S. Shipping Board, 2,000,000 tons more are being cancelled, according to a statement by Edward N. Hurley, chairman of the board. No details are given as to the sizes of ships and the yards affected. The statement refers to the necessity of balancing the fleet and also to the war prices of the contracts. Chairman Hurley says, "We feel that we should now be building only at peace prices," and states that the cancellation of all existing contracts is under contemplation, where keels have not acutally been laid. This statement, issued from the shipping board's office Apr. 25, is amplified and somewhat changed by a statement issued May 5. According to the latter, the type of vessel that will be most largely needed for post-war ocean carriage is a combined freight and passenger vessel of at least 12,000 to 15,000 tons d.w. carrying capacity, and the cancellations are to be made with a view to preparing for placing orders for this type of ship.

Among the Express Companies.

E. A. Williams has been appointed agent Canadian Northern Ex. Co., Prince Albert, Sask., vice N. W. Storie, transferred.

R. A. Mitchell has been appointed General Agent, Canadian Ex. Co., Toronto, vice R. G. Wilkins, who has retired after 50 years service.

The American Railway Ex. Co., is applying to the Interstate Commerce Commission for authority to increase express rates between U.S. and Canadian points.

N. W. Storie, heretofore agent Canadian Northern Ex. Co., Prince Albert, Sask., has been appointed agent at Edmonton, Alta., vice H. J. Morrison, transferred.

Edward Todd, of Owen Sound, Ont., who died in Florida, May 21, at one time conducted a telegraph, express and ticket office business in Owen Sound, and is said to have introduced the first telegraph instrument there in 1866. He retired from business in 1896.

Telegraph, Telephone and Cable Matters.

W. H. Doyle has been appointed acting local manager, Western Union Telegraph Co., Moncton, N.B., during the illness of W. H. Crandall.

G. C. Baudrin has been appointed local manager, Great North Western Telegraph Co., Quebec, Que., vice W. T. Leslie, transferred to other duties at Ottawa, Ont.

R. F. Errington, heretofore operator at Sault Ste. Marie, Ont., has been appointed local manager, Great North Western Telegraph Co., Regina, Sask., vice R. T. Dawson, resigned.

The Great North Western Telegraph Co. has opened offices at Beaumaris, Helderleigh and Rosseau, Ont., and Beatty, Sask., and has closed its offices at Fort Coulonge and Milnikek, Que., and Pass Lake, Ont.

An Ottawa press report states that the Dominion Government is likely to abandon the direct operation of its telegraph lines, and to merge its eastern lines with the Great North Western Telegraph Co.'s system and the western lines with the Grand Trunk Pacific Telegraph Co.'s system. It is also stated that powerful wireless telegraph stations are to be erected in Yukon territory.

The Marconi Wireless Telegraph Co. was reported recently to have decided to build a wireless telegraph station at Montreal, working direct with Paris, France. We are advised that the report is at least premature. The company is making experiments in regard to long distance reception in Montreal, and the possible erection of a wireless station there will depend on the result of these experiments.

An order in council has been passed authorizing a fee of $5 for candidates for emergency certificates of proficiency in radiotelegraphy. These certificates have hitherto been issued, valid only until the next regular examination, without fee, and there has been a tendency to abuse the privilege. The order in council, which cancelled all licenses for amateur and other non-essential radiotelegraph stations throughout Canada, has been rescinded, and the pre-war regulations have been resumed.

In reply to question in the House of Commons May 5, re the operations of the Commercial Cable Co. in Canada, the following information was given: The company, which is a U.S. incorporation, has its head office in New York, and F. G. Burstall, Hazel Hill, N.S., is the superintendent in Canada. So far as the government is aware no employe of the company was refused permission to enlist for overseas military service. After the passing of the Military Service Act, exemptions were applied for by the company on behalf of cable operators and these were granted. The government control of the cable station and the staff was limited to censorship and was not extended to the relations between the company and its employes.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by he manufacturers of, or dealers in the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Whiting Foundry Equipment Co., Harvey, Ill., has issued a folder on Whiting bucket cranes, describing and illustrating different types of cranes used by railways, etc.

Armstrong Whitworth of Canada Ltd. At the recent annual meeting the following directors were elected. President, Sir Percy Girouard, K.C., M.G.; Vice President, M. J. Butler, C.M.G.; other directors, Right Hon. G. H. Murray, G.C.B.; Hon. G. G. Foster, K.C.; F. B. T. Trevelyan, H. B. Walker, H. H. Vaughan, Lawrence Russell. Messrs. Vaughan and Russell are now directors. With M. J. Butler, they comprise the executive committee in charge of the company's works in Canada.

Steel Company of Canada.—At the recent annual meeting several changes were made in the directorate. Robt. Hobson was re-elected President. C. A. Birge retired from the Vice Presidency, but remains on the executive. F. H. Whitton, heretofore General Manager, and R. H. McMaster, heretofore Assistant General Manager, were elected Vice Presidents. G. H. Duggan, President, Dominion Bridge Co., Montreal, was elected a director, succeeding C. Alexander, of Providence, R.I., who retired.

Safety Car Heating & Lighting Co., New York. The directorate for this year has been constituted as follows: President, W. L. Conwell; Vice Presidents, J. A. Dixon, R. Parmly and J. P. Soper, President, Soper Lumber Co.; other directors, C. A. Austin, President, Mercantile Trust Co.; R. Barbour, President, Barbour Flax Spinning Co.; E. M. Bulk-

The Canadian canal opened Apr. 12, and the U.S. canal Apr. 10.

ley, Spencer Trask & Co.; H. R. Carse, President, Submarine Boat Corporation; [illegible], President, Railway Steel Spring Co.; E. LeB. Gardner, President, New Jersey General Security Co.; A. B. Hepburn, Chairman, Advisory Board, Chase National Bank; G. D. Pope, A. C. Soper, H. H. Wehrhane, Hallgarten & Co. W. L. Conwell entered the company's service Jan. 1, 1916, as Assistant to the President. On the death of R. M. Dixon, the President, on Oct., 1918, Mr. Conwell was elected acting President.

Transportation Conventions in 1919

June 11.—Railway Accounting Officers' Association, New York.

June 17-20.—American Train Despatchers' Association, Chicago, Ill.

June 18-21.—Master Car Builders' Association, Atlantic City, N.J.

June [illegible].—American Railway Master Mechanics' Association, Atlantic City, N.J.

September.—Master Car and Locomotive Painters' Association of the United States and Canada, Chicago, Ill.

September.—Traveling Engineers' Association, Chicago, Ill.

Sept. 16-18.—Roadmasters' and Maintenance of Way Association, Chicago, Ill.

October.—American Railway Electric Engineers' Association, Chicago, Ill.

Oct. 21-23.—American Railway Bridge and Building Association, Cleveland, Ohio.

Oct. 21-23.—Maintenance of Way and Master Painters' Association, St. Louis, Mo.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Belleville Railway Men's Educational Club. Meets each Tuesday, 7.30 p.m. F. A. Pingston, Belleville, Ont.

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 305 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Railway War Board—W. M. Neal, Montreal.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 556 Church Street, Vancouver, B.C.

Canadian Railway and Marine World

July, 1919

The June Mechanical Conventions at Atlantic City.

The two great annual railway mechanical conventions of the American Railway Master Mechanics' Association and the Master Car Builders' Association, held principally at Atlantic City, N.J., for many years, were suspended after 1916, in consequence of the United States having entered the war, but meetings of th eexecutive committees were held in Chicago in 1917 and 1917, at which reports of various committees were presented.

As announced in Canadian Railway and Marine World for April, the Director General of the U.S. Railroads decided to provide, during the period of federal control, a responsible channel through which he might obtain recommendations for the advancement of railway practice. The American Railway Association revised its organization, changed its name to the American Railroad Association, and enlarged its scope by covering the former activities of a number of other railway associations, etc., including among others, the American Railway Master Mechanics' Association, and the aster Car Builders' Association. The new American Railroad Association is divided into five sections, viz.: operating, engineering, mechanical, traffic and transportation, respectively.

The mechanical section took over the former activities of the American Railway Master Mechanics' Association, and the Master Car Builders' Association, the committee consisting of three representatives of the U.S. Railroad Administration, two representatives of each of the operating regions into which the U.S. has been divided and two representatives of Canadian railways. The chairman is C. E. Chambers, Mechanical Assistant to Regional Director, Allegheny Region, U.S. Railroad Administration, and the Canadian representatives on the committee are: W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., and James Coleman, Superintendent, Car Department, G.T.R. The names of the other members of the committee were given in Canadian Railway and Marine World for Apr., pg. 187.

Under the mechanical section's management a convention was held at Atlantic City, June 18 to 25, master car builders' matters being dealt with from June 18 to 20,; election of officers and committee being held June 21, and master mechanics' matters being dealt with from June 23 to 25. The most important features of the convention were, as usual, reports of the standing and special committees, and individual papers presented. The principal ones are given on this and following pages, either in full or in abstract.

Prices for Car Labor and Material.

An American Railroad Association's mechanical section committee, P. F. Smith, Jr., General Superintendent, Motive Power, Pennsylvania Lines, chairman, reported as follows: Your committee, after the 1915 M.C.B. convention took up the work of analyzing prices for labor and material (as outlined by the committee on compensation for freight car repairs in their report to the 1915 convention) as instructed by the association. For the 1916 convention the report presented gave a general outline of the method being followed in carrying on the work, and included a list of items for rules 101, 107, 108, 111, 116 and passenger car rules to be added and changed. This report was adopted and the revised 1916 M.C.B. rules included the change in items and prices as suggested.

For the 1917 convention the report presented covered all items for labor and material for freight and passenger car repairs, and specified that during the ensuing year the studies of the committee would include the direct and overhead charge for yard repair work as compared with shop track work; center, intermediate and side sill renewals; tank car repair studies; items per rule 111; also give further consideration to material prices and make recommendations for alterations in such prices as may be found necessary. This report was adopted, subject to the modifications which the price committee had in mind and that were reported upon at the meeting held in Chicago instead of the convention generally held at Atlantic City; but, the items for labor and material, as reported on were not introduced in the M.C.B. Rules of Interchange, and the proceedings do not give any reasons therefor; further, the price committee were not informed or given any instructions how to proceed in the future.

For the 1918 meeting at Chicago, the report presented, due to abnormal conditions existing at that time, was to the effect that the items for labor and material as printed in the 1917 revised M.C.B. Rules, should stand, but the percentage to be added should be increased to 50%. On this report apparently no action was taken, as proceedings make no mention of such a report, further; price details were taken care of by arbitration committee. In view of the above, your committee ask for further instructions.

If it is decided to continue this committee, we suggest that the work left unfinished in our 1917 report be continued, and the entire price schedule be revised to date and submitted to the 1920 convention. We further recommend in the revision of time allowances that time basis be used and the hours divided on the decimal plan in multiples of tenths.

Report of Committee on Train Lighting and Equipment.

An American Railroad Association's mechanical section committee, J. R. Sloane, Engineer Electric Car Lighting, Pennsylvania Rd., chairman, reported, outlining an exhaustive series of road and shop tests made on train lighting equipment on the Pennsylvania Rd. From observations made on the tests, the following recommendations were made:

That the method of testing to determine the rating of an axle generator be as follows: That the generator, together with the generator and lamp regulator, if used, shall be connected in a normal manner to dead load resistance in the battery and lamp circuit; and shall be operated continuously for 5 hours, with commutator hand-hole covers removed, at the minimum r.p.m. that will generate rated volts at the load side of the generator regulator and carry the current; and that the net current output shall be the armature current less all current consumed in the generator fields, generator regulator, and lamp regulator, if used.

That the rating of an axle generator when connected and operated as above, shall be the maximum net current that the generator will carry without exceeding the following values:

	Maximum Observable Temperature	Maximum Observable Rise in Temperature
Any part of generator or regulators, except commutator, brushes, brush rigging and bare copper solenoids	110 deg. C	70 deg. C
Commutator, brushes, brush and bare copper solenoids	130 deg. C	90 deg. C

That the rating test shall be made at or above 15 deg. C. ambient temperature.

That a badge plate be securely attached to each axle generator which shall show the manufacturer's name, type number; nominal voltage of generator (40 v. for 30 v. system and 80 v. for 60 v. system); rating in amperes as above determined, and minimum speed in r.p.m. at which generator will deliver rated volts and amperes.

That the above recommendations be submitted to letter ballot as recommended practice.

The final meeting of the committee was attended by representatives of all the axle generator manufacturers in the U.S., but one, and the above recommendations were unanimously approved by the representatives attending.

A method of rating axle generators is one of the essential portions of an axle generator specification. The committee, which they realize that it is impossible to draw complete detailed specifications that would be applicable to all types of axle generator equipment as now commercially manufactured, nevertheless believe that there are a number of essential characteristics that are common to all types of axle generators and which would be included in complete specifications. The committee therefore recommended that they be instructed to investigate this matter with a view to drawing up a partial specification which will include the features common to all axle generator equipment.

Depreciation of Freight Cars Committee's Report.

An American Railroad Association's mechanical section committee, M. K. Barnum, Mechanical Engineer, assistant to General Superintendent Maintenance of Equipment, Baltimore and Ohio Rd., chairman, and of which L. K. Sillcox, Master Car Builder, Chicago, Milwaukee and St. Paul Rd., formerly Mechanical Engineer, Canadian Northern Ry., was a member, reported as follows:

In order that your committee's conclusions might be based on representative factors as to average life and residue values, circular 35 was issued requesting data on equipment dismantled during the 3 years, ended Dec. 31, 1917. This period was taken because it represented normal conditions more nearly than those existing during 1918, the first year of Federal control. This information was requested by classes, in three groups—wooden cars, wooden cars with steel underframes and cars of all-steel construction.

Replies were received from 55 railways and 7 private lines, representing ownership of 2,023,783 cars and covering 106,010 cars dismantled during the 3-year period. A summary of the latter is given below; cars retired in connection with rebuilding are not included:

All Wood Cars.

Class	Number	Average life of cars in years	Scrap value.
Box	17,672	22.3	12.2
Stock	5,201	20.1	12.1
Flat	6,800	22.3	17.1
Gondola	24,630	18.0	14.7
Hopper	16,082	20.3	14.4
Refrigerator	4,591	21.7	12.3
Tank	81	21.6	31.5
Weight average	105,057	20.9	13.5

Wooden cars with steel underframe, none.

All Steel Cars.

Class	Number	Average life of cars in years	Scrap value.
Gondola	817	13	11.7
Hopper	136	14.7	17.2
Weighted average	953	13.1	12

The information furnished regarding wood cars with steel underframes was very limited and not representative of average conditions, and your committee did not feel justified in using it.

The average life of railway owned wooden refrigerator cars dismantled was 17.1 years, and of private line wooden refrigerator cars dismantled was 21.9 years, making the average life for all wooden refrigerator cars dismantled 19.4 years. However, it is only fair to state that the average life of railway owned wooden refrigerator cars is very largely affected by two lines reporting the dismantling of a large number of cars of an average life of only 15 years, which is much lower than the general average for all railway owned wooden refrigerator cars, and by excluding these two lots of cars the results are as follows:

Railway owned	21.3 years
Private line owned	21.9 years
[illegible]	21.7 years

which your committee feels should be taken as the average life of wooden refrigerator cars and which has been shown in above table.

In order that the information would be obtained on a uniform basis, your committee asked that the scrap value be expressed in per cent of M.C.B. price of scrap as shown in rule 112 in the 1918 M.C.B. Rules, using the 1918 price for scrap. From the information secured, we obtained a weighted average percentage of scrap of the M.C.B. value new, on all wooden cars, of 13.5%. It is your committee's opinion that ¾c. a lb. is more nearly representative of the average current market price for scrap than the ½c. a lb. as quoted in the present M.C.B. Rules, which would increase the weighted average percentage from 13.5% to 20.25%.

In settling for destroyed cars, recognition should be given to the fact that the car has a value to the owner above that of the actual value of the scrap to the line destroying the car, and further, that there is considerable serviceable material on which the line destroying the car can obtain the secondhand instead of the scrap value, and that if 20.25% represents the value of the scrap to the line destroying the car, your committee does not feel justified, in the absence of any other figures, in recommending any change in the provision of rule 112 which provides that in no case shall the depreciation exceed 60% of the value new.

The weighted average life of all classes of wooden cars was found to be 20.9 years, as indicated in the above table. We have no information as to the average life of cars of steel underframe or all-steel construction, in the absence of which we would suggest that on such cars, other than gondola or hopper cars, the same rate of depreciation be used as on wooden cars, until such time as experience may warrant a different rate.

The weighted average life of all classes of open top steel cars was found to be 13.1 years, but on account of your committee having knowledge that the cars reported as being dismantled during the period did not represent the present standard for this type of car we are inclined to believe that the information does not represent the average life of this class of equipment and, pending the time when experience will warrant a revision, your committee recommends considering 17½ years as the average life for open top steel cars.

Based on the average life as indicated in the above table for wooden gondola cars, your committee suggests that wooden and steel underframe gondolas and hopper cars, for the purpose of depreciation, be included with similar cars of all-steel construction.

Opinions were requested as to whether depreciation should be applied on air brake values at the same rate as for car bodies and, on a car-owned basis, the majority of the replies favored depreciating both 8-in. and 10-in. air brakes at the same rate as the car body, which is recommended by your committee.

The majority of replies to the question about depreciation of trucks, considered on a car-owned basis, favored having the trucks carry their own rate of depreciation and having that rate less for all-metal trucks than for composite trucks. However, your committee finds that the rate of depreciation of car bodies should be reduced to 3% and 3½%, according to construction, and we do not feel that a rate less than 3% for trucks is justified; therefore we recommend that the trucks be depreciated at the same rate as the car body to which they belong.

In view of the information at hand, your committee submits the following recommendations for a straight depreciation basis for freight cars.

	1918 Rules of interchange, %	Proposed rate %
Wooden car bodies, except gondolas and hoppers	[illegible]	[illegible]
Wooden car bodies, gondolas and hoppers	5.5	3.5
Wooden car bodies with steel underframes, except gondolas and hoppers with steel underframes	4.5	3
Wooden car bodies, gondolas and hoppers	4.5	8.5
Steel underframe flat cars	5	3
All-steel car bodies or those with steel underframes and steel superstructure frames, except gondolas and hoppers	4	3
All-steel car bodies or those with steel underframes and steel superstructure frames, gondolas or hoppers	4	3.5
Tanks for non-corrosive material	4	3
Tanks for corrosive material	5	3.5
Air brakes	None	Same rate as carbody
Trucks	Same rate as carbody	Same rate as carbody

The age of the car body shall govern in figuring depreciation on air brakes and trucks. The depreciation rate for the class of car shall govern in figuring depreciation on such betterments as are listed in rule 112 and shall be figured from date of application.

In its study of the subject of depreciation, your committee was confronted with the question of rebuilt cars and believes that this should be referred to a committee for consideration, and suggests this committee, if appointed, be requested to take up the part of rule 112 which provides that in no case shall the depreciation exceed 60% of the value new.

Report of Committee on Powdered Fuel.

An American Railroad Association's mechanical section committee, C. H. Hogan, Assistant Superintendent Motive Power, New York Central Rd., chairman, reported as follows: At the time of the last report of your committee in 1916 there were several experimental installations for burning powdered fuel on locomotives in the U.S., but the increasing demands for ransportation, due to the great war, and finally the entrance of the U.S. into the conflict, made the setting aside of even a single locomotive for such experimental purposes an impossibility. Accordingly all locomotives that had been equipped for the burning of powdered fuel were stripped of the special appliances intended for that purpose and returned to their regular service.

The general principles involved in the burning of powdered fuel were set forth in our last report in 1916, when the experiments were progressing so satisfactorily that they seemed about to spell success. That the principles were correct has been demonstrated, and it remained to work out the practical details to meet the varying requirements that locomotive service demanded, as has been done for stationary plants. But this sudden stoppage of the work, immediately after the presentation of our last report, leaves matters almost exactly as they were at that time.

It is probable that, as soon as the affairs of the railways are settled and normal conditions have been resumed, the experiments with and development of the devices for burning powdered fuel will be taken up again, which it will then be the pleasure of your committee to present to you. And, with conditions as they are, your committee is asking to be relieved from the necessity of making a report at this time and to be continued pending the resumption of the experimental work which they were appointed to watch and lay before the association.

Welding Truck Side Frames, Bolsters and Arch Bars.

An American Railroad Association's mechanical section committee, W. O. Thompson, Superintendent Rolling Stock, New York Central Rd., chairman, reported in part as follows: The fact that so many cast steel side frames and cast steel bolsters are failing in the tension members is conclusive evidence of weakness in design, and the welding of the fractures will not add to the strength, but is likely to introduce a factor of further weakness by improper workmanship and change in the structure of the metal. It is, therefore, necessary to confine autogenous welding within specified limits on structures, subject to alternating stresses, and prescribe definite instructions to govern such welding. Other metal car parts subject to compression only, or compression and low tension strains, may be welded. Worn surfaces of any nature, and on any parts, may be built up, provided that the material remaining in parts subject to tension before welding, is equal to at least 80% of the original section area, and in parts such as bolster guides, column castings, center plate rings, etc., the material remaining must be equal to 60% of the original section area. It is recommended that the following general rules for autogenous welding be observed carefully:

1, Welding cracks or fractures will not be permitted on axles, arch bars, car wheels or tires, truck equalizers, spring or bolster hangers, brake staffs, brake wheels, coupler bodies, knuckles, knuckle pins, locks, lifters and throwers, parts made of alloy steel, and top chert angles of all open-top all-steel cars, if the fracture is located at a point between the bolsters more than 5 ft. from the center line of either body bolster.

2, Building up worn surfaces will be permitted on the following: Parts subject to compression only; *spring or bolster hangers; *holes in levers; **center plates; **truck sides, bolsters and column castings, journal boxes, coupler bodies, knuckles, locks, lifters and throwers, which must be dressed and checked for interchangeability; flat spots on rolled steel wheels and tires, if the thickness of the tread is 1 in. or more above the limit of wear groove.

*Provided that the material remaining in the part is equal to at least 80% of the original section, and **, 60% of the section.

3, Welding cracks or fractures will be permitted on the following: Car and roof sheets; *cast steel truck sides; *pressed and structural steel truck sides, bolsters and transoms; *cast steel bolsters; draft castings; *brake beams; *cast steel coupler yokes; car sills, posts, braces, stakes, carlines, side plates and end plates.

*Welding is permitted only when the area of the crack is less than 40% of the total area through the section at the point of fracture, but it is not permitted to weld any crack located within 6 in. of an old weld.

4, All parts marked ** in section 3, except truck transoms, must not be welded unless removed from car or truck. Truck transoms may be welded in place by removing the truck from under car body. The edges of pieces for welding must be prepared as show in figs. 1 and 2. If both sides of the fractured member can be worked upon, the fracture should be prepared as in fig. 1, and where only one side of the fractured member is accessible, fig. 2 should be followed. The entire crack should be burned or chipped out far enough back so that there will be no portion of the crack in the metal. Failure to do this permits the check or crack to work its way across the metal to the farther side, due to the constant vibration, even after the weld has been made. A hole may be drilled at the end of crack or check and chip or burn towards the hole. The surfaces where new material is to be deposited must be clean and bright and reasonably smooth and, therefore, if the surfaces are prepared by the burning process the surfaces must be finished by chipping before welding. The portion of the part adjacent to the fracture should be heated before the welding is begun. In welding, the operator should begin to weld at the point farthest away from the outside edge and work the weld towards the edge. All efforts must be made to prevent oxidizations, and to accomplish this the work should be placed at angle that will allow the blowing out of all slag or impurities in the fused metal, and by giving the torch a rotary movement it will assist in their removal.

The new material must be deposited to the form shown in figs. 3 or 4 in order to properly reinforce the weld, and B should be somewhat greater than T. For the important items marked * in section 3, as well as for car sills, posts, braces, stakes, carlines, side plates and end plates, B must be at least 1½ times T. The parts marked * in sections 2 and 3, with the exception of truck transoms welded in place, must be carefully annealed by uniformly heating to approximately 1,400 or 1,500 deg. F. and allowed to cool slowly in the atmosphere. Worn surfaces permitted to be built up to the original section by depositing of new metal thereon must first be made clean, bright and fairly smooth, and after the metal is deposited must be dressed to the required dimensions and gauged where necessary. When truck side frames and bolsters are welded the weld must be made smooth and the following record legibly stamped on the weld by at least ⅜-in. steel stencils, in the following form.

5, It is also recommended that reference be made in the Rules of Interchange to the effect that autogenous welding, by either gas or electric process, when performed, must be strictly in accordance with these limits and regulations. The present price in the Rules of Interchange, rule 107, item 432, will not properly compensate the party performing the welding according to these regulations, and should be revised. A penalty should also be prescribed in the Rules of Interchange providing for the rejection of any car on which a truck side frame or truck bolster is welded, after the adoption of these regulations, when not conforming to same.

Car Trucks Committee's Report.

An American Railroad Association's mechanical section committee, J. T. Wallis, General Superintendent Motive Power, Pennsylvania Rd., chairman, and of which J. Coleman, Superintendent Car Department, G.T.R., and W. J. Robider, General Master Car Builder, C.P.R., were members, presented a report, the principal feature of which is the marking of freight equipment cars to show the load limit. The points considered in this connection are the failure of axles in service due to be overloaded in accordance with the marked capacity of the cars, particularly the 60,000 lb. capacity cars; and the difficulty and confusion in determining the allowable lading that may be placed on the car from the weight markings stencilled on the cars, as well as from the provisions of the M.C.B. Rules of Interchange governing the amount of load that may be carried. The committee recommended that cars be marked with the maximum load, light weight and total weight, and include the cubical capacity under inside dimensions.

The Norfolk and Western Ry.'s request to have its special 5¼ x 9 in. journal approved, as having a capacity for a total weight of 152,000 lb., was not recommended, as the committee considers it no stronger than the standard 5 x 9 in. axles, with a capacity of 132,000 lb.

The question of remuneration for light weighing cars, spring plates, and the dust guard well for the 5 x 9 in. passenger journal box, was also considered, and minor changes in the last two were recommended.

Report of Committee on Couplers.

An American Railroad Association's mechanical section committee, R. L. Kleine, Chief Car Inspector, Pennsylvania Rd., chairman, reported in part as follows: With the adoption, last year, of the details such as contour line, design of 6 x 8 in. shank, etc., for the M.C.B. standard D coupler, the duty assigned to the committee to present to the association a one standard coupler has been completed. To realize the benefits of this work it is essential that the coupler be placed into general use as soon as practicable. The design has passed the experimental stage and has been proved in service and the manufacture of the coupler has progressed to the end that the coupler manufacturers who have worked jointly with your committee in adopting the standard D coupler are in position to furnish the coupler in any quantities desired.

To accomplish the universal use of the standard coupler, your committee recommends the following program: Make it mandatory that all new cars built after a certain date be equipped with the M.C.B. standard D coupler with 6 x 8 in. shank. Make it mandatory that after the present stock of 5 x 7 in. couplers is used, all future renewals will be made with the M.C.B. standard coupler with 5 x 7 in. shank.

In order to carry out this program, the cars built after June 1, 1920, will not be accepted in interchange unless equipped with 6 x 8 in. shank M.C.B. standard couplers. Existing cars, equipped with 5 x 7 in. shank couplers of the present types, when requiring coupler renewals, shall have 5 x 7 in. shank M.C.B. standard couplers applied, this rule to be effective when present stock of new and secondhand 5 x 7 in. shank couplers have been exhausted. Existing cars equipped with 5 x 5 in. shank couplers shall have the existing type of couplers maintained in repairs. Where changes are made in the design of the draft arrangement, provision should be made for the application of either the 5 x 7 in. or 6 x 8 in. shank M.C.B. standard coupler.

A revision of standards for uncoupling attachments is recommended, and the committee also recommends submitting to letter ballot the following: Coupler operating device for new freight cars and application of new design coupler operating device to existing freight cars must be of a type directly connected to coupler knuckle locking-block or locking-block lifter, without the use of clevises, links, chain or pin and must conform to the detailed specifications prescribed in the U.S. Safety Appliance Standards.

Superheater Locomotives Committee's Report.

At American Railroad Association's mechanical section, committee, W. J. Tollerton, General Mechanical Superintendent, Chicago, Rock Island and Pacific Ry., chairman, reported as follows:

The superheat schedule was somewhat delayed during the past few years, due to the shortage of labor and material caused by the war. Of the railways reporting, practically all are going to the piston valve when superheating, either by changing to piston valve cylinders or applying a piston valve steam chest. One railway, in superheating cross-compound locomotives, retained the slide valve on the low pressure side, using a double ported slide valve. Those reporting as retaining slide valves used bronze valves. In applying new cylinders new modern valve gears were applied to the locomotives. Considerable trouble was experienced in using the piston valve steam chest due to leaks and rapid wear. These defects have been overcome in the later designs. When superheat valve stem packing is used the life of the packing is about the same as that of a saturated locomotive.

Lubrication—On the railways using slide valves no change was made in the oiling or lubricating devices when bronze valves were used, but where the original cast iron valves were used some trouble with cutting the seats was experienced and the application of an additional system of graphite lubrication stopped the trouble. The hydrostatic lubricator is still the standard for all locomotives and reports from same are satisfactory in every case.

A number of railways have taken up force feed lubrication, using a plunger type of lubricator. As the practice of lubrication is very recent, and data as to the performance limited, the committee does not feel justified in making any recommendation, but it is the opinion of the railways using it that the force feed lubricator when in good condition will distribute oil more economically, possibly more regularly than the hydrostatic lubricator. It has the advantage of being outside of the cab and requiring no special attention of the locomotiveman, as the feeds are set and the lubricator stops feeding when the locomotive stops.

Sufficient information is not at hand to report on the life of packing rings and bushings; it is the committee's opinion that the life will be increased, but is unable to say to what extent.

[illegible] [illegible] are not extensively used and your committee is of the opinion that they are unnecessary and should be discontinued, as it is doubtful if any benefits are derived from their use.

The use of superheat valve oil is recommended by the majority of railways reporting, but a large percentage use the ordinary valve oil and claim satisfactory results for same. Carbonization is caused by the manner of operation.

Considerable trouble has been experienced with cylinder and valve packing. Much of this trouble has been overcome by changing the design of the rings, which in most cases consisted of going from a ring, with a square cross-section, to a narrow faced ring, by using a better grade of material, and by admitting steam to the cylinders while drifting. It is your committee's opinion that 2 cylinder packing rings are ample for good service.

The majority of railways report satisfactory results from 50% lead, 50% copper mixture for piston rod packing. Very good results have been obtained from 74% lead, 20% copper and 6% nickel, and 80% lead and 20% antimony, especially when equipped with a hard grease piston rod lubricator, which adds greatly to the life of the softer packing. Some railways are using tandem piston rod packing, but it is the committee's opinion that single packing will give satisfactory results.

When automatic or manually operated drifting valves or drifting throttles are not used, instructions have been issued to locomotivemen to drift with what is called a cracked or drifting throttle. It is essential that steam be supplied to the cylinders while drifting. Drifting valves are not essential, but desirable, especially in a mountainous country, as the steam can be supplied by cracking the throttle. Automatic drifting valves of a good design are valuable as they eliminate the human element in furnishing steam for drifting. A number of roads are using a manually operated drifting throttle, others are using and experimenting with automatic valves of different makes. Fifty per cent of the roads reporting do not use steam chest relief valves, and 50% do when locomotives are not equipped with drifting valves or vacuum breakers. It is the committee's opinion that relief valves should be used on large power if it is not equipped with drifting valves or vacuum breakers. It is the committee's opinion that a properly designed drifting valve will eliminate carbon deposit, aid in lubrication, and increase the life of packing.

Maintenance—The superheater units have failed mostly at the rear return bend, the welded type giving the most trouble. The application of cast steel return bends has reduced this trouble. Some failures have occurred at the front end under the ball joint. This failure is due mainly to cinder wear, as the unit lies in the path of the cinders drawn through the tubes at a high velocity. To protect against this wear, a shield of thin steel is spot welded to the unit. Failures at this point are repaired by cutting off the worn part and welding on a new piece. No particular difference has been noted in the cinder wear of a stoker fired and hand fired locomotive. The abrasive effect of the cinders varies greatly with different coals.

The tools used to repair and maintain the units are those recommended by the Locomotive Superheater Co. When units are removed, the joints should be reground and individually tested before being replaced, and collectively after being replaced. A periodical test might be desirable, but the committee feels that it is not essential.

The majority of railways purchase the header bolts. One uses 0.988% carbon steel heated, to between 1400° and 1500°, and plunged into an oil bath, then reheated and allowed to cool naturally. Another specifies that the material shall have a tensile strength of 90,000 lb. a sq. in., elastic limit not less than 65,000 lb. a sq. in., an elongation in 2 in. not less than 18%. The metal should have the following chemical properties: carbon, 0.45 to 0.60 per cent; manganese, not over 0.70%; sulphur, not over 0.05%; phosphorus, not over 0.05%. Some use a high grade iron without any heat treatment.

The investigation shows that in most cases a limit percentage of weight for scrapping of superheater flues has not been established. Some give the limit percentage as from 10 to 25 per cent in reduction. Some gives flues the hammer test. Superheater flues are reclaimed by welding up pits and holes worn in by steam leaks. It is a good practice to weld the large superheater flues to the back flue sheet. Good results have been obtained from same, and the committee recommends this practice.

All boiler tubes should be blown out each time the fire is drawn and, at least, at each wahsout period all tubes should be cleaned thoroughly from end to end, and all accumulation removed; special attention should be given to the superheater flues. The flues should be blown with a ¼ in. or ⅜ in. pipe and 100 lb. of air.

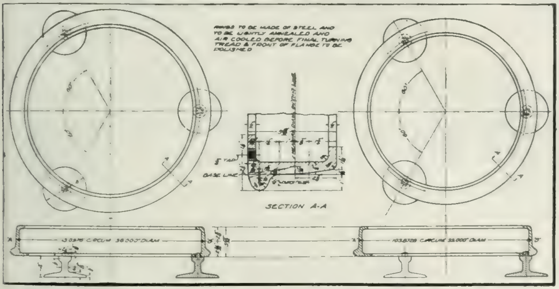
The method employed in testing packing for leaks around the outside steam pipes where they enter the smoke box is by applying a lighted torch to all surface joints, while the blower is on. Much trouble is experienced in keeping these joints tight. Different kinds of packing have been used with varied results. Cement and ground magnesia have been used with some success. A mixture of ground magnesia and asphaltum, applied while hot, gives promise of better results; this is due to the heat keeping the mixture in a semi-plastic state. The design of construction used on the U.S. standard locomotives gives promise of a high efficiency.

Most railways have issued, through bulletins, or personally by the road foreman, instructions not to carry over 2 gauges of water; this, of course, depends on the water conditions of the locality in which the locomotive is operating. The use of a pyrometer will show the men the low temperature of the steam resulting from carrying high water; it will also show the effect the position of the throttle and reverse lever has on the superheat obtained. The majority of the roads prefer a wide open throttle, with as short a cut-off as possible, under the operating conditions. Some roads claim better results by using a loger cut-off and a lighter throttle, claiming better superheat.

Light, frequent and regular firing proves to be the best practice, and produces the best degree of superheat, but it is essential that at all times the flues be kept clean. The method of firing depends on the quality of fuel used.

Car Wheels Committee's Report.

An American Railroad Association's mechanical section committee, W. C. A. Henry, Superintendent Motive Power, Pennsylvania Lines, chairman, and of which W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., was a member, reported as follows: Certain recommendations have been made by manufacturers of wrought-steel wheels and referred to your committee. Among them is one, that the 38 in. diameter wrought-steel wheel be eliminated from our standards, it being stated that the number of wheels manufactured of this diameter is small and that in many cases the 36-in. wheel could be used. Your committee does not have sufficient information to justify making definite recommendations now, but arrangements will be made to obtain this information, and, in the meantime, the use of the 38-in. wheel should be discouraged, as it is advantageous to reduce the number of standards as far as can be done without causing undue hardship.



RINGS TO BE MADE OF STEEL AND TO BE LIGHTLY ANNEALED AND AIR COOLED BEFORE FINAL TURNING TREAD & FRONT OF FLANGE TO BE POLISHED
BASE LINE
SECTION A-A

Fig. 1. Wheel Circumference Measure Test Rings for 33 and 36 in. Wheels.

It has been recommended that the limit of wear groove for wrought-steel wheels be located ½ in. from inside of rim of wheel instead of ¾ in. as at present, it being felt that the thickness of metal would be sufficient to afford the necessary strength. Other questions than the strength of the wheel are involved, viz.: maintenance of draw bar height, truck clearance, effectiveness of brakes with increased range in diameter of wheels. Your committee, therefore, requests that members give this subject consideration in order to reply to a circular of inquiry that will be sent out.

The question has been raised as to whether the standard wheel circumference measure, sheet M.C.B.-16B, should have the points indicating the normal circumference of the 33-in. and 36-in. wheels located on the tape when laid out flat, or whether correction should be made for the tape thickness; there being a difference of 2-10 in., or more than one tape size, depending upon which way the tape is laid off. In laying out the wheel circumference measure, due correction should be made for the tape thickness and in order that absolute uniformity may be obtained the executive committee has decided that the association obtain standard rings of 33-in. and 36-in. diameter; these rings to be certified by the Bureau of Standards and be used in cases of dispute to check wheel tapes. Your committee was instructed to prepare design and mounting for these rings and same are submitted herewith, fig. 1.

The specifications for wrought-steel wheels permit a variation of 5 tape sizes under and 9 tape sizes over the size called for. It is felt desirable to provide for these additional tape sizes for 33, 36 and 38-in. wheels, by adding to the spaces now provided for taping cast-iron wheels. The continuous markings on the upper side of the tape would then be used for mating worn wheels. Fig. 2 shows recommendations of your committee as to how this could be carried out.

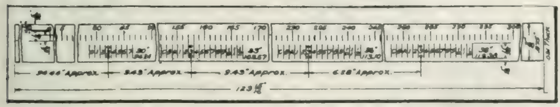


Fig. 2. Additional Spaces to be added to Standard Wheel Circumference Measure Tape for Taping Wrought Steel Wheels.

The following note should be inserted on sheet M.C.B.-16B: "Linear dimensions shown represent measurements of actual circumference of the wheel and not straight length of the tape. Graduations to be spaced ⅛ in. apart with tape laid flat, and space between lines 157 and 158 on the upper side of tape to coincide with space representing tape size 3 for the 33-in. diameter cast-iron wheels."

Rule 76 of the Rules of Interchange reads as follows: "Tread worn hollow; if the tread is worn sufficiently hollow to render the flange or rim liable to breakage." It is your committee's opinion that the meaning of this rule is not clear and is subject to wide variation in actual application; it having been found that many wheels are being withdrawn on account of tread wear without the wear being sufficient to injure the wheel. Your committee recommends that a gauge, as shown in fig. 3, be used in determining whether or not a wheel should be condemned on account of tread worn hollow; a wheel not to be condemned on this account unless the projection on underside of gauge does not come in contact with the tread of the wheel.

It has been recommended that a clause be inserted in our specifications, requiring that in case of cast-iron wheels failing to pass the M.C.B. test, the first letter of the initials of the purchasing road be chipped off with the idea of stopping the practice claimed to exist to a certain extent of roads purchasing rejected wheels. It is felt that action of this sort is desirable, but the letter C in the legend M.C.B. be chipped off, for the reason that being located on the outside of the wheel it can be more readily seen than if a letter on the inside, where purchaser's name is placed, were chipped off. Furthermore, wheels not coming up to M.C.B. requirements cannot be considered M.C.B. wheels. Your committee, therefore, recommends that the following clause be added to specifications for cast-iron wheels under the heading "Rejection," par. 16: (d) In all cases where wheels are rejected the letter C must be chipped out of the legend M.C.B. on the outside face of each wheel." Your committee further recommends that a rule be inserted in the Rules of Interchange prohibiting acceptance in interchange of a car, any of the wheels of which have the letter C chipped out of the legend M.C.B.

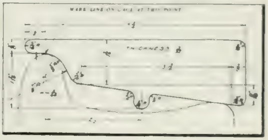

Fig. 3, Wheel Tread Worn Hollow Gage.

The Association of Manufacturers of Chilled Car Wheels advises us that all information thus far available indicates superiority of the arch design of plate, adopted in 1917, for the 700 and 850 lb. wheels over what has been considered our standard design of plate. It is our feeling, however, that another year should be allowed to elapse in order to accumulate more information before considering the re-design of the 625 and 725 lb. wheels.

Calgary and Fernie Ry.—The Dominion Parliament has extended for five years the time within which the company may build its projected railway from Calgary, Alta., via the Kananaskis Pass to the headquarters of the Elk River in British Columbia, thence by the valley of the Elk River to Fernie, B.C. The company was incorporated in 1906, and has been granted several extensions of time for construction, the last being in 1917. (Jan., pg. 26).

Car Construction Committee's Report.

⅞ DIA HOLES
FIG 15
CENTER AND INTERMEDIATE SILL THREE BOLT SPLICE REINFORCEMENT

Diagrams of Car Construction Recommendation.

The American Railroad Association's mechanical section committee, W. F. Kiesel, Jr., acting Mechanical Engineer, Pennsylvania Rd., chairman, reported as follows:

In the past year, the subjects referred to your committee were: 1, Revision of rule 22, 1917, Code of Rules of Interchange; and 2, Suggested provision for side door openings 10 ft. wide in all box cars, the side door proper to be 6 ft. wide, with a removable door post, and an auxiliary door 4 ft. wide.

M.C.B. enquiry circular 19 was sent out to all members, asking for suggestions and recommendations for change in rule 22 of Code of Interchange, and the replies thereto were carefully considered by your committee, based on which the following rule has been formulated, and is offered herewith as a substitute for present rule 22.

"Cars having wooden sills—Draft timbers must not be spliced. Longtudinal sills must not be spliced between or over cross-bearers. Longitudinal sills (intermediate or side sills) may be spliced at both ends, on either side of body bolster. The nearest part of the splice must not be less than 12 in. from edge of body bolster. Intermediate sills, spliced between body bolster and cross-bearer, the reinforcement shall be applied in accordance with fig. 15. Center sills shall be spliced only between body bolster and cross-tie timber. The nearest part of the splice must not be less than 24 in. from edge of body bolster. Center sill splices shall be in accordance with fig. 11. The diameter of horizontal or vertical splice bolts shall be ⅝ in.

"Cars having steel center sill splices must be reinforced as per figs. 11 or 11-A. Intermediate sills, spliced between bolster and end of cars, and side sill, spliced on either side of bolster, must be in accordance with figs. 10 or 10-A. When splicing or renewing any longitudinal sill, reinforcement shall be applied to all existing non-reinforced splices, in all sills except side sills. If the old splice is a 4-bolt splice, it shall be reinforced in accordance with figs. 11 or 11-A. If the old splice is a 3-bolt splice, located at least 7 in. from face of bolster. Adjacent sills may be spliced. All splices shall be of the butt-joint type, reinforced on both sides by plates of not over 24 in. in length, and not less than twice the length of the protruding end when the projection is less than 12 in. The reinforcing plates shall be at least as thick as the web of the sill. The splice plate on the flange side of the sill shall be U-shaped, to include flanges, while the plate on the opposite side shall cover the web only. Rivets to be spaced as shown in figs. 12 and 12-A. Where autogenous welding is available, the sills may be welded after riveting the U-shaped plate on the flange side, omitting the flat plate on web side.

"Cars having steel center sill splices located between body bolster and end sill, and less than 8 in. from face of bolster. All splices shall be of the butt-joint type, with the addition of a cover plate. The splice plates shall be at least as thick as the web of the sill. They may be located on either side of the sill, extending forward and back of the center line of bolster 30 in., as shown in figs. 13 or 13-A. The rivets shall be spaced as shown.

"Side sill splices. All splices must be of the butt-joint type, reinforced on both sides by plates 14 in. long. The reinforcing plates shall be at least as thick as the web of the sill. The splice plate on the flange side of the sill shall cover the web only, while the plate on the opposite side shall be flanged over the bottom leg of the side sill, and riveted to the same, as shown in fig. 14. The splice may be located on either side of the body bolster. The rivets shall be spaced as shown. Side sills may also be welded by the autogenous process, making the thickness of the metal through weld one and one-half times the thickness of the metal in the sill, in which case the reinforcing plates and rivets shown in fig. 14 may be omitted."

Box Car Side Doors—The General Motors Corporation's Traffic Manager suggests the following: "It has long been my contention that a 6-ft. wide side door, with a movable post, and a 4-ft. extension beyond, is the proper kind of door to be used on either 36, 40 or 50-ft. cars. This kind of door enables everyone to use a box car. In other words, with only a 6-ft. door it confines the use of this box car to certain commodities, and certain other commodities, such as light bulky articles, are excluded from the use of these cars, as it is impossible to get a light and bulky commodity in anything less than an 8-ft. wide side door—10 ft. wide preferred. If all box cars in future were equipped with the kind of door above described, it would mean that on a car coming into our factory, loaded with any kind of commodity, when it was unloaded we could immediately use the car for loading automobiles or trucks, by removing the post and taking advantage of the 4-ft. additional extension. This gives a load to the car in both directions, and means that there would be practically no empty movement of a box car in any direction, as the same could be used for all classes and kinds of commodities from merchandise to grain."

The point raised in the above is a matter of policy, for adoption or rejection by the railway managements. It, however, raises the question of providing a satisfactory design of door openings, wider than 6 ft., as a basis of construction. Special automobile cars, with side door openings varying in width from 8 to 12 ft., and some with end doors 8 ft. and more in width, are in existence. If so directed, your committee will take up the task of providing such side door design.

Design and Maintenance of Locomotive Boilers.

An American Railroad Association's mechanical section committee, C. E. Fuller, Superintendent Motive Power, Union Pacific Rd., chairman, reported as follows:

On Feb. 8, 1919, the committee issued a circular containing 6 questions and a request that all replies be in the chairman's office by Feb. 28. Up to Mar. 20 only 19 roads responded, and from their reports we derive the following general conclusions:

None of the 19 report introducing any new or special designs of locomotive boilers during the last two years; 9 roads use electric welding in fire boxes for patches, partial side sheets, cracks and fire door patches; 8 report no electric welding at all, and 2 report use of oxy-acetylene. Only 3 report making a common practice of using electric welding as a substitute for riveted seams in fire box and only to a limited extent in repair work. One road uses riveted seams strengthened by electric welding. In some cases seams between crown sheet and side sheets are welded the full length without rivets, and also fire door hole flanges, without giving any further trouble. One road reports that all cross seams, and, to some extent, the fire door sheets, are either electric or acetylene welded. Mud ring corners are being successfully repaired by cutting off 18 in. each way and welding in a new corner, but the report does not specify whether this operation is done by electric or acetylene process.

One road claims to have a successful method of reclaiming enlarged staybolt holes, by tapping out from 2 to 3 in. diam. and screwing in plugs the same thickness as sheet, with both plug and sheet chamfered off ⅛ in. and the electric weld built up in the gutter thus formed, with a slight mound for strength, and cracks between staybolt holes repaired by cutting out crack to a 45 deg. bevel on each side—3-16 in. apart, and building in the electric weld.

One road furnishes sketch of a sectional flue expander, with the parts which, in the standard expander, would have a bearing against the bead of the flue, ground off. This is to be used on flues which are electric welded in the back sheet when they show leakage, the idea being that they will be able with this expander to knock the scale off on the water side next to the sheet and prevent overheating and cracking, and at the same time avoid crowding the bead of the flue against the weld and breaking it. Grinding the expander off this way does not impair its efficiency for locomotive house work on flues which have not been welded. Some of its large superheater flue expanders have been changed also, and it claims that up to date this seems to be the most efficient tool for keeping scale away from ferrule on the water side. This road finds it necessary to work the flues which have been welded in the sheet about every 60 days, and in bad water districts it does it oftener. A discussion of this process of removing scale and its effect upon welded flues is invited.

One road reports electric welding smoke box studs, the inference being that the studs are butt welded to the ring to save drilling and tapping. Another road electric welds arch brick studs in a similar manner.

The most approved methods of performing the various welding operations were included in last year's report and need not be repeated. Among the roads reporting last year, 25% used electric welding for entire new fire boxes, which does not agree perfectly, nor conflict radically, with the fact that none of the roads reporting this year mention such a practice, although one road uses oxy-acetylene welding in place of riveted seams, except in mud ring, for all new fire boxes.

Of the 19 roads reporting, only 10 have had experience with combustion chambers, and all that have had them any length of time report favorably, on account of improved combustion and less trouble with leaky flues. If there has been any notable change in locomotive boiler practice during the past year, it has been the re-introduction of the combustion chamber. These range all the way from the D-shaped tube sheet up to a combustion chamber reported on the new Pennsylvania Mallet as 10 ft. long. One member says his view of the combustion chamber is that its main function is not so much to increase the fire box surface as it is to shorten the tubes and give increased length of flameway, to allow combustion to be more nearly completed before it is extinguished by admission to the tubes. Combustion once completed, it is immaterial whether the heat be absorbed by the fire box or by the tubes, and the more heat extracted by the fire box, the less will be the evaporation of the tubes. The introduction of large combustion chambers naturally brings up the question of bridge walls between combustion chamber and fire box proper; possibly, also the desirability of some form of discharge for the bank of sparks carried over the bridge. While the committee has received no data on bridge walls, we have no doubt that a discussion will develop this feature.

A member has suggested as worthy of consideration the best method of determining the water level in the extremely long boilers of today. This refers particularly to the long boilers on Mallet locomotives, which operate over heavy humps and dips.

Eleven roads have experienced trouble from cracks in boiler where guide and waist sheet angle is fastened to the boiler shell. To overcome this, 6 roads have removed the rivets or studs, leaving a loose bearing. One road uses 2 small waist sheets instead of the one-piece design, which it finds permits greater flexibility, and one road is experimenting with flexible braces between guide yoke and boiler, but these have not been on the road long enough to produce results. One important road continues to rivet angle or T to the boiler with a ¾-in. liner inside of the boiler, which distributes the strain over a greater area with successful results. Another important road uses studs in some locomotives and rivets in others, but finds that the counterbalance has some effect in causing cracks at that point.

Thirteen of the 19 roads have no government locomotives, while the remaining 6 have nothing to say except one reference to the 2 water glasses and water column, which is believed by some to be superfluous.

The committee's attention has been directed to detail description and reports of the performance of a locomotive equipped with new type of fire box on the C.M. & St. P. Rd., known as the Nicholson thermic syphon. The principal fea-

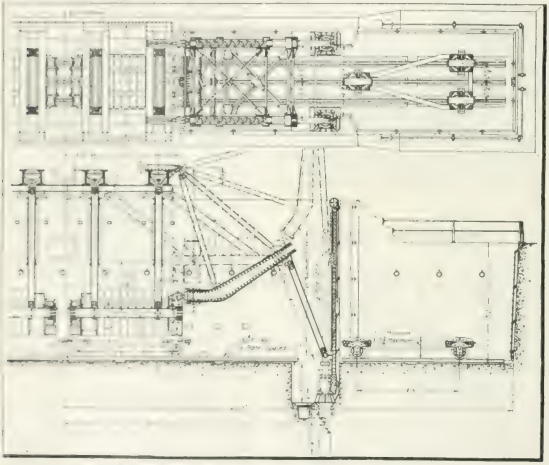
[illegible] of design consist of 2 water legs extending longitudinally from the throat to the [illegible] sheet, thus dividing the front part of the fire box into practically 3 compartments. These syphons are triangular in form from the side elevation, and constitute a water space about 4 in. wide transversely, the 2 parallel surfaces being staybolted in the usual manner. The heating surface of this fire box in direct contact with the fire is materially increased, due to the area of these syphons. It is stated that the speed of the water through these syphons is such that all the water in the boiler passes through them in 5 minutes. According to published test data, the locomotive equipped with these syphons appears to have produced some very economical results.

The limited response to this year's circular of inquiry, and consequent meagerness of your committee's report, may be due to war and other abnormal conditions that have existed, making it difficult for the railways to pursue the usual development of mechanical processes and new ideas.

Report of Committee on Draft Gears.

An American Railroad Association's mechanical section committee, R. L. Kleine, General Car Inspector, Pennsylvania Rd., chairman, reported as follows: On Sept. 27, 1916, your committee addressed a circular of inquiry to the railways to ascertain the kind and capacity of draft gears in service, travel, performance, sustained capacity in service and repairs, also sill spacing, coupler attachments, rivetted versus key connections between coupler and attachments, draft lug spacing, overall length of yoke, coupler horn clearance, etc. Replies were received covering a total of [illegible] cars owned. The data received gives a very fair idea of the gears in service, forms of attachments used, spacing of sills, etc., but the information is very meagre, generally, as to the efficiency of the gears in service, cost of maintenance, practicability of repairs and capacity of repaired gears, although valuable data is reflected on tests of two types of draft gear taken from service before repairs were made, as well as tests of these gears after repairs.

It was felt necessary that gears should be thoroughly tested not only when new, but after they had seen service, as well as after repairs had been made to gears taken from service, also that such tests should be made approximating as closely as possible actual service conditions, eliminating variables as far as possible. The static machine gives a certain comparison as determined by its diagram and absorption of work, but does not measure the capacity of the gear as a shock absorber. The 9000-lb. drop test machine will measure the height of drop at which various gears will close, and, therefore, can be considered a relative measure of shock-absorbing capacity in different gears. However, the weight used is so much less than actual service that the question arises whether the weight and height of drop of the test machine is comparable to the weight and speed of loaded car in service, and if a gear so tested in a 9000-lb. drop test machine will have the same relative efficiency in service under the heavier weight car and slower speed. The 15,000-lb. single pendulum machine in conjunction with the 30,000-lb. car on level track, as used by the Union Draft Gear Co., is another form of drop testing and is comparable with the drop weight. The Symington test plant, at Rochester, N.Y., consists of testing draft gears in full-sized freight cars. One car is dropped down an incline and strikes another car standing on a level track. Facilities are provided for measuring the speed of moving car, tendency of lading to shift under impact and recoil, closing of gears and distance the standing car travels as a result of the impact. This testing arrangement represents more nearly actual service conditions than any of the tests previously referred to. It, however, necessarily includes a number of variables, but is, no doubt, valuable for check testing and action under service conditions.



Pendulum Draft Gear Test Machine on Pennsylvania Rd.

In order to reduce to a minimum all variables and for the purpose of accurately measuring impact blows, recoil, etc., the Pennsylvania., under the direction of J. T. Wallis, General Superintendent Motive Power, designed a pendulum draft gear testing apparatus (illustrated herewith), consisting of 2 weights, 200,000 lb. each, suspended from a suitable framework, with provision for applying different draft gears. The weights may be varied up to 200,000 lb. as found desirable. It was the purpose of the draft gear committee to use this machine in tests conducted by it, but on account of the war, the machine has not been built.

On June 7, 1918, C. B. Young, Manager, Inspection and Test Section, Division of Operation, U.S. Railroad Administration, advised it was the desire and intention of that section to make an extensive test of draft gears, to determine what a draft gear should be, and also the value of the draft gears now on the market measured by the ideal standard, and invited suggestions and recommendations of the draft gear committee, draft gear manufacturers and railway officers. Your committee acted upon this invitation and placed at the government's disposal all the data and tests that had been collected, as well as their views in connection with the tests to be conducted. After outlining their plan of procedure, the Inspection and Test Section of the U.S. Railroad Administration conducted tests of draft gears on the static and drop test machines, for the purpose of calibrating the gears that will be used in the cars at the Symington testing plant, which latter tests were started Apr. 10, 1919, and to which your committee was invited.

In order to avoid duplication of work and entailed expense, your committee has suspended making any tests of draft gears, but will work in close harmony with the U.S. Railroad Administration, Inspection and Test Section, and thus have available the results of these tests for the committee work.

St. John and Quebec Ry. Construction Financing—Judgment was given in the New Brunswick Supreme Court of Appeal, June 6, in an action brought by the N.B. Government to recover from J. K. Flemming, the former premier, $100,000, alleged to have been illegally obtained from A. R. Gould, former President of the St. John and Quebec Ry., in connection with contracts entered into in 1911 and 1912, between the N.B. Government and the company. The company's financing formed the subject of an investigation by a royal commission, and upon the findings of that commission this and other actions were instituted b, each the Government for the recovery of moneys alleged to have been illegally handled. Objection was taken by Mr. Flemming to the statement of claim, and the matter was argued through to the Supreme Court of Appeal which has decided in favor of the N.B. Government.

Report of Committee on Locomotive Headlights.

An American Railroad Association's mechanical section committee, H. T. Bentley, Superintendent Motive Power and Machinery, Chicago and North Western Rd., chairman, reported in part as follows:

Heretofore, reports of the headlight committee have been more in the nature of results obtained by tests of electric headlights and at the time they were made and conclusions reached, most railwaymen, especially in thickly congested territory, and where high-powered lights had not been tried, were satisfied that such a device was a menace to the safe operation of a busy railway and should not be used. Now that the electric headlight is with us to stay, it may be in order, to refresh our memories, to give a brief history of its evolution, and after that, see what is still further needed to make the apparatus as reliable and free from failure as any other part of the locomotive.

The first arc light was operated in the early eighties by an oscillating engine, which later was changed into a turbine for furnishing the power, and this method, with modifications and improvements, is still in use. Objections to the arc light were many, among them being the necessity for continually changing carbons, the tremendous heat generated, the unreliability and variety in the intensity and direction of illumination, the burning out of carbon holders and other parts of the apparatus; there was no way of dimming or softening the light, and on account of its brilliancy it was very objectionable at stations or when passing trains on double track, etc. As an advertising medium and on single-track roads, particularly in the west, it was fairly successful, except for failures, some of which are mentioned above.

After much experimentation it was decided in 1915 to substitute the incandescent carbon filament lamp for the arc light and a remarkable improvement in cost and operation was shown, the light being steady, uniform and more reliable; it was also possible to have a smaller lamp in the same headlight casing, so that by use of a switch it could be used when the larger lamp was objectionable at stations or on double track. Improvements in electric lamp construction gave us the tungsten filament with its increased efficiency, so that for the same amount of current, very much greater illumination was furnished, but the frailty of this filament caused considerable trouble and failures, the lamp manufacturers were appealed to and later furnished a type of lamp with a short, stiff filament that was very rugged and thus annoyance of failures from this cause was overcome.

On account of the lack of effciency in the carbon lamp, it was necessary to use a comparatively large generator with an accompanying high steam consumption, and trouble was still experienced with the governor, and bearings had to be frequently lubricated or the machine was out of commission. The greater efficiency of the lamps enabled a very much smaller unit, with decreased steam consumption, to be used, and at about this time the lubricating devices were improved so that instead of having to oil the bearings about every 8 hours, they would run for several months without attention.

A dimming device was later designed, so that instead of using 2 lamps, one of which had to be out of focus, the 250-watt lamp in focus could be used for road work, or, through the medium of a resistance of 3.12 ohms, could be reduced by the movement of a switch, so that it was not objectionable to a locomotiveman opposing it. The difficulty of properly focusing lamp was taken care of by a device which enabled this to be done quickly and properly.

In the earlier recommendations of the A.R.M.M.A. committee, a 6-volt system was suggested, but on account of train-lighting systems being 32 voles, this voltage is now generally used for headlighting equipment, and on several roads, suburban trains' cars are lighted from the headlight equipment and to take care of this work a 2½ or 3 k.w. machine is used.

Towards the end of 1915 experiments were made with storage batteries to furnish current for the headlight. This equipment gave good results, except for lamp trouble, which difficulty was later overcome, but its first cost was so high and the length of time consumed charging batteries so great, where facilities were provided for that purpose, that its use was abandoned.

The headlight reflector, 18 in. diameter, 9 in. deep, silver plated, gives considerable trouble with tarnishing, and a glass reflector that can be readily kept clean is very desirable. Several makers have put such reflectors on the market and hope before long the use of silver-plated reflectors will be a thing of the past.

Acetylene gas was tried for headlights on a number of roads, some using a generator apparatus on the locomotive while others used acetylene stored in tanks. With the former practice serious accidents occurred, due to men with open torches cleaning out the spent carbide before all of the gas had been dissipated; while the storage tanks, it required considerable work to replace them when discharged. The light furnished was of good quality, but due to breakage of piping, clogging of burners, and troubles mentioned above, the use of acetylene for headlight purposes was discontinued.

The amount of light necessary on a switch locomotive must be considered not only from the locomotiveman's requirements, but also from the switchman's safety standpoint, and complaints are continually being made by the former that the light is not bright enough, and from the latter that it is too strong, but by using a 40-watt lamp in a clean reflector, ample light is furnished to comply with the 300-ft. requirement of the law and not be objectionable to the switchmen.

There appears to be a demand in some quarters for an enclosed type of switch of more rugged construction and conveniently located within reach of the locomotiveman as complaints are made that the single-pole double-throw switch as generally used is not very satisfactory.

Failures frequently occur from broken steam pipes, broken field lead, excessive voltage, grounded brush holders, loose connections, worn bearings and excessive valve travel, but the manufacturers and repair men are making much progress in the correction of these difficulties and we soon will have the headlight equipment as free from troubles as any properly designed machine.

The American Railway Electrical Engineers' Association has been the committee with its report on this subject, and by permission, it is presented by us as we believe it gives a great deal of technical information from men well qualified to handle the subject, so that by a thorough discussion of this valuable addition to the literature on the subject, we will be in very much better position to know what is the best practice and be governed accordingly.

The A.R.E.E.A. report referred to gave full details of all recommended standard practice for electric headlights, fully illustrated with plans.

Report of Committee on Mechanical Stokers.

An American Railroad Association's mechanical section committee, A. Kearney, Superintendent Motive Power, Norfolk and Western Rd., chairman, reported as follows: Your committee has been reporting to this association since the 1913 convention. In each successive report, it has been the purpose to acquaint the association with the developments of the various locomotive mechanical stokers up to that time, and to give consideration to the performance of stokers as experienced by the roads that have them in service. With each successive report, it became a greater burden for your committee to introduce additional features of interest and importance not already given consideration in previous reports, until it has now become extremely difficult to compile any additional data that might be received with interest and appreciation. During the last two years, the railways have done very little research or experimental work, as all interests have worked with the one purpose in view of producing transportation, and other interests have been put aside for this end. Consequently, there has been practically no information established relative to the performance of locomotive stokers in service, such as is obtained from specially conducted tests.

This two-year's war period, from a manufacturer's standpoint, however, has been extremely active, and there have been a large number of stokers applied. Inquiry was made of the different stoker manufacturers as to the number of stokers they had actually applied and were in service at Jan. 1, 1919. The following table indicates the number of different representative stokers then in service and the type of locomotives to which they have been applied:

Kind	Mikado	Mallet	Santa Fe	Centipede	12-wheel	Decapod	Consolidation	Mt. Type & Mohawk	Pacific	Total
Street	424	638	580	4	14		20	3	37	1522
Duplex	240	804	195			53	1	1		1294
Standard	150	338	56		33		23	162	21	781
Hanna	70	6	7		16			4		169
Elvin			1							1
Total	884	1786	885	4	63	53	44	170	58	3717

There was a total of 3,717 stokers of the above types in service Jan. 1, 1919.

The stoker report of 1917 shows a total of 1,611 stokers (exclusive of Crawford) in service at Apr. 1, 1917. There were placed in service 2,106 stokers between Apr. 1, 1917, and Jan. 1, 1919, which indicates the rapid rate at which locomotive stokers are being applied. The types of locomotives to which the stokers are largely being applied are the mallet, Mikado and Santa Fe, which represent the locomotives of large capacity. The question as to the size of locomotives upon which stoker installations are justified is one that is frequently referred to and is yet unsettled. It is your committee's opinion that the conditions surrounding individual conditions are so varied that no fixed rule can be recommended for guidance in this connection.

Suggestions have been made involving certain limits in the weight and tractive effort of locomotives, the character of fuel used and the rate at which it must be fired. Limitations on the basis of weight and tractive effort of locomotives may be feasible where the locomotives operate under uniformly heavy conditions, but even then there are certain local and physical conditions to be considered that prevent any general recommendation being laid down even on such basis as this. Locomotives operating in districts where the demand for maximum power is intermittent and for short duration could not be considered on the same basis as locomotives of the same weight and capacity operating where the maximum power is demanded for extended periods. The character of fuel available for firing may also be considered one of the controlling factors in consideration of the application of locomotive stokers to comparatively small locomotives. In view of these governing factors, your committee does not feel justified in attempting to suggest a ruling which might be followed in the consideration of this phase of the subject, as it is believed that this question will have to be settled based upon the surrounding conditions under which the locomotive is required to operate.

There were some questions of general interest in connection with stoker operation concerning which it was thought well to secure an expression from the roads using mechanical stokers. These questions were sent out to such roads and replies to this inquiry have been received from 32 roads; representing a total of 1777 of the stokers now in service. Inquiry was made relative to the kind and character of fuel used, and it is noticed that on all of the roads, bituminous fuel is used; the fuel reported varies in heat units from 9,212 to 14,250 btu.

In answer to the inquiry as to whether the same size exhaust nozzles are used on stoker-fired locomotives as on hand-fired locomotives, it seems that the general practice is to use the same size exhaust nozzle, although a few roads vary from this general practice. Three roads report smaller nozzles on the stoker-fired locomotives, ranging from ⅛ to ¼ in. smaller in diameter. Two roads report that they are using nozzles from ⅛ to ¼ in. larger in diameter than are employed on their hand-fired locomotives.

The consensus of opinion is that the stoker-fired locomotives burn more fuel than the hand-fired. Where percentages of difference have been expressed they range from [illegible] to 41% in favor of hand-firing. This difference, however, is expressed in terms of coal as fired and does not recognize the advantages that have been gained by improvement in the performance of the locomotive resulting in uniform steam pressure and more active and uniform performance over the division. These increases in fuel consumption may, in some instances, be considered as the price of firing locomotives of capacity beyond the range of successful hand-firing.

In referring to the continuous performance of stokers over a division, the record indicates that in the majority of cases the stokers are doing about 100% of the firing of the locomotive.

The failures occurring on the stoker equipment are the same old offenders and are classified as "failure of stoker parts," "foreign matter in fuel" and "wet coal." The record tabulated from the information received as to the percentage of failures that may be classified under these three headings is quite interesting in the variety it presented. On some roads the highest percentage of failures is due to broken stoker parts; on others, foreign matter in the fuel seems o be the chief offender, while on others the question of wet coal is apparently causing the most concern and delays to stoker-fired locomotives.

An effort was made to obtain information relative to the cost of stoker maintenance upon a 1000-mile basis. It develops that very few roads keep such a record, and those that have reported on this item, when grouped together, show a very wide range of costs. One road with 92 stokers in service reports a cost of $1.77 per 1000 miles, while another with 54 stokers in service shows a cost of $40 per 1000 miles. These are the maximum and minimum cost figures presented, and indicate the extent of the variation in cost, and if closely analyzed it would, no doubt, be found that local conditions were possibly largely responsible for the variation.

In the circular sent to the users of mechanical stokers, suggestions relating to features of mechanical stokers to which attention should be directed by the manufacturers were solicited, and for the benefit of the manufacturers it might be well to incorporate some of these suggestions in this record.

A simpler and more accessible lubricating system has been suggested by several roads. Provision for the better handling of wet coal comes as a suggestion from roads that are experiencing trouble in this respect. Recommendations for more accessible conveyor screws are presented, which might be considered in conjunction with one road which suggests that the stoker be constructed so that it will be less susceptible to failure when foreign material gets into the stoker mechanism with the coal. Provision for overcoming the loss of fuel from the conveyor system may well be considered by the manufacturers as this feature has been suggested as a stoker deficiency. Improvement in the arrangement for the positive adjustments of conveyor adjusting plates is recommended, and it has also been suggested that consideration be given to the design of a system of conveyance of the fuel from the tender to the fire box that will provide against puverizing the fuel in conveyance. Better protection from dust for the bearings and gears of the stokers is referred to as desirable.

In the 1917 report, additional reference was made to the Elvin stoker then undergoing development on the Erie Rd. This stoker has passed through its experimental stage and it is understood that it is now in condition to be presented as a commercial proposition. Your committee has learned from reliable sources that the Elvin stoker now in operation on the Erie Rd., is giving very satisfactory service, and that it embodies several individual features which may mean greater economy in mechanical firing. The opinion has been expressed by disinterested parties who have come in contact with this type of stoker and have seen it in operation that, while it may not have reached its final stage of development, there are, nevertheless, marked possibilities in a stoker of this type.

Your committee wishes to recognize the unceasing efforts and activity of the stoker manufacturers in the development of their respective devices, and is of the opinion that with continued effort in the light of service experience, a more perfect stoker may be developed in which objectionable features, such as those outlined, will have been eliminated.

Report of Committee on Tank Cars.

An American Railroad Association mechanical section committee, A. W. Gibbs, Chief Mechanical Engineer, Pennsylvania Rd., chairman, reported in part, as follows: With the war came the necessity for the transportation of various products, among them toxic liquids for filling shells, not previously handled in tank cars. Your committee has given considerable time to the development of designs of cars for this purpose, principally in connection with the U.S. Ordnance Dept., engineering division. Some of the toxic liquids had low rates of expansion, so that the question of pressure was not material, the one important requirement being that leakage must not occur. The class III car was adapted to this service by the modification of certain details, such as omitting all opening s in the shell, making the dome capacity about 1%, special arrangement for closing the dome, openings, etc. Another demand was for tank cars for carrying compressed liquefied gases, notably chlorine. The specification for class V cars, with welded tanks, adopted by the association in 1917, with some modifications of details, met the situation very well.

Some difficulties were experienced in welding anchorages to the tanks. This was remedied by avoiding the use of anchorages having great length of welded contact with the shell.

While a design of safety valve was approved for use with a number of these cars, which it was important to get into service, there were some features of the valve which were not entirely satisfactory, and study of the question, in connection with the representatives of the Ordnance Dept., continued up to the time of the armistice, and has since been carried on by the committee.

The seams of these tanks were hammer welded throughout, using water gas as the heating medium. With steel of a proper quality there seems to be no difficulty in securing thoroughly sound welds and containers which are bottle tight.

Your committee is glad to report that the American Society for Testing Materials has prepared a specification for plates for forge welding, which meets the views of those engaged in producing welded containers. If this specification is adopted by the A.S.T.M. this year, your committee recommends that it be substituted for the specification of the A.S.T.M. for boiler plate steel, fire box quality, now prescribed by the tank car specification for tanks of class V cars. To insure getting satisfactory material under this latter specification it has been necessary for the users to make certain restrictions within its limits.

As stated in the committee's report last year, the necessity of keeping in service every car capable of safely handling liquid products made it advisable to suspend until July 1, 1919, the requirement of flange quality steel for class III tanks, and until Jan. 1, 1920, the hydraulic retests of tanks of classes I, II, II, IV and V cars, which in normal times are necessary from both the safety and economic standpoints. As the conditions which led to these suspensions have passed, your committee has recommended to the executive committee that no further extensions of these requirements be granted and that circulars be issued to inform all interested accordingly.

Safety Valves.—Owing to the pressure of other more important matters, the committee has been able to make but little progress during the past year with the experimental work in connection with the safety valve. For use in connection with these tests better springs than are ordinarily used in these valves have been purchased, but even these do not entirely comply with the specifications. It is very evident that for certain products it will be necessary to provide a safety valve in which corrosion is guarded against by the use of non-corrosive material in both the housing seat and the bearing face of the valve proper. It is, of course, desirable that the quantity of non-corrosive metal used shall be as small as possible, to lessen the probability of its being stolen. The committee has made some experiments in electrically welding the non-corrosive metal to the iron parts, but the results so far have not been satisfactory. Further work will be done in this direction. It is not certain that an absolutely tight valve can be secured which will at the same time retain the valuable feature of the present design, viz., very free discharge in case of necessity. A considerable amount of information has been accumulated concerning the behavior of safety valves under pressure, and the committee hopes to be able to push the work to a conclusion during the coming year.

Certain changes are recommended in the safety valve collar, bottom discharge valve, rivetting, calking, hand brake power, application of running boards on tanks covered with jackets, application of dome platform brackets to tank cars covered with jackets, inspection, boards for attaching placards prescribed by the Interstate Commerce Commission, method of testing safety valve in place on the car, transportation requirements and draft attachments.

U.S. Railroad Administration Tank Cars.—On Feb. 7, 1919, the secretary, by direction of the executive committee, referred to the tank car committee the suggestion that they go over the plans and specifications for the U.S. Railroad Administration tank cars (oil cars, 7,000, 8,000 and 10,000 gal. capacity, and acid cars of same capacities), and consider the advisability of adopting them as standards of the M.C.B.A., report to be made at the coming June convention. This involves two questions: 1. As to the wisdom of adopting any particular tank car designs as M.C.B. standards? 2. Whether from all standpoints the government tank car designs meet the requirements of the tank car traffic better than others now being followed? In deciding these questions the interests of the railways, the tank car owners, and the car builders must be properly considered.

Your committee believes that as long as the requirements of the M.C.B. standard specifications covering the essential features of tank car construction are complied with, it would be unwise to restrict the builders and users to certain standard designs, as the many commodities of widely different characteristics, weights and values transported in such cars require for their safe and economic handling various modifications in detail design. The Railroad Administration designs were prepared to meet the M.C.B. specifications, and your committee passed them in conference with the Railroad Administration mechanical people. The tank car equipment of the country, in which the railway ownership is comparatively small, must also be assumed to comply with the M.C.B. requirements, as it is moving in interchange. Specifications and prints have been furnished by the Railroad Administration for its cars, but the time available is entirely too short to permit the proper comparision and consideration of them and of the plans and specifications for other designs which must be gone over to answer the second question.

Fuel Economy and Smoke Prevention.

An American Railroad Association's mechanical section committee, W. Schlafge, General Mechanical Superintendent, Erie Rd., chairman, and of which W. H. Flynn, Superintendent Motive Power, Michigan Central Rd., formerly Master Mechanic, Canada Southern Division, Michigan Central Rd., was a member, reported as follows: Your committee was originally constituted in 1913, during a period when organized effort for the promotion of economy in the use of fuel for locomotive purposes was in its inception. The committee has heretofore aimed to deal with the methods of firing and the means to be adopted for developing the required supervision, rather than with the multitude of details in design and maintenance which, while important in themselves, are subjects that more properly fall within the scope of other committee assignments. However, the situation immediately preceding the report of 1918 was so extraordinary and the need for economy so pressing, that a departure was made from the earlier policy and some consideration given the more general features attending the purchase, transportation and use of railway fuel. The problem was not so much one of cost as of supply and the shortage made economy a patriotic, if not a humanitarian, duty. This situation has been practically relieved so that now the importance of the subject arises from its influence upon operating expenses which have reached a point where they are absorbing the gross rail revenues for many roads.

There has been a steady increase in the total fuel cost to the railways, chiefly caused by two factors—increased cost of production and increased consumption due to the natural expansion of traffic. The accompanying curve no. 1 exhibits the trend of total cost for the past 19 years for which there are available figures. Comparison with curve 2 shows that while the trend of prices at the mines has been steadily upward, the increased total cost is chiefly due to increased consumption. The increase was reasonably uniform for the 10 year period ended with 1919 and subsequently it was more gradual. On a basis of the general trend of increase for the previous few years, a reasonable estimate of cost would have placed the total for 1917 at about $265,000,000, but owing to the circumstances arising through the war, the influence of winter traffic conditions and the scale of mine prices established, the total actually amounted to the stupendous sum of $401,297,300, an increase of 55.9% over the preceding year. In this connection it is significant to note that in 1917 the cost of fuel for yard locomotives alone represented 88% of the total for all locomotives in 1899. The official statistics for 1918 will undoubtedly disclose a total even greater, although there will be a substantial decrease in 1919 due to the greatly reduced tonnage handled and to the influence of a generally organized effort to promote economies in every possible manner. But the total will still be a vast sum, and since it represents approximately 14% of the total operating expense it has assumed a greater importance than ever.

In view of the situation thus briefly presented, your committee is of opinion that its report for this year may be profitably devoted to some consideration of the application of its previous recommendations and to methods for economy in the use of fuel for other than locomotive purposes. In its presentation of these subjects the committee considers itself fortunate in having the advice and counsel of the Fuel Conservation Section of the U.S. Railroad Administration which has had an opportunity not enjoyed by any other agency to judge the benefits of organized measures for locomotive fuel economy. Moreover, the defects of earlier methods have been disclosed and the necessity for general coordinated effort emphasized.

In one of its earlier reports your committee provoked some criticism because of its suggestion that railway fuel should be purchased to specification, but the past few years have furnished convincing evidence that this procedure is highly important if reasonable economies are to be effected. The advantage lies not so much in the purchase of fuel having the high b.t.u. values as in the opportunity for selecting coal that can be economically burned under the peculiar conditions prevailing in locomotive service. A specification which limits the percentage of easily removable non-combustibles produces economies in fuel, labor and transportation and involves

[illegible]

[illegible] reasing coal consumption [illegible] growing importance [illegible] indispensable factor [illegible] prompts your committee to say that in its opinion action should be taken at no distant date to determine the most favorable conditions under which economical combustion may be obtained with various grades of fuel so that plant design and equipment may [illegible] to utilize available supplies to the best advantage. Such an investigation would naturally include the difficult and varied circumstances attending locomotive service.

In the committee's opinion public interest will ultimately require the exercise of reasonable efficiency in the use of fuel, which prompts a brief consideration of the conditions of purchase. Specifications should include the characteristics of the available supply with particular reference to the percentage of ash content, to its clinker forming qualities, and to its liability to spontaneous combustion. The size demanded for best results is also important and should be specified by the road supervision which should be familiar with requirements for the most satisfactory combustion conditions. It should be observed also that where these conditions cannot be obtained with one grade of coal, analysis will frequently develop that a suitable mixture may be secured with another grade. As is well known, the character of the ash content exercises a great influence upon the combustion conditions, since, under certain circumstances, the free burning of the combustible material is prevented and clinker forms over the grate surface, thus interfering with combustion by cutting off the air supply and not infrequently preventing proper operation of the grates to keep the fuel bed open.

There is also a common source of waste through clinkering coal, especially on long divisions where it is often the practice to clean fires between terminals, resulting in the usual cinder pit and accompanying losses, including those involved in handling and disposing of the ash. The ash constituents producing these conditions are not only visible and mechanically separable, but may be intimately mixed with the combustible elements and, therefore, disclosed only by chemical analysis.

[illegible] has been made to the importance of properly grading the sizes of coal to ensure the greatest efficiency. It is [illegible] that existing locomotive [illegible]ing conditions prohibit the use of slack, but not that different grades of lump coal have different evaporation values. This has recently been [illegible]ated at the University of Illinois [illegible] modern mikado [illegible]motive, the results of which are indicated [illegible]

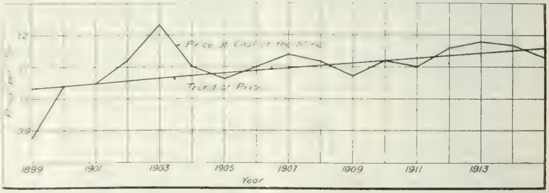
[illegible] Evaporation Per Lb. Dry Coal.

[illegible] coal.	[illegible] tests.	[illegible] tests.
[illegible]	10.21	9.09
[illegible]	10.12	8.66
[illegible]	[illegible]	8.32
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	7.13
[illegible]	[illegible]	7.06

It should be said concerning these results that they are probably not generally [illegible] they were made [illegible] from a single mine with [illegible] it is not impossible that other coals with a locomotive [illegible], grate, fire box [illegible] might develop a different ratio, but the figures are useful in demonstrating the importance of the subject and emphasizing the necessity for ascertaining the conditions applicable to the different coals on each railway.

The foregoing observations are made for the purpose of emphasizing recommendations of your committee made in earlier reports concerning the desirability of creating an organized fuel department which should embrace the services of a chemist and an inspection corps whose attention could be devoted to those problems involving research and experiment and whose co-operation with the purchasing department would ensure selection of those coals promising the greatest service value. Where the purchases are relatively small, a joint arrangement might be effected whereby the cost of this work could be distributed among several consumers. It is believed that the U.S. Fuel Administration and Fuel Conservation Sections have fully demonstrated the advantages of systematic inspection and analysis and a reasonable exercise of control over the supply. The benefits which have thus been received should be made permanent.

It may be well to briefly describe a system in effect for some time on a large railway which has proved satisfactory and which has resulted in co-ordinating the various agencies responsible for the purchase and use of fuel. A chart of the organization appears herewith and its functions are briefly described as follows: The chemist and coal inspectors report to a staff officer of the mechanical department who is responsible for co-ordinating the laboratory and inspection work with that of the road supervision and the purchasing department. In this manner a proper analysis of the varying conditions is ensured and a check maintained upon shop maintenance and upon fuel distribution by the operating department.



Curve 2, Price of Coal at the Mine, Showing Upward Trend.

Whenever purchase from a new mine is proposed analysis is made of a representative mine sample taken in accordance with the method outlined by the interior department in its "Directions for the Sampling of Coal for Shipment or Delivery." From this analysis the general availability of the coal is determined and, if satisfactory, road tests are conducted with the first consignments to determine the service characteristics. As a rule the chemical analysis and physical inspection at the mine are sufficient to justify conclusions, but final acceptance requires favorable report by the road supervision. Following regular shipments, samples from cars at destination are taken from time to time in conformity with the method recommended in the publication mentioned. These analyses are compared with that of the original mine sample in order to determine whether the quality remains uniform and to see that the characteristics do not change. The inspector taking these samples effects contact between the road supervision and headquarters, interviews road supervision, investigates locomotive failures caused by poor coal, to ensure observance of the schedule provisions and to see that the quality of shipments is up to the standard; he checks manifests to ensure proper distribution, and the coal dock records to see that the right grade of fuel is used for the specified service. The other field inspectors are assigned to specific territories and live at a point central to them so that the necessity for travel is minimized.

The duties of the field inspection force comprise not only the preparation and sizing at the mines, but should include all features affecting efficiency, cost of transportation and handling, such as inspection of the empty cars for foreign matter, particularly sandstone, cinders, gravel and similar materials likely to be mixed with the coal and dumped into the pockets. Experience has demonstrated that a quarter of a ton of such refuse is frequently found in empty cars consigned to the mines. The inspection should also cover defects in equipment, such as warped doors, operating mechanism in bad order and all conditions affecting the loading, unloading or loss of lading in transit frequently overlooked in routine car inspection. Another feature of importance is the distribution of equipment to suit unloading conditions. Large losses are incurred in consigning flat bottom cars or cars with flat bottoms having hoppers to points where shipments may be handled in self-unloading cars. The cost of unloading is now a large item and it constitutes a part of the total fuel charge. The field inspection force should be required to maintain a check upon these details and upon the scale and manifest weights to detect discrepancies, and to ensure loading of equipment to the prescribed limit.

If the information collected by the inspection force is to be of value, it must be promptly transmitted to headquarters, consequently, a daily report should be required covering all the features of inspection, so that prompt steps may be taken in connection with any conditions requiring correction. One of the inspectors, designated chief, is held responsible for the work of the others and is expected to be informed on the technical features of the work so that the department will be assuerd of information concerning developments in the entire field of investigation concerning fuels, combustion and other related subjects. Such an organization requires a high order of ability, but the cost involved is readily justified in view of the possibilities for economy presented. While varying circumstances will affect the number of men required in such a force, it is believed that, in general, a thoroughly satisfactory inspection service for a large railway should involve an expense not exceeding 0.1% of the fuel cost.

The problem involved in the inspection, distribution and utilization of fuel is one in which each division of the operating department has some responsibility, and it is, therefore, advisable that the chief operating official should be fully informed as to the requirements, procedures and accomplishments of this branch of the organization. In the opinion of some recognized authorities, notably the Chief of the Fuel Conservation Section, the head of the fuel department should report direct to the chief operating official, but, in view of the wide divergence of opinion on the subject, your committee is not yet prepared to make such a recommendation, because it is thought that co-operation between the various operating branches will produce the required results, especially since fuel is now the second largest item of operating expense and, therefore, of prime importance to the transportation department.

The limitations upon a report of this kind and the subjects remaining for consideration do not permit further discussion of the features of inspection and we will now consider the second subject which relates to the locomotive and the influence of maintenance upon fuel consumption. Various publications have recently pointed out, graphically and otherwise, the sources of heat losses in locomotive service, and these are doubtless well understood, but since a knowledge of the nature of these losses is essential to a proper appreciation of the possibilities for economy, it is desirable that brief reference be made to the avenues through which heat is wastefully dissipated, which are as follows: 1. Steam leaks in fire box, superheater, front end or to the atmosphere. 2. Grate, cinder pit and stack losses. 3. Escaping steam through safety valves, unnecessary operation of auxiliaries, such as headlight generator, air pump, etc. 4. Unconsumed volatile usually denoted by excessive smoke. 5. Heat losses in escaping gases. 6. Radiation. These items are largely influenced by factors independent of operation and maintenance, but it is with the latter that we are now chiefly concerned and to which attention is directed.

Recent observation, confirmed by the Fuel Conservation Section, indicates that steam leaks are not receiving the attention demanded by the extent of losses involved or the inefficiency of operation produced. One remedy for this situation lies in a proper inspection of locomotives while under steam in advance of each boiler wash. This inspection to be followed by a check inspection after the locomotive is ready for service. This practice would ensure reasonable freedom from leaks because excessive leakage rarely develops in the intervals between two boiler wash periods.

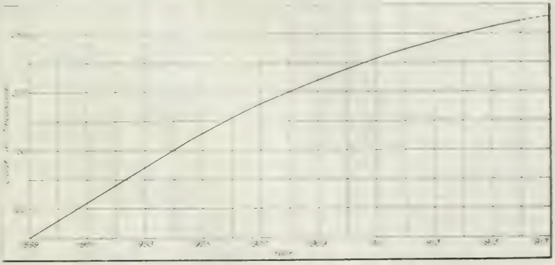
Large losses are sustained through faulty superheater maintenance. Pressure tests should be regularly applied to superheater units and steam pipe joints in order that defects may be located and corrected. Recent inspection on one railway developed that out of 15 locomotives in service, 11 had leaking superheater joints involving loss of fuel and locomotive efficiency. This condition can virtually be eliminated through the observance of standard methods for the maintenance of units. This should include proper assembly, with the required bands and supports in the tubes. Observation on several railways shows that this feature is being neglected, with the result that vibration opens the header joints, causing bad leaks in the smoke box and, frequently, costly damage to adjacent parts.

Faulty combustion, represented by unconsumed hydrocarbons and high combustible in the ash, is most frequently occasioned by improper air supply. For a given furnace and fuel, the excess air is fixed within comparatively small limits. An increase in the air supply reduces efficiency, because of the loss in heating the excess, while on the other hand, a decrease below the required percentage produces less complete combustion. Coals having low percentages of volatile matter require less excess air for nearly complete combustion than those having higher percentages of volatile. This not infrequently accounts for better results with one grade of fuel than with another.

In locomotive service the air supply is controlled by front end, flue, grate and ash pan conditions, which often do not receive proper attention from the designers. Many modern locomotives have grates with insufficient air-inlet openings, or with openings that readily become clogged, thus increasing the resistance to air flow. Attempts are frequently made to overcome this condition by adjusting front ends or reducing the diameter of the exhaust nozzle.

Radiation losses have heretofore received little attention from writers on locomotive fuel economy, and even less from those responsible for locomotive design and maintenance, as a casual inspection of any locomotive will disclose. It is estimated that the radiation from each square foot of surface carrying 200-lb. pressure and surrounded by atmosphere at 70 deg. F. temp. wastes 1000 lb. of coal a year. This loss increases rapidly with decreasing temperatures, certain weather conditions and rapid circulation produced by moving locomotives. The average locomotive has approximately 100 sq. ft. of such exposed boiler and pipe surface, easily representing an annual loss of $150 to $200. This can be substantially reduced if cylinder heads, steam pipes and fire box surfaces are properly insulated and for this purpose it is recommended that magnesia-asbestos or hair felt be used and that it be not less than 1½ in. in thickness except for small pipes where ¾ in. is sufficient. Fire boxes may be covered by removable sections where access to staybolts is required. These practices, once somewhat general, have been neglected because of the maintenance problems introduced with modern power.

A common source of loss of power and combustion efficiency arises from frequent unnecessary changes in [illegible] or adjustment of front end appliances. Standards suited to local conditions for each class of locomotive should be determined and maintained, and periodically checked by the inspection force. The common practice with respect to a poor steaming locomotive, for which the cause is not readily discernible, is to alter some of the front end details, whereas, proper investigation usually discloses a leak in some of the joints, frequently between the front and the ring, or around the outside steam pipe joints. As an over-drafted locomotive produces air, spark and back pressure losses, the importance of maintaining standard front end details may be understood.



Curve 1, Total Cost of Locomotive Fuel for the Last 19 Years.

Many of the older locomotives are still equipped with ash pans having insufficient air openings, a defect readily detected with a U tube draft gauge. There should be no indication of vacuum in the ash pan. Correction of this condition recently permitted an increase of ½ in. in the nozzle diameter of several locomotives and not only effected a substantial saving in fuel, but greatly increased the efficiency of the locomotives.

It is highly important that the flues and tubes be free from obstructions, which not only interfere with the air supply to the fire box, but reduce tube evaporating efficiency and superheater economy. The Fuel Conservation Section has recently pointed out that the fuel loss through drop in super heat with half the tubes stopped up may reach 24%. In order that thorough and efficient cleaning may be assured, standard apparatus and methods should be established and suitable records maintained. The maximum interval in mileage or time between cleanings, consistent with the requirements for different classes of power and service, should be determined, and flues thoroughly cleaned within these limits. Periodical checks by the supervising officers are required, to ensure proper work and continuous records.

In its last report your committee briefly covered these features of maintenance that contribute largely to power and fuel losses, but the work of the Fuel Conservation Section has demonstrated that two other appliances are exerting an appreciable influence upon locomotive fuel losses—the power reverse gear and the pneumatic sander. There are some power reverse gears in use that, not being positive, permit "creeping" while the locomotive is in operation, thus increasing the cut off and decreasing efficiency. It is recommended that all such gears be modified, so as to permanently [illegible] that particular attention be paid to the maintenance of valves and packing to ensure proper operating conditions.

The losses occasioned by poor sand and defective or inoperative sanding appliances, are greater than commonly supposed and arise chiefly through failure at critical points, necessitating stopping, taking slack and doubling hills. Your committee recommends the adoption of suitable specifications governing the purchase of locomotive sand which, by establishing reasonable limits for silicon content, will ensure a suitable quality. Then, to make the material effective, the sand pipes should be firmly held over the rail by substantial clamps not less than [illegible] x 2 in. section, attached to the [illegible] lower end of the pipes. With the adoption of these provisions the prescribed daily or trip inspections should ensure the desired sanding efficiency.

Previous discussion has been confined to the influence of the locomotive and its details of construction, maintenance and operation upon fuel consumption, but it may be well to mention the fact that car equipment also exerts a large influence upon the problem. While any defect contributing to increased resistance produces a corresponding increase in the fuel required, perhaps the most general features are defective brakes and air leakage caused by defective hose and gaskets. The leakage limits for freight trains established by many railways should be generally adopted and consistently maintained. Your committee recommends that they be given official recognition and incorporated in the air brake rules now the standard practice of the section.

While the opportunity for the greatest savings occurs on the road, there is an aggregate annual loss now amounting to millions arising from locomotive fuel consumption that is occasioned through the limitations imposed by service conditions. The fact is that irregular demands upon the locomotive render side track and terminal economies of the utmost importance. A large part of the terminal losses arises from maintaining locomotives under steam when not required for early service, and from unnecessary cleaning or removal of fires. Where locomotives are not likely to be required for service within 20 hours, as frequently occurs on Sundays or holidays, or under special conditions arising from variations in operation incident to reduced business, fires should be drawn. Under all circumstances grates and stacks should be covered to prevent the cooling effect of air circulation through the [illegible] and flues. This suggests the frequent waste observed through faulty methods of firing up, resulting in the loss of green coal through the grates, either because they are defective or the openings are large enough to permit the green coal to fall through. Observations of recently prevailing methods disclose that enough coal is frequently wasted in this manner to haul 1,000 tons [illegible] on the average railway. Grates should be covered with shavings, or wood, before coal is applied, which will not only eliminate the loss mentioned, but reduce the quantity of coal otherwise required in building fires.

Side track losses arise from excessive draft, which should be regulated by means of the fire door. Another factor in this connection is the influence of the superheater damper, which is frequently tied open, a practice that should be discouraged, because of its influence upon maintenance as well as upon fuel consumption.

Cinder pit operation offers much greater opportunity for fuel economy than is generally recognized. Recent investigation developed that the combustible content of locomotive cinders at certain terminals averaged 35% by weight. In other words, every car of cinders contained more than a third of a car of coal. It is at present impossible to avoid large losses here, but they may be minimized through co-operation of locomotive men, firemen, hostlers and ash-pit foremen, by careful firing before locomotives reach the pit and avoiding the application of green coal immediately before fires are cleaned.

This suggests the service that competent supervision may render on the ash pit in cleaning fires promptly, moving locomotives as soon as ready, in careful cleaning of fires to properly remove ash and clinker without waste of fuel, in preventing the excessive use of air pump and steam blower and in maintaining co-operation with the locomotive house in order that no fire shall be dumped unnecessarily and no fire cleaned that will require subsequent dumping. The ash pit foreman should be provided with a copy of the monthly boiler list and see that fires are dumped as the locomotives pass over the pit.

Fuel Organization for a Trunk Line Railway.

The coal pocket foreman should be furnished with a schedule of coal required by locomotives in each class of service, and should be charged with the responsibility for observance of the schedule. The Fuel Conservation Section estimates that at least 100,000 tons of coal, unnecessarily carried on locomotive tenders, is being transported 100 miles every day, at a total expense for fuel alone equivalent to 1,000 tons a day. The schedule should also indicate the kind of coal required for different classes of locomotives and assignments, so that the better grades may be employed in the heaviest service.

The extent of the possible terminal losses suggests the desirability of an accounting system that will distinguish between the fuel consumption of locomotives in the hands of the mechanical and the transportation departments. Such records would readily disclose uneconomical practices and permit their prompt correction. The road performance should be compared with predetermined figures based on an estimate and trial under average conditions.

While the responsibility for fuel conservation rests in a large measure upon the mechanical department, there are features of operation affecting the problem that are under the immediate control of associated departments, whose interest is essential to many economies that are possible only through improved efficiency in daily routine. This includes prompt dispatching of locomotives and trains, proper adjustment of tonnage, proper make-up of trains, prompt completion of station work and elimination of delays in the movement of ash pit and coal cars.

Maintenance of way and signal department officers can also render effective service, in the cause of fuel economy, by eliminating, as far as possible, the necessity for stopping or reducing the speed of trains because of prolonged slow orders, the unnecessarily prolonged display of caution flags or inoperative signals. This department is also directly responsible for lighting and pumping-plant operation, and should eliminate fuel losses through radiation from exposed surfaces and the steam leaks that are frequently characteristic of these isolated plants.

Locomotive fuel constitutes about 88% of the total railway consumption, and, therefore, offers the greatest opportunity for conservation and economy, but the remaining 12% represents the very substantal sum of $45,000,000 on the 1918 basis, an amount approximating half the total fuel cost for locomotives 10 years ago. Of this total the largest percentage is represented by power plant consumption to which the remainder of the paper will be devoted.

Questions of relative economy in the purchase of power or its generation in privately owned plants are important, but do not fall within the scope of a paper which deals with the problems of operation rather than design, and consideration will, therefore, be given to those details susceptible of correction in existing plants.

The inefficiency in the ordinary railway stationary boiler plant arises from equipment, maintenance and operation. Large losses are frequently encountered because of insufficient or inefficient equipment. Investigation has developed frequent instances of low rates of evaporation in very inefficient plants, caused by an attempt to force boilers above their normal capacity. This is a frequent accompaniment of the discarded locomotive boiler, which is always uneconomical for stationary purposes. In one instance of recent occurrence, a locomotive boiler in stationary service, consuming 7 tons of coal a day, was replaced by a return tubular boiler which effected a saving of 3 tons a day under the same service conditions.

Many stationary boilers are not provided with dampers in the uptake, and yet draft regulation should be obtained with dampers and the draft should be obtained with dampers and the draft should be varied to suit the rate of combustion which is proportional to the load. Maximum efficiency is attained when the proper draft for given rates of combustion under given condition is established by suitable tests. Tests made indicate how an average saving of 9½%.

Feed water heaters are not economically employed and yet the conditions prevailing in practically all railway power plants will permit their use for 8 months in the year. When it is considered that under average conditions an increase of 11 deg. F. in the temperature of feed water effects a saving of about 1% in fuel consumption, the loss from free exhaust steam is plainly evident. There is no more immediate and effective means of economy than through feed-water heating.

One other prime factor is power plant economy lies in the disposition of exhaust steam other than for feed-water heating purposes. This feature would not be lost to view if the enginer portion of the plant were considered, the auxiliary, and mechanical power a by-product. The fact is that under average conditions the heat consumption of stationary engines does not exceed 15% of the total heat generated, the difference being represented by the heat of the exhaust. In practically all railway shops, therefore, the heating requirements should be satisfied with exhaust steam, and in large plants the condensate should be returned through a suitable vacuum system. The outside purchase of power and the use of high pressure steam for heating purposes is an unwarranted extravagance.

Experience has convinced your committee that the largest losses usually encountered in the operation of stationary boilers on railways are included under the following headings, which are enumerated in the order of frequency and importance: 1. Leaky settings and stack connections. 2. Poor firing. 3. Radiation from uncovered surfaces. 4. Dirty flues.

Leaky settings produce excess air in the combustion space, although this may arise from other causes. The importance of this common source of inefficiency will be understood from the fact that boiler efficiency falls off in almost direct proportion to the percentage of excess air, and this not infrequently produces a loss of 40%. Brickwork settings are sure to develop cracks in addition to which the porous character of the brick permits air infiltration. All exposed brick settings should at least receive a coat of a good plaster sealing compound—a ½-in. covering of magnesia-asbestos cement, followed by the sealing compound, is even better.

Frequent leaks are found around stack connections, plates, dampers and doors, all of which influence the draft and reduce boiler efficiency. These parts require occasional inspection to insure a high order of maintenance.

Poor firing includes too thick or too thin a fuel bed, accumulation of clinkers, too frequent shaking, uneven distribution, permitting holes to develop, improper manipulation or neglect of dampers and carelessness in fire cleaning. Correction of these faults is a matter of analysis, education and supervision. It should be observed, however, that the economies of the best equipment may be lost in poor boiler room practice.

Radiation losses are usually considerable and nearly always neglected. At 100-lb. steam pressure and 70 deg. atmospheric temperature, the loss in radiation amounts to 718 lb. of coal per sq. ft. of uninsulated surface per year. Is is, unfortunately, common practice to burden railway shop boiler plants with a multitude of accessories usually involving large heating loads. It is certainly economy to centralize steam production, but economical steam distribution is a matter too frequently left to the division plumber or the shop pipe foreman, who may be masters of the technique of their trade, but to whom lost b.t.u.'s are of no particular interest. The surest evidence of this statement lies in the appearance of bare ground in winter over the average buried steam pipe. And here it should be said that plain, unprotected, asbestos covering, on an underground steam pipe, may be expected to become a surface condenser of large capacity.

Your committee takes this occasion to recommend the adoption of specifications for pipe coverings suitable for superheater and saturated steam and hot water, and also for water-proof underground coverings for low pressure lines.

Clean flues and boilers are a matter of standard practice and organization. In plants having no engineer, the responsibility for cleaning flues and washing boilers at the prescribed intervals should be placed upon one of the firemen, and he should be followed up by the general supervision.

Auxiliaries are frequently neglected, especially in the smaller and older plants. Blowing rod packing, excessive water-pump slippage and leaking steam-pipe joints are all too commonly in evidence where it is unnecessary to maintain a suitable relation between input and output.

The losses outside the plant are also much greater than usually supposed, particularly in compressed air lines. It is estimated that the cost of air, compressed in a modern plant, approximates 10c for each 1,000 cu. ft. of free air used, and yet the waste in many plants is enormous. Reasonable economy requires that a periodical inspection of air losses shall be conducted and leaks in pipe lines, valves and hose promptly repaired. Once each week is not too frequent for inspection in the average shop.

Preparation of systematic records is essential to every well operated plant. The possibilities should be developed through suitable experiments, and standards once established should be checked with the daily operation. Such records should be made to correspond with the available equipment, and, for smaller plants, may be very simple. The results for a general division of a railway may be tabulated and a rating established which will stimulate competition. For this purpose plants having the same general facilities should be grouped by classes in order that the ratings may be comparable.

It should be said that stationary power-plant operation may be reduced to a reasonably exact basis and that best results are attaiend when the equipment is planned for the required service. Results may then be obtained upon a basis corresponding with reasonable exactness to a predetermined production cost, but the variables in the operation must be worked out to produce maximum economy for various rates of output. These are problems requiring skill and experience, and should be intrusted only to qualified engineers. Your committee repeats its recommendations of last year that mechanical stationary power plants be placed under the responsible supervision of one man, whose time on the larger systems can profitably be devoted to the problems and economies in steam generation and utilization.

Your committee recognizes that without any attempt at research or experiment, it has been necessary to sacrifice originality of subject matter. But if many of the things mentioned have long been familiar to mechanical department officers, perhaps their present existence is the best of reasons for their consideration at this time. It is reasonable to assume that neither the cost of mine production, nor that of transportation, will be appreciably lower in the immediate future, so that economy in consumption assumes an importance relatively greater than ever before. But, it may be asked what shall be done to realize the economies admittedly so necessary? The answer is that the first requisite is full knowledge as to the extent to which wasteful practices prevail which should be determined by careful survey. Remedial measures will frequently involve mechanical equipment requiring appropriations, but the chief problem is one of efficient operation and effective supervision. The results depend upon maintaining an enthusiastic interest on the part of those responsible for the use of fuel and the elimination of wasteful practices. And the interest and enthusiasm must begin at the top and permeate the entire operating organization if the maximum efficiency is to be attained. The great difficulty, on a railway lies in the tendency to relaxed effort, because of the routine involved, but this is a subject demanding sustained and interested support from the chief operating officer to the fireman and the locomotive house man.

Train Brake and Signal Equipment Committee's Report.

An American Railroad Association's mechanical section committee, T. L. Burton, Consulting Air Brake Engineer, New York Central Rd., chairman, reported in part as follows: The question of air brake maintenance was discussed at a committee meeting in Nov., 1918, the findings of the committee being embodied in a circular on the subject, which was approved by the U.S. Railroad Administration.

It is suggested that the recommended practice packing ring gauge be made a standard, with tolerance dimensions provided for in the gauge, and the specifications to include instructions as to its use.

The practice of taking the cylinder piston and packing leather, when removed, to a conveniently located shop, where the leather is cleaned by a specially assigned man, and tested on the test rack, should be extended and made standard practice. With this in view, the committee has prepared drawings on suitable test racks and their use. While considering the new [illegible] [illegible] has [illegible] as superior to the older types, it does not consider it so much as to recommend that older types be [illegible].

It is recommended that when brake cylinders and triple valves are cleaned, they be stencilled on one side in two lines, one showing the place, month, date and year of cleaning, the other line showing the road on which the work was performed.

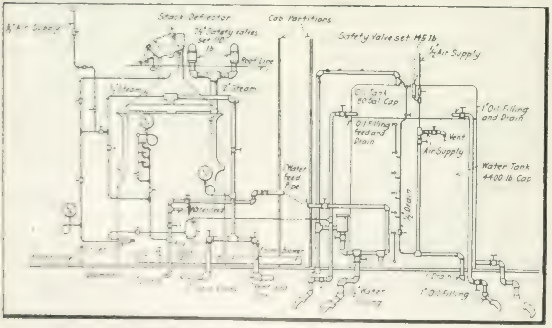
In connection with retaining valves for freight cars, a large number of different types and capacities are required to make proper repairs to foreign cars. The recommendation is made that two pressure spring type retaining valves of such capacity as may be required by individual roads, be used, leaving the question of standard capacity open for further consideration.

Detailed recommendations for recommended and standard practice are embodied covering the foregoing points.

Design, Maintenance and Operation of Electric Rolling Stock on Heating of Passenger Trains Drawn by Electric Locomotives.

At American Railroad Association's [illegible] section committee, C. H. Quereau, Superintendent, Electrical Equipment, New York Central Rd., chairman, submitted a report of which the following is an abstract.

Successful electric operation of through passenger trains over the usual steam railway division, or for any distance approximating this, would be impracticable unless the locomotive can furnish sufficient steam to satisfactorily heat the train. A study of the problem was commenced in 1902, and from that time until 1912, there were 9 designs of boilers built and tested, 4 of them using electricity as the source of heat, and 5 using fuel oil. The electric boilers did not prove satisfactory, while the oil-fired type has been finally developed to a point where it is quite generally accepted.



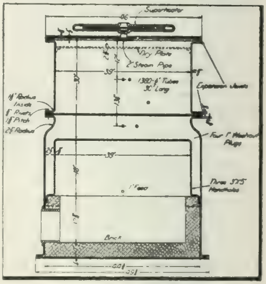
Assembled Installation of Oil Fired Heating Equipment.

The type of oil fired boiler shown in the accompanying illustrations was that finally adopted as giving the most satisfactory results. It was designed in 1912 and applied to 29 locomotives. They have [illegible] sq. ft. of heating surface, with a working pressure of 110 lb., and a capacity of [illegible] lb. of steam per hour. Though based on previous designs, there were several radical changes, the most important being the use of a water leg [illegible], increasing the [illegible] between the [illegible] to [illegible] in.; the substitution of a forced draft in the fire box with a closed door for the natural draft used previously; and the use of [illegible] of the bellows type in the boiler shell. Complete with oil and water storage tanks and piping, but without fuel oil or water, the heater equipment weighs 5,850 lb., and occupies a circular floor space less than 5 ft. in diameter for the boiler, and about the same for the storage tanks. Under service conditions, these boilers evaporate over 5 lb. of water per sq. ft. of heating surface, and over 6 lb. of water per lb. of oil, though in carefully conducted tests, the evaporation per lb. of oil has frequently been over 10 lb.

When using eastern fuel oil, which has a paraffine base, or kerosene, the lower section of the burner, which carries the steam or air for atomizing the oil, projects beyond the oil orifice, forming a lip or shelf on which the excess oil may flow and still be atomized. Where it is more economical to use the heavy western oils, having an asphalt base, it has been found necessary to leave off the lip, because of the liability of oil accumulating at that point and interfering with the steam jet. Only when the boiler is started is air from the main reservoir turned into the stack blower to insure a draft, and on to the burner to atomize the fuel oil. When the steam pressure approximates [illegible]0 lb., a 3-way cock substitutes steam for air. It only requires 10 min. from starting the fire to develop 110 lb. steam.

There is a superheater in connection with the boilers, as shown, and it is possible to obtain any reasonable degree of superheat. Good practice indicates that about 15 degs. is desirable, as a high superheat damages the steam hose and gaskets. Tests show that when the steam is somewhat superheated, it requires less steam per car per hour to satisfactorily heat it.

The type of boiler illustrated is standard for the New York Central Rd. electric passenger equipment, where the capacity is rated at 2,200 lb. of steam an hour; on the Chicago, Milwaukee and St. Paul Rd., where it is rated at 2,600 lb. of steam an hour; on the New York, New Haven and Hartford Rd., where the maximum capacity is given at 2,700 lb., and an average of 2,200 lb. an hour. It has been adopted for the Canadian Northern Ry's. electrified zone, where the heating plant is installed in a separate car, or trailer, instead of on the locomotive. Each of the railways reports satisfactory results from these boilers. In each case, the cars are heated from a steam header at terminals before the locomotives are attached, or are delivered, properly heated, by steam locomotives to the electric locomotives.



Cross Section of Oil-Fired Boiler.

The amount of steam necessary to satisfactorily heat and the car depends on a number of governing factors, such as outside temperature, wind, size of car, etc., but it would appear that for the average modern car, with outside temperatures between 20 and 30 degs. F., each car takes about 200 lb. of steam an hour, and with outside temperature of 0 deg. F., the consumption of steam per car approximates 225 to 250 lb.

Considering the extra plant required for electric heating, it was estimated a few years ago that with a 35-locomotive installation, electrically generated steam would cost about $45,000 a year more than oil generated, not including fixed charges in the cost of current. If fixed charges are included, there would be a saving of over $100,000 a year in favor of oil as a source of heat.

English Valley and Hudson Bay Ry.—In connection with the application of the company, for which H. A. Stewart, Toronto, is solicitor, to the Dominion Parliament for an extension of time for the construction of a railway from near Brereton, Man., station, on the National Transcontinental Ry. from Moncton, N.B., to the English River, Ont., between the eastern boundary of Manitoba, and the 9th meridian of longitude, the House of Commons railway committee reported that the granting of the extension would not be in the public interest. The House of Commons adopted the report on June 10, and directed that the fees paid, less cost of printing and translation, be returned.

Other Master Car Builders' Reports.

In addition to the various committee reports given in full, or in abstract, in this issue, the following committees also submitted reports:

Revision of Passenger Car Rules of Interchange—A committee of which H. H. Harvey, General Car Foreman, Chicago, Burlington and Quincy Rd., was chairman, and of which C. J. Forrester, General Car Inspector, G.T.R., was a member, recommended certain additions, changes and omissions in existing rules.

Specifications and Tests for Materials (M.C.B.)—A committee of which F. M. Waring, Engineer of Tests, Pennsylvania Rd., was chairman, recommended a number of changes in existing M.C.B. tests and specifications.

Standard Blocking for Cradles of Car Dumping Machines—A committee, of which J. McMullen, Mechanical Superintendent, Erie Rd., was chairman, found, by observation of the operation of the machines equipped with the present M.C.B. blocking, that cars receive more or less damage while passing through the machines. After experimenting in co-operation with the heads of various industries in the coal and ore districts, they have developed a blocking which they consider suitable for protecting cars. It consists of vertical posts covered with 3 in. horizontal planking, the latter so arranged that it does not interfere with the various projecting edges of the cars. A plan of the proposed blocking accompanies the report.

Loading Rules—A committee of which J. J. Burch, General Foreman Car Department, Norfolk and Western Ry., was chairman, recommended numerous changes in existing rules for loading. The principal part of the report is a complete set of instruction on the loading of automobiles, trucks and trailers.

Arbitration—A committee of which J. J. Hennessey, Assistant Master Car Builder, Chicago, Milwaukee and St. Paul Rd., was chairman, and of which J. Coleman, Superintendent Car Department, G.T.R., was a member, recommended a number of changes in existing practice.

Standards and Recommended Practice—A committee of which T. H. Goodnow, Superintendent Car Department, Chicago and North Western Rd., was chairman, recommended a number of changes in standards and recommended practice.

Other Master Mechanics' Reports.

In addition to the various committee reports given in full, or in abstract, in this issue, the following committees also presented reports:

Train Resistance and Tonnage Rating.—A committee of which O. P. Reese, Superintendent Motive Power, Pennsylvania Lines, was chairman, reported no new development.

Specifications and Test Materials (A.R.M.M.)—An American Railroad Association mechanical section committee, F. M. Waring, Engineer of Tests, Pennsylvania Rd., chairman, recommended changes in several existing specifications.

Standards and Recommended Practice—A committee, of which W. E. Dunham, General Superintedent Motive Power and Car Department, Chicago and North Western Rd., was chairman, recommended some changes in standards and recommended practice.

Officers and Committee for 1919-1920.

An American Railroad Association's mechanical section committee, F. W. Brazier, Superintendent Rolling Stock, New York Central Rd., chairman, and of which W. J. Robider, General Master Car Builder, C.P.R., was a member, reported as follows:

The present officers and general committee of the mechanical section of the American Railroad Association were elected at a joint meeting of the executive committees of the American Railway Master Mechanics' and Master Car Builders' Associations, held in New York, N.Y., Feb. 1, 1919, to serve tentatively until permanent officers and general committee could be regularly elected by members at the 1919 convention.

Sec. 5 (a) of the rules of order for this section provide that "it shall be the duty of the nominations committee to offer to the convention the name of one representative member as a candidate for chairman and one for vice chairman, and the names of 7 representative members as candidates for the general committee." As the present general committee is a tentative committee to serve only until this convention, your committee has nominated a chairman and 7 members for the general committee to serve for 2 years, and a vice chairman and 7 members of the general committee to serve for one year. This will provide that future nominations for the general committee can be made for the regular 2-year term in accordance with the rules.

In addition, F. McManamy, Assistant Director, Division of Operation, U.S. Railroad Administration, C. B. Young, Manager, Inspection and Tests Section, U.S. Railroad Adminstration, and F. F. Gaines, Chairman, Board of Railroad Wages and Working Conditions, U.S. Railroad Administration, are also members of the general committee representing the U.S. Railroad Administration. Your committee suggest the following:

To serve for two years—Chairman, W. J. Tollerton, General Mechanical Superintendent, Chicago, Rock Island and Pacific Rd.; general committee, J. T. Wallis, General Superintendent Motive Power, Pennsylvania Rd.; T. H. Goodnow, Superintendent Motive Power, Chicago and North Western Rd.; **W. H. Winterrowd**, Chief Mechanical Engineer, Canadian Pacific Ry.; C. H. Hogan, Assistant Superintendent Motive Power, New York Central and Hudson River Rd.; J. E. O'Brien, Mechanical Superintendent, Missouri Pacific Rd.; A. Kearney, Superintendent Motive Power, Norfolk and Western Rd., and C. F. Giles, Superintendent Machinery, Louisville and Nashville Rd.

To serve for one year—**Vice Chairman, J. Coleman**, Superintendent Car Department, Grand Trunk Ry.; general committee, J. W. Small, Mechanical Assistant to Regional Director, Southern Region, U.S. Railroad Administration; J. S. Lentz, Master Car Builder, Lehigh Valley Rd.; H. R. Warnock, General Superintendent Motive Power, Chicago, Milwaukee and St. Paul Rd.; C. E. Fuller, Superintendent Motive Power, Union Pacific Rd.; S. Lynn, Master Car Builder, Pittsburgh and Lake Erie Rd.; A. P. Prendergast, Mechanical Superintendent, Texas and Pacific Rd., and J. R. Gould, Superintendent Motive Power, Chesapeake and Ohio Rd.

The report was adopted and the officers and committee elected as recommended.

Railway Supply Exhibits at the Atlantic City Conventions.

The Railway Supply Manufacturers' Association's exhibits were, as usual, of a very comprehensive nature, in fact, larger than in any previous year, there being 301 exhibits, occupying about 9[illegible],500 sq. ft. of floor space, against 277 exhibits and 87,360 sq. ft. of floor space for 1913, the previous record year. Among the principal exhibitors were the following:—

American Brake Shoe & Foundry Co., New York, N.Y.—Reinforced brake shoes for locomotives and cars; malleable iron locomotive and car brake heads and keys.

American Locomotive Co., New York, N.Y.—Flexible staybolts; power reverse gear; intercepting valve; piston valve.

American Steel Foundries, Chicago, Ill.—Simplex clasp brake; Economy cast steel draft arm; Davis steel wheel; Ajax and Hercules brake beams; Simplex and American coupler pockets; Simplex coupler; Atlas safety guard and third point support; cast steel bolsters; Vulcan trucks.

Association of Manufacturers of Chilled Car Wheels, Chicago, Ill—One 33 in. 625 chilled iron wheel for 30-ton cars; one 33 in. 700 chilled iron wheels for 40-ton cars; one 33 in. 725 chilled iron wheel for 50-ton cars; one 33 in. 850 chilled iron wheel for 70-ton cars; one pair 850 lb. M.C.B. wheels for 70-ton cars, mounted on axle with flange increased 3-16 of an inch, as recommended by the association.

Boss Nut Co., Chicago, Ill.—Boss lock nuts.

Buffalo Brake Beam Co., New York, N.Y.—Brake beams and brake beam parts.

Chase & Co., L.C., Boston, Mass.—Mohair plush upholstery for railroad coaches, steamships and automobiles; leatherwove upholstery for railroad coaches.

Dearborn Chemical Company, Chicago, Ill.—Showing method of Dearborn water treatment for prevention of scale formation, corrosion, pitting and foaming. Waters analyzed. Operators of analytical laboratories; No-ox-id rust preventive.

Du Pont Fabrikoid Co., Wilmington, Del. Railway car seats; dining car seats; leather substitutes; a Cadillac roadster with entire surface covered with Craftsman Fabrikoid.

Edison Storage Battery Co., Orange, N.J.—Edison alkaline storage battery for railway train lighting, railway signaling; industrial trucks and tractors; commercial vehicle and delivery wagons; storage battery locomotives; mine lamps; meter testing; manhole lighting; ignition and lighting.

Electric Service Supplies Co., Philadelphia, Pa.—Keystone turbo-generator; Keystone locomotive headlight switch; Golden Glow locomotive headlight.

Flannery Bolt Co., Pittsburg, Pa.—Tate flexible staybolts for water space; adjustable crown stays; flexible flush staybolts; flexible drilled (hollow) staybolts; F.B.C. solid flexible staybolt (new design); F.B.C. hollow flexible staybolt (new design); installation tools for the application of Tate and F.B.C. staybolts; model of section locomotive boiler with complete installation—all types.

Franklin Railway Supply Co., Inc., New York, N.Y.—Franklin automatic adjustable driving box wedge; Franklin automatic driving box lubricator; Franklin automatic fire door; E[illegible]

[illegible] conduits, Franklin [illegible].

Galena-Signal Oil Co., Franklin, Pa.—[illegible].

Garlock Packing Co., Palmyra, N.Y.—Special packings for railway shops and roundhouses; for air pumps, throttles, [illegible] accumulators, steam hammers, stationary engines and pumps.

Gold Car Heating & Lighting Co., New York, N.Y.—Vapor combination pressure and vapor pressure, hot water and electric car heating systems. Thermostatic control for all types of car heating systems and buildings; ventilators for railway cars; pressure regulators.

Grip Nut Co., Chicago, Ill.—Grip nuts.

Hunt-Spiller Manufacturing Corporation, South Boston, Mass.—Air furnace gun iron castings.

Independent Pneumatic Tool Co., Chicago, Ill.—Piston air drills and reamers, non-reversible and reversible; pneumatic [illegible], stay bolt drivers; hoists; pneumatic chipping hammers; pneumatic caulking hammers; pneumatic flue heading hammers; pneumatic light riveting hammers; pneumatic long-stroke riveting hammers; sand rammers; electric drills and grinders; pneumatic tool hose and hose couplings; close corner drills.

Ingersoll-Rand Co., New York, N.Y.—Showing Little David type of pneumatic tools.

Johns-Manville Co., H. W., New York, N.Y.—Air brake cylinder packing cups and expander rings and gaskets; slack adjusters; insulating materials; pipe coverings; hair felts; boiler lagging; [illegible] packings; pump valves; insulating cements; high temperature cements; [illegible]eilinite; ebony and asbestos paper and millboard; vitribestos; fire felt; fibre conduit; sheet fibre; metallic flexible conduit; tape extinguishers; fuses, asbestos shingles; boiler wall coating; mastic; water-proofing materials, 85% magnesia and fire felt for locomotive boiler lagging; salamander insulation for steel passenger and postal cars; Keystone hair felt insulation for refrigerator cars.

Joliet Railway Supply Co., Chicago, Ill.—Huntoon brake beams; Huntoon truck bolsters; Joliet journal boxes; Perry, Barry & Perry side bearings; Huntoon center plates; Burnett reinforced car end; Burnett angle cock holder; Burnett train pipe anchor; Rex emergency knuckle.

KeYoke Railway Equipment Co., Chicago, Ill.—Cast steel friction draft gear; [illegible] cast steel coupler yokes; keyless cast steel coupled yokes.

Locomotive Stoker Co., Pittsburg, Pa.—Type D duplex stoker; type D slope [illegible] pusher.

Locomotive Superheater Co., New York, N.Y.—Pyrometer for superheater [illegible], developments in construction of superheater units; stationary superheaters.

[illegible] & Co., Chicago, Ill.—Journal [illegible].

Metal & Thermit Corporation, New York, N.Y.—Thermit and appliances; [illegible], samples of carbonfree metals and alloys produced by the Thermit process; large sample weld on a 9 [illegible]; materials for demonstrating pipe welding for welding locomotive [illegible]; sample of superheater [illegible] welded.

Mudge & Co., Chicago, Ill.—Mudge [illegible]; Mudge Slater [illegible] end; Mudge Salvit [illegible].

National Lock Washer Co., Newark, N.J.—[illegible]; car curtain fixtures; window locks; sash balances; weather stripping; curtain rollers; national rib lock washers.

Pratt & Whitney, New York, N.Y.—Moving pictures of railway machine tools in actual shop operation.

Norton, Incorporated, A.O., Boston, Mass.—High speed self-lowering lifting jacks.

Pyle-National Co., Chicago, Ill.—One type K2 500-watt maximum capacity turbo-generator; one type E2 500-watt normal capacity turbo-generator; one type E, 1,500-watt turbo-generator; one type T, 2½ k.w. turbo-generator; one type M, 3½ to 7 k.w. turbo-generator; one special 18 in. incandescent case and reflector fitted with no. 1450 lamp stand; one standard 18 in. incandescent case and reflector fitted with no. 1450 lamp stand; one model of Young valve gear.

Safety Car Heating & Lighting Co., New York, N.Y.—Pintsch mantle light; car lighting electric generators; car lighting electric generators; car lighting fixtures; Oxy-Pintsch metal cutting equipment; electric fans.

Symington Co., The T. H., New York, N.Y.—Farlow draft attachments; Symington journal boxes; Symington flexible dust guards.

Union Draft Gear Co., Chicago, Ill.—Cardwell friction draft gear type G class 11A; Cardwell friction draft gear type G class 11A-compound.

Universal Draft Gear Attachment Co., Chicago, Ill.—Universal cast steel re-inforcing draft arms, coupler yokes and malleable draft lugs and plates.

Vapor Car Heating Co., Chicago, Ill.—Passenger train car heating; vapor system of heating; steam pressure system of heating; combination steam and hot water heating system; car heating specialties; steam specialties; emergency stoves; ventilators.

Westinghouse Air Brake Co., Pittsburg, Pa.—Reception booth.

Westinghouse Electric & Manufacturing Co., Pittsburg, Pa.—Arc welding motor-generator; small turbine generator unit; motor driven grinder; small portable drills; electric fans.

Wheels Truing Brake Shoe Co., Detroit, Mich.—Various forms of abrasive shoes designed for grinding car wheels and locomotive driver-wheels.

Whiting Foundry Equipment Co., Harvey, Ill.—Working models of type R electric crane trolley and Whiting electric screw-jack locomotive hoist; photos, drawing and catalogues of foundry equipment, cranes and railway equipment, such as coach hoists, turntable centers and tractors, transfer tables, car wheel foundries.

Exploration of Quebec Hinterland—A press dispatch of June 5, from Seven Islands, on the St. Lawrence River, reported the arrival there of F. Kissick, one of the leaders of the party which started from Quebec, Apr. 8, for a general exploration of the Ungava territory, and the laying out of a route for a railway from Seven Islands to Big Lake Kapachoo proposed to be built by a company incorporated by the Quebec Legislature as the Quebec and Ungava Ry. The party reported that all the preliminary work had been done for 75 miles inland, and that M. A. McCullough of Winnipeg, one of the party, had been drowned, near the camp on East River, 50 miles from Seven Islands. — [illegible] Montreal, is reported to represent the company, and is expected to give directions as to the future work of the party at an early date.

Hydro Electric Railway Construction for Ontario.

The Hamilton, Ont., City Council is reported to have passed a resolution June 10, calling upon the Hydro Electric Power Commission of Ontario to start work immediately upon the construction of the projected electric railway from Toronto via Hamilton to Niagara Falls. Sir Adam Beck, chairman of the commission, who was present, is reported to have informed the council that the money market is now so much easier that it is expected that the funds for construction can be secured at less than 5% and that there is possibility of construction work being started in the autumn.

Similar resolutions have been passed by the Burlington and Nelson municipal councils, and the matter, so far as the municipalities are concerned, is now completed, the Hydro Electric Power Commission of Ontario, being responsible for the carrying on of construction work,

Private Car for Minister of Militia—At a sitting of the committee of the House of Commons public accounts committee recently, some information was elicited as to the cost of the private car, Roleen, for the Minister of Militia. According to press reports, the car was bought in the United States second-hand in 1913, for the department, when Sir Sam Hughes was minister, by D. B. Hanna, then Third Vice President Canadian Northern Ry., for $9,800. Shortly afterwards $1,200 was spent in repairs, and in 1916 the car was overhauled and refurnished in the G.T.R. Montreal shops at a cost of $26,843.46. This amount included 15% profit on the cost of materials and 10% profit on the cost of labor.

Level Crossings Elimination—The Dominion Parliament has passed an act extending for 10 years, the provision of $200,000 a year to aid in eliminating level crossings of the railways in Canada. This act was passed in order that the work of eliminating these crossings with government assistance can be carried on in the event of the Consolidated Railway Act not being passed at parliament's present session. (May, pg. 248).

C.P.R. Quebec Terminal Facilities—Sir Thomas White submitted in the House of Commons, June 16, a copy of an agreement entered into between the Dominion Government and the C.P.R. for the use of the terminal facilities in Quebec. For the year ended Mar. 31, 1918, the Dominion Government paid the C.P.R. $28,637.47, and for the year ended Mar. 31, 1919, $136,787.07.

Lake St. Joseph Hotel Ownership—The Minister of Railways stated in the House of Commons that the Lake St. Joseph Hotel, at Lake St. Joseph, Que., is owned by the Quebec and Lake St. John Ry., and that 85% of that railway's stock is owned by the Canadian Northern Ry., which forms part of the Canadian National Rys.

Alberta Public Utilities Commission—The Alberta Legislature at its recent session, amended the Public Utilities Act so that any application, petition, matter or complaint within the board's jurisdiction may be heard by a single member, and the board may, on his report, deal with such matter as if the hearing had been before the full board.

Steam Railway Operating Statistics for Year Ended June 30, 1918.

In the following table the column headed gross earnings includes passenger and freight earnings, as well as miscellaneous earnings from operation, the latter not being shown separately; the next four columns give the operating expenses classified under their various headings, while the last gives the net earnings, which are arrived at by deducting the totals of the four columns referred to from the figures in the gross earnings column. The minus (—) mark before figures in the net columns shows that there was a deficit in the operation of the line to the extent of the figures given. The cents have been omitted in all cases, and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items. The figures in the the first column, "First track mileage," include the first track of main line, branches and spurs of lines represented by the respective companies' capital stock, the lines of proprietary companies, the lines operated under lease, and lines operated under contract, but not lines operated under trackage rights, the mileages of which are included in those for the respective owning companies. There are 20 companies operating under trackage rights over 1,028.33 miles of the lines of other companies. In addition to the 38,878.52 miles of first track operated, there are 2,522.73 miles of second track, details of which are given under "Notes to Steam Railway Statistics," on another page of this issue.

The figures in the last column of the table show the net earnings or loss from the operation of the various railways, and their necessary adjuncts. Many companies have income from other sources, and in some cases carry on business apart from their railways; these revenues are brought together in the "Income account," and from them are deducted taxes, rents for lease of other lines, etc., interest or funded debts, sinking funds, etc., leaving in the final analyses, the net corporate revenue available for dividend, or the gross deficit for the year. Another table containing these figures will be published in Canadian Railway and Marine World's next issue.

Name of Railway	First track mileage	Passenger earnings	Freight and switching earnings	Gross earnings from operations	Maintenance of way and structures	Maintenance of equipment	Traffic and transportation expenses, etc.	General expenses	Net operating earnings
Alberta and Great Waterways	113.20	$ 28,215	$ 50,360	$ 90,707	$ 20,709	$ 19,055	$ 53,114	$ 7,685	$ —9,856

Notes to Steam Railway Statistics.

The following notes refer to the statistical table on page — of this issue:

(1) The Detroit River Tunnel is operated by the Michigan Central Rd., which controls the Canada Southern Ry. Its earnings are reported in a separate table respecting international lines.

(2) The Inverness Ry. & Coal Co. Ry. in Nova Scotia is being operated by its receiver, but no particulars except mileage are available. The Klondike Mines Ry. in Yukon Territory; the North Shore Ry. (formerly the Beersville Coal & Ry. Co.) in New Brunswick, and the Northern New Brunswick & Seaboard Ry. are not being operated.

(3) The Magnetawan Ry. and the St. Clair Tunnel are operated by the Grand Trunk Ry. The earnings of the first named are included in those of the G.T.R., while those of the tunnel are reported in a separate table respecting international lines.

(4) The Nobonsing & Nipissing Ry., 5.50 miles, was taken up several years ago.

(5) The Wabash Ry., while operating in Canada, does not own any railway in the country, but runs over the G.T.R. from Windsor to the Niagara River under a lease. It does both a through and local business in Canada, the officials acting jointly for the G.T.R. and Wabash Ry.

International Railways—The following table gives particulars of operations of companies which are of an international character, operating across the International boundary. The Detroit River Tunnel is owned by the Michigan Central Rd.; the International Bridge Co., and the St. Clair Tunnel are owned by the Grand Trunk Ry., and the Pullman Co., operates sleeping and parlor cars over some Canadian railways.

	Total revenue	Total operating expenses	Net operating revenue
Detroit River Tunnel	$1,050,000	....	$1,050,000
International Bridge Co.	438,831	$ 83,255	355,576
St. Clair Tunnel	324,694	176,058	148,636
Pullman Co.	744,261	583,294	160,966

The Van Buren Bridge Co., operating between St. Leonards, N.B., and Van Buren, Me., which reported for 1916-17, did not report for 1917-18.

Second Track—Following are details of second track, in addition to the first track mileage given in the table on page 365, and this page, col. 1.

	Miles.
Canada Southern Ry.	243.04
Canadian Pacific Ry.	1427.60
Grand Trunk Ry.	723.37
Grand Trunk Pacific Ry.	14.94
Intercolonial Ry.	72.86
Montreal & Atlantic Ry.	6.50
National Transcontinental Ry.	5.31
Quebec Ry., Light and Power Co	9.50
Sydney and Louisburg Ry.	1.00
Timiskaming & Northern Ontario Ry	1.70
Toronto, Hamilton & Buffalo Ry	9.79
Vancouver, Victoria & Eastern Ry	7.12

An Address on Car Service.

By J. D. Altimas, Assistant General Superintendent Car Service, Canadian Pacific Railway.

The following address was given at a meeting of C.P.R. officers, agents, foremen, etc., in Montreal recently:—

"Car service in its essentials means the prompt and proper handling of cars, i.e., getting them ready for placement in time as ordered, preparing the billing and other papers, and moving them out immediately they are loaded, prompt movement while in transit, prompt placement at destination, and switching them out after they are made empty, so as to make them available for further loading. In all circumstances, cars must be used to the best possible advantage.

"Heretofore we have classed all cars of foreign ownership as foreign cars, but, from now on, we will draw the line a little closer and classify foreign cars of Canadian ownership and of United States ownership. Under the new arrangement, Canadian owned cars must be used as much as possible for business originating at and moving to points in Canada. Canadian Pacific cars, however, must, whenever possible, be used for business moving from and to points on the C.P.R. only, and all foreign cars will still cost 60c a car per day while they are on our rails, therefore, it will be just as important as ever to get rid of all classes of foreign cars as promptly as possible. When foreign cars are to be loaded, they should be used for loads that will take them off our rails via the shortest route, but always in accordance with the rules. When no loading is in sight they must be reported to the proper officer for disposal.

"Every effort should be made to load cars to their full carrying capacity. Even in times of car surplus, the maximum loading should be obtained, because this factor has a most important bearing upon the cost of handling tonnage in trains.

"The points which I have mentioned are the essentials of the car service problems. The details covering the handling of the various classes of cars of different ownership, both railway and private, are contained in the circulars issued by the car service department. All agents should study these rules carefully, so that they will understand what is required and so that they may instruct their subordinates and see that all concerned carry out the instructions.

"With all the instructions that are issued, and all the reports that are compiled, very often we do not get proper results, simply because we fail in some of the essentials. My experience leads me to the conclusion that where most of us fail is in not keeping proper records. Occasionally when proper records are installed, they are allowed to go wrong owing to a lack of supervision. We know that an agent, usually, is a pretty busy man, and has many things to look after, but he should make it his business to see that a proper record is kept of every car in his yard, from the time it arrives until it leaves.

"The agent may not have, in fact very seldom has, the time to do this work himself. He should, first of all, see that the information is obtained from the proper source, i.e., from the cars themselves, as to initials and car numbers, the other information from the waybills, or other data which accompany the cars. Next he should see that the information is entered promptly and correctly into the records. With his station records in good shape, it then becomes an easy matter for the various reports, daily, weekly, or monthly, to be correctly compiled and forwarded to the proper officers. The daily car report for the car service department is without doubt, the most important report an agent has to compile. When cars are promptly and properly reported, the car service department is enabled to give orders for their disposal, and in a great measure the proper and prompt disposal of equipment is a big factor in the economical handling of tonnage, which affects the expenses of operation and in the securing of business which affects the earnings. Once the records are properly started, the agent, or in the case of larger stations, the chief clerk, can check up and supervise the records very quickly. Surprise checks are always productive of good results. We very soon learn which clerks require close supervision. The fact that checking up and supervising is in effect, prompts everybody in the office to see that the work is promptly and efficiently done.

Interswitching, so far as the car service department is concerned, means the interchange of cars. Every physical movement of a car from one road to another, must be properly shown in the interchange report. The correct number, with the correct initials or marks, is just as important as the correct date of interchange. The most important feature of all, however, is to see that each and every car interchanged is shown in the report. There are too many cars omitted from the interchange reports, which would not be the case if the importance of these reports was impressed upon all concerned and a little supervision was given by the agent or chief clerk. Recently I have not been following up closely the record of errors and omissions in the interchange reports, but I mentioned this matter a few days ago to Mr. Phelan, our car accountant, who tells me we are getting good results from the agents in clearing the outstanding records, but apparently there is still lots of room for improvement. Best results can only be obtained by close checking and supervision, which will ensure more correct and complete reports in the first place, which would, of course, eliminate all the unnecessary work in both the car accountant's office and in the agent's office. In every case where we are unable to pay per diem to the car owners, in accordance with the rules, we are penalized by the addition of a penalty of 5c per day, which makes the per diem charge 65c a day instead of 60c. When you consider that we are paying on an average over $345,000 a month for the use of foreign cars, while our accounts against foreign roads for the use of our cars average over $529,000 a month, you will realize how important it is for the car accountant to get proper interchange reports, since the whole accounting system is based upon these reports.

"There is another good reason why we must make every effort to improve the interchange reports. The American Railroad Association has under consideration a new method of settlement for car hire. Under our present method we settle for each individual car, allowing to the car owner direct 60c for each day one of his cars is on our rails. The proposed plan contemplates a settlement between connecting roads on daily balances of the number of cars received and delivered at the interchange point, regardless of ownership of such cars, the final settlement being made with the car owner, through the medium of a per diem clearing house. You will readily understand that to operate a plan of this kind the interchange reports must be absolutely correct. As a preliminary to this plan, the American Railroad Administration at Washington has decided to inaugurate a per diem bureau for the settlement of per diem accounts between U.S. roads and Canadian roads, and it has already started a campaign to ensure all interchange reports at border points being prepared on a proper basis. Special meetings are being convened at the principal points and all concerned are being instructed as to what is required. In addition the various car accountants are to prepare complete data, covering errors and omissions in the reports, showing the record for each station and these statements are to be forwarded to the Railroad Administration. It will be necessary for all of us to get busy and make sure that all concerned understand what is required, otherwise, we will be sure to hear from headquarters.

"I am prompted to tell you of something which I discovered by a little checking up at one of our large interchange points. The interchange reports from this particular station contained quite a few errors in initials and numbers, and numerous omissions. Our analysis developed that these errors and omissions were in the reports covering Sundays. The next time I visited that station I took this matter up with the agent, and we soon discovered that as the regular interchange clerk was entitled to one day off each week, he had decided to lay off Sundays, and a substitute was furnished in the person of the lamplighter, who was very glad to earn the extra money. Sometimes you will find a lamplighter who will make a good interchange clerk, but in most cases if such a man could make a good interchange clerk, he would not be a lamplighter very long. My advice, therefore, is not to depend on the lamplighter, or any other similar help, to look after interchange work.

"This question of records in connection with car service and interchange work is most important and I will take this opportunity to point out that the index record should be properly maintained at all times for the reason that it is the key to all the information in your station records. We are preparing a new form of index record, something similar to old form 908b, which we believe can be used more effectively at the smaller stations.

"I will again impress upon you the necessity of exercising supervision over the work of your subordinates. We have tried this method in our own office to good advantage and I am certain that you will improve conditions and get better results if you will give a certain amount of your time each day to supervising the several desks in the offices under your care."

The Canadian Railway Troops Splendid Work in the War.

The story of the Canadian Railway Troops is one of the romances of the war, recording how one battalion of Canadian railwaymen grew into a corps of nearly 16,000 strong, which, from the spring of 1917, took a major part in the construction and maintenance of railways of all gauges to within easy reach of the front line. After the battle of the Somme, it was clearly proved that road and animal transport could not alone take forward in the fighting zone, over shell-torn terrain, the weight of war material (as much as 2,000 tons a mile of active front per day) required to stage a modern battle.

In the early stages of the war, the French General Staff assumed the entire responsibility for the maintenance and construction of railways, in the British armies zone on the western front. Though six Imperial Royal Engineer Railway Construction Companies were sent to France in 1914, they were not permitted by the French to do any, or scarcely any, work, until it was recognized that the duration of the war would be indefinitely prolonged, and the French Government would be unable to furnish either sufficient railway construction personnel or material.

In 1914, some well known Canadian railway contractors requested the Militia Department to be allowed to raise a railway construction unit, but for reasons outlined above, this proposal was not approved. However, in the spring of 1915, the War Office requested the Canadian Government to send over two railway construction companies. These, the Canadian Pacific Ry. Co. undertook to organize at the Militia Department's request, with the result that the Canadian Overseas Railway Construction Corps proceeded to France in Aug., 1915. This unit was made up of 500 picked men from the C.P.R. construction forces. Each man, before enlisting, was required to pass a test as to his technical ability before he joined the unit, which was the pioneer Canadian railway construction unit in France.

After personal representations had been made to several War Office departments, it was finally decided in May, 1916, to ask Canada to furnish another unit, approximately 1,000 strong, for railway construction work on the western front. The organizer of this battalion, Lt.-Col. J. W. Stewart, of Vancouver, now Major-General J. W. Stewart, C.B., C.M.G., who gathered recruits from among the experienced railway workers of every province in the Dominion. It was known as the 239th Overseas Railway Construction Corps, but, before it could sail, Lt. Col. Stewart was called to England, at the War Office's request, to assist in the general organization of better transport facilities on the western front.

As outlined above, after the commencement of the battle of the Somme, it was decided by the Imperial General Staff to make greater use of railways, and more especially of light railways in forward areas as used by both the French and Germans. To accomplish this, **Sir Eric Geddes** was appointed Director General of Transportation, with practically plenipotentiary powers to reorganize all the transportation services on the British western front. As during recent years more new railways have been built in Canada than in any other part of the British Empire, Sir Eric Geddes naturally looked to Canada for a man to supervise and direct the construction of railways.

It was agreed that Canada should furnish five battalions of construction men, to be known as the Canadian Railway Troops, and that Col. Stewart should proceed to France immediately to act as Deputy Director of Light Railways, as well as being in immediate command of the Canadian Railway Construction Battalions on their arrival in France. Lt.-Col. Angus McDonnell, now Colonel Angus McDonnell, C.M.G., was delegated to remain in England to organize the units and to follow Lt.-Col. Stewart as second in command, on the completion of the organization.

On Jan. 1, 1917, Brigadier-General Stewart (having been promoted to that rank), was appointed Deputy Director General Transportation (Construction), and made directly responsible to the Director General of Transportation, for all railway construction, the maintenance and provision of necessary material, thus taking over supervision of the work done by the Royal Engineers' Railway Construction Companies (at that time numbering [illegible] ranks), in addition to that done by the Canadian Railway Troops, as well as direct administrative command of the latter. An administrative office to deal with the organization was set up in London, and a depot established at Purfleet, Essex. The original five battalions were made up as follows:

The 1st Canadian Overseas Construction Battalion, which had proceeded to France in [illegible] and was working on standard gauge railways, was re-organized and re-equipped as the 1st Battalion, Canadian Railway Troops in France.

The [illegible] Infantry Battalion, then at Bramshott, Eng., was re-organized as the 2nd Battalion Canadian Railway Troops, proceeding to France, Jan. 11, 1917.

The 239th Battalion was re-named the 3rd Battalion, Canadian Railway Troops, and went to France, Mar. 22, 1917.

The 4th and 5th Battalions were organized at Purfleet, and proceeded to France in Feb., 1917.

However, before the 3rd Battalion left for France on Mar. 22, 1917, it had been decided to increase the number of battalions to 10, and as more units arrived from Canada, they were sent to Purfleet. So swiftly was the new organization carried out, that by Apr. 1, 1917, there were six Canadian Railway Troops battalions fully equipped and serving in the field. All ten battalions were at work on the British western front by the end of June, 1917. The greater number of the units were employed on light railway construction and maintenance, and, with the help of attached labor, since 1917, all the light railway construction and maintenance, on the British western front, until the armistice was signed, was carried out by Canadian Railway Troops.

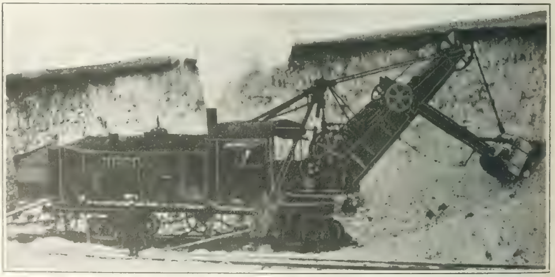
Canadian Pioneer Battalion building grade, Lebucquiere East Diversion, in France, Nov. 22, 1917. Photograph loaned by C.P.R.

The whole Canadian Railway Troops organization was separate from the Canadian Corps. The administrative headquarters of the Canadian Railway Troops were established at the British Army's General Headquarters in France in Mar., 1917, to enable Brigadier-General Stewart to fill the dual capacity of General Officer Commanding the Canadian Railway Troops, and Deputy Director of General Transportation (Construction).

The Railway Troops arrived in France just in time to prove their worth. During the German retreat on the Somme, in Feb. and Mar., 1917, the first of the battalions to arrive were able to push forward standard gauge and light railway lines with surprising rapidity, in spite of the obstacles and difficulties imposed by atrocious weather and the thoroughness of the destruction left by the enemy in the wake of his retreat.

On Apr. 9, 1917, began the battle of Arras, when the Canadians attacked and captured Vimy Ridge, then the strongest German fortress on the western front. For several weeks prior to the opening of the attack, the weather had been extremely bad, and the ground in the battle area was like a quagmire. Notwithstanding this, the Canadian Railway Troops had laid rails to within a short distance of the front line. Then, as soon as the infantry advanced on that memorable Easter Monday, the railway battalions constructed new lines on the heels of the fighting men. Supplies and ammunition were carried forward on standard and narrow gauge lines, and the wounded were evacuated over them to the very doors of the field ambulance dressing stations and the casualty clearing hospitals. It was the first time that such work had been accomplished during the war. Within a week of the opening of that Arras offensive, trains were running to the brow of Vimy Ridge, and by the end of April, by which time the British lines had been pushed for some distance across the level plain stretching beyond the ridge, light railways were running forward as far as the battalions' ration dumps.

The next big offensive in 1917 was at Messines, and there the railwaymen from Canada contributed their quota to success, in spite of interruptions caused by enemy shell fire, the almost impassable sea of mud which they were compelled to cross, and the many other obstacles that beset the path of railway construction on the battlefield, obstacles that are unknown to the civilian railroad worker. Nor were the Railway Troops less determined and successful during the final attack at Passchendaele, in which the Canadian corps again won undying fame, under conditions among



Steam shovel working in chalk pit, for railway construction on British Western Front, Nov. 26, 1917. Photograph loaned by C.P.R.

the most trying and exasperating encountered during the war.

The difficulty of the task set the Canadian Railway Troops in the Ypres salient may be gauged from the fact that during more than two moths of the summer of 1917, the average daily number of breaks in the light railway lines, due to enemy shell fire, was about 100, in the areas of the 2nd and 5th British armies alone.

It was in Mar., 1918, when the German offensive began in the Somme sector, that it unfortunately became necessary to leave many miles of standard and light gauge railways in the enemy's hands. Seven battalions of the corps of Canadian Railway Troops had to be withdrawn from railway work and were employed for a time on the construction of a rear defence trench system. In this work, which was carried out under the direction of Brigadier-General Stewart, they were assisted by 20,000 troops from labor, engineer, road and other technical units. When the task was completed, they had built a defensive trench system on a front over 30 miles, with a total trench mileage of approximately 120 miles. In addition, many strong points and machine gun emplacements were built and the whole front protected with thick belts of wire. In addition to this work the railway system was being altered and lines added, so that, if the position became still more serious, supplies and material could be handled with greater dispatch and convenience. Nor was this all. On the southern part of the front, a point where the German thrust had been most successful, the Railway Troops were kept busy on the reorganization of the lines of communication.

March and April, 1918, were indeed eventful for the corps of Canadian Railway Troops, for not only did the situation strain their wonderful adaptability to the utmost, but it threw out a direct challenge. There arrived a moment when it became necessary for the Canadian Railway Troops suddenly to transfer themselves into fighting men. They met the challenge with a skill and a success which proved the wisdom of the policy insisted on by the Canadian military authorities, that every Canadian at the front engaged on work of a technical nature, should first be trained as a soldier.

It was during the last four days of March, when the enemy was advancing on Amiens, that one battalion of the corps of Canadian Railway Troops was called on to take part in the defence of the city. The railwaymen promptly organized 16 Lewis gun teams and held tenaciously to the position allotted them, until relieved by troops from the New Zealand Division. Again, in the first British army area, three of their battalions were organized into what was called the Canadian Railway Brigade. No sooner, however, had they became so formed, than the importance of engineering again became such a paramount consideration that the Canadian Railway Brigade, which had been organized with every intention of making use of it as a fighting force, had to be disbanded. Two companies, however, from still another railway battalion, were put into the line and did very good work until relieved by Imperial troops.

In the meantime, the number of battalions had been increased to 13, by the conversion and re organization of the 2nd and 3rd Canadian Railway Labor Battalions with the 11th and 12th Battalions, Canadian Railway Troops, respectively, ad the formation of the 13th Battalion from personnel at the depot at Purfleet, England.

Later in the spring of 1918, the Germans launched an offensive in two sectors in the north, with the intention of reaching the Channel Ports. This, too, placed a considerable strain on the corps of Canadian Railway Troops, as they were at once put to work on the construction of broad gauge lines and the elaboration of the light railway system which acted as a feeder to the front line trenches.

In the early summer of 1918, the Canadian Overseas Railway Construction Corps, the 58th Broad Gauge Operating Company, the 13th Light Railway Operating Company, the 69th Wagon Erecting Company, and the 85th Engine Crew Company, were brought under the Headquarters, Canadian Railway Troops, and the whole formed into the corps of Canadian Railway Troops. About the same time Brigadier-General Stewart was appointed Director of Construction, and as such his duties embraced all construction of a civil engineering character in the zone of the British armies. This work continued until the end of July, 1918, and at the beginning of August preparations were being made by the railwaymen for the work which would be required of them in the attack by the allies on a 20 mile front beyond Amiens. The achievements accomplished by the corps of Canadian Railway Troops in that battle formed a brilliant chapter in their career, and from then on the railwaymen continued to lend invaluable aid in the successive offensive which, launched on different parts of the front, finally led to victory.

Mention should not be omitted of the fact that during the offensive in Palestine in the summer of 1918, when General Allenby called for a party of expert bridge builders, the War Office requisitioned the services of Canadian Railway Troops. Six officers and 250 other ranks were thereupon selected from among the volunteers who came forward in France, and left for Palestine on Sept. 20, 1918.

It should be added that many officers were seconded from the Canadian Construction Railway Troops to fill executive positions in different departments under the Director General of Transportation, which should be considered as a high tribute to the technical efficiency of the officers concerned and the corps of Canadian Railway Troops as a whole.

The following table shows the comparative strength of the Imperial and Canadian Railway Construction Forces on the western front as at the dates given:

Date	Nom'l. strength Imperial Ry. Con Troops	Nom'l strength Canadian Ry. Con. Troops
Dec. 31, 1914	1,476	
Dec. 31, 1915	2,140	512
Dec. 31, 1916	4,900	1,617
Jan. 30, 1917	7,340	11,562
Dec. 31, 1917	7,340	13,772
Nov. 11, 1918	7,340	14,877

In addition there were four Canadian Railway Troops Operating Companies, with a strength of 1,087, all ranks, on Nov. 11, 1918. The total strength of Canadian Railway Troops in England on Nov. 11, 1918, was 5,364.

During their career at the front, the personnel of the Corps of Canadian Railway Troops were awarded 489 honors and decorations. The construction units of the corps of Canadian Railway Troops were more mobile than any other construction units on the British front, as their establishment provided for 280 mules, 10 lorries and 8 box cars per unit. They also were able to carry out new construction with great rapidity by using scrapers and mules, thereby saving man power, one of the most important questions in the concluding phases of the campaign.

In this necessarily condensed report, it is impossible to give more than the briefest outline of the organization, functions and operations of the Canadian Railway Troops. The importance of the work assigned to them can easily be understood by anyone with only a rudimentary knowledge of warfare, as, since prehistoric times, mobility has been organized as an essential factor to victory. The career of the Canadian Railway Troops on the western front furnishes one of the most engaging chapters in the record of Canada's contributions in the war, and was a factor in helping to spell victory with a capital "V."

Summary of work done by Corps of Canadian Railway Troops during 1918.

Standard Gauge Lines, 4 ft. 8½ in.

Miles located	[illegible]
Miles graded	369.[illegible]
Miles grade repaired	838.[illegible]
Miles track laid	1038.00
Average number of miles maintained monthly	[illegible]
Average number attached labor daily on construction	4616
Average number other ranks, C.R.T. daily on maintenance	997

Narrow Gauge (Decauville) Lines, 2 ft.

Miles located	1494.19
Miles graded	[illegible]
Miles grade repaired	[illegible]
Miles track laid	823.79
Average number of miles maintained monthly	746.81
Average number attached labor daily on construction	1288
Average number other ranks, C.R.T. daily on maintenance	2166

The foregoing is reproduced from the report of the Minister of Canadian Overseas Military Forces, Sir Edward Kemp, of which it forms a chapter.

Canadian Manufacturers' Association's President on Government Ownership.

W. J. Bullman, of Winnipeg, President, Canadian Manufacturers' Association, in his opening address at the recent annual meeting in Toronto, said: "A great experiment is being tried now in the government ownership of railways. While this association in annual convention at Winnipeg in 1917 declared against the public ownership of railways, and even suggested that further aid should be given to certain railways under proper supervision, so that their identity might be continued, the fact must not be forgotten that the construction of these railways was duly authorized by the people at large and would not have been built without such endorsation. However, as the government has been compelled to take over the Canadian Northern Railway and to operate the Grand Trunk Pacific under a receivership, the experiment must proceed, and the government is to be congratulated on the effort which is being made through legislation to keep the operation of these railways free from politics.

"It may be necessary for the government to take over the Grand Trunk Railway, but the extension of the principle of government ownership to the Canadian Pacific Railway would prevent competition, and, by overloading the government, would endanger [illegible] the whole undertaking.

Mainly About Railway People Throughout Canada.

J. C. Beckwith, who has been appointed District Engineer, Levis, Edmundston and St. Maurice Divisions, Quebec District, Canadian National Rys., Quebec, Que., was born at Fredericton, N.B., Aug. [illegible], and entered railway service, June, 1898, since when he has been, to 1900, rodman and draftsman Columbia and Western Ry., Boundary District, B.C.; 1900, draftsman, C.P.R., in British Columbia and Ontario; 1901, draftsman, Algoma Central and Hudson Bay Ry. in Western Ontario; 1901 to 1902, draftsman, C.P.R., Winnipeg; 1902 to 1903, leveller and transit man, C.P.R., Winnipeg; 1903, Resident Engineer, C.P.R., Winnipeg; 1903 to 1904, transit man and Resident Engineer, C.P.R., Winnipeg; 1905 to 1907, Assistant Engineer, Construction Department, Eastern Lines, C.P.R., Montreal; 1907 to 1908, Engineer in Charge, New Brunswick Southern Ry., St.. John, N.B.; 1909, Division Engineer, New Canadian Co., Port Davis, Que.; 1909 to 1912, Assistant Engineer, Construction Department, Western Lines, C.P.R., Winnipeg; 1912 to 1913, Assistant Engineer, Construction Department, Eastern Lines, C.P.R., Montreal; 1913 to Apr. 1, 1914, Assistant Engineer, Canadian Government Rys., Moncton, N.B.; Apr. 1, 1914 to May 1, 1919, Engineer of Construction, Canadian Government Rys., Moncton, N.B.

Van Tuyl Boughton, whose appointment as Assistant Superintendent, C.P.R., Chapleau, Ont., was born at Troy, N.Y., Sept. 9, 1888 and entered railway service in July, 1910. From July, 1910 to Oct., 1910, he was rodman, C.P.R., Schreiber, Ont.; July, 1911 to Nov., 1912, transitman, C.P.R., Sudbury, Ont.; Nov., 1912 to June, 1916, Resident Engineer, C.P.R., Chapleau, Ont.; June, 1916 to May, 1917, Resident Engineer, C.P.R., Sudbury, Ont.; May, 1917 to May, 1919, with 11th Engineers (Railway) U.S. Army.

Lady Brown, wife of Sir Geo. McLaren Brown, European General Manager, C.P.R., who has been spending some time in Canada, principally in Hamilton and Montreal, has returned to England.

Sir Geo. Bury, ex-Vice President, C.P.R., assumed his duties as President, Whalen Pulp & Paper Mills Ltd., at Vancouver, June 2.

George Judson Cooper, whose appointment as General Claims Agent, Grand Trunk Western Lines Rd., Detroit, Michigan, was announced in our last issue, was born at Chicago, Ill., Aug. 25, 1892, and entered railway service Sept. 1, 1909, since when he has been, to Oct. 1, 1910, clerk to General Claim Agent, Pere Marquette Rd., Grand Rapids, Mich.; between Oct. 1, 1910 and Nov. 1, 1913, he attended Wisconsin University; Nov. 1, 1913 to Jan. 1, 1914, Claim Agent, Illinois Central Rd., Paducah, Ky.; Jan. 1 to June [illegible], 1914, Claim Agent, same road, Freeport, Ill.; July 1, 1914 to Jan. 1, 1915, Claim Agent, same road, Springfield, Ill.; Jan. 1, 1915 to May 1, 1917, Assistant to General Claim Attorney, Pere Marquette Rd., Grand Rapids, Mich.; May 1, 1917 to July 15, 1918, Assistant General Claim Agent, same road, Detroit, Mich.; July 1, 1918 to Jan. 15, 1919, he held a commission in the U.S. Army; Mar. 1 to May 1, 1919, District Claim Agent, U.S. Railroad Administration, Detroit, Mich.

Emery C. P. Cushing, who has been appointed Purchasing Agent, C.P.R., Calgary, Alta., was born at Ottawa, Ont., Nov. 13, 1886, and entered C.P.R. service Dec. 1, 1902, since when he has been, to Mar. 15, 1907, clerk and stenographer, Passenger Department, Ottawa; Mar. 15, 1907, to Aug. 1,1908, clerk and stenographer, General Passenger Department, Montreal; Aug. 1, 1908, to Aug. 1, 1912, clerk and stenographer, President's office, Montreal; Aug. 1, 1912, to May 1, 1918, chief clerk and secretary to President (Lord Shaughnessy), Montreal; May 1 to Sept. 30, Assistant to General Purchasing Agent, Montreal; Sept. 30, 1918 to May, 1919, Assistant Purchasing Agent, Winnipeg.

Louis Charles Dupuis, whose appointment as Division Engineer, Canadian National Rys., Quebec, Que., was announced in our last issue, was born at St. Roch des Aulnais, L'Islet County, Que., Nov. 8, 1886, and entered railway service, Aug. 20, 1911, since when he has been, to May, 1912, Assistant Engineer, Intercolonial Ry., Moncton, N.B.; May, 1912 to Jan., 1913, Assistant Engineer, I.R.C., Levis, Que.; Jan. to Oct., 1913, Resident Engineer, I.R.C., Levis, Que.; Oct., 1913 to Jan., 1916, Assistant Engineer in charge of double track, St. Romuald to Charing, Que., Canadian Government Rys., Levis, Que.; Jan., 1916 to May, 1919, Assistant Engineer, C.G.R., Levis, Que.

H. C. Martin,
Freight Traffic Manager, Grand Trunk Railway.

Llewellyn E. Edwards, Supervising Engineer, Railways, Bridges and Docks, Works Department, Toronto, has resigned on his appointment as Bridge Engineer, in the Bureau of Public Roads, U.S. Department of Agriculture, Washington, D.C. He was born near Portland, Me., and in 1907, was Structural Engineer, G.T.R., Montreal, and was engaged on the design and construction of the Coteau bridge over the St. Lawrence River, at Valleyfield, Que. He entered the City of Toronto's service in Feb., 1913, and was engaged on general bridge construction, and when the U.S. entered the war, he was appointed a captain in the Engineers Corps, U.S. Army, and was incapacitated from further service by an accident sustained whilst training troops in a southern camp.

Ulmus E. Gillen, who has been appointed General Manager, Toronto Terminals Ry. Co., Toronto, was born at Brooklyn, Mo., Feb. 27, 1867. He entered railway service in 1884, and was, to Apr., 1885, clerk, telegraph operator and relief agent, Chicago, Milwaukee and St. Paul Ry., Canton, S.D.; Apr., 1885 to 1888, telegraph operator, Missouri Pacific Ry., Pacific, Mo.; 1888 to 1892, operator in dispatcher's office, same road, St. Louis, Mo.; 1892 to 1901, dispatcher, and chief dispatcher, same road, St. Louis; 1901 to 1902, Trainmaster, G.T.R. Belleville, Ont.; 1902 to 1904, Assistant Superintendent, same road, Belleville, Ont.; 1904 to 1907, Assistant Superintendent same road, London, Ont.; 1907 to 1912, Superintendent, same road, Montreal; 1913 to Sept. 1, 1917, General Superintendent, Western Lines, same road, Chicago, Ill; Sept. 1, 1917 to June 17, 1919, Vice President in charge of transportation, G.T.R., Montreal, and since Oct., 1918, on leave of absence through illness. He was President of the G.T.R. Maintenance of Way Association for 1916, and in 1917 was President of the General Superintendents' Association of Chicago. He is a member of the American Railway Engineering Association.

Casimir Stanislaus Gzowski, Jr., whose appointment as Special Engineer to Vice President, Operation, Etc., Canadian National Rys., Toronto, was announced in our last issue, was born at Toronto, May 1, 1876, and entered transportation service in April, 1897. While attending Toronto University he was engaged during the summers on survey work, in 1897 being with the C.P.R. on survey and construction on its Crowsnest Branch and subsequently in various positions in charge of location and construction work for the C.P.R. and other roads. In 1905 he became a partner in Macdonell, Gzowski & Co., Vancouver, B.C., and later with a branch in Spokane, Wash., under the name of G. O. Foss & Co., as contractors and engineers, building the C.P.R. Nicola Branch, changes of line on C.P.R. at Rogers Pass, near Nelson, B.C., and on the Esquimalt & Nanaimo Ry., Vancouver Island. The firm also built parts of the Milwaukee extension westerly, Great Northern Ry. changes of lines and parts of branches in Canada and the U.S.; C.P.R. spiral tunnels at Field, B.C., and considerable other railway work in Canada and the U.S., until its dissolution in 1914, after which he did valuation work for the Dominion commission of enquiry into railways and also acted as special engineer for the Canadian Northern Ry. on the government arbitration of its stock valuation.

Mrs. Grant Hall, wife of the Vice President, C.P.R., returned to Montreal, early in June, after spending several weeks with her sister, Mrs. Allen Weagant, in Winnipeg.

George Ham, of the C.P.R. headquarters staff, Montreal, visited Vancouver in June, having accompanied the first party of passengers on the new C.P.R. Trans-Canada Limited train.

E. J. Hilliard, who has been appointed Division Freight Agent, G.T.R., Ottawa, Ont., was born at Montreal, Apr. 14, 1870, and entered G.T.R. service in 1886, since when he has been consecutively, to June, 1904, clerk, Passenger Department; in Chief Accountant's office; stenographer, General Manager's office and Division Freight Agent's office; Contracting Freight Agent, Montreal; Contracting Freight Agent, New York; Travelling Freight Agent, Montreal; chief clerk, Division Freight Agent's office, Montreal; Travelling Freight Agent, Moncton, N.B.; June, 1904 to June, 1919, Commercial Agent, Buffalo, N.Y.

Chas. R. Hosmer, of the C.P.R. directorate, who was in the Royal Victoria Hospital, Montreal, for a number of weeks, during which he had to undergo two operations, was reported June 1 to have recovered sufficiently to leave the hospital, return to his house and take daily motor drives. He left Montreal June 18, with Mrs. Hosmer, to spend some weeks at their summer house at St. Andrews, N.B.

H. Hulatt, Manager of Telegraphs, G.T.R. and Grand Trunk Pacific Ry., Montreal, has been elected second vice chairman, Telegraph and Telephone Division, American Railroad Association, formerly Association of Railway Telegraph Superintendents, for the current year. Last year he was one of the committee of directors.

F. James, foreman of the planing mill, Canadian National Rys., Moncton, N.B., retired from active service, May 31, after 44 years service, and was presented with a gold watch and locket by the employes.

Thomas Kearney, who has been appointed Resident Engineer, Canadian National Rys., Montreal, was born at Donegal, Ireland, July 19, 1887, and was educated at the Royal School, Raphoe, and University College, Galway, Ireland, and graduated from the National University of Ireland, in science, in 1911, and in engineering in 1912. He came to Canada in 1913, and from Apr. 10, to May 1, 1914, was Assistant Engineer, Canadian Northern Quebec Ry., Quebec, Que.; May 1, 1914 to Apr. 1, 1919, Assistant Engineer, C.N.Q.R., Montreal.

H. G. Kelley, President, G.T.R. and Grand Trunk Pacific Ry., has been elected a member of the American Railroad Association's executive committee.

E. R. Lewis, Chief Engineer, Duluth, South Shore and Atlantic Rd., Duluth, Minn., has resigned, to take up railway editorial work.

R. W. Long, who has been appointed Division Freight Agent, G.T.R., Toronto, was born at Appin, Ont., Mar. 20, 1873, and entered G.T.R. service in March, 1889, since when he has been, to Oct., 1896, operator and clerk in Commercial Agent's and Local Freight Agent's offices, Buffalo, N.Y.; Sept., 1901 to May, 1904, Commercial Agent, Buffalo, N.Y.; June, 1904 to July, 1907, Division Freight Agent, Stratford, Ont.; July, 1907 to June, 1919, Division Freight Agent, Hamilton, Ont.

Mrs. Malcolm, widow of Thos. Malcolm, formerly President, International Ry. of New Brunswick, Campbellton, N.B., who has been living at the Ritz Carlton, Montreal, for some time, left for England early in June.

Gordon A. McGuire, who has been appointed Commercial Agent, G.T.R., Buffalo, N.Y., entered G.T.R. service in 1905 and served at Montreal and Toronto, until 1908, when he was transferred to Grand Trunk Pacific Ry. service at Winnipeg, in 1913, being chief clerk to Division Freight Agent, Edmonton, Alta.; 1916, tariff clerk, General Freight office, Winnipeg, and later he was appointed chief clerk to Vice President (Traffic), G.T.R., Montreal, which position he held at the time of his present appointment.

Sir Wm. Mackenzie, ex-President, Canadian Northern Ry., left Toronto, May 14, for England, expecting to return about the end of July.

J. K. McNeillie, Superintendent, Susquehanna Division, Delaware & Hudson Rd., Oneonta, N.Y., formerly General Superintendent, Canadian Government Rys., Moncton, N.B., has been elected a director of the Oneonta Chamber of Commerce, for three years. The Oneonta Star says his election is in recognition of his public spirited interest in all that pertains to the welfare of the town since he became a resident of it.

C. E. McPherson, Assistant Passenger Traffic Manager, C.P.R., Winnipeg, who travelled on the first Trans-Canada Limited train, from Winnipeg to Vancouver, recently, went on to San Francisco on business.

G. W. McVicar, Travelling Auditor, G.T.R., Guelph, Ont., won a McLaughlin motor car in a Great War Veterans' Association's drawing recently.

W. M. Noon, Superintendent, Duluth, South Shore and Atlantic Rd., died at Miami, Fla., recently. He had been in railway service for 52 years, was with the D.S.S. & A.R. for the past 29 years, and was a member of the American Railway, Bridge and Building Association.

H. D. Reid, President, Reid Newfoundland Co., St. John's, Nfld., was married June 5, to Miss M. M. Robert.

J. G. Rutherford, C.M.G., one of the members of the Board of Railway Commissioners for Canada, has been given the degree of Doctor of Veterinary Science, by Toronto University. He has been appointed chairman of a commission of four, to investigate the potentialities of the arctic and subarctic regions of Canada as a grazing country for the development of musk ox and reindeer herds for commercial and national purposes.

Lady Schreiber, widow of the late Sir Collingwood Schreiber, who at the time of his death was General Consulting Engineer for the Dominion Government, has left Ottawa for England to visit her sister, Mrs. Baldwin.

Hon. W. J. Shaughnessy, who has been elected a director of the C.P.R., succeeding Jas. Dunsmuir, resigned, is the only surviving son of Lord Saughnessy, his brother having been killed in the war. He was educated at Laval University, Montreal, and Cambridge, Eng., and practices law in Montreal. He served overseas for three years, leaving Canada as Captain and Adjutant of the 199th Irish Rangers, recruited in Montreal, and was in charge of the arrangements for the Battalion's Irish tour. On the breaking up of the Irish Rangers, he went to France as A.D.C. to Brig.-Gen. Simms, Canadian Representative at British general headquarters, and afterwards was transferred to the Canadian Corps headquarters, as A.D.C. to Lieut.-Gen. Sir Arthur Currie, Corps Commander.

Alex. T. Shortt, Superintendent of Ogden shops, C.P.R., Calgary, Alta., died at the Calgary General Hospital, May 27, aged 46, after a short illness. He had been, at various times, Master Mechanic of the Saskatchewan and Alberta Divisions, and was in C.P.R. service for about 20 years.

A. H. Smith, President, New York Central Rd., has been elected President, Cleveland, Cincinnati, Chicago and St. Louis Rd. Co. and also the Canada Southern Ry., Lake Erie and Western Rd., and other New York Central subsidiaries, vice W. K. Vanderbilt, Jr., resigned.

Lord Mount Stephen, first President C.P.R. Co., who has lived in England for many years, was 90 years of age on June 5.

Mrs. Stitt, widow of Wm. Stitt, who at the time of his death was General Passenger Agent, Eastern Lines, C.P.R., is spending some weeks at Delta, on Lake Manitoba.

Sir Thomas Tait, President Fredericton and Grand Lake Coal and Ry. Co., motored recently from Montreal to St. Andrews, N.B., where he and his family spend the summer at the Algonquin Hotel.

Lady Van Horne and Miss Van Horne left Montreal, June 19, to spend the summer at their house, Covenhoven, St. Andrews, N.B.

Robert James Scott Weatherston, who has been appointed Division Freight Agent, G.T.R., Hamilton, Ont., was born at St. Thomas Ont., Jan. 27, 1878, and entered G.T.R. service July 4, 1893, since when he has been, to Dec. 31, 1901, clerk in Transportation Department, Hamilton, Ont.; Jan. 1 to July 22, 1902, clerk in Traffic Department, Hamilton, Ont.; July 23, 1902, to May 10, 1903, Soliciting Freight Agent, Hamilton, Ont.; May 11, 1903, to June 17, 1906, Soliciting Freight Agent, Toronto; June 18, 1906, to May 31, 1907, Travelling Freight Agent, Ottawa, Ont.; June 1, 1907, to Oct. 31, 1911, chief clerk to Division Freight Agent, Hamilton, Ont.; Nov. 1, 1911, to Jan. 31, 1919, Division Freight Agent, Stratford, Ont.; Jan. 31 to June, 1919, Division Freight Agent, Ottawa, Ont.

J. K. Yorston, who has been appointed Locating Engineer, Western Lines, C.P. R., Winnipeg, entered C.P.R. service 9ug., 1906, and has been, to Jan., 1907, rodman; Jan., 1907 to May, 1908, chainman and topographer; May, 1908 to Dec., 1909, rodman, experiment man, chainman on location and experiment man on construction; Dec., 1909 to Jan., 1913, resident engineer on construction; Jan. to Apr., 1913, transit man on location; Apr., 1913 to Sept., 1915, resident engineer on construction; Sept., 1915 to Dec., 1916, inspector of concrete and experiment man, Rogers Pass tunnel; in Apr., 1917, he was appointed resident engineer, Lethbridge Division, Alberta District, C.P.R., Lethbridge, Alta., which position he held at the time of his present appointment.

Car Demurrage Rules, Influenza Epidemic—The Board of Railway Commissioners issued a circular May 31, referring to its judgment of Nov. 25, 1918, and stating that the special treatment given in respect to influenza conditions would terminate on June 15, but that this, of course, would not in any way affect claims under consideration, or in respect of relief under the judgment which might be filed prior to June 15.

Transportation Appointments Throughout Canada.

[illegible] which is gathered [illegible] from official sources, is compiled [illegible] so as to ensure absolute [illegible]. Anyone who may notice any error [illegible] will confer a favor by advising [illegible].

Canadian Government Merchant Marine Ltd.—R. B. TEAKLE, formerly Manager, Allan Steamship Line, at Boston, Mass., and latterly Manager, France-Canada Line, at Philadelphia, has been appointed Manager, C.G.M.M. Office, 230 St. James St., Montreal, Que.

THOS. TODD, formerly Chief Accountant and Purchasing Agent, Allan Steamship Line, Montreal, and subsequently loaned by the C.P.R. to the Canadian [illegible] Commission, has been appointed Auditor, C.G.M.M. Office, 230 St. James St., Montreal.

Canadian National Rys.—J. C. BECKWITH, heretofore Engineer of Construction, Canadian Government Rys., Moncton, N.B., has been appointed District Engineer, Levis, Edmundston and St. Maurice Division, Canadian National Rys. Office, Quebec, Que.

LIEUT.-COL. F. F. CLARKE, who prior to the war was in Canadian Northern Ry. service, has resumed his duties as Chief Land Surveyor, Canadian National Rys., with jurisdiction over the whole system.

C. M. HAMILTON, of Weyburn, Sask., who has been nominated as the Liberal candidate for the provincial constituency, is reported to have stated that he intended to resign as a director of the Canadian National Rys.

J. J. LEYDON, heretofore city ticket agent, Halifax, N.S., is reported to have been appointed City Passenger Agent there.

W. C. MOIR, formerly in the city ticket office, Halifax, N.S., and latterly in active military service, is reported to have been appointed city ticket agent there, vice J. J. Leydon, promoted.

A. PATRICK, formerly Sleeping and Dining Car Inspector, Western Lines, Canadian Northern Ry., and latterly in the Royal Air Force, has been appointed Agent, Sleeping, Dining and Parlor cars, Canadian National Rys., Quebec, Que., vice Jas. Baird, transferred.

Canadian Pacific Ry.—M. W. BOUCHER, heretofore Locomotive Foreman, Ignace, Ont., has been appointed Locomotive Foreman, Field, B.C.

H. G. BUCHANAN, heretofore City Freight Agent, Edmonton, Alta., has been appointed District Freight Agent there, and his former position has been abolished.

E. C. P. CUSHING, heretofore Assistant Purchasing Agent, Winnipeg, has been appointed Purchasing Agent, Calgary, Alta., vice B. W. Roberts, transferred to Vancouver, B.C.

H. G. DRING, formerly General Passenger Agent, has been appointed European Passenger Manager, C.P.R., and not European Passenger Manager, Canadian Pacific Ocean Services, Ltd., as stated in Canadian Railway and Marine World for [illegible]. His initials were erroneously stated as H. D. Office, London, England.

[illegible], heretofore Resident Engineer, [illegible] Division, Manitoba District, has been appointed Division Engineer, Saskatoon Division, Saskatchewan District, vice E. A. Kelly, [illegible]. Office, Saskatoon.

[illegible] heretofore Assistant [illegible]

ed Assistant Superintendent, Bruce Division, Ontario District, vice W. J. Stinson, transferred. Office, West Toronto, Ont.

J. MILES, heretofore Assistant Superintendent, Toronto Terminals Division, West Toronto, has been appointed Assistant Superintendent, Trenton Division, Ontario District. Office, Trenton, Ont.

COL. C. W. P. RAMSEY, C.M.G., formerly Engineer of Construction, Eastern Lines, who returned from overseas some little time ago, and re-entered the C.P.R. service, is for the summer attending to the work of superintendents at various points, who are given their usual leave of absence.

LIEUT. COL. BLAIR RIPLEY, C.B.E., D.S.O., formerly Engineer of Grade Separation, C.P.R., Toronto, having returned from overseas, has re-entered the company's service and has been assigned special duties for the present.

F. E. Gillen,
General Manager, Toronto Terminal Ry. Co.

B. W. ROBERTS, heretofore Purchasing Agent, Calgary, Alta., has been appointed Purchasing Agent, Vancouver, B.C.

HON. W. J. SHAUGHNESSY, son of Lord Shaughnessy, has been elected a director, succeeding Jas. Dunsmuir, of Victoria, resigned. The vacancy on the board caused by the death of W. D. Matthews, of Toronto, has not been filled.

L. J. SKELLY, heretofore Assistant Superintendent, Montreal Terminals Division, Quebec District, has been appointed Traffic Supervisor, Toronto Terminals Division, Ontario District. Office, West Toronto, Ont.

W. J. STINSON, has been appointed Assistant Superintendent, Toronto Terminals Division, West Toronto, Ont., vice J. Miles, transferred.

J. K. YORSTON, heretofore Resident Engineer, Lethbridge Division, Alberta District, Lethbridge, Alta., has been appointed Locating Engineer, Western Lines. Office, Winnipeg.

Canadian Pacific Ocean Services, Ltd., E. C. BROWN, has been appointed Purchasing Agent, Montreal.

H. G. DRING has not been appointed European Passenger Manager, C.P.O.S., London, as stated in Canadian Railway and Marine World for June, his appointment being that of European Passenger Manager, C.P.R. His initials were erroneously stated as H. D.

CAPT. THOMAS FISHER, R.N., has been appointed General Manager, London, Eng.

J. A. MARTIN, heretofore Assistant Manager, has been appointed Manager, Liverpool, Eng.

A. S. MAYNARD, heretofore Commissary Agent, has been appointed General Purchasing Agent, Montreal.

E. T. STEBBING, heretofore Agent, New York, has been appointed Passenger Manager for Great Britain and the European continent, vice H. S. Carmichael, resigned. Office, Liverpool, Eng.

WILLIAM WAINWRIGHT, formerly with the Allan Line Steamship Co., and latterly with the British Ministry of Shipping (Canada), has been appointed Assistant to the Chairman, C.P.O.S. Ltd. Office, Montreal.

Caraquet & Gulf Shore Ry.—F. V. BURTON, not F. B. Burton, as stated in Canadian Railway and Marine World for May, Superintendent, Bathurst, N.B., is now in direct charge of this line, consequent on the death of W. B. Cronk, Vice President.

S. G. WOODWARD, formerly Roadmaster, British Chemical Co., and Assistant Roadmaster, Central Ontario Ry., Trenton, Ont., has been appointed Roadmaster, C. & G.S. Ry. Office, Bathurst, N.B.

La Cie. Canadienne Transatlantique Ltee., Canada Steamship Lines., Ltd., General Agents—DUNCAN D'E. COOPER, formerly Agent, Lehigh Valley Rd., Toronto, has been appointed Agent for Ontario for La Compagnie Canadienne Transatlantique, in charge of export and import traffic. Office, Foy Bldg., Front St. West, Toronto.

Grand Trunk Ry.—I. N. CLARK, heretofore Travelling Car Inspector, Eastern Lines, Montreal, has been appointed Master Car Builder, Ontario Lines, and his former position has been abolished. Office, London, Ont.

F. FOUSE, heretofore Travelling Car Inspector, Ontario Lines, London, Ont., has been appointed Master Car Builder, London shops, and his former position has been abolished. Office, London, Ont.

E. J. HILLIARD, heretofore Commercial Agent, Buffalo, N.Y., has been appointed Division Freight Agent, Ottawa, vice R. J. S. Weatherston, transferred.

R. W. LONG, heretofore Division Freight Agent, Hamilton, Ont., has been appointed Division Freight Agent, Toronto, vice L. Macdonald, promoted.

J. HENDRY, heretofore Assistant Master Car Builder, Montreal, has been appointed Master Car Builder, Eastern Lines, and his former position has been abolished. Office, Montreal.

W. J. HYMAN, Chief Draftsman, Car Department, has resigned, and has been appointed Sales Engineer, International Equipment Co., Montreal.

G. A. McGUIRE has been appointed Commercial Agent, Buffalo, N.Y., vice E. J. Hilliard, promoted.

JOHN McMURTY, has been appointed

Road Foreman of Locomotives, Hamilton, Ont., vice G. Cooper, promoted.

D. C. MESSEROLL, heretofore Lubricating and Air Brake Inspector, Montreal, has been appointed General Travelling Car Inspector, and his former position has been abolished. Office, Montreal.

N. P. NORTH, heretofore Trainmaster, Districts 2 and 3, Montreal Division, has been appointed Trainmaster, Districts 6 and 7, Montreal Division, vice H. M. Gain, transferred. Office, Belleville, Ont.

W. A. PITT, heretofore Assistant Master Car Builder, London, Ont., has been appointed Master Car Builder, Montreal shops, and his former position has been abolished. Office, Montreal.

R. J. S. WEATHERSTON, heretofore Division Freight Agent, Ottawa, Ont., has been appointed Division Freight Agent, Hamilton, Ont., vice R. W. Long.

Grand Trunk Pacific Ry.—A. C. LIPSETT, recently in active service overseas, is reported to have been appointed acting City Passenger and Ticket Agent, Calgary, Alta., vice R. Merritt, who has been granted extended leave of absence on account of illness.

Toronto Terminals Ry. Co.—U. E. GILLEN, heretofore Vice President in charge of transportation, G.T.R., Montreal, has been appointed General Manager, Toronto Terminals Ry. Co., vice J. W. Leonard, deceased. Office, Toronto.

J. M. ROSEVEAR, General Auditor, G.T.R., Montreal, has also been appointed Auditor, T.T.R. Co., vice W. H. Ardley, retired. Office, Montreal.

President Beatty, of the C.P.R., on Government Ownership, Etc.

E. W. Beatty, K.C., President C.P.R., during his trip from Montreal to the Pacific coast and return, in the latter part of May and early in June, addressed a number of meetings, including the follow: Associated Boards of Trade of British Columbia, at Nelson; Canadian Club, at Victoria; Board of Trade and Canadian Club, at Vancouver; Canadian and Rotary Clubs at Calgary; business men, at Edmonton; Canadian Club, at Fort William.

Following is a complete report of Mr. Beatty's remarks:—"I feel that I need make no apology for speaking very briefly on a matter which is engrossing the attention of the most serious thinking Canadians, and that is, what is to be the ultimate end of our railways and under what auspices or method of administration are they to be managed. The possession by the Canadian Pacific Ry. Co. of a system involving 13,770 miles in Canada, of which 8,750 miles are west of the Great Lakes, gives in itself a reason why its officers should have some knowledge and some views on the subject, and if they are of any value, those that have an equal voice in the final determination of the question are certainly entitled to the benefit of them.

"I have an additional reason for mentioning this subject, in that a great deal of misapprehension seems to exist in some quarters as to just what the problem is. We have private ownership of some railways and we have public ownership of others, both existing in the country now. The fact that the country has been compelled, through the financial failure of some systems, to take them over, in order to prevent them from falling into utter desuetude is one thing, but that it is quite a different problem from the question of a permanent policy of government owned and government managed railways. I do not know that the Government could have done anything else than it did do, but I do feel that neither the Government nor the people of this country are yet in a position to determine finally what the future of all these systems must be.

"I think it is unfortunate that fuller discussion of this subject has not obtained in Canada up to now. It is true it occupies certain space in the newspapers, and has been discussed in parliament, but always with the unsatisfactory result that the advocates of the different methods of administration are considered prejudiced. If a public man speaks, we shrug our shoulders, and say it is politics; if a railway man speaks, he is said to be prejudiced by his railway association. Not all the men who go to Ottawa are governed absolutely and exclusively by political considerations, and the railway man can still be a railway man and be a good citizen of Canada, with an honest desire to see the transportation future of his country assured.

"Government ownership in theory has much to recommend it. It has been said by a very able member of the Government that the advisability of its increases as you approach a state of monopoly, and that is probably true, but it has not been determined in any satisfactory way up to date, whether Government management of our systems is feasible or even possible. Until it is determined, I should conclude it would be well for the government and the people to withhold their final judgment. Among the advocates of this system are many men who are sincerely and honestly convinced that in the last analysis it will be for the benefit of the people of this country, and that is the only angle from which the question can be viewed. It is unfortunate however, that most of these large enterprises, and the wish for success is father to the thought, that success will result. We have recently had the benefit of the results of similar experiments in Great Britain and the Uuited States, and while I am quite prepared to admit that the abnormal conditions under which the systems had to be operated during the war, make the lessons to be drawn from this method of administration not entirely conclusive, I am strongly of the view that there is nothing in these results which gives confidence or justifies the hope that we would avoid the disaster they have experienced, and that the difficulties which at least, contributed to their failure would be absent from the administration of Canadian railways under like auspices.

"You will recall that the Uuited States systems broke down when put to the test. They broke down physically and financially. Both could, I think, have been avoided, or at least minimized, had a little broader view of the needs of U.S. railways been taken by U.S. tribunals in the five years prior to the entry of the U.S. into the war. What was subsequently done, was done in an attempt to meet a highly emergent situation and with an intent that the cost, whatever it might be, of mistake or should be borne in the interest of the principles for which the allied nations were contending in this war. The result is described as a debacle, the deficits have been enormous, and the efficiency and character of the service lessened to an alarming degree. The U.S. people were, however, fortunate their experience was crowded into a comparatively short time, and they were enabled to learn the lesson it taught without protracted experiments.

"As a result of this experience and that which they had through the operation of cables, telegraphs and telephones, I think it may be safely said that the last vestige of desire for government operation of these utilities has departed from the majority of the U.S. people. In fact, those actually entrusted by the government with the administration of the properties have admitted the unwisdom of the continuance of the system. The Posmaster-General has agreed to the return of the cables and the telegraph lines, and the President of the U.S. has directed the return of the railways. The Director-General of Railroads, Mr. Hines, who has been connected with the U.S. Railroad Administration from the beginning, first as Assistant Director-General and latterly as Director-General, expresses his views as follows: "I want to tell you that in my judgment, based on a very careful sudy of this subject since the Federal Control began, the best interests of the country will be promoted, not through permanent government operation, but through the return of the railways to private management. I believe the American public wants competition in service, and private initiative is, I think, of the utmost importance in order to get satisfactory public service. Mr. E. N. Hurley, Chairman of the U.S. Shipping Board, states that it is his belief that combinations between government and business are almost as dangerous as combinations between church and state. The results in the U.S. will be available to this country and the ultimate solution adopted there will be of use to us in determining what our policy will be, because the evils of government administration if present in one country will be difficult to avoid in the other.

"It may be said that my own views are prejudiced, and they are to the extent that they are the result of 18 years of intimate association with the workings of one railway company and an appreciation from the inside of what factors contributed to its efficiency and success. It is a long and arduous work to hammer together an efficient organization which must be so widespread in its activities and so widely separated as to locality as the organization of a transcontinental railway. In the case of the C.P.R., it has been in existence for almost [illegible] years, and the organization has been built up painfully and slowly. It has now reached an efficiency in all ranks, which it will be easier to maintain, but it could not be developed, nor can it be maintained without the enterprise, resourcefulness, loyalty, initiative and esprit of the officers and men of the company. There is something which gives rise to this spirit which comes from within the organization itself, and I would need be assured not only that independent non-political administration is possible, but that it would provoke this spirit, before I would cast a vote for a permanent policy of government ownership and operation. When I speak of government ownership and operation. I do so because [illegible] as the latter is the natural consequence of the establishment of the former. It is not possible, in my opinion, to divorce the responsibility for operation from those upon whom rests the responsibilities for the results. In theory, it may seem reasonable, but in practice I am quite convinced it will be found impossible to persuade those who vote the money for these enterprises to exclude themselves entirely from the administration of the properties for which they supply the money.

"In the determination of this question, I know of no consideration less important than that of political expediency. It is particularly a question of national economics, and what system will give the best and cheapest service to the people of this country. The crux of the whole thing lies in this, that is, the ability of governments to carry on enterprises such as this with the same competency and efficiency as private owners. I am not attempting to persuade you to my views; they are not unalterable, but I have not yet found anyone who could adduce evidence of the success of a government operated system in former days, or in other countries, where similar conditions prevail, and before we adopt a similar policy which will saddle us with the principles of public ownership and operation of our systems, we should, I think, be very sure of our ground. The question cannot be determined in accordance with the wishes and views of financiers, stock brokers, politicians, or any one set of men; it must be determined on the one ground by balancing its advantages with its disadvantages and considering which is in the best interests of Canada.

"In order to reach a decision, the most careful consideration and analysis of results here and in other countries is necessary. With knowledge and experience, we can determine it, without it, we will add to our railway mistakes. That we have made serious blunders is evident, but we are all responsible. We built railways in wrong places, and at wrong times. But these mistakes, serious as their consequences have been, would be minor compared to the mistake if we adopted a wrong principle for their administration, and add the continuing and pyramiding losses, which would result from extending these wrong principles to a largely extended system.

"I am a great believer in this country and I believe that our difficulties, economically and commercially speaking, will be solved. Some of these difficulties appear serious, and they are, and in expressing hope and confidence. I do not wish to minimize the danger of the situation. I am convinced, however, that the difficulties are not insuperable, nor should they be entirely unexpected. It is the most natural thing, and quite in accordance with the precedent of history, that following such a terrible four years world eruption, there should now arise, both nationally and individually, conditions which it will take extraordinary [illegible] to meet. Last summer the railways of the country were threatened with very serious labor troubles; wage adjustments were made and rates were raised, but the individual difficulties due to unrest did not thereby disappear. The railways, in conjunction with the government and the labor unions, adopted a course quite without precedent in the history of Canada. Their heads sat round a table, discussed the best methods to adopt, and in the end constituted what is known as Railway Board of Adjustment No. 1, composed of six representatives of the labor unions and six railway executives. The board was empowered to adjust and make binding upon the parties concerned all disputes arising between railway employes and the railway companies. In the event of failure to agree, there was a provision for calling in an outside and independent referee, who would give the casting vote. Whether or not it was because the number this gentleman would bear was no. 13, I cannot say, but 32 main disputes, in some cases involving half a dozen minor differences, each one of which might have precipitated a strike, have been determined by this board, and in no case has there been an absence of agreement, and in no case have either the executives or the men complained that substantial justice was not done. Now the reason for the extraordinary success of the tribunal, which was formed to exist during the period of the war only, but which I hope will continue long after peace has been declared, is this—it was composed of men determined to see that right was done; men who respected their colleagues on the board and themselves; men who were actuated by the spirit of adjustment. In no case has the board ever forgotten its judicial attitude, nor has there been any evidence of feeling on either side.

"It is not for me to suggest what measures would be appropriate for industries, but I can assure you that the workings of the Canadian Board of Adjustment No. 1 can be looked to with great satisfaction, and I should think, with some advantage by all those who have to deal with the existing labor problems. You are all aware of the high scale of wages now existing in this country and of the prevailing unrest. As representing a company whose operating expenses increased by $34,000,000 in the short period of two years, I have had some experience of the manner in which these rapidly increasing costs affect large enterprises. We are all disposed to attribute these things to the high cost of living, but few, if any, of us know what is responsible for it, or what the ingredients in it are. It has recently been announced by the Minister of Labor that the government has quietly made investigations and will be able shortly to make an announcement of the results of them, and undoubtedly that is the first step to be taken, because if these costs are improper costs, we should know where the unfairness rests; if they are otherwise, we must take means to ensure our ability to meet these higher standards of living. Here again, it is the actual facts, which will enable the people to decide what should be done and whether our highly increased wages are due to reasons which could be avoided, or whether they are inevitable.

"It has been announced that conventions are to be held in the coming summer for the purpose of developing the natural resources of the western provinces, and the establishment of industries there in order that they may be more self contained. This is as it should be. We need immigrants; principally of the agricultural class, and we need to know and interest others in the local possibilities of Western Canada. Most of us believe that they are almost limitless, but we must interest capital in order that these resources can be developed and industries maintained in the development of the whole country."

Freight and Passenger Traffic Notes.

The Canadian National Rys. are reported to have bought the old Sun Life Bldg., James St. North, Hamilton, Ont., for an up-town office.

The C.P.R. is reported to be arranging for the establishment of a tourist route from Vancouver, by water, around the west coast of Vancouver Island, during the summer, the round trip to last a week.

A Quebec press report of June 12 stated that the putting on a daily passenger train service on the Quebec and Saguenay Ry., between St. Joachim, and Murray Bay, Que., for July, Aug. and Sept., was being discussed.

The Canadian National Railways, District Passenger Agent's office, and city ticket office, heretofore located in the Transportation Building, 120 St. James St.., Montreal, were removed June 23 to the Canadian National Rys. Bldg., 226-230 St. James St.

The Vancouver Board of Trade, the Canadian Manufacturers' Association's British Columbia branch and other allied trading bodies, are reported to have arranged for establishing a freight traffic bureau for the province with headquarters at Vancouver.

The Canadian National Rys. advised the Edmonton, Alta., Board of Trade, recently, that it was impossible to put on a freight service over the 44 miles of the line from Oliver towards St. Paul de Metis, on which track was laid, on account of it not being ballasted.

Freight traffic over the Quebec bridge for the week ended June 15, was, according to a press report, 335 loaded cars from the bridge station to Chaudiere Jct.., and 252 from Chaudiere Jct. to the bridge station, a total of 587, against 618 for the corresponding week of 1918.

The car ferry steamship Prince Edward Island, operating between Cape Tormentine, N.B., and Borden, P.E.I., is making two trips a day, thus giving a double daily service for passengers, mail and freight. The 6.15 a.m. train out of Charlottetown, connects with the Ocean Limited train, and the 12.50 p.m. train out of Charlottetown connects with the maritime express, going west; while passengers on these trains going east change at Sackville, N.B., to trains connecting with the ferry. Passengers arriving in Prince Edward Island on the ferry's afternoon trip can get through to Tiquist, and those arriving in the evening ferry can get to Summerside.

Mail from Edmonton to McMurray, Alta., heretofore carried via Athabasca Landing by rail, thence by motor boat to House River, and then by portage to destination, is now being carried by rail to Lac la Biche on the Alberta and Great Waterways Ry., thence by a gasoline "speeder" to the end of track, for the remaining eight miles the mail is carried to wagon to the Clearwater River, and thence by launch to destination. The mail is now delivered twice a month. A press report states that the mail contractor is having a motor car fitted to run on the Edmonton, Dunvegan and British Columbia Ry., with a view of making weekly round trips.

The British Columbia Government issued an order in council recently, granting running rights over the Victoria and Sidney Ry., to the Canadian National Rys. The operation of the V. and S. Ry.

was abandoned by the Great Northern Ry., and the company's affairs are in a receiver's hands. A conference is reported to have taken place at Vancouver recently between A. T. Goward, Local Manager of the British Columbia Electric Ry. at Victoria, and the liquidator of the V. and S. Ry., with a view of the B.C.E.R. taking over the section of the line from Victoria to the nearest point of contact with its own line, thus making a loop line.

A. P. Barnhill, K.C., a director of the Canadian National Rys., is reported to have said in Montreal, June 20, that as soon as the St. John and Quebec Ry. is completed from Gagetown to the C.P.R. to Westfield, N.B., and the Fredericton-McGivney Jct. improvements on the old Canada Eastern Ry. are done, it will be possible to run through trains between St. John and Montreal. The trains will start from the west side of the harbor in St. John, and reach Westfield over the C.P.R., running rights having been arrange dfor, thence over the St. John and Quebec Ry. to Fredericton, thence over the I.R.C. to McGivney Jct. and thence by the National Transcontinental Ry. to Levis, and from Levis by the Intercolonial to Montreal. It is expected that the new route will be opened up in September. The distance from St. John to Montreal, by the proposed route will be 660 miles, and trains leaving St. John at 3 p.m., will, it is said, be timed to reach Montreal at 8 o'clock on the following morning.

Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World readers who are returning to civil life from military, naval or other government service are strongly urged to send in items about themselves and about their friends who are in a similar situation. Items should give former position, describe character of military or other service and state the civil work to which the transportation official, etc., in question, is going. In the case of those with service abroad, information regarding the activities of the units to which they were assigned is especially desired.

Troop Transportation Expenditures—According to Canadian National Rys. statistics, the total number of troops moved to camps and seaports east of Winnipeg, between Aug., 1914 and May 31, 1919, was 1,108,081. The estimated cost is based on a calculation of from $10 to $15 a man. Between Aug., 1914 and Nov. 30, 1918, the actual war period, the C.N.R. handled 462,240 men by special trains and 296,585 by regular trains all outward bound. The number of special trains required was 1,191 and the special train mileage was 808,359. From the commencement of demobilization, Dec. 1, 1918 to May 31, 1919, 153,609 men were handled by special trains at Halifax, N.S., westerly, and 17,680 by regular trains. For home coming troops to the latter date, 353 special trains were used with a total mileage of 303,515.

Tanks loaded on railway cars, on British Western Front, showing bundles of wood carried, to dump in deep trenches, to allow tanks to cross. Photograph loaned by C.P.R.

PERSONAL NOTES.

Lieut.-Col. Blair Ripley, D.S.O., formerly Engineer of Grade Separation, C.P.R., Toronto, who returned to Canada recently with the 1st Battalion, Canadian Railway Troops, of which he was O.C., has been made a Commander of the Order of the British Empire.

Lieut.-Col. H. F. H. Hertzberg, D.S.O., M.C., who has returned to Canada after considerable service in France, is a son of A. L. Hertzberg, Engineer, Ontario District, C.P.R., Toronto. He went overseas as a lieutenant with the first contingent and in April, 1915, was wounded, while serving with the 1st Field Co. of the 3rd Brigade. In June, 1915, he was awarded the Military Cross for conspicuous gallantry and devotion to duty, and in Jan., 1918, received the Distinguished Service Order. In addition to these decorations he was mentioned in dispatches three times.

Capt. Howard Reid, recently of the Royal Air Force, who is acting as official starter of various flying machines in Transatlantic flights, making Newfoundland their starting point, is a son of Sir Wm. Reid, formerly President, Reid Newfoundland Co. He was one of twelve British airmen to start a flight from Mudros to Bucharest in 1916, across the Bulgarian and Turkish battle lines and thence northward to Russia and to England by way of Archangel. Only two of those who started finished the flight.

Lieut. W. H. Roberts, who has resumed duties in the C.P.R. ticket office at Edmonton, Alta., enlisted in the old 9th Battalion and served in France with a machine gun brigade. He was given a commission in Aug., 1917, and was awarded the Military Cross, for conspicuous gallantry at Amiens, in 1918.

Lieut. E. E. Soper, son of W. Y. Soper, Vice President, Ottawa Electric Ry., returned to Canada, June 5, after 3 years service overseas. He left Canada in 1916 with the Canadian Army Service Corps and on arrival in England was transferred to the Forestry Corps, and went to France as Quartermaster of No. 48 Company, which operated chiefly in Southern France. He returned to England in February. His wife returned to Canada with him, she having been engaged in war work as deputy administrator of the women's section of the Royal Air Force, at Bushey Park, near London.

C.P.R. Boys' Club, Montreal—In connection with its welfare work, the C.P.R. has organized a club for the boys employed in the offices at the Windsor St. station, Montreal. The membership at it recent organization consisted of about 150 employes under 18 years of age. The club engages in various atheltic and other amusements, and the members take up various branches of study connected with their work, 50% of the cost of instruction being borne by the company.

Canadian National Rys. Headquarters—A report that the C.N.R. headquarters were to be removed from Toronto to Montreal having been in circulation recently, the mayor of Toronto telegraphed Sir Robert Borden, protesting, and received the following reply:—"Your telegram regarding reported removal Canadian Government Railway headquarters from Toronto to Montreal. Government has no intention of any such proposal, nor has it been considered."

The C.P.R. Social Club was organized recently at Fort William, Ont. The officers elected are: Honorary President, A. F. Hawkins, Superintendent; Honorary Vice Presidents, the heads of all departments at the terminal; President, J. D. Callahen, Yard Office; Vice President, J. C. Watson, General Office; Secretary, Insp. M. A. Woodworth, Superintendent's Office; Treasurer, Insp. J. Rowe, Port Arthur, freight department. There is an executive committee representative of the employes of the different departments. The club aims at the promotion of more intimate intercourse among the staff of the different departments, and the fostering and encouraging of activities in all branches of sport. It is intended to equip club rooms for the members, the company having granted the use of rooms on the second floor of the freight and grain office for this purpose. We are advised that over 300 of the company's employes have already joined the club.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 261. May 13.—Authorizing Bell Telephone Co.'s increased tolls for long distance service and on all toll rates and charges for exchange telephone service and charges incidental thereto; [illegible] service connection charge, so-called, to be disallowed, increased tolls for exchange service already installed to be effective June 1.

28,318. May 14.—Authorizing Grand Trunk Pacific Branch Lines Co. to build spur for Rocky [illegible] Collieries Ltd., in northwest ¼, Sec. 35, Tp. 47, Range 20, west 5th meridian, Alta.

28,319. May 14.—Approving plan of work to be done on Barons drain, under C.P.R., of South Dorchester Tp., Ont.

28,320. May 15.—Authorizing Canadian National Rys. to cross highways on its Melfort-Humboldt Branch between Sec. 4, Tp. 38, Range 22, and Sec. 33, Tp. 37, Range 22, between Secs. 28 and 21, Tp. 37, Range 22, and between Secs. 21 and 20, Tp. 37, Range 22, west 2nd meridian, Sask.

28,321. May 1[illegible].—Authorizing Esquimalt and Nanaimo Ry. to build spur for Victoria Lumber & Mfg. Co., Nanaimo, B.C.

28,322. May 12.—Approving G.T.R. plan of revised location of station at St. Agapit, Que.

28,323. May 16.—Relieving Canadian National Ry. from providing further protection at the crossing of Dawson Road, Man.

28,324 and 28,325. **May 15.—Authorizing Canadian Northern Ontario Ry. to rebuild bridges** over Mill Creek, Ont., mileage 59.25, from Montreal, and Squiers Creek, mileage 49.76, from Picton, Ont.

28,326. **May 16.—Authorizing Canadian Na**tional Rys. to cross highway between Secs. 23 and 26, Tp. 38, Range 22, west 2nd meridian, Sask.

28,327 and 28,328. May 16.—Authorizing Canadian Northern Ontario Ry. to rebuild bridges over Coal Creek, mileage 38.13, and over Squiers Creek, mileage 41.35, from Picton, Ont.

28,329. May 16.—Authorizing G.T.R. to operate over crossing at Junction Cut, Ont., without first stopping.

28,330. May 14.—Approving agreement, Apr. 25, between the Bell Telephone Co. and North Brock Telephone Co. in Ontario County, Ont.

28,331. **May 20.—Authorizing Canadian North**ern Ontario Ry. to rebuild bridge over Black River, mileage 86.90, from Toronto.

28,332. May 21.—Relieving Montreal Tramways Co. and G.T.R. from protection at crossing of G.T.R. along the front of the city docks, and Dominion Coal Co.'s spur.

28,333. May 19.—Authorizing Niagara, St. **Catharines and Toronto Ry. to build spur for A.** Martin & Son, Thorold, Ont.

28,334. May 1[illegible].—Authorizing Grand Trunk Pacific Ry. to build spur for Penny Labor Co. at mileage [illegible], British Columbia.

28,335. May 20.—Authorizing Canadian National Rys. to cross highway between Secs. 22 and [illegible], Tp. [illegible], Range 22, on its Melfort-Humbolt Branch, Sask.

28,336. May [illegible].—Approving G.T.R. clearances [illegible], Brockville, Ont.

28,337. May [illegible].—Authorizing Canadian Northern Quebec Ry. to rebuild bridge over River [illegible] from Joliette, Que.

28,338. May [illegible].—Authorizing Canadian National Rys. to cross highway between Secs. 10 and [illegible], Tp. [illegible], Range 22, on its Melfort-Humboldt Branch, Sask.

28,339. May [illegible].—Relieving Quebec, Montreal & Southern Ry. until Oct. 1, from complying with order 27,744, Oct. 1, 1918, re mixed trains service between Noyan Jct. and Lacolle Jct., Que.

28,340. May 1[illegible].—Ordering Canadian National Rys. to stop train 7 at Richmond, Ont., on Saturday nights.

28,341. **May 20.—Authorizing Hydro Electric** Power Commission of Ontario to build spur across **Niagara, St. Catharines and Toronto Ry. on lots** [illegible] and 66, Stamford Tp., Ont.

28,342. May 20.—Authorizing C.P.R. to open [illegible] second main track between Fair[illegible] and West St. John, N.B., from mileage 0.07 [illegible].

28,343. May 20.—Authorizing Canadian Northern Ontario Ry. to rebuild bridge over Chenail [illegible], Hawkesbury, Ont.

28,344. May [illegible].—Authorizing Canadian National Rys. to rebuild **bridge over Sinclair St.,** [illegible], Ont.

28,345. May 20.—Authorizing Canadian National Rys. to cross highway between Secs. [illegible], Range 22, on its Melfort-Humboldt Branch, Sask.

28,346. May 2[illegible].—Approving G.T.R. to re[illegible] River near St. [illegible]

28,347. May [illegible].—Amending order 28,291, Apr. [illegible] Montreal [illegible] July

17, 1918, suspending C.P.R. and G.T.R. tariffs cancelling special commodity rates on glass bottles in carloads, Hamilton, Toronto and Montreal, and authorizing them to cancel special commodity rates on bottles in carloads from Wallaceburg made effective in pursuance of judgment of July 30, 1904, to take effect simultaneously.

28,349. May 2.—Authorizing Great Northern Ry. to discontinue train service between Grand Forks and Phoenix on Vancouver, Victoria & Eastern Ry. & Nav. Co., on condition that satisfactory freight service be furnished.

28,350. May 19.—Approving agreement, May 9, between Bell Telephone Co. and Welland County Telephone Co., Welland County, Ont.

28,351. May 21. Ordering that crossing of Powell St., Vancouver, B.C., by the Vancouver, Victoria & Eastern Ry. & Nav. Co. (G.N.R.), to take up tracks to stop at northern boundary, Dominion Biscuit Co. property.; Canadian National Rys. to extend the V.V. & E.R., over which it has running rights to south of Hastings St., northerly and easterly, crossing Powell St. and C.P.R. main line.

28,352 and 28,353. May 26.—Approving Bell Telephone's agreements with Ivy Thornton Telephone Co., Simcoe County, Ont., May 26, and Durham Road Telephone Co., Bruce County, Ont., May 8.

28,354. May 26.—Authorizing Canadian Northern Ontario Ry. to rebuild bridge over Talbot River, Mara and Thorah Tps., Ont., mileage 67 from Toronto.

28,356. May 26.—Authorizing Canadian Northern Ontario Ry. to rebuild bridge over Laronde River, Beaucage Tp., Ont., mileage 74.7 from Brent.

28,355. May 28.—Suspending pending hearing at Ottawa, June 10, tariffs of C.P.R., G.T.R., Canadian National Rys., New York Central Rd., Quebec, Montreal & Southern Ry., Napierville Jct. Ry. and Montreal & Southern Counties Ry., increasing, effective June 1, rates on milk in passenger or mixed train service.

28,357. May 23.—Amending order 28,147, Mar. 11, re maintenance of signalmen at G.T.R. crossing at Southwold, Ont., and Michigan Central Rd. at Appin, Ont.

28,358. May 27. — Authorizing Saskatchewan Government to build highway crossing over Canadian National Rys. on dead line between Secs. 6 and 7, east to Hague Ferry, Sask.

28,359 to 28,361. May 26.—Authorizing Canadian Northern Ontario Ry. to divert Burnt Creek, Neelon Tp., Ont., mileage 107.80 from Parry Sound, and to rebuild bridge over same; to rebuild bridge over South Nation River, North Plantagenet Tp., Ont., mileage 78.26 from Montreal; and to rebuild bridge over Farm Road, Whitechurch Tp., Ont., mileage 34.50 from Toronto.

28,362. May 26.—Ordering C.P.R. and Ottawa & New York Ry. to change timetables in connection with trains at Finch, Ont., and the connection there.

28,363. May 27.—Authorizing Grand Trunk Pacific Ry. to divert road allowance in northeast ¼, Sec. 2, Tp. 24, Range 9, in Stanley rural municipality, no. 215, Sask.

28,364. May 27.—Authorizing Canadian Northern Ontario Ry. to rebuild crossing over arm of Sydenham Lake, mileage 166.10 from Todmorden, Ont.

28,365. May 26.—Authorizing C.P.R. to build spur to Dryden ballast pit, Zealand Tp., Ont.

28,366. May 27.—Ordering G.T.R. to build farm crossing for J. Demers, St. Agapit Parish, Que.

28,367. May 26.—Rescinding order 16,128, Mar. 15, 1912, in so far as it exempts C.P.R. from erecting fences along right of way between mileage 42.3 and 42.5, and 45.5 and 45.8, north side, such fencing to be done by June 30, 1919.

28,368. May 21.—Approving Canadian Northern Western Ry. location through Tps. 14 and 18, Ranges 6 and 9, west 4th meridian, Alta., from mileage 92.40 to 128.68.

28,369. May 21. Dismissing application for order directing Lake Erie and Western Ry. (C.P.R.) to provide access to M. F. Muir's property **on the river front at Brantford, Ont., by crossing beneath tracks.**

28,370. May 30.—Authorizing Niagara, St. Catharines & Toronto Ry. to build spur for Clemens & Miller, Welland, Ont.

28,371. May 29. Authorizing Canadian Northern **Quebec Ry. to build spur for H. Walsh & Son, St. Andrews, Que.**

28,372 to 28,374. May 29.—Authorizing Canadian Northern Saskatchewan Ry. to build across three highways in Saskatchewan.

28,375. May 29.—Authorizing C.P.R. to build spur for Canadian Co-operated Wool Growers, Ltd., in York Tp., Ont.

28,376. May 31. Authorizing Canadian National Rys. to connect with Grand Trunk Pacific Branch Lines Co.'s line at Moose Jaw, Sask.

28,377. May 30. Authorizing Canadian Northern Western Ry. to cross highway between Sec. 3 and 4, Tp. 17, Range 8, west 4th meridian, Alta.

28,378 to 28,382. May 29. Authorizing Canadian Northern Saskatchewan Ry. to build across five highways in Saskatchewan.

28,383. June 3. Authorizing Canadian National Rys. to operate over portion of Victoria & **Sidney Ry. (G.N.R.) from Sidney, B.C., to Canadian Northern Pacific Ry. crossing, for three months from date.**

28,384. May 30.—Authorizing G.T.R. to take certain land for track for suburban trains, new team tracks and house tracks serving new freight shed near Point St. Clair, Que.

28,385. May 31.—Authorizing Town of Drumheller, Alta., to make highway crossing over Canadian National Rys. Y on Third Ave.

28,386. June 4.—Authorizing C.P.R. to build spur for B. Blair Co., Blandford Tp., Ont.

28,387. May 30. Approving agreement between Bell Telephone Co. and Imperial Munitions Board Liquidation Committee, dated May 17, re operating exchange at Nobel, Ont.

28,388. May 30.—Authorizing Canadian Northern Western Ry. to cross 26 highways in Alberta.

28,389. June 5.—Authorizing McDougall Tp., Ont., to make highway crossing over Canadian National Ry. at Lot 28, Con. 6.

28,390. June 5.—Approving plans and specifications of work on Parent outlet relief train on G.T.R. lands, Sandwich East Tp., Ont.

28,391, 28,392. June 2. — Authorizing Canadian Northern Saskatchewan Ry. to cross two highways in Saskatchewan.

28,393. May 31.—Approving Canadian National Rys. plan of alterations to station building at Kamsack, Sask.

28,394. June 5.—Approving changes in G.T.R. spur for Steel Co. of Canada, Belleville, Ont.

28,395. June 2.—Amending order t27,996, Jan. 8, re protection by C.P.R. at street crossings in Peterborough, Ont.

28,396. May 31.—Ordering Canadian National Rys. to move portable station at Runnymede, Sask., to 50 ft. east of east switch and to make road past station and adjoining road allowance.

28,397. May 29.—Amending order 25,540, Oct. 17, 1916, re protection of crossing of C.P.R., Canadian National Rys. and G.T.R. in Riverdale Park, Toronto.

28,398. May 28.—Authorizing Lake Erie & Northern Ry., Toronto, Hamilton & Buffalo Ry., and G.T.R. to operate over interchange track at Brantford, Ont.

28,399. May 31.—Authorizing Canadian National Rys. to build spur fo rManitoba Abbattoir & Packers Ltd., St. Boniface, Man.

28,400. June 4.—Approving Great Northern Ry. plan of changes in its bridge over False Creek, Vancouver, B.C.

28,401. June 5.—Ordering Michigan Central Rd. within 60 days to instal automatic bell at crossing of Talbot Road, Maidstone, Ont.

28,402. June 6.—Authorizing C.P.R. to make changes in track for Dwyer Elevator Co., Fort William, Ont.

28,403. Apr. 19.—Authorizing Saskatchewan Government to make highway crossing over Grand Trunk Pacific Ry. on surveyed road north of Sec. 29, Tp. 39, Range 21, west 3rd meridian.

28,404. June 4. — Authorizing Saskatchewan Government to make crossing over C.P.R. at Amazon.

28,405. June 4.—Authorizing G.T.R. to build branch line for Stewart Ltd., Sarnia, Ont.

28,406. June 2.—Ordering C.P.R. within 60 days to instal two automatic bells at crossing of Anderson St., Grenfell, Sask.

28,407. June 6.—Authorizing Canadian Northern Pacific Ry. to build spur for Queen Bess Mine, Lot 1652, Kamloops Land District, B.C.

28,408. June 6.—Approving clearances for Canadian National Rys. overhead unloading apparatus for tank cars, to be erected for Imperial Oil, Sarnia, Ont.

28,409. June 6.—Authorizing C.P.R. to rebuild bridge near Ardendale station, Ont.

28,410. June 6.—Authorizing Canadian Northern Ontario Ry. to rebuild bridge over Seguin River, at Parry Sound, Ont.

28,411. June 6.—Approving G.T.R. plan of construction and location of passenger shelter, at St. Henri station, Montreal.

28,412. June 9.—Approving relocation of C.P.R. station at Coldwater Jct., Ont.

28,413. June 4.—Ordering Canadian National Rys. to make certain alterations in station at Baldur, Man., to be completed by Aug. 1.

28,414. June 4. Ordering G.T.R. to divert road allowance between Cons. 4 and 5, **Raleigh Tp., Ont., to make it cross tracks at right angles with** turns outside of right of way.

28,415. June 4.—Approving Michigan Central Rd. clearances at belt conveyor for Queenston Quarry Co., St. Davids, Ont.

28,416. June 9.—Ordering C.P.R. to appoint male caretaker at Laval Rapids, Que., to see that station is kept clean and in proper condition for l.c.l. freight and express and for passengers.

28,424. June 11. Authorizing Canadian National Rys. to build spur for Manitoba Coal & **Development Co., Drumheller, Alta.**

28,425. June 11. Authorizing Dominion Government to build highway over C.P.R. near Lake Louise, Alta.

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—There has been filed with the Secretary of State at Ottawa duplicate of a lease, dated May 1, made by Canadian Northern Rolling Stock Ltd., to the Canadian Northern Ry. of certain rolling stock, attached to which is an assignment of the same to the Girard Trust Co.

Grand Trunk Ry.—The Dominion Parliament has authorized the company to issue additional perpetual consolidated 4% debenture stock, in such amounts as the proprietors of the company entitled to vote shall from time to time determine, provided that the aggregate amount of the interest to be paid annually on the stock to be issued under the present act shall not exceed £100,000. Such stock is to rank equally and be consolidated with the present consolidated debenture stock, and the holder shall be entitled to the same voting powers. The proceeds of the stock issued may be applied in the exercise of any of the powers specifically conferred upon the company, and for the company's general purposes.

A special meeting of shareholders was called to be held in London, Eng., June 30, to approve of the act, and authorize the directors to exercise the powers conferred by the act.

Grand Trunk Pacific Ry.—The Dominion Parliament has confirmed the two orders in council under which the Minister of Railways was appointed Receiver for the G.T.P.R. and its subsidiary companies. These orders were given in full in Canadian Railway and Marine World for April.

Grand Trunk Pacific Ry.—The Premier of Saskatchewan is reported to have stated, June 5, that the Saskatchewan Government had paid the interest due on the bonds issued by the Grand Trunk Pacific Ry., and subsdiary companies, in respect of branch lines in the province, the payment of which had been guaranteed by the Saskatchewan Legislature.. The half year's interest, due May 1, amounted approximately to $260,000.

Roberval-Saguenay Ry.—The Saguenay Pulp and Power Co., which owns the Roberval - Saguenay Ry. Co.'s stock, placed on the market, June 9, an issue of $5,500,000 6½% serial gold bonds, dated June 1. They are issued in denominations of $100, $500 and $1,000 and are redeemable as to $100,000 on July 1, 1921, and in increasing amounts on each succeeding July 1, until 1934, when the balance of $2,476,000 will become due. The security for the issue includes $1,333,000 of 7% bonds, $800,000 or 6%, non-cumulative preferred shares, and $1,200,000 ordinary shares of the Roberval-Saguenay Ry., these being the entire bonds and shares issued by the company. The profits of the railway for the year ended Dec. 31, 1918, are stated to have been $105,002.88. The directors of the Saguenay Pulp and Power Co. include: Hon. F. L. Beique, a director of the Canadian Pacific Ry., and Hon. J. M. Wilson, a director of the Montreal Tramways Co.

Rutland Rd.—There has been deposited with the Secretary of State at Ottawa an agreement dated April 5, between the company and the Guaranty Trust Co. of New York, supplemental to the lease of April 1, 1913, establishing the Rutland Rd. Equipment Trust of 1913.

Toronto, Hamilton and Buffalo Ry.—Following are the directors for the current year, elected at the annual meeting in Hamilton, Ont., June 3:—H. B. Ledyard, J. N. Beckley, W. K. Vanderbilt, Jr.; Lord Shaughnessy, D. W. Saunders, W. P. Torrance, E. W. Beatty, W. L. Scott, A. K. Harris, Grant Hall, A. H. Smith.

Rolling Stock Orders and Deliveries.

The C.P.R., between Apr. 13 and June 14, ordered 3 vans from its Winnipeg shops.

The C.P.R., between Apr. 13 and June 14, received the following additions to rolling stock: 108 flat cars, and 7 locomotives, from its Angus shops; and 4 vans from its Winnipeg shops.

The Canadian Locomotive Co. has made no deliveries of locomotives on order since those last mentioned in Canadian Railway and Marine World on account of the plant being closed owing to a strike.

The G.T.R. has received 4 switching locomotives from its Montreal shops, leaving 5 of an order of 20 under construction there. A full description of these locomotives was given in our last issue.

The National Steel Car Co., between May 13 and June 12, delivered 427 box cars, 40 ft. long, to Canadian National Rys., and is continuing delivery of railway material to the Federated Malay States Government.

Canadian National Rys. has invited tenders for the construction of 20 steel postal cars and 20 steel first class passenger cars. The postal cars are to be supplied with the latest Canadian Railway Mail Service's requirements and also with those of the U.S. Railway Mail Service. They are to be 73½ ft. long.

Canadian Car and Foundry Co., between May 13 and June 12, delivered to Canadian National Rys. 347 steel frame box cars, completing an order for 5,000; 41 colonist cars; 142 ballast cars, and 22 Eastman heater cars, which were equipped at the company's Amherst plant. It has also delivered 6 electric locomotives to the Hydro Electric Power Commission of Ontario, and 23 refrigerator cars, which have been repaired at Montreal, to the G.T.R.

Quebec Board of Trade on Government Ownership of Railways.

The Quebec Board of Trade passed the following resolution recently:—"That the President be requested to write to Sir Robert Borden, Prime Minister, stating that while quite understanding that urgent reasons compelled the government to take over and operate the National Transcontinental Ry. and the Canadian Northern Ry., the Quebec Board of Trade would respectfully suggest that it would not be wise for the government to take over and assume the indebtedness of any other railway, at least until two or three years trial of the roads they are now operating shall have proved whether this can be done with advantage and without increasing the already very heavy financial burdens of the country. An opportunity to ascertain, by a little delay, would seem prudent, in view of the enormous losses sustained by the United States Government in operating the railways of that country, even with increased rates, and in view of our own experience with the Intercolonial Ry."

Canadian Pacific Railway Trans-Canada Trains.

As announced in advance, in Canadian Railway and Marine World for June, the C.P.R.'s new Trans-Canada Limited started running on June 1, the first westbound train leaving Montreal at 3.30 p.m. and reaching Vancouver, Jan. 6 at 10 a.m., making the annual running time for the 2,885.8 miles, 93½ hours. It was never behind time on the whole run, and at some points exceeding its schedule, and it could have reached Vancouver considerably earlier.

As stated above, the running time from Montreal to Vancouver is 93½ hours. From Toronto to Vancouver it is 89¾ hours. Eastbound the running time is, from Vancouver to Montreal, 92¼ hours, and from Vancouver to Toronto, 88 hours.

On leaving Montreal the train had about 100 passengers and picked up others en route. The highest number of passengers was 125. The passengers on the cross country flight were largely from Boston, New York, Washington, D.C., and San Francisco. Some left at Banff, but the majority went through.

Trans-Canada Limited Train, Canadian Pacific Railway, leaving Windsor Street station, Montreal, June 1, 1919, on its first run to Vancouver, B.C., 2885.8 miles.

Following are particulars of the equipment of the Trans-Canada Limited trains. Train 7, from Montreal to Vancouver, and train 9, from Toronto to Sudbury, where it is consolidated with train 7: Dining car, Montreal to Vancouver; Toronto to Sudbury, standard sleeping car, Montreal to Vancouver; standard sleeping car, Montreal to Winnipeg; Winnipeg to Vancouver; standard sleeping car, Toronto to Vancouver; standard sleeping car, Toronto to Winnipeg, Winnipeg to Vancouver; standard sleeping car, Fort William to Winnipeg; standard sleeping car, Winnipeg to Vancouver; compartment car, 1 drawing room, 7 compartments, Toronto to Winnipeg; compartment observation car, 1 drawing room, 3 compartments, Montreal to Vancouver.

Train 8, from Vancouver to Montreal, and train 10, from Sudbury to Toronto: Dining car, Vancouver to Montreal; Sudbury to Toronto; standard sleeping car, Vancouver to Winnipeg; standard sleeping car, Vancouver to Toronto, standard sleeping car, Vancouver to Winnipeg, Winnipeg to Toronto; standard sleeping car, Vancouver to Montreal; standard sleeping car, Vancouver to Winnipeg, Winnipeg to Montreal; standard sleeping car, Winnipeg to Fort William; compartment car, 1 drawing room, 7 compartments, Winnipeg to Toronto; compartment observation car, 1 drawing room, 3 compartments, Vancouver to Montreal.

The new trains, east and west, require for their operation, 59 sleeping cars, the value of which at present prices is approximately $2,478,000; fifteen dining cars, $750,000; twelve observation cars, $480,000; five compartment cars, $210,000; twelve baggage cars, $180,000, and 24 locomotives, $1,464,000; making a total of $5,762,000 on a very conservative estimate. The labor cost is less easy to compute, but each train itself requires 12 train crews, and 24 locomotive crews.

The first westbound train carried many photographers, who took views en route.

Steel Rails Ordered for Canadian National Railways.

Following is a copy of a report of a committee of the Privy Council, approved by the Governor-General, June 6, 1919:—"The committee of the Privy Council have had before them a report, dated June 2, 1919, from the Minister of Railways and Canals, representing that the Algoma Steel Corporation have advised that, as the production of munition steel now has ceased, they are without orders with which to keep their plant running, and that if this continues, they will be forced to close down their plant, throwing 2,000 and 3,000 men out of employment. That a deputation of the employes of this company recently had an interview with the Minister of Railways and Canals, and drew attention to the fact that the closing down of the plant would throw them out of employment, leaving them with no means of supporting their families.

"That the matter has been taken up with the management of the Canadian National Railways, who advise that an additional quantity of steel rails, up to 10,000 tons, could be used by them in work which has not been laid out for the present season, but which it would be advisable to have carried out this year, if the rails required are available. The Minister, on the advice of the Deputy Minister of the Department of Railways and Canals, recommends that authority be given for entry into a contract with the Algoma Steel Corporation for 10,000 gross tons of 85 lb. steel rails; the price per ton not to exceed the actual cost of production as ascertained by the Minister of Railways and Canals upon investigation, and in no event to exceed $50 a ton, or such lesser price as may be agreed upon with the Canadian Pacific Railway Co. for any rails which may be rolled for them by the Algoma Steel Corporation, at any time prior to Sept. 15, 1919, the said rails to be used on the Canadian National Railways and to be rolled in accordance with the same specifications as used by the company in manufacturing the rails covered by their recent contract of Jan., 1919. The committee concur in the foregoing recommendation and submit the same for approval."

The contract as above outlined was accepted by W. C. Franz, President Algoma Steel Corporation, in a letter to the Deputy Minister, in which he said:—"Referring to order in council, dated June 2, 1919, covering purchase of 10,000 gross tons of 85 lb. rails. We are quite agreeable to accept all conditions regarding daily tonnage, and price to be actual cost not exceeding $50 a ton. However, the last clause referring to C.P.R., we ask to apply on any rails we might sell to the C.P.R. prior to Sept. 15, 1919, as we now have a balance due that company on old contract made in 1917, that was at a price of $33 a ton, that we would like to be free to roll at any compromise price we might make with the C.P.R. when this tonnage is supplied them."

The Canadian Railway and Marine World is advised that the 10,000 tons of rails are to be used to replace 60 lb. rails on the Saskatoon-Calgary Line.

Business at National Transcontinental Ry. Stations—The Minister of Railways stated in the House of Commons, June 4, in reply to a question, that it was not in the interest of the Canadian National Rys. System that information as to the business done at each station, either by way of receipts or cars received, or dispatched, should be given to competing systems. The request was that this information be given for each station on the Transcontinental Ry. for each month.

Canadian National Railways Construction, Betterments, Etc.

Appropriations for Construction and Betterments—The Minister of Railways informed the House of Commons, June 5, when the vote of $11,121,681 for construction and betterments on the Canadian Government Railways came up for consideration, that the amount included $6,004,140 for work on lines east of Quebec; $1,600,000 for the Halifax Terminals; $500,000 for branch lines in New Brunswick; $993,208 for work on the National Transcontinental Ry. west of Fort William; $524,333 for the mechanical department, and $1,500,000 for general appropriations in connection with construction and betterments.

Prince Edward Island Ry.—In connection with the vote on account of $11,121,681 for construction and betterments on the Canadian Government Rys., the Minister of Railways said in the House of Commons, June 5, that it was decided last year to standardize the gauge of the P.E.I.R. between Port Borden and Summerside so that standard gauge cars could be loaded between these points and taken over the main line. That work was started and proceeded with as rapidly as possible. The present information is that if labor can be obtained during the summer, it will be possible to operate standard gauge cars into Summerside and Charlottetown. It is not intended to standardize the line any further than Charlottetown or Summerside during this year. After the rails are laid there will be a lot of work to do in putting the road in shape, and it is felt that under present financial conditions the government would not be justified in proceeding further during this year. It is the government's intention to standardize the whole line, but the Minister could not say how much will be done next year.

Prince Edward Island Car Ferry—Tenders were received to June 28 for improvements, including dredging, of the entrance channel and turning basin at the car ferry terminal at Cape Tormentine, N.B.

Halifax Ocean Terminals — Tenders were received to June 30 for the construction of a train shed at Halifax, N.S., as part of the Halifax ocean terminals plans. Ross and McDonald, Montreal, are the architects.

Orangedale to Cheticamp Branch—A public meeting at Inverness, N.S., May 24, passed a resolution asking the Dominion Government to build a branch line from the Intercolonial Ry. at Orangedale, mileage 153, on the Truro-Sydney line, to Cheticamp. The meeting appointed a railway extension committee for the Inverness County, and also a delegation to go to Ottawa to present the resolution. A press report of the meeting says that reports on the route and the prospects of traffic were made to the government in 1912 and 1914.

Pugwash, N.S., Spur—The Minister of Railways stated in the House of Commons, June 4, that the cost of the spur from the I.R.C. main line to the brick yards at Pugwash, N.S., was $92,452.67, and that the work was completed, Aug. 28, 1918. There were four claims outstanding in respect of right of way, which were in course of settlement, the total amount involved being $694.78. The same freight rates apply on traffic from and to the Nova Scotia Clay Works spur line, as from Pugwash itself, except on shipments of ore, on which there is a switching charge of 1c per 100 lb. The total receipts from such switching charges to Mar. 31, were $82.40. The total tonnage handled over the spur from date of opening to Mar. 31, 1919, was 2,479 tons, and the total earnings therefrom from originating point to destination were $5,167.63. The Nova Scotia Clay Works is to pay rental for this spur of $1,700 a year for 15 years.

Second Track on Intercolonial Main Line—We are officially advised that new second track is to be built this year between Truro and Belmont, mileage 0 to 7.57, and between Springhill Jct. and Maccan, mileage 59.54 to 68.67. Between Truro and Belmont there will be only slight changes in alignment on curves, and the gradients will remain unchanged, except slightly at a few locations.

On this stretch there are three bridges to be doubletracked, the following being the details: Salmon River bridge being 0.6, two 105 ft. deck plate girder spans, each track; new abutments and pier to be built and new steel placed; existing spans to be removed; old piers and abutments to be dismantled to bed of stream. North River bridge, mile 2, two 105 ft. truss plate girder double track spans; new abutments and pier to be built and new steel to be placed; existing spans to be removed; old abutments to be dismantled. Belmont River bridge, mileage 7.3, two 105 ft. truss plate girder double track spans; new abutments and pier to be built and new steel spans placed; existing spans to be removed and old abutments and pier to be dismantled.

Between Springhill Jct. and Maccan there will be a few slight changes in alignment and curves, also some slight changes in gradients, to make same more uniform and to take out small snags. On this stretch there is one bridge to be doubletracked, at Little Forks, mileage 62.9, consisting of one 104½ ft. deck plate girder span, with one 35 deck plate girder span at either end for each track, the existing 104½ ft. deck plate girder span to be raised; new substructure consisting of 2 piers and 2 abutments for double track.

Tenders for grading for the above work were received to June 28, the work being as follows:—

Grading for one additional main line track, between Truro and Belmont, N.S., for approximately 7.57 miles, partly on the right side and partly on the left side of the present track.

Grading for one additional main line track between Springhill and Maccan, Amherst Subdivision, N.S., for approximately 9.13 miles, partly on the right side and partly on the left side of the present track.

Tenders were also received to June 28, for the following second track and diversion work:—

Grading for double track railway at Moncton, N.B., approximately 3.35 miles, consisting of grading on the north side of and parallel to the present track on the St. John Subdivision from mile 1.44, to 2.53, both approximate, and grading for double track from mile 2.53, St. John Subdivision, to mile 3.50, Newcastle Subdivision.

Grading for double track diversion from mileage 108.21 to 112.91, on Chandiere Subdivision, between Ste. Rosalie and Charlotte, Que.

Fredericton - McGivney Jct. Betterments—We were officially advised, June 11, that work had not then been started on the improvement of the section of the old Canada Eastern Ry., between Fredericton and McGivney Jct., N.B., which is to be used in connection with the through route from the National Transcontinental Ry., via the St. John and Quebec Ry. to St. John, N.B.

Grand Lake, N.B.—The proposal for the building of a 5-mile spur line from the National Transcontinental Ry. to the Grand Lake coal areas of New Brunswick, has, we are officially advised, been considered by Canadian National Rys. executive and it has been decided not to build it.

Double Track Bridge Near Sackville—Tenders were received to June 28 for the construction of the substructure for a double rack railway bridge over the Tantramar River, about a mile east of Sackville, N.B., on the I.R.C. main line.

Section Houses—Tenders were received to June 28 for building section houses at the following points:—Napadogan Subdivision-Pacific Jct.; Alward, Pangburn, North Cains, N.B.; Edmundston Subdivision-Juniper, Summit, N.B.; Leonard Subdivision—Grog Brook, N. Grog Brook, Sirios, N.B.; Monk Subdivision—Lapointe, Picard, Bretaque, Lefebvre, Que.; Quebec Subdivision—Hervey Jct.; Lac Chat, Que.; Fitzpatrick Subdivision—Hibbard, Que.; Parent Subdivision—Parent, Monck, Que.; Doucet Subdivision—Vilmontel, Que.

Tenders were received to June 28 for the construction of a coaling plant and sand house at Sydney, N.S., and a freight shed at Rothesay, N.B.

Tenders were received to June 28, for the erection of three dwellings at Napadogan, N.B.

St. Ubalde, Que.—A press report states that "the Canadian National Rys. contemplates building a spur line near St. Ubaldo to connect with new mines." We cannot locate St. Ubaldo, but there is a St. Ubalde, in Portneuf County, the nearest station to which is St. Casimir, mileage 124, from Montreal on the Canadian Northern Ry. to Quebec, and mileage 505 on the National Transcontinental Ry. from Moncton.

St. Malo Shops—We are officially advised in connection with the track to be laid at the St. Malo Shops, Que., that it is not intended to build a new line connecting the shops with the main track, that line being already laid, but that it is intended to relay some of the tracks leading to the car and erecting shops.

The shops were expected to be partly opened before the end of June.

Cap Rouge to Portneuf, Que.—Tenders were received to June 21 for rock filling, riprapping, broken stone ballasting, etc., on the St. Lawrence Subdivision between Cap Rouge and Portneuf. This work is in connection with the rebuilding of the washed out roadbed and track between the places named.

National Transcontinental Ry.—Tenders were received to June 30, for the erection of no. 1 section houses at Frederick, Hunta, Moonbeam, Savoff, Jacobs, Fowler, Superior Jct., Quibell, Dugald, and Oscar, east and west of Superior Jct., Ont. J. Schofield, is the railway's architect at Winnipeg.

Toronto-Sudbury Line Betterments—Tenders were received to June 28 for the construction of concrete culverts and bridge abutments between mileage 56, [illegible] and 64, Sparrow Lake, on the Muskoka Subdivision; and for concrete culverts and bridge abutments and piers between mileage 82, Porlock, and 108, Coniston, on the Sudbury Subdivision.

Port Arthur Elevator—Tenders were received to June 30 for the construction of the superstructure of a grain elevator workhouse of about 700,000 bush. capacity, with unloading shed and complete elevator equipment at Port Arthur, Ont. The plans, specifications, etc., were given out to tendering firms by C. D. Howe & Co., consulting engineers, Port Arthur.

Port Arthur Locomotive House—A press report states that a 5-stall addition is to be made to the locomotive house, and that the foundation under the turntable will be replaced this year.

Prairie Provinces Extensions—In further reference to the matter published under this head in Canadian Railway and Marine World for May, we have been officially advised that on the Amaranth extension the 35 miles to be built is divided into two parts, 15 miles to be added northerly from Amaranth, Man., the other 20 miles to be added to the St. Rose du Lac branch, which leaves the main line at Ochre River, running easterly, and is at present in operation to St. Rose du Lac, Man. This 20 miles is to be graded in northerly and northwesterly from the present end of grade, 9 miles from St. Rose du Lac. The grading to be done on the Swift Current extension is let for 27 miles instead of 25 miles as mentioned in the article referred to above.

In connection with this latter line, we are advised that the firm of Gibbs Bros., to which the contract was let, consists of J. N. F., D. C. and W. C. Gibbs, the latter of whom is Manager. The work was started May 15, and is in charge of D. C. Gibbs, who has his headquarters at Gravelbourg, Sask.

The Western Construction Co., to which was let the contract for the construction of the 23 mile extension of the Luck Lake branch, is a recently incorporated company in which Jas. Miller and L. Parke, are principally interested. The company's headquarters are at North Battleford, Sask.

Western Lines Locomotive Houses—We are officially advised that the locomotive houses to be built at Kamsack, Humboldt and North Battleford, Sask, will have brick walls, mill construction, supports and roofs, and concrete pits, the stalls being 100 ft. long. The buildings at Kamsack and Humboldt will have 10 stalls, and that at North Battleford, 15. The machine shop attached to each will be of similar construction, 30 x 80 ft.

Water Supply at Wartime, Sask.—Tenders were received to June 20 for the construction of a water supply pipe line at Wartime.

Rosebud Diversion—Tenders were received to June 19, for the construction of [illegible] diversions at mileages 324 and [illegible] Calgary Subdivision.

Hanna-Medicine Hat Line—The Secretary of the United Farmers of Alberta is reported to have received a letter recently from [illegible] E. Warren, General Manager, Western Lines, in which he said that it was hoped to begin operations on the Hanna-Medicine Hat line in three or four weeks, and that it would take about [illegible] to lay the track from the present railhead, mileage 11.8, to the river.

Kamloops-Kelowna-Lumby Line—We are officially advised that this line will have a total length of 132 miles. It is already built from the Canadian Northern main line across the Thompson River into Kamloops (see Canadian Railway and Marine World, Mar., pg. 128), and the contract let recently to John W. Stewart & Co., Winnipeg, is for the comcially advised that the line running from Kamloops through Armstrong to Vernon is 83.7 miles long; the line from Vernon to Kelowna, is 33 miles long, and the line from Vernon to Lumby is 15 miles long. The route from Kamloops is along the southern bank of the Thompson River, then along Monte Creek to Monte Lake, and across the Grande Prairie County to Ashcroft, Armstrong and Vernon, where the line branches, one section running easterly for 15 miles to Lumby, and the other southerly via Long Lake, to Kelowna, on Okanagan Lake. The maximum gradient is 1.56%, and the maximum curvature 10 deg., there are no large bridges on the line, but there will be a number of timber trestles.

A recent press report states that subcontracts have been let for the grading approximately 10-mile sections to Rankin Bros., Carleton and Barber; Lieut.-Col. McDonald, Major Stewart and Capt. McLeod.

New Westminster to Vancouver, B.C.—We are officially advised in connection with the press report referred to in our last issue as to a proposed line from New Westminster to South Vancouver, that it is intended to build the line from the south end of the bridge over the Fraser River into New Westminster, approximately a mile. Until the surveys, which are to be extended beyond New Westminster are completed, no decision can be reached as to further construction, route, etc.

Vancouver Island Lines—Tenders were received recently for erecting a pile trestle on a spur line to Cameron Mill, Selkirk Water, Victoria, B.C.

Tenders were received recently for grading the company's railway terminal north of Point Ellice bridge, Victoria, B.C. A press report states that the work to be done requires the removal of about 40,000 cubic yards of material from the area between Point Ellice bridge and the southern end of the Selkirk Water bridge. (June, pg. 318).

Alien C.P.R. Stockholders—The Quebec Court of Appeal has dismissed the C.P.R.'s appeal from an order of the Superior Court under sec. 28 of the Consolidated Orders in Council respecting trading with the enemy. Under this order approximately $22,000,000 of C.P.R. stock held by or on behalf of Germans, was given into the charge of the Finance Minister as custodian. Counsel moved, on behalf of the Secretary of State, to dismiss the appeal on the following grounds: That the Superior Court was exercising special statutory jurisdiction and acting as a curia designata; that no right of appeal existed under the statute or otherwise; that the judgment appealed from was not a final judgment, and did not order the doing of anything which could not be remedied, and did not decide the issues in whole or in part; that there was concurrent jurisdiction in the Court of King's Bench and the Superior Court created by the order in council; and that the appellant had no interest in prosecuting this appeal.

Canadian National Railways Earnings.

The gross earnings of the system from Jan. 1, compared with those for the same period of 1918, are as follows:

	1919	1918
January	$ 6,744,018	$ 4,696,567
February	6,000,312	4,421,504
March	6,827,491	5,710,660
April	6,909,632	7,165,890
May	7,518,244	6,580,745
	$33,999,727	$28,575,366

Approximate gross earnings for two weeks ended June 14, $2,924,017, against $2,980,286 for same period, 1918.

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1919, compared with those of 1918:

	Gross	Expenses	Net	Increases or decreases
Jan.	$13,028,328	$11,474,816	$1,553,512	$ 385,519
Feb.	11,064,167	10,083,051	981,116	390,218
Mar.	12,374,182	10,835,138	1,539,044	*1,453,737
	$36,466,677	$32,393,005	$4,073,672	*$678,000
Incr.	$ 3,674,643	$ 4,352,643		
Decr.			$ 678,000	

*Decreases.

Approximate earnings for April, $12,780,000; May, $13,277,000, and for two weeks ended June 14, $6,019,000, against $13,007,000; $13,024,000, and $5,760,000, for same periods respectively in 1918.

Grand Trunk Railway Earnngs, Expenses, Etc.

Gross earnings, working expenses, net earnings and increases or decreases compared with those for 1918, from Jan. 1, 1919:

	Gross	Expenses	Net	Increases or decreases
Jan.	$ 4,405,402	$ 5,121,779	x$ 716,377	*$ 81,816
Feb.	4,090,800	4,401,019	x 311,219	660,372
Mar.	5,517,223	4,676,174	841,049	763,616
Apr.	5,360,896	4,604,585	756,311	93,047
	$19,374,321	$18,803,557	$ 569,764	$1,435,219
Incr.	$ 5,318,527	$ 3,883,308	$1,435,189	

xDeficits. *Decreases.

Approximate gross earnings for May, $5,272,060, and for two weeks ended June 14, $2,288,670, against $4,863,585, and $2,126,210 for same periods respectively in 1918.

Canadian Northern Ry.'s Winnipeg Taxes—The Canadian Northern Ry., and the Winnipeg City Council were reported, June 14, to have reached an agreement with regard to local taxes. The city, is said to have agree to accept $100,000 in full payment of all taxes due by the company as owner or lessee for the periods ended Dec. 31, 1917, and Dec. 31, 1918, the company to pay all the local improvement assessments against its lands in the city from and including the year 1918.

Railway Lands Patented—Letters patented were issued during May for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Alberta & Great Waterways Ry.	31.84
Canadian Northern Ry.	940.70
Edmonton, Dunvegan & British Columbia Ry.	16.60
Grand Trunk Pacific Ry.	8.92
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	69.70
Total	1,067.76

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

British America Nickel Corporation—We are officially advised in connection with a press report as to the construction of a line from Nickelton to Sudbury, Ont., that the company has made a survey for such a line, but has no immediate intention of building it. J. H. Gillis, Nickelton, Ont., is the company's Superintendent of Construction. (June, pg. 313).

Burrard Inlet Tunnel and Bridge Co.—A deputation from the Vancouver area headed by the mayor of North Vancouver, B.C., waited on the Dominion Government at Ottawa recently to urge that the Dominion undertake the construction of the projected bridge across the Second Narrows of Burrard Inlet, as a part of the projected Vancouver harbor works. It is reported that the delegation was informed that the appropriations include amounts for a car ferry and terminal railway to serve the North Shore industries, and that the question of the erection of a bridge is one more for the consideration of the British Columbia Government and for the municipalities than for the Dominion Government. (June, pg. 313).

A delegation which visited Ottawa recently in connection with the projected bridge over the Second Narrows of Burrard Inlet, is reported to have made the following report to the north shore reconstruction committee, on June 10:—"The bridge is accepted as a definite part of the whole scheme of harbor development; the Minister of Marine is heartily in favor of its construction when finances will permit; when built it will be financed by the harbor board, Canadian National Rys., and the municipalities with possible provincial government assistance; there is still a possibility of obtaining a portion of the $5,000,000 appropriation for harbor improvements; Commissioner McClay has declared his intention of standing for the appropriation of $500,000 of board funds towards bridge construction; Messrs. Stevens, Crowe and Cooper have specifically declared that they will secure a commencement of bridge construction next year, while Messrs. Hanna and MacLeod, of the C.N.R., have declared their readiness to enter into an arrangement for the joint construction of the bridge and to prepare their plans in time for the submission of bylaws in Jan."

Calgary and South Western Ry.—The route map of this projected railway shows a line starting from Sec. 27, Tp. 23, Range 1, west 5th meridian, near Turner, 6 miles out of Calgary on the C.P.R. Calgary-Macleod line, cutting across the southeast corner of the Sarcee Indian reserve, crossing Fish Creek at Priddis, Fisher Creek at Millerville, the north branch of Sheep River at Kew, thence to the valley of the south branch of the Sheep River, the north bank of which is followed up to its source in the Rocky Mountains Forest Reserve in Sec. 15, Tp. 19, Range 7, west 5th meridian. The total distance is 59.4 miles. We are officially advised that construction will be deferred until next autumn, or early in the spring of 1920. John Callaghan, Calgary, Alta., is Chief Engineer. (May, pg. 253).

Central Ry. Co. of Canada—The Dominion Parliament has passed an act providing that subject to the provisions of sec. 3, chap. 83, statutes of 1914 (Consolidated Railway Act). "The Central Ry. of Canada or the purchaser thereof in the proceedings now pending in the Exchequer Court of Canada, may complete within five years of the passing of this act the uncompleted portions of the railway authorized by chap. 172 of the statutes of 1903, and the acts amending the same, to be constructed between Rockland and South Indian, between South Indian and Hawkesbury, between Hawkesbury and Glen Robertson, Ont., and between St. Andrews and Ste. Agathe, Que.," with the proviso that if 25 miles of the uncompleted portions of line are not completed and put in operation within two years, and 25 miles additional built each succeeding year, and the whole lines completed within five years, the powers granted shall cease in so far as the uncompleted portions of the lines are concerned. The Minister of Railways explained to the House of Commons that the passage of the act in this form gives the bondholders the power to sell anything that has any value. The company has an interest in 35 miles of line, serving Glen Robertson and Hawkesbury and leased to the G.T.R., and owns, in addition, the right of way for the South Indian-Hawkesbury and the St. Andrews-Ste. Agathe lines. (May, pg. 260).

Esquimalt and Nanaimo Ry.—The Dominion Parliament has authorized the building of a line from between Port Alberni and Bainbridge, on the existing Parksville Jct.-Alberni line, northwesterly via Great Central Lake and Ash River Valley to Comox Lake, with a branch line from near Sproat Lake to Long Beach on the west coast of Vancouver Island. Plans for these lines are reported to have been prepared. (Apr. pg. 191 and Feb., pg. 79).

The Minister of Public Works is reported to have advised the mayor of Victoria that the Dominion Government has definitely decided not to make a contribution towards the cost of the Johnson St. Bridge. The modified plans for the bridge prepared by the City Engineer of Victoria after the conference with the C.P.R. officials, have been forwarded for final approval by P. B. Motley, Engineer of Bridges, and J. M. R. Fairbairn, Chief Engineer C.P.R. The estimated cost of the bridge is $525,000, of which the C.P.R. will contribute $100,000, the city $225,000, and the government $200,000. (June, pg. 313).

Great Northern Ry.—About 1,000 yards of the right of way, about 10 miles south of Nelson, B.C., on the Bedlington and Nelson Ry., one of the lines owned by the G.N.R. in Canada, is reported to have been washed out by floods.

A recent decision of the Board of Railway Commissioners rejected the City of Vancouver's application for an amendment of the order with respect to the interlocking and derailing plant at the Powell St. crossing, on a new line which is to be double tracked and will connect the G.N.R. spur from False Creek with the C.P.R. service track north of the main line, connections being made east and west with the government dock and the G.N.R. dock, respectively. The order suggests that a new line might be built from just south of the Hastings St. viaduct, under the viaduct, with a trend north and east, instead of north and west. (May, pg. 253).

Grand Trunk Ry.—The Dominion Parliament has extended for two years the time within which the Lachine, Jacques Cartier and Maisonneuve Ry. may build its projected line from Lachine Parish to Hochelaga Ward, Montreal, or in the Town of Maisonneuve, passing in the rear of Mount Royal, with power to extend the line from the starting point to Dorval, on one side, and to the northern end of the Montreal Island on the other. The construction of this line was originally authorized in 1909; it was declared to be a work of the general advantage of Canada in 1911, and extensions of time for its construction have been granted, the one prior to the present being in 1917. Surveys were made several years ago, and plans were approved by the Minister of Railways and the Board of Railway Commissioners, but considerable difficulties were experienced in securing right of way, and the approval of the municipalities for the crossing of highways.

The Toronto City Council has authorized the company to erect a bridge shop near Main St., York Station, East Toronto, at an estimated cost of $7,500.

A press report states that the company is considering the purchase of some property east of Rectory St., London, Ont., to extend its east end yards. (June, pg. 313).

Kettle Valley Lines—A press report states that representations have been made to the British Columbia Government to urge the company to build a line southerly from Penticton, through the 22,000 acres of land set apart mainly for settlement by returned soldiers. It is said that the matter was discussed with E. W. Beatty, President, C.P.R., which company leases the K.V.R. during his recent visit to Victoria.

In connection with the building of the branch line from Princeton to the Copper Mountain district, a local correspondent gave some details recently of the development work in progress at Princeton, Allenby and Copper Mountain in carrying out the Canada Copper Corporation's plans. He says that at Allenby it appears as though there were two railways building into the town, one on each side, with the lower one some 200 ft. beneath the upper one. In making distance, in order to secure a feasible gradient, a loop is formed, and by a clever piece of engineering, the line comes in at the upper side of the mill to which it will deliver the crude ore, and it goes out from the lower side at which it will receive the concentrates for delivery at the Trail smelter. A good deal of development work is reported to be at a standstill, waiting for the completion of the branch line, which was to have been finished in June. The railway contractors' men are reported to have stopped work Apr. 1, and practically no work has been done since. (Mar., pg. 135).

Lacombe and North Western Ry.—A press report states that ties and telephone posts have been delivered at Gull Lake, and that construction gangs are making preparations for the extension of the line from its present terminus near Bentley to Rimbey, Alta. The line is owned by the Alberta Government, and provision for the extension was made at the legislature's recent session. (June, pg. 313).

Montreal Central Terminal Co.—The Senate's railway committee reported June 5 that C. N. Armstrong, one of the promoters of the bill, having made application for leave to withdraw it, he be allowed to do so and that the fees paid less cost of printing and translating be remitted. This report was approved by the Senate June 6, and the bill was withdrawn. The bill asked for an extension of time within which the company could construct its proposed terminals, bridge and other projected works in Montreal.

The company, according to a press report, applied to the Minister of Public Works at Ottawa, June 11, for approval of its plans for a tunnel or tunnels proposed to be built under the St. Lawrence River from Longueuil on the south short to Montreal in lieu of the bridge originally proposed, and for certain railway connections therewith. Counsel or engineers were present on behalf of the Railways Department, the Montreal Harbor Commission, the municipalities interested on the south shore, the Grand Trunk Ry., etc., and all expressed their opposition to the plan. C. N. Armstrong, the principal promoter of the project, stated that, apart from outlays on land, $250,000 had been expended in connection with the proposal. The company desired to provide facilities for access to the east end of Montreal for railways not having them. The company was not asking a guarantee of bonds or a subsidy, but desired to have a traffic agreement for the government lines to use the tunnel and terminal. If the company could not get that the tunnel would not be built. Counsel for the Railways Department stated that the only effect of sanctioning the scheme would be to compel the Canadian National Rys. to buy out the company; the engineer for the Grand Trunk Ry. said it would cost between $80,000,000 and $90,000,000 to carry out the company's plans and that the project could never be made to pay without having industrial connections; the secretary of the Montreal Harbor Commission said the sanction of these plans would interfere with the commissions plans for the proposed bridge to the south shore, via St. Helen's Island, and the south shore municipalities' representatives stated that only a bridge would meet with their approval and support. The Minister reserved his decision: (June, pg. 313).

The North West Route—The Senate Standing Committee on Railways reported June 5 with respect to the bill for the incorporation of a company with this title, which had been passed by the House of Commons, that after examination it had arrived at the decision that the incorporation of the company proposed to be created would not be in the public interest. This report was adopted by the Senate June 6. The bill provided for the incorporation of a company to develop certain stretches of navigable waterways, and to connect the same by means of railways, so as to provide a rail and water connection between the westerly end of Baker Lake, at the headwaters of Chesterfield Inlet, Hudson Bay, and Old Fort Reliance at the easterly end of Great Slave Lake. (May, pg. [illegible]).

Pacific Great Eastern Ry.—A press report states that delivery has been completed of the rails which were ordered in the United States prior to the war. There are said to be about 1,500 tons at Fort George, and about 9,000 tons at the present end of track, the remaining 10,000 tons were loaned to the Dominion Government for the Canadian Northern Ry. The 9,000 tons at the end of track will, it is estimated, be sufficient to lay track from mileage 210 to William Lake, about 70 miles. Tracklaying is expected to begin July 1, and to be completed to Williams Lake by Sept. 1.

In the course of a recent speech, the Premier of British Columbia is reported to have said that a number of miles of the railway would have to be abandoned. It would cost the province a considerably greater sum than the government had anticipated in the first place, to get the railway linked up with the Grand Trunk Pacific Ry. at Prince George.

Major Ewart, formerly of the 8th Battalion Canadian Railway Troops, in France, is reported to have been appointed to make a survey of the country north of Quesnel, with a view of securing a route for the line, which will avoid some difficult country.

Part of the original project of the P.G.E.R. was the continuation of the line from Prince George to the Peace River country, and the effecting of a junction at the British Columbia-Alberta boundary, with the Edmonton, Dunvegan and British Columbia Ry. A deputation from the Peace River country waited on the British Columbia Government recently to urge progress and the Premier promised consideration. (June, pg. 313).

Quebec to St. Stephen, N.B.—D. F. Maxwell, C.E., in a recent interview at Quebec, is reported to have said that a railway from Quebec to St. Stephen, N.B., would be a very valuable branch to the Transcontinental Ry., and would cut the distance from Quebec to an ocean port in half, as compared with the present route from Quebec to St. John. The distance from Quebec to St. John, by the present route, is 577 miles, while from Quebec to St. Stephen it would be 250 miles. A line between these two points would run through a real virgin timber country for 100 miles, and would open up a new and rich country for general settlement. The route was gone over at one time by A. L. Light, C.E., and J. G. Scott, Quebec, is reported to be also familiar with the country through which the line would pass. The port at the end of the line would be St. Croix harbor, which it is claimed that the largest ships could use. Starting at St. Croix harbor, the line would run through St. Stephen, passing through Princeton, Me., back to the St. Croix River, and lakes to Mattawamkeag, and along the valley of the Penobscot River to Melensocket, and on to the Etchemin River, to St. Malachie, Dorchester County, Que., where connection could be made with the Transcontinental Ry.

J. G. Scott is reported to have said that the surveys for this line were made in 1882, before the line via Sherbrooke and Lake Megantic was built. That line was only 90 miles shorter between Montreal and Halifax than via the Intercolonial Ry., and it goes over a summit of 1,700 ft., while the suggested Quebec-St. Stephen line would have a summit of about 1,200 ft., with a maximum gradient of 0.4%. The National Transcontinental Ry. would be used from Quebec to Frampton, 52 miles.

St. John and Quebec Ry.—The Dominion Parliament has extended to Dec. 21, 1921, the time within which the section of the line from the present northerly terminus at Centreville to Andover, N.B., may be built, at the Minister of Railways direction. The Minister is given power to extend the subsidy agreement with the Dominion Government to the same date, and the agreement with the New Brunswick Government for the operation of the line as a part of the Intercolonial Ry. on the basis of a division of the gross receipts in the proportion of 60% to the Dominion and 40% to New Brunswick. The New Brunswick Legislature has also passed an act providing for the extension of time, etc.

We are officially advised that the section of the line from the present southerly terminus to Westfield where a junction is effected with the C.P.R., will be ready for operation by Aug. 1. Ballasting and other work is in progress. The Premier and other representatives of the New Brunswick Government left Fredericton, June 6, to inspect the line. A press report of June 6, states that a train left Centerville, June 5, and travelled over the line via Westville and on to St. John. (June, pg. 314).

Western Dominion Ry.—The Dominion Parliament has extended for two years the time within which this company may commence its projected railway from the International boundary in Range 23, west 4th meridian, via Cardston, and Pincher Creek to Lundbreck on the C.P.R. Crowsnest line, thence to Calgary and Edmonton, Alta., and Fort St. John, B.C., with branches into the Southern Alberta coal fields. (Feb., pg. 80).

New Conditions for Extension of Railway Charters.

In connection with the several acts passed by the Dominion Parliament at its current session, granting extensions of time for construction, an additional provision has been inserted at the Minister of Railway's instance. The practice has hitherto been to extend the time for beginning of construction for two years, and the time of completion for five years. The new provision is that the company shall within two years after the passing of the act proceed with the construction and complete and put in operation 25 miles of the authorized railway, and shall continue to construct and complete and put in operation to the satisfaction of the Minister, not less than 25 miles of the railway, or the equivalent thereof, during each year thereafter, until the whole of the railway is completed. The section also provides that if the company fails to carry out the requirements specified, the powers of construction granted to it shall cease.

The Shedden Forwarding Co., Ltd., has been granted supplementary letters patent, decreasing its capital stock from $1,500,000 to $1,125,000, the decrease being effected by repaying to shareholders $25 on each of 7,000 share allotted, and by reducing to the war value of $75 each, 8,000 unallotted shares, so that the existing 1,500 shares now of the par value of $100 each, shall be reduced to the par value of $75 each. The company is to add to its name the words, "and reduced" for one month from May 22, 1919.

Rails for G.T.R.—The Algoma Steel Corporation rolled 12,060 tons of 100 lb. A.R.A. section steel rails for the G.T.R. recently, shipments being made to Allandale, Ont., for distribution. This completed a nolder order which was suspended during the war.

Canadian Pacific Railway Construction, Betterments, Etc.

New Brunswick District—A press report states that the company is about to call for tenders for paving with granite blocks, 2,500 square yards at its freight terminals, Mill St., St. John, N.B.

Manitoba District—Tenders were received to June 18 for the construction of a standard no. 3 station at Hargrave, Ont., piers for bridge 3.1, La Riviere Subdivision, Ont., for floor for stock yards at Fort William, Ont., and for the erection of a coaling plant at Raith, Ont.

The Manitoba and North Western Ry. Co., a C.P.R. subsidy, has been authorized by the Dominion Parliament to build a line from its Shell River Branch, in Tp.. 21, Range 28, west of 1st meridian, generally northerly to Tp. 23, Range 28, west 1st meridian. Work is to be started within two years, and completed within five years, and to provide for construction, the company may issue securities for $40,000 a mile..

Saskatchewan District — President Beatty is reported to have stated in Saskatoon, June 6, on his recent trip, that the company will build a line from Lanigan through Watson and Melfort, to Tp. 57, Range 17, west 2nd meridian, north of the Carrot River, and that construction will be gone on with this year from the Lanigan end, and that construction will also be started from Rosetown south to the Saskatchewan River, thence easterly. The company is said to be investigating with a view to early construction, the route of a line from Hawarden into Saskatoon. Hawarden is a station on the Moose Jaw northwesterly branch, almost directly south of Saskatoon. The President is further reported to have said that construction will be started shortly on a line from Milden, on the Moose Jaw northwesterly line to Empress, on the Swift Current northwesterly line.

We are officially advised that the company proposes to build a line from Vidora or Govanlock, Sask., to Assiniboia, Sask., and that a start will be made from the western end, during this year. In all probability, the work will be started from Vidora, but this has not been definitely decided. As soon as the route map is approved by the Board of Railway Commissioners, tenders will be asked for the work on 50 miles. This is one of the lines mentioned in the resolution passed at the company's recent annual meeting.

Moose Jaw Station—President Beatty is reported to have said, in an interview at Moose Jaw, Sask., May 30, that a new station to cost at least $250,000 will be built there. We are officially advised that competitive plans have been asked for from architects at Moose Jaw and Winnipeg. The new building will be directly north of the present station and will be of stone. The main street frontage, and part of the gardens will be occupied by the building, the northern extremity of which will reach almost to Manitoba St. The present baggage and express rooms will be allowed to stand, but at a later date a west wing will be added to the station to replace them. The plans provide for a change to a subway entrance to the tracks if this is desirable later, but the cosntruction will first be made for an entrance similar to the one now in use.

D. C. Coleman, Vice President, Western Lines, is reported to have stated that the question of building an hotel at Moose Jaw, will have to stand over until the cost of building had returned to a more normal level.

Alberta District—President Beatty is reported to have stated at Lethbridge recently, that the only construction definitely settled on for Alberta, is the Acme-Empress line.

A press report of June 11, states that a contract has been let to Stewart and Welch, Vancouver, B.C., for building of a line from Acme to Drumheller, Alta. The line will, it is reported, involve considerable heavy construction. This is the line referred to in the company's annual report as an extension of the Langdon north branch from Acme, Alta., to the projected extension of the Swift Current Northwesterly Branch near Empress, 132 miles. Such a line would pass through the Drumheller coal fields. (June, pg. 319).

Traffic Orders by Board of Railway Commissioners.

Supplement 12, to Canadian Freight Classification.

General order 265. Re application of Canadian Freight Association, on behalf of railway companies subject to the board's jurisdiction, under section 321 of the Railway Act, for approval of proposed Supplement 12 to Canadian Freight Classification 16, containing certain increased, reduced, and additional ratings; notice having been given by the railway companies in The Canada Gazette as required by sec. 321 of the Railway Act, and to the mercantile organizations enumerated in general order 153, Nov. 4, 1915, and the proposed changes having been considered at a conference of representatives of the Grand Trunk, Canadian Pacific, and Canadian National Railways, the Canadian Manufacturers' Association, and the Montreal and Toronto Boards of Trade, held at Montreal, Apr. 9, 1919, when various objections filed with the board were considered, the proposed changes were agreed to, modified, or eliminated; and upon the consideration of what has been filed, and upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the proposed supplement 12, as finally revised and submitted for approval by the Canadian Freight Association's chairman, by letter, dated May 28, 1919, be approved.

Eastern British Columbia Ry.'s Tariff.

28,420. June 11. Re application of Eastern British Columbia Ry., for approval of its standard mileage freight tariff C.R.C., 73; upon reading what has been filed in support of the application, and upon the report of the board's traffic department, it is ordered that the said tariff, cancelling C.R.C., no 16, be approved; the said tariff, together with a reference to this order, to be published in at least two consecutive weekly issues of the Canada Gazette.

Commodity Rates on Ferro Silicon.

28,427. June 11. Re application of Montreal Board of Trade for disallowance, and of Canadian Manufacturers' Association for suspension of proposed cancellation of commodity rates on ferrosilicon from Welland and Thorold, Ont., and Shawinigan Falls, Que., the said proposed cancellation having been suspended by order 27,841, Nov. 7, 1918; upon hearing the matter at Toronto and Montreal on Jan. 15 and 16, 1919, respectively, in the presence of counsel and representatives for the Canadian Pacific, Grand Trunk, and the Canadian National Railways, and the Canadian Manufacturers' Association at the Toronto sittings; counsel for the C.P.R. only appearing at the hearing in Montreal, the case was adjourned to be reinstated for hearing at the request of the parties; no application for a rehearing having been made on behalf of the Montreal Board of Trade, and the Canadian Manufacturers' Association having withdrawn its application for suspension; it is ordered that order 27,841, made herein, be rescinded.

Classification of Dr. Rusk's Chick Food.

28,436. June 12. Re application of the Taylor Milling and Elevator Co., Lethbridge, Alta., complaining against the classification of Dr. Rusk's chick food, when shipped in mixed cars of flour and feed; upon hearing the application at Lethbridge, Feb. 24, 1919, in the presence of counsel for the C.P.R., the applicant being represented at the hearing, and what was alleged; and upon reading what has been filed in support of the application, and on behalf of the Canadian Freight Association, and the report of the board's Chief Traffic Officer, and its appearing that the C.P.R., by item 87A of Supplement 10, effective May 6, 1919, to its commodity tariff C.R.C., no. w. 2,397, has established its 4th class rates from Lethbridge to all its stations in Alberta, Saskatchewan, and British Columbia on poultry food, removing in part the applicant's objections to the classification complained against; it is ordered that the C.P.R. file forthwith a further supplement to its tariff C.R.C. no. w. 2,397, adding to the said item 87A of Supplement 20, the 8th class rating for carload shipments of not less than 30,000 lb. of the items of poultry food therein enumerated; and it is further ordered that the application for the privilege of including less than carload lots of poultry food with grain products at the carload rates, provided for the latter, bulking the whole to make up the minimum weight required for grain products, be refused.

American Railroad Association and Railway Stores—The American Railroad Association has created an additional section to be known as section 6, to consider and report upon all questions affecting the purchasing, selling, storing and distribution of materials and supplies, and kindred subjects. The section will include the Railway Storekeepers' Association's former activities. H. S Burr, Superintendent of Stores, Erie Rd., is the chairman of the committee, which includes E. N. Bender, General Purchasing Agent, C.P.R., and E. J. McVeigh, General Storekeeper, G.T.R., Montreal.

British Railway Earnings, Etc., for 1918—A London, Eng., cable of June 16, referring to the Board of Trade report on British railways for 1918, states that the total revenues in 1918 increased to more than $820,300,000, compared with $550,000,000 in 1913, while total expenses in 1918 were about $606,600,000, compared with $347,000,000 in 1913. Operating rates are shown to have increased from 63.3% in 1913 to 73.9% in 1918. One item of particular interest in the statement was the increase in passenger receipts. They were approximately $250,000,000 in 1913, and in 1918 were about $322,500,000.

Birthdays of Transportation Men in July.

Many happy returns of the day to:

A. A. Allan, Vice President, Holden Co., Ltd., Montreal, formerly Master Mechanic, Temiskaming & Northern Ontario Ry., born at Grafton, Ont., July 7, 1870.

J. H. Black, ex-Superintendent, Timiskaming & Northern Ontario Ry., now at Toronto, born near Smiths Falls, Ont., July 8, 1874.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

D'Alton C. Coleman, Vice President, Western Lines, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

G. C. Conn, ex-Freight Traffic Manager, Pere Marquette Ry., Detroit, Mich., now General Traffic Manager, Buick Motor Co., Flint, Mich., born at Woburn, Mass., July 1, 1867.

H. Darling, Locomotive Foreman, Grand Trunk Pacific Ry., Smithers, B.C., born in Northumberland, Eng., July 27, 1873.

S. E. Dewey, General Eastern Freight Agent, G.T.R., New York, born at Beckenham, Kent, Eng., July 4, 1879.

A. H. Eager, Mechanical Superintendent, Western Lines, Canadian National Rys., Winnipeg, born at Waterloo, Que., July 15, 1868.

F. C. Foy, Passenger Agent, New York Central Rd., Utica, N.Y., born at Toronto, July 5, 1881.

F. E. Hartshorn, Assistant Superintendent, Montreal Division, Quebec District, Canadian National Rys., Joliette, Que., born at West Stewartstown, N.H., July 21, 1877.

S. J. Hungerford, Assistant Vice President, Canadian National Rys., Toronto, born at Bedford, Que., July 16, 1872.

C. W. Johnston, Assistant General Passenger Agent, G.T.R., Montreal, born at Actonvale, Que., July 27, 1879.

M. Kelly, Resident Engineer, Farnham Division, Quebec District, C.P.R., Farnham, born at Thamesville, Ont., July 6, 18784.

T. King, Superintendent, Detroit Division, Grand Trunk Western Lines Rd., Detroit, Mich., born at Dunbarton, Ont., July 18, 1869.

A. E. Lock, Superintendent Car Service, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Albany, N.Y., July 11, 1873.

G. A. McNicholl, Assistant General Freight and Passenger Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Montreal, July 31, 1876.

H. D. Mackenzie, Master Mechanic, Canadian National Rys., Edmundston, N.B., born at Churchville, N.S., July 22, 1864.

M. H. MacLeod, Vice President, Operation, Maintenance and Construction, Canadian National Rys., Toronto, born in Skye, Inverness-shire, Scotland, July 1[illegible], 18[illegible].

J. M. Macrae, Assistant General Freight Agent, Canadian National Rys., Winnipeg, born at Stornoway, Scotland, July [illegible] 1864.

W. G. Manders, Assistant Freight Traffic Manager, Canadian National Rys., Winnipeg, born at Owen Sound, Ont., July 24, 1876.

[illegible] Marple, General Foreman, Michigan Central Rd., St. Thomas, Ont., born in McKillop Tp., Ont., July 1, 1860.

J. E. Morazain, General Superintendent, Quebec District, Canadian National Rys., Quebec, born at Wheatland, Que., July 31, 1875.

P. C. Perry, Assistant Resident Engineer, Grand Trunk Pacific Ry., Regina, Sask., born at Fort William, Ont., July 27, 1889.

R. E. Perry, Assistant General Freight Agent, Canadian National Rys., Montreal, born at Drayton, Ont., July 5, 1876.

J. E. Quick, ex-General Baggage Agent, G.T.R., Toronto, now at Port Huron, Mich., born at Richmond, Ontario Co., N.Y., July 10, 1851.

G. G. Ruel, Counsel, Canadian National Rys., Toronto, born at St. John, N.B., July 5, 1866.

C. Steeves, General Boiler Inspector, Eastern Lines, Canadian National Rys., Moncton, N.B., born at Hopewell Cape, N.B., July 6, 1874.

George Stephen, Freight Traffic Manager, Canadian National Rys., Toronto, born at Montreal, July 5, 1876.

Sir Thos. Tait, President, Fredericton & Grand Lake Ry. & Coal Co., Montreal, born at Melbourne, Que., July 24, 1864.

M. M. Todd, Vice President and Treasurer, Grand River Ry. and Lake Erie & Northern Ry., Galt, Ont., born there, July 22, 1891.

H. B. Walkem, Assistant Engineer, C.P.R., Vancouver, B.C., born at Montreal, July 31, 1858.

G. A. Walton, General Passenger Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, July 17, 1881.

R. H. Webster, Commercial Agent, G.T.R., Moncton, N.B., born at Pictou, N.S., July 2, 1885.

Canadian Manufacturers Oppose Government Railway Ownership.

The Canadian Manufacturers' Association passed the following resolution at its annual meeting in Toronto recently:—Whereas, the Dominion Government has been compelled to take over and operate two transcontinental railway systems, and whereas, these systems are not yet paying the cost of operation, and deficits incurred by them must be borne by the tax paying public, and whereas, competition is absolutely necessary in order to secure proper and adequate service, be it therefore resolved, that the Canadian Manufacturers' Association places itself on record as being opposed to any further acquisition or operation of railways by the Dominion Government.

Interswitching at Owen Sound, Ont.—The city council engaged W. F. Tye, C.E., recently to report on the feasibility of interswitching traffic between the C.P.R. and G.T.R., and also on the possibility of erecting a union station and establishing an electric railway service. The two railway lines are on opposite sides of the Sydenham River, and it is proposed to build a Y crossing the river from the G.T.R. near 10th St., to connect with the C.P.R. on the east side of the river. The estimated cost of this is $100,549, and it is claimed that a saving of $4,258 a year would be effected, over the present system of road hauling. The report did not favor the erection of a union station, or an electric railway, stating that a considerable annual loss could be expected.

Canadian Pacific Railway Honor Roll 43.

Armstrong, James Henry	Agent	Lemberg	Wounded
Astbury, Charles	Painter	Winnipeg	Wounded
Bareham, Arthur	Wiper	Moose Jaw	Wounded
Birkhead, George J.	Sectionman	Inglewood	Killed in action
Bogeya, George	Car cleaner	Toronto	Wounded
Bougie, Joseph	Boilermaker	Kenora	Presumed dead
Clifford, Arthur	Carpenter	Winnipeg	Wounded
Coffey, George	Apprentice	North Bay	Wounded
Costello, Patrick C. L.	Clerk	Calgary	Wounded
Cox, Percy Alexander	Acting agent	Yokohama	Wounded
Dando, Arthur Orchard	Helper	Ogden	Wounded
Disbrey, William	Stower	Regina	Wounded
Emery, Nelson Victor M.	Stenographer	Saskatoon	Died of wounds
Fairbairn, Howard A.	Coalman	Bobcaygeon	Wounded
Foley, Herbert	Foreman	Lethbridge	Wounded
Gardner, Jack	Helper	Glen Yard	Killed in action
Gilchrist, Robert B.	Carpenter	Ogden	Wounded
Harvey, Fred Adam	Trainman	Revelstoke	Wounded

Ward, John	Porter	Lethbridge	Killed in action
White, Frederick	Helper	London, Ont.	Wounded
Williams, Edward S.	Levelman	Strathmore	Wounded
Wilson, Gordon	Trainman	Minnedosa	Wounded

Shown on honor lists to date: Killed, 904; wounded, 1,951; total, 2,855.

Electric Railway Department

Electric Railway Operating Statistics for Year Ended June 30, 1918.

The figures in the following table are reproduced from statistics issued by the Railways Department at Ottawa. The following abbreviations are used in the names of railways: E., electric; E.R., electric railway; E.S.R., electric street railway; S.R., street railway. The minus mark (—) in the column for net income or deficit, shows that there was a deficit in the operation of the line to the extent of the figures given.

The figures in the first column of figures show the first main track mileage. In addition there are 453.11 miles of second track, making a total of 2,069.47 miles of main line track. An explanation of errors made in previous returns issued by the Railways Department will be found under "Notes to Electric Railway Statistics, on another page of this issue.

Name of Railway	1st Main track mileage	Gross earnings from operation	Miscellaneous income	Operating expenses	Taxes funded debt, etc.	Net income or loss	Total car mileage	Fare passengers carried	Freight carried tons
Berlin and Waterloo S.R. (Now Kitchener and Waterloo S.R.)	3.28	$ 57,926	$ 163	$ 37,529	$ 7,585	$ 12,975	$ 199,334	1,315,037

	1,616.36	$24,299,889	$2,311,176	$17,535,974	$6,150,074	$3,645,624	84,435,323	487,365,456	2,497,530

For additional mileage figures obtained by Canadian Railway and Marine World, see under "Notes to Electric Railway Statistics."

Less deficits .... —720,606

Total net income........ $2,925,017

Notes to Electric Railway Statistics.

The following notes refer to the statistical table on page —.

(1) The Brandon (Man.) Municipal Ry., has not reported its earnings for the year.

(2) The Calais S.R. is the line reported in previous years as the St. Stephen S.R. of New Brunswick, Calais being the contiguous town in Maine, where the line is owned and from which it is operated.

(3) The London and Lake Erie Ry., and Transportation Co. ceased operations, Oct. 15, 1918, and the lines being dismantled. No report of its earnings has been made since 1916.

(4) The mileage given in the table for the Montreal Tramways Co. is that reported by the Railways Department as at June 30, 1915, but the company's first track at June 30, 1918 was 132.50 miles. In recent years the Railways Department's statistical report has contained figures of receipts and expenditures taken from the company's annual report. They are omitted from the table this year, and the company's annual report is published in a different form than formerly, and the information formerly given is therefore not now available. The company does not report to the Railways Department.

(5) The mileage given for the Toronto Suburban Ry., 19.54, is palpably incorrect, as the company during the greater part of 1917-1918 had more than double that mileage in operation—the extension from Lambton to Guelph also being itself 46.3 miles long.

In addition to the mileage given in the table, the Edmonton Interurban Ry., which has not been operated for a couple of years, owns 8.13 miles of track.

The New Brunswick Power Co., St. John, N.B., is omitted from the Railways Department's table as it does not make reports to the department.

The Pictou County Electric Co. is omitted from the Railways Department's table as it does not report to the department.

Errors in Railways Department's Statistics.—When the Railways Department's statistics for 1916-1917 were issued, it was apparent that mileage figures given for certain railways were incorrect. As an example, the Winnipeg Electric Railway was shown as having 110.20 miles of first main track, and no second main track. Canadian Railway and Marine World called the attention of the Railways Department's Comptroller of Statistics to this and to some other similar errors in regard to other companies, in consequence of which he said he would issue a special circular to the campanies so the figures for 1917-18 may be considered more reliable than those for previous years. The following table shows the figures published by the Railways Department for 1916-1917 respectively.

	1916-1917	1917-1918
Length of 1st main track	1743.54	1616.36 miles
Length of 2nd main track...	345.72	453.11 "
Total length of main track	2089.26	2069.47 "

In referring to this matter the Railways Department's report says "There was not an actual reduction of first track mileage in 1918. There was merely an accurate statement of second track mileage, following special correspondence with units which had been making incorrect returns, the immediate effect of which was to reduce the first track mileage. The mileage of all tracks remain practically unchanged."

Mileage Actually Operated—The following additional figures of first main track mileage operated have been obtained by Canadian Railway and Marine World to supplement those given by the Railways Department:—

	Additional miles
Montreal Tramways Co	8.24
New Brunswick Power Co	18.15
Pictou County Electric Co	9.10
Woodstock, Thames Valley and Ingersoll Ry.	11..50
	46.99
Mileage given by Railways Department	1616.36
To be first main track mileage operation	1663.35

British Columbia Electric Ry. Men's Strike.

Platform and shop men of the B.C. Electric Ry.'s Vancouver and North Vancouver city systems ceased work on June 5 in a sympathetic strike, outbreaks of which have spread with revolutionary aspects throughout Western Canada. The union men took a ballot May 31 and registered three to one against the sympathetic strike. The Vancouver Trades and Labor Council held a mass meeting of all unions on June 2 and in spite of a majority of the unions of the city being against the strike and, it is believed, a majority of union men being of the same opinion, this council called the unions of the city to walk out on a general strike, the street railway men and electrical workers included. The street railway men individually were strongly opposed to the strike. The issue was not a local one. It was well known by that time that the general strike in Winnipeg and throughout the west was engineered by the so-called "one big union" with the intention of overthrowing the government and precipitating a revoluton.

The strike began in Vancouver June 9 at 11 a.m. The street railway men decided to hold a mass meeting the following night. In the meantime, strikers are alleged to have intimidated car men with threats of violence if they did not stop work. It is felt certain that this was the cause of the street railway men at the subsequent mass meeting voting two to one in favor of a strike. On that occasion, only two thirds of the men who had previously voted against the strike voted the same way, the others presumably having gone over to the other side.

A Vancouver correspondent writing us on June 7, said:—"Transportation is being provided by means of jitneys and private automobiles. The Vancouver City Council repealed the bylaw prohibiting jitneys for the time being, much to the anger of the strikers. Cars on all interurban lines are still being operated. Central Park and Burnaby Lake lines are operating to their connections with city lines, the men attached to the New Westminster Trades and Labor Council, which has registered against a sympathetic strike. New Westminster city system is also operating. The Fraser Valley and Lulu Island interurban lines are also operating, the trainmen being attached to the Brotherhood of Railway Trainmen, which is not countenancing the sympathetic strike. Electrical workers have voted to strike, but only linemen have gone out. Substation operators are still at work."

A press report of June 19, stated that the employes still continued on strike, and that no action had been taken by the heads of the union in favor of a return to work.

Service at Cost Favored in Manitoba.

The St. Boniface, Man., Board of Trade, passed a resolution recently expressing the opinion that fares should be fixed on a basis of the cost of street railway service, plus a reasonable return on the value of the property used and useful in the public service, such return to be fixed by the Manitoba Public Utilities Commission.

The Winnipeg Electric Ry., which operates in St. Boniface, favors the adoption of the service at cost plan.

The Levis County Ry. has bought 12 standard safety cars, specially fitted for the local climate, from the American Car Co., St. Louis, Mo.

The Electric Railways' Present Disastrous Position.

By Prof. L. A. Herdt, D.Sc., E.E., Vice Chairman, Montreal Tramways Commission.

Electric railway transportation stands face to face today with the greatest crisis in its history. This crisis is not due to some new competitor bidding for the first place as a common carrier; the electric railway is, and will be for some time the most economical urban and suburban carrier; jitneys, busses and others will not succeed against it. The crisis is a financial one and the problem of today concerns the method of saving an industry whose entire economic basis has been undermined.

In 1918, 4,900 miles of electric railways, more than one-tenth of the total mileage in the United States, went into receivership, representing a value of more than $500,000,000, and 750 miles of electric railways abandoned their service, representing a value of $80,000,000. A great many electric railway properties have grown weary from hope long deferred and are considering dismantlement at present day scrap prices rather than prolonged existence as losing ventures.

Brooklyn Rapid Transit, with 755 miles of track and an funded debt of $120,000,000 and $75,500,000 of outstanding stock is in the hands of a receiver. A fare of 8c is in effect, and has so far proven insufficient to pay the cost of service. The Pittsburg Ry., operating 605 miles of track is in the hands of a receiver. Hundreds of others could be cited. Roads which before the war were considered the strongest financially in the country cannot any longer withstand the economic conditions which face them.

The suggestion is sometimes made to the effect that the companies should carry on their own burdens by borrowing money, if the street car operations are now unprofitable. Let anyone go out and attempt to borrow money on an afflicted company's credit. Credit only comes from prosperity.

The whole structure of the franchise relationship between the electric railway and the various communities has broken under the strain of war. The rapid increase in the cost of everything which is used in operating street railways, the extraordinary demands of labor for high wages, made necessary by the rise in the cost of living, the alarming decrease in the purchasing power of the dollar, has brought the electric railways face to face with bankruptcy. The fundamental fact exists that under the present costs of material and labor, the majority of the street and interurban railways are furnishing, in response to the demand of the public, a service which costs more than they collect in fares.

Electric railway fares or rates are in the majority of cases regulated by law, or are established by existing franchises. With fixed fares, fixed 25 or 30 years ago, no avenue of automatic escape from rising costs lays open to the electric railway industry. In fact, the electric railways have staggered for years under inadequate rates, so that in the majority of cases, their credit has been destroyed, service impaired, equipment deteriorated to the brink of destruction.

The electric railways (not in Montreal alone), but everywhere, are asking for higher fares. These appeals have been met by a storm of rebuke. The public seems to be willing to permit this great industry to stagger on under the burdens thrown upon it, with inadequate relief in the way of increased rates, while exposed to the full brunt of the extraordinary increases in cost of labor and material. The public must be brought to realize that its interest in the electric railways of the country is greater than that of the stockholders or bond holders. The electric railways must be placed in a position to continue to discharge their essential service.

The public condemns the street car company without a hearing. Why? What is this due to? I believe that the unfairness of the public is due to the public's blissful ignorance. The public knows nothing about the street car company's troubles, because the street car company does not make a confidant of the public. Public utilities, like some other big interests, rush into print only when some calamity is about to befall them. They make some sort of plea. The public, which is the plaintiff, stands by its guns. It doesn't realize the good that the defendant has done, because it has heard only the bad. The public, someone has said, is the fairest being on earth, but it must be talked to, it must be told the facts.

A community with adequate and efficient street car service is busy, growing and prosperous, while the city, large or small, which has inadequate local transportation is dull, dead or dying. Efficient local transportation, adequate to he needs and welfare of the community is imperative. The public utility, tied by contract and franchise, with heavy financial obligations, and with definite essential responsibilities, must work constantly and continuously to fulfil its obligations—it is tied down hand and foot over long periods of time, and is held down at best to small financial returns, yet the public calls the company impertinent and worse, if it asks for a nominal increase for its products. Food has increased 100%; shelter 20%; clothing 90%—it is paid. But a public utility asks 20%—this is impertinence carried to its limit.

It is plainly evident that whether the public shall decide to operate the street railways, whether it assumes greater control over them, or whether it allows them to remain in the hands of private investors, the unit of their fares, the price at which their product is sold, must be sufficient to operate the roads. The fares should be restored to the level which prevailed in past years. The ticket dropped in our fare boxes today bears an impress "5 cents," but as compared with the 5c of a few years ago, it is 2½c and no more. The street railway franchise, or the statute or agreement calling for the 5c unit called not for an impress or a coin, but for a certain value of purchasing power. The equivalent of the 5c coin in the decade 1890 to 1900 purchasing power is the 10c fare. The purchasing power of the dollar has declined at least 50% since the early nineties. In other words, the 50c of that period bought what it requires $1 for today. The decreasing purchasing power of the dollar is not a product of the war alone. The war but gave it an additional, although a mighty, impetus. The various little things that we used to pay 5c for are now up with an advance of 2 to 4c 4c articles are now 6c, and 2c little things are now 4c. If we get right down to the cent, the newspaper that used to sell for 1c is now selling for 2c, an increase of 100%. This is all fair and just, it appears, but street car fares must remain where they are—any increase will not be tolerated.

Does the public pay high prices for electric transportation service? No—decidedly no. A tabulation of the income accounts of 388 electric railways, representing more than 63% of the electric railway mileage of the United States and Canada, shows a falling off in net income of 82% in 1918 compared with the corresponding period of 1917. Many companies are facing actual operating deficits in spite of increased fares and increases in gross receipts. In any other business the manager provides for increased costs by advancing his selling price. The electric railway company with fixed fares cannot do this; only when on the brink of destruction will the community admit that there is a justification for the readjustment of rates, and even then the increased fares have in a majority of cases caused a falling off in traffic and resulted in little, if any, actual increase in gross revenue.

Is there a remedy for the conditions facing public utilities today? Let us see how the cost of street railway service is made up. Cost of electric transportation service is made up of three main items:—1. Cost of operation, including platform wages (motormen and conductors), power for cars, heating and lighting and taxes. 2. Maintenance and renewals of the system as a whole. 3. Fixed charges, i.e., interest on the moneys invested in the system, including city rental for use of streets.

In the City of Montreal, for the period from July 1 to Dec. 1, 1918, the operating expenses per revenue passenger were in round figures 2.6, or 58% of the revenue. For maintenance and renewals. 75c or ¾c per revenue passenger was spent, that is 3.35c or 75% of the revenue was disbursed for operating expenses, maintenance and renewals. For this same period the average return per revenue passenger was 4.45c. Of this remaining 1.1c average return per revenue passenger, 1c in round figures is required to meet the company's financial obligations, that is, to meet the interest on the bonds and debentures, leaving 0.1c or a little over one-tenth of a cent per revenue passenger to meet the city rental and shareholders' dividend. In other words, in the last six months of 1918, 75% of the fare collected was paid out by the company for operating, maintenance and taxes; of the remaining 25%, 23% went to interest on bonds, mortgages and debentures; the remaining 2% goes to the city, the balance, if any, to the shareholders.

Of the total revenue in 1918, not less than 38% went to labor and 37% to material. In 1918, over $3,000,000 was paid in wages; less than one-tenth of this was paid to shareholders. An increase of 10% in wages would therefore wipe out all dividend payments for one year.

The Montreal Tramways in the year ended June 30, 1914, just prior to the war, spent in operating expenses, including maintenance and renewals, 58.89%, of its revenue. In 1918, as stated above, the operating expenses, including maintenance and renewals, amounted to 75% of the revenue. It may also be stated that the expenditure for maintenance and renewals was below the average spent in previous years. Increased wages and increased cost of materials are responsible for this large increase in operating cost. Municipal ownership is urged by many as a panacea. One year of public ownership of railways in the U.S. has proved the absolute danger of such control. It should be borne in mind that whether the public operate the street railways under public ownership, or whether they are operated by officials—the servants of private investors—the unit of the fares, that is, the price at which the product is sold (in this case transportation), must be such as will be sufficient to meet the total operating costs.

The management of an electric railway is not as blind as to refuse an extension of facilities or an improved service if it is likely to bring an increase in revenues, but it costs money to run cars and certain revenues must be obtained to keep the cars running. The real cost of service per passenger depends on the length of time that he occupies space on a car and hence the traffic conditions of high cost are: Slow average speed and long average ride.

If we divide the company's passenger revenue per annum by the number of revenue passengers per annum we obtain the average return per revenue passenger. With fixed fares, this return per revenue passenger is constant. In Montreal, the return per revenue passenger before the increase of fares, was on an average, 4.1c; it is now 4.8c, an increase slightly less than 0.7c per passenger or, an increase of 18% over the previous rate of fares. For every revenue passenger carried the company now receives 4.8c, irrespective of the distance travelled by the passenger. The dweller in Notre-Dame de Grace, or Ahuntsic, or Cartierville who rides 5, 6 or 10 miles, pays no more than the dweller in Hochelaga, or St. George or St. Denis Wards, who rides only half a mile to destination.

I have stated previously that the real cost of service to a passenger depends on the length of time that he occupies a space on a car, and hence the traffic conditions of high cost of service are: Slow speed and long average ride; the largest item of expenditure is labor as it absorbs from 38 to 40% of the total revenue.

The labor charge amounts to a fixed quantity per hour that a car is in operation, that is, the labor charge is not proportionate to the distance travelled by the car, hat is, to the mileage, but the higher the average speed of the car, the lower will be the labor cost for a given distance travelled by the car. Economy demands the largest possible car mileage in proportion to car hours and this makes the speed at which cars are operated very important. Every effort must be made to increase the average speed. Not only does a high speed make the service attractive, but it also makes possible lower prices. It is the speed and cheapness of operation which makes 5c rapid transit in subways and elevated roads possible.

The previous discussion has pointed out that to provide proper service the earnings per passenger must be sufficient to allow a liberal allowance for operating expenses per passenger, that is, an adequate car mileage per annum varying with the total number of passengers must be provided. Funds must also be provided for the proper maintenance and repair of the tracks and equipment. Annual fixed charges of the capital invested in the system must also be paid.

Under the new contract, the Montreal Tramways system is operated under a service at cost plan whereby the fare is automatically adjusted to meet the cost of service, including in this cost a fair return to capital invested in the enterprise. The new tramways contract embodies primarily the control of the fares, that is, the control of the fares in order to prevent unreasonable profits to the company from exploitation of the need of the public for tramways service. The cost of service principle is embodied in this contract.

The principle of controlling the fare in order to prevent such exploitation, or in other words, imposing a limit to the company's profits, involves in equity the provision also of means to guarantee to the company a minimum fair return on is investment. As the chances of excessive profits are removed, so the chances of loss must be minimized. It is clear, therefore, that at any time the fare must be sufficient on the average to pay for the cost of operation and proper maintenance of the system, with such other legitimate charges against revenue as may be agreed on, including a fair minimum profit on the invested capital of the company. This return is a preferred charge on the company's revenue after paying for the operation and proper maintenance of the system. If a guaranteed return is provided, the company must allow of a measure of outside control on such deductions from revenue as have priority over this return on the capital invested. It follows, that the various items of the cost of service must externally controlled.

In order to provide service to the public, the Montreal contract provides continuous control of the car service. This necessitates the provision of sufficient cars to carry the traffic under average conditions and special provision for rush hour conditions. It is impossible to formulate clauses in a contract to provide for control of his nature; a controlling body must be empowered to order such changes as from time to time may become desirable after careful study of the traffic requirements. Apart from rush hour conditions the service bears a simple relation to the average number of passengers per car mile, carried per annum, that is, the density factor. The cost of operation and maintenance are passenger varies almost inversely as this density factor. Thus a high value of this factor results in a low cost per passenger, but the cars will be crowded. At present, when the base costs of operation and maintenance are high, it is necessary to allow a high value for this ratio, in order to keep the cos per passenger within reasonable bounds. This limit is imposed by the average fare per passenger collected. With a decrease in base costs it may be desirable to reduce this factor, giving improved service at the same maximum cost and fare.

After all the charges have been paid, viz: operating expenses, maintenance and renewals, fixed charges, city rentals, the remaining surplus is to be divided in the proportion of 20% to the company, 30% to the city and 50% to a special fund devoted to the reduction of fares. The sum total of this fund is used as the indicator of the adequacy of the fare charged to meet the charges of the company. If this fund becomes depleted, due to drafts to make up shortage in the contingent reserve fund, it will be evident that the succeeding year's operation would show a further drain of reserve which would not be replenished from the tolls reduction fund. All the charges against income would not be fully guaranteed for the succeeding year and since such guarantee is a primary condition of the contract, it will be necessary to revise the fare schedules to replenish the contingent reserve fund. At any time when, owing to there being a large balance to the credit of the tolls reduction fund, the same being sufficient to make up the estimated decrease in gross earnings at a lower fare for a period of several years, it is provided that the controlling body may order a reduction of fare. This method of obtaining a readjustment of fares, being based on the total of a fund to which, when any surplus exists, money is added each year, prevents the possibility of postponing a reduction of fare by excessive expleniture undertaken to reduce the annual surplus. In this respect the scheme of the proposed contract is different from any that have been in use.

It will be seen from the above discussion that the permanent controlling body is necessary. It is obvious that outside control, as above provided for, is in the interest of the travelling public. Since the city shares in the profits and responsibilities of the tramways system, it is a partner in the enterprise. It is desirable, therefore, that such controlling body should be independent of the City of Montreal and of the Montreal Tramways Co., and should be an entirely independent body.

The agreement provides for a proper return on the fair value of the property and guarantees efficient service to the community. Ou such a basis the matter of fares readily adjusts itself and such questions as the extension of service into unproductive territory, increase of service, and other questions that have caused irritation in the past, will present themselves for consideration in an entirely new aspect. All unnecessary burdens and additional burdens imposed upon the electrim railways must inevitably and logically be reflected sooner or later, either in the rate of fare, or in the impairment of the service rendered. The familiar protests against the crowding of cars, antiquated equipment, infrequent service, poor service, transfer privileges, etc., will now come back to the car riders themselves and the remedy is obvious. The people of Montreal or any other city can ride in discomfort or in luxury according to the bill which they are willing to pay.

The foregoing paper was read before the Montreal Publicity Association recently.

The Detroit Wages and Fare Situation—Employes of the Detroit, Mich., United Rys., returned to work June 12, after having been on strike from June 7 to enforce a demand for an advance of wages. The plan of settlement involves the increase of wages to 50c an hour for the first 3 months; 55c an hour for the next 9 months, and 65c an hour thereafter, to date from May 16, with the abolition of the 5c fare, and the 8 for 25c workmen's tickets, from June 21. The fare to be charged as fixed by the city council is 5c.

The Winnipeg Sympathetic Strike and the Winnipeg Electric Railway.

A correspondent wrote Canadian Railway and Marine World from Winnipeg, June 15, as follows:—

At the time of writing, June 15, Winnipeg has been in the throes of a general strike for just over 4 weeks. This strike, which affects 35,000 workers, was aimed at depriving this city, of 200,000 people, of its public utilities and necessities of life, and is very generally acclaimed to be an attempt on the part of radical leaders who control the local trades and labor council, to establish Bolshevism and the rule of the soviet here. That the strike has extended over so long a period, is due to the very wholehearted manner in which the citizens have banded together, in an effort to defeat what even ministers of the crown have described as a revolutionary attempt to overturn proper governmental authority and to supplant sane progressive trades unionism with the "one big union" idea, which is akin to the I.W.W. and Bolshevist movements in other countries.

A dispute between metal trades employers and employes was seized upon by the trades and labor council as the casus belli. The metal trades employers, while prepared to negotiate schedules with committees of their own employes, or international representatives of the latter, refused to recognize the metal trades council, a combination of unions, including several with which the metal trades employers had no dealings with whatever and nothing to discuss. The metal trades council, which is composed of very radical socialists, insists on being recognized as the official negotiating body for all metal trades workers. The employers, however, refused to recognize any extraneous body. In spite of the fact that the employers were prepared to negotiate with unions or committees of their own employes the metal trades council received the support of the trades and labor council, on the plea that the employers refused to recognize the principle of collective bargaining, and in order to force the employers to accept the definition of collective bargaining, as drawn up by the metal trades council, a general sympathetic strike of all unions, including firemen and policemen, associated with the trades and labor council was called. A vote of the unions was taken first and 8,000 voted in favor of the strike, as against only a few hundred opposed. Misrepresenting this as a majority vote of all workers, the general strike went into effect on May 15, and 35,000 workers became idle. Before the strike, and since, strenuous efforts have been made by provincial and Dominion authorities to effect a settlement. The strike leaders, holding that they could not arbitrate a principle, which in this case is collective bargaining, refused to refer the dispute to arbitration.

Printing pressmen, stereotypers and locomotive firemen, locomotive men and trainmen were also called out. For a week Winnipeg was without a daily newspaper, but the international organizations of these various unions refused to countenance a sympathetic strike, and the local unions which did strike, have in consequence been punished. The newspapers have now got their full staffs, while the train service has not suffered much interference. Incensed at the attempt to deprive the city of fire and police protection, transportation, water, light, milk and bread, etc., the citizens banded together into a "Committee of One Thousand" and issued the edict that before a settlement of the metal trades dispute is made the question of the sympathetic strike must be settled once and for all. Volunteer forces were organized to man the police and fire brigades, the light and water plants, and the milk plants and bakeries. Having thus successfully nullified the attempt of the strike committee to reduce the city to starvation, the citizens expressed determination that the sympathetic strike weapon, as it applies to various utilities, shall not be resorted to every time there is a dispute between a private employer and his employes. Permanent staffs for the fire, police, and other utility departments have to sign a "loyalty" oath before being taken on, in which they declare they will not become members of any union affiliated with an outside body, and that they will not participate in sympathetic strikes.

One of the principal sufferers in connection with the strike has been the Winnipeg Electric Ry. Co., which operates light, power, gas and transportation utilities. Fortunately the company was able to keep its light, power and gas plants in full service, but the transportation utility has been completely tied up since May 15. The 1,700 motormen, conductors, and shop employes, struck in sympathy with the metal trades employes and not through any dispute with the company. At the time the strike was called a board of conciliation was engaged in arbitrating the demands of motormen and conductors for 70c an hour (maximum) and an 8-hour day. Several sessions of this board had been held, but A. Scoble, business agent of the street railwaymen's union, had told the board that no matter what its decision was, unless the demands of the men were met they would go out on strike. The union refused to name a representative on the board, and refused to put in its case. Three days before the sympathetic strike was called, the street railwaymen were asked, by their union officials, to vote on the question: "Are you in favor of a strike to enforce your demands?" No reference was made to conciliation, and the result of the vote was 97% in favor of a strike. No vote, however, was taken on the sympathetic strike issue, but the men responded to the trades and labor council's call and went out on strike on the morning of May 15. Meantime the board of conciliation investigating the men's demands had suspended until the strike is over.

No action was taken with regard to resuming street car service until June 9, when the city council passed a resolution requesting the company to resume operation immediately. Several conferences were held between officials of the company and the city with regard to the provision of police protection. In response to the city council's demand, A. W. McLimont, Vice President and General Manager of the company published an advertisement in all local papers asking the men to report for work at their respective barns on June 12 at 8 a.m. This advertisement closed with the following appeal: "I wish to convey to you men my personal feeling that you are not now aiding the cause for which the general strike was called by continuing to deprive the people of Winnipeg of transportation. On the contrary, you are injuring your personal standing in the community and getting the authorities and the public alike down upon the Winnipeg Electric Railway Co.'s employes. Remaining on strike now only results in seriously injuring the company which employs you and depriving it of revenue it must have to conduct its business, and provide the wherewithal to pay your wages, in order that you in turn may support your families and yourselves."

On June 11 members of the street railwaymen's union held a meeting to consider this new development, and after discussion they decided unanimously to remain out on strike in sympathy with the other workers. Strong pickets were placed at the respective barns, the following morning, and only two employes reported for duty. Resumption of service, of course, was impossible.

In a letter to Mr. McLimont, the president of the street railwaymen's union, after giving the result of the meeting, said: "We regret that we are unable to comply with your request that we appear for work at 8 o'clock on Thursday morning to operate cars. We would be very pleased to do so if the question that caused the suspension was eliminated, but instead of it being eliminated, other complications have been added that make in our opinion operation of cars a serious mistake at this time. We are hopeful, with your co-operation, that the time of operation will be extended until the matters in dispute are satisfactorily adjusted to all concerned. We appreciate the spirit in which your letter is couched and we hope that in the very near future we will be able to resume our former positions, and continue our past amicable relationship, and we would request that you use your good offices with the many other influential interests that are working, with the object in view of restoring to our fair city that spirit of good fellowship and brotherly love that should permeate every man and woman that has the welfare of the community at heart. Try with us to again establish the spirit: 'Do to others as we would have them do to us.' "

At a city council meeting on June 14 the question of permitting jitneys to ply the streets just so long as the street car service might be tied up, was discussed. The City Solicitor suggested that the council might ask the Winnipeg Electric Ry. Co. to waive the agreement with the city prohibiting jitneys for the time being. Some of the aldermen, however, argued that the company had broken its agreement through not providing street car service when requested by the council, and was, therefore, out of count. After discussion the City Solicitor asked for time to study the question, before making a statement as to what rights the city had to permit jitneys to run under the circumstances.

As the Winnipeg Electric Ry.'s passenger revenue averaged about $10,000 a day previous to the strike, its loss has, of course, been very heavy..

Owing to the fact that on June 12 only two out of the whole of the men on strike reported for work, no attempt was made to operate any cars. The element seemed [illegible] with the strikers in preventing the cars running, for on June 14, the city was visited by a severe cyclonic storm, which did very considerable damage to the electric railways and power transmission lines, etc., it being reported that on the Winnipeg, Selkirk and Lake Winnipeg Ry. alone, there were eight miles of poles demolished. Owing to the effects of the storm no attempt was made to run the cars until June 18, when 13 cars were put in operation early in the morning. The power was soon afterwards mysteriously shut off, and later was turned on again. It was reported June 18 that cars would be operated on the Portage Ave. route only in the meantime. Subsequent report stated that additional men were returning to duty, that additional lines were being restarted, and that it was hoped before very long to restore a full service. On June 25 it was announced that the sympathetic strike had been called off unconditionally and that normal electric car service would be restarted at once.

Quebec Railway, Light & Power Co. Orders Double Truck Cars.

The Quebec Railway, Light & Power Co. has ordered 10 double truck steel cars for its city street railway division, the same to be fully equipped and ready to operate, and to be numbered 610 to 619, both inclusive. Five have been ordered from Ottawa Car Manufacturing Co. and 5 from Preston Car & Coach Co. Following are the principal particulars:

[illegible]	about 42 persons
[illegible]	about 15,000 lb.
[illegible]	about 36,000 lb.
[illegible]	29 ft. 88 in.
[illegible] front vestibule	4 ft. 6 in.
[illegible] rear vestibule	6 ft. 0 in.
[illegible] over all (not to exceed)	8 ft. 0 in.
[illegible] (not to exceed)	7 ft. 8 in.
[illegible] bumpers	0 ft. 6 in.
[illegible] (not to exceed)	11 ft. 2 in.
[illegible]	18 ft. 0 in.
[illegible]	mahogany finish
[illegible]	agasote
[illegible]	single arch
Air brakes	Westinghouse S.M.E.
[illegible]	Peacock
[illegible]	4½ in. diam.
Car trimmings	Ottawa Car Co.
[illegible]	" "
[illegible] end	Westinghouse K-35-D
[illegible]	Nat. L. W. Co.
[illegible]	Fabrikoid
[illegible]	H.B. life guard
[illegible]	15-69-5 in. face
[illegible]	Nuttal b.f.
[illegible]	Con. Car Heating Co.
[illegible]	Crouse Hinds
[illegible]	Brill
[illegible] Westinghouse [illegible]	40 h.p. each
[illegible]	outside hung
[illegible] center of car	
[illegible] at iron stanchions	
[illegible]	4 longi- [illegible] seats
[illegible]	rattan
[illegible] wheel [illegible]	Brill 76-E-2
[illegible]	rolled [illegible] flange
[illegible]	[illegible] honeycomb

[illegible]

[illegible] type).

Motorman and conductors' seats.

[illegible] standard double roller bearing [illegible] and ball center bearings.

[illegible] gongs, p.a.y.e. stand.

[illegible] tube, Nuttal trolley [illegible]

[illegible] same as Montreal Tramways [illegible]

Construction underframe and carbody to be of similar design to that of Montreal Tramways Co., 1550 class cars, eliminating folding steps and doors feature on rear vestibule end. Front vestibule to be short, and equipper with folding door and step, with operating lever convenient to motorman. There to be no bulkhead at front end of car, but 2 iron pipe stanchions and a panel installed up to the height of the belt rail, also a long cross seat to be installed across the front end of car to seat 3 persons. Rear vestibule to be circular at end, and equipped with heavy bronge p.a.y.e. rails, no doors on entrance or exit to platform. There are to be 11 double sash windows in each side of car body, top sash to be stationery, and bottom sash made to raise, to open. Roof to be of arch type, with 3 honeycomb ventilators at each side. Bulk head at rear end, with one sliding door at exit side, and one folding door at entrance side.

Car to be equipped in accordance with specifications with seats bumpers, drawbars, curtains, grabhandles, p.a.y.e. rails, folding step at front vestibule, push buttons, buzzers, signal bells, alarm gongs, hand straps, ventilators, brakes, track sanders and other minor fittings and appliances found on cars of this type generally. Six iron pipe guard rods with fittings to be put on windows on devil strip side of car body 3 in. apart. Also a 3-rod brass window guard on vestibule windows and seats for the motorman and conductor.

The specifications cover the construction of car bodies, equipments, trucks, special fittings and appliances mentioned therein, cars to be furnished ready for operation. Minor details suggested by the purchaser during the construction of the cars to be carried out without extra charge, providing such suggestions are made in time not to interfere with the construction.

British Columbia Electric Ry.'s Housing Plans.

As a practical instance of what may be done by a company for the benefit of its employes in the way of enabling them to own their own homes, the project recently put in operation by the British Columbia Electric Ry. is of interest. The company made a start with its office employes, and to assist them in buying or building houses, set aside recently $50,000 to be loaned at 6% repayable in instalments. The details of the plan, which were worked out by a committee of the Office Employes' Association, fix the maximum amount to be loaned to any one employe at $2,500, and the repayment term at 12 years. Over 80 applications, totalling $160,000, were received, and the committee selected 25 of the applicants. The first cases handled are purchases of houses already built. The applicant is required to provide cash or security equal to 10% of the loan, so that on a $2,000 property, the company will provide $1,800, and the employe $200. The company's legal and other departments give their services free in carrying out the plans.

American Electric Railway Association Convention—Owing to war conditions this association did not hold a convention in 1917 or 1918, but it will revive its annual convention this year, and that of its affiliated associations, viz: American Electric Railway Accountants' Association, American Electric Railway Engineering Association, American Electric Railway Claims Association and American Electric Railway Transportation & Traffic Association. The convention will be held at Atlantic City, N.J., from Oct. 6 to 10, both inclusive, and there will be an electric railway appliance exposition on Young's Million Dollar Pier, where the associations' meetings will also be held.

Electric Railway Finance, Meetings, Etc.

British Columbia Ry. and allied companies:—

	Apr., 1919	Apr., 1918	10 mons. to Apr. 30, 1919	10 mons. to Apr. 30 1918
Gross	$631,988	$515,417	$6,022,107	$5,010,688
Expenses	458,674	385,420	4,449,003	3,848,134
Net	173,314	129,997	1,573,104	1,162,554

The gross and net for Apr., 1919 include $16,185, representing 1c out of every 6c fare collected in Vancouver, and held in suspense under the Public Utilities Act, pending the commission's decision.

Electric locomotive for Hydro Electric Power Commission of Ontario's Niagara Power Development Construction Railway.

Cape Breton Electric Co.:—

	Apr., 1919	Apr., 1918	4 mons. to Apr. 30, 1919	4 mons. to Apr. 30, 1918
Gross	$46,455.82	$37,674.04	$184,534.25	$154,913.56
Expenses	33,316.47	27,985.85	136,732.30	120,365.48
Net	13,139.35	9,688.19	47,801.95	34,548.08

Regina Municipal Ry.—A Regina, Sask., paper says:—"During May the street railway deficit took a jump from $9,152 to $17,324. In other words the deficit for May was nearly as great as that of the four preceding months." Superintendent Houston is reported to have pointed out that cheques for back pay for the increase of wages granted by the council were paid in May. He estimates that the increase will amount to $11,000 or $12,000 a year, so that $5,000 of the increased deficit would be accounted for in this way. This added to the normal increase in the deficit for the month at the first four months of the year would practically make up the difference of the deficits.

Sandwich, Windsor and Amherstburg Ry.—It was reported May 30 that negotiations were in progress for the purchase by the Hydro Electric Power Commission of Ontario of the lines in Canada, owned by the Detroit United Rys. and operated by the Sandwich, Windsor and Amherstburg Ry. A subsequent statement was to the effect that the negotiations had been broken off owing to the decision of the municipalities to submit bylaws authorizing the company to charge increased rates in order to pay its employes higher wages on a scale agreed upon. The bylaws will, it is said, be voted upon by the ratepayers of the City of Windsor, the Town of Walkerville, and the municipality of Sandwich, on July 5.

Toronto Ry.—At a recent meeting of the Toronto board of control, the mayor moved that a bylaw be submitted to the ratepayers at the election in Jan., 1920, authorizing the provision of $5,000,000 to prepare the way for the taking over of the Toronto Ry. by the city in 1921. The matter was referred to the city council's transportation committee.

Toronto Ry., Toronto and York Radial Ry. and allied companies:—

	Apr., 1919	Apr., 1918	4 mons to Apr. 30, 1919	4 mons. to Apr. 30 1918
Gross	$1,051,960	$1,065,766	$4,257,882	$4,229,490
Expenses	573,597	565,038	2,476,143	2,285,928
Net	478,363	500,728	1,781,739	1,943,562

Winnipeg Electric Ry. and allied companies:—Net earnings after operation April were $94,570.69, and after deducting fixed charges, $34,284.97.

Montreal & Southern Counties Ry. Franchise Renewed.

The Montreal City Administrative Commission on June 3, passed a bylaw extending the Montreal and Southern Counties Ry.'s franchise for 10 years from June 15, 1918. The company's track in the city is 2,697 ft. long, and for the use of the streets on which it is laid the company is to pay a rental of $1,400 a mile, plus the cost of sprinkling, and cleaning streets, the removal of snow, and certain repairs to pavements. The total of these items is to be revised every three years, the cost for the first period under the new franchise being, at the rate of $4,167.40 a year. The company may be called upon to put its power conductors underground; it must lay track on any lines authorized under the franchise by Nov. 1 of this year; it may take up passengers with their baggage, as well as freight and parcels, at its terminal station, but it must not operate a local service within the city limits. (May, 1918, pg. 211).

Toronto Street Car Questions.

The Toronto Bureau of Municipal Research asked the following questions recently:—

Should the citizens at large be compelled to make good annually, through the tax rate, the deficit created by the operation of city-owned utilities?

What percentage of the passengers carried on the civic car lines reside outside the city limits?

Why should the citizens of Toronto furnish transportation at a loss to these people who are not even taxpayers?

If the basis of municipal ownership is service at cost, why not charge the cost of service to those who receive same?

Should not the civic car lines be put on a better revenue-producing basis so that our civic officials may have a fair chance to demonstrate their ability to handle civic transportation?

Does not the annual deficit from the operation of the civic car lines provide one of the most potent and damaging arguments urged against municipal ownership? Is not this argument being used today?

If the city were to charge the present rate of fares on the proposed North Yonge St. and Mount Pleasant lines, by what amount would the annual deficit be increased.

Are the real advantages to the community of encouraging people to live outside the area served by the Toronto Ry. of importance enough at this critical time to counterbalance the dangers of operation by deficit (to be made up from general taxation)?

Do the citizens wish the present policy of fares below cost continued?

Mainly About Electric Railway People.

T. Ahearn, President, Ottawa Electric Ry., entertained his fellow directors of the Bell Telephone Co. at luncheon, at the County Club, near Ottawa, recently, after they had held a directors' meeting in Ottawa.

Miss E. M. Carr, daughter of C. E. A. Carr, of the C. E. A. Carr Co., railway supplies, etc., Toronto, and formerly General Manager, Quebec Ry., Light, Heat & Power Co., was married recently at Toronto, to E. M. V. Fielding of Niagara Falls.

Mrs. G. R. G. Conway, wife of the General Manager, Mexican Light & Power Co., and one of her children, is visiting Scotland for a few months; Mr. Conway and their other two children remaining in Mexico.

Lorne C. Webster, President, Quebec Ry., Light, Heat & Power Co., has been elected a director of the Merchants Bank of Canada.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., and Mrs. Gale, are spending the summer at their country house at Aylmer, Que.

Sir Wm. Mackenzie, President Toronto Ry., left Toronto, June 14, for England, expecting to return about the end of July.

Mrs. Henry Smith, who died in London, Ont., June 10, was the widow of a former Superintendent of the London St. Ry., in the old horse car days, previous to its electrification in 1895, and for some time afterwards, and who died in 1905.

Jurisdiction Over Grand River Railway Co.

The Grand River Railway Co. applied to the Dominion Parliament, at its recent session, to repeal sec. 3, chap. 47, Dominion Statutes of 1904. An act respecting the Berlin, Waterloo, Wellesley & Lake Huron Railway Co. which provided as follows:

"The acquisition by purchase or lease by the company, of the line of either, or both, of the street railway companies mentioned in sec. 2 of this act (viz: Galt, Preston & Hespeler St. Ry. Co. and Preston & Berlin St. Co.) which have been incorporated by charter of the Province of Ontario, or any agreement for amalgamation by the company with either or both of the said street railway companies shall not make such line or lines of street railway companies shall not make such line or lines of street railways or any extension or extensions thereof hereafter constructed under such charter or charters subject to the Railway Act, 1903, or works for the general advantage of Canada, but they shall be and remain subject to the legislation and control of the Province of Ontario."

The bill has passed both houses of parliament and now only requires the Governor General's assent.

Electric Railway Notes.

The Hamilton St. Ry. at the city council's request, inaugurated near side stops on June 1, instead of stopping on the far side of crossings as theretofore. The Toronto Ry. is reported to be ordering electrical and other equipment for 50 cars to be built in its own shops.

The Weston, Ont., Town Counsel is reported to be considering taking steps to compel the Toronto Suburban Ry. to put on a 10 minute service between Keele St., West Toronto, and Weston, in accordance with a recent order by the Ontario Railway and Municipal Board.

The British Columbia Electric Ry. had one of its cars damaged recently in a collision with a Great Northern Ry. train at Georgia St. crossing, Vancouver. In an action in a B.C. court, the B.C.E.R. has been awarded $593 damages; the judge holding that if the emergency signals had been given by the train foreman the accident would not have happened.

The Cape Breton Electric Co. is reported to have begun June 1 to sell metal tickets for use on its cars. These tickets can be purchased singly or in any reasonable quantity, and are to be used on all lines exclusively, except on the Sydney and Glace Bay interurban line, where the requisite coins may also be used in payment of fares. The metal tickets sell for 6c each.

The Montreal Tramways Co. was on June 8, directed by a Quebec court, to pay $192 with costs to W. Cochram, as damages for injuries received while a passenger on one of the company's cars. The car on which he was travelling was so crowded that he had to stand on the lower step of the car platform. While crossing the elevated bridge near Blue Bonnets, he was struck by a guard or cantilever of the bridge. The court held that the company was not only responsible for the overcrowding of the car, but for the placing of the guard at the bridge at a point too near passing cars.

Three passengers on a Montreal Tramways Co.'s car on Oct. 10, 1915, engaged in a quarrel, which resulted in a Mrs. McDonald, who was also a passenger, receiving some injuries. Her husband, P. McDonald, sued the company for damages, and a court awarded $1,000 therefor. The companys thereupon entered an action against John Couti, N. and E. Beauregard, the three passengers who engaged in the disturbance, to recover the amount of the damages and costs awarded McDonald. Justice Greenshields decided, June 21, in the company's favor and gave judgment against the men jointly and severally for $1,000 and costs.

Electric Railway Projects, Construction, Betterments, Etc.

Calgary Municipal Ry.—We were officially advised June 18, that there is under construction about a mile of single track line in the city, all the material for which is on hand. This material is being removed from the line built to serve the military camp on the Sarcee Indian Reserve, which is no longer required. The labor is to be paid for out of revenue account. This is apparently an extension of the center street line, which was under discussion in Jan.

At a recent city council meeting, the proposal for the extension of the Killarney St. line was held over pending the giving of a written opinion by the City Solicitor as to how the two-thirds council vote to reject the commissioners' recommendations affected capital expenditures. The commissioners recommendation was for the extension of the line from 17th Ave. andn 29th St., south to 23rd Ave., 1,700 ft., turning east on 23rd Ave. and back to 17th Ave. or 28th St., but the council decided that the line be carried to 25th Ave., 1,200 ft. (June, pg. 324).

Guelph Radial Ry.—A press report states that the Guelph, Ont., city council proposes to issue bonds to provide funds for the construction of an extention from Hespeler St. north to Mount Forest St.

The International Transit Co. is, we are officially advised, relaying with 85 lb. rails between 6,300 and 6,400 ft. of track on Main St., Sault Ste. Marie, Ont., and will also lay a second track alongside as well as renewing the present sidings. The joints will be electrically welded. The company has bought 70 tons of 85 lb. rails from the Algoma Steel Corporation, and 4,500 cedar ties. This work is being done in advance of city permanent paving. A. E. Pickering is General Manager. (June, pg. 324).

The Lethbridge Municipal Ry. is, we are officially advised, putting in new ties on three miles of track.

Lunenburg Electric Ry.—The Nova Scotia Legislature has amended the company's act of incorporation, principally by granting an extension of time within which the projected lines may be built. The company was incorporated in 1911 to build an electric railway within the municipalities of Lunenburg and Chester. W. Duff, clerk of Lunenburg municipality, was one of the original incorporators.

Montreal Tramways Co.—We are offically advised that the company either has in hand, or proposes to carry on, construction on the following extensions and renewals during the current year: Extensions—St. Patrick St. and Monk Boulevard to Allard St., 2.20 miles; Cote des Neiges Road, from Westmount Boulevard to Queen Mary Road, 1.50 miles. Relaying with 115 lb. rails the following: St. Lawrence from Ontario to Craig, one [illegible] St. Denis St., Ontario to St. Catherine, half a mile; St. James St., Place d'Armes to McGill St., quarter of a mile; Notre Dame St., Berri to La[illegible] St., one-fifth of a mile; Notre Dame St., Craig to Frontenac, 0.8 mile; [illegible] Mount Royal to Bernard, [illegible], Craig to Ontario, [illegible] atherine St., Laurier to Bellingham, 1.70 miles; St. Catherine St. [illegible] miles. The company also proposes to rebuild certain other parts of its tracks, using the same rails, and also renewing a number of small intersections. The company also proposes to put up an addition to its Youville substation, to make various renewals to car barns, and to rebuild and strengthen bridge and viaduct on one of its outside lines. W. F. Graves is Chief Engineer, Montreal.

At a meeting of the city council, June 9, the following resolution was proposed by Alderman Elie, but consideration of it was deferred to a future meeting:—"Whereas the needs of traffic require a more efficient tramway service than the Montreal Tramways Co. can possibly give under present circumstances; whereas, whatever may be the number of cars placed at the disposal of the public by the company, congestion cannot be avoided, the number of lines not being sufficient and the service being delayed, owing to the fact that the tramways of several lines have to run on the same streets, as is the case in the vicinity of Place d'Armes; whereas the construction of underground tramway lines would be, in the council's opinion an efficient remedy for the present state of things; Be it resolved, that the administrative commission be requested to consider the advisability of including in the amendments to the charter which may be submitted at the next session of the legislature, a clause amending the tramway contract, or to adopt any other measure so as to provide for the establishment of an underground tramway service with the shortest possible delay." (June, pg., 324).

Nova Scotia Tramways and Power Co.—Special meetings of the holders of the company's preferred and common stock were called to be held at Halifax, June 24, to authorize the issue of $2,000,000 of unsecured 3-year notes, one-half of which are to be put on the market as soon as approved by the Nova Scotia Public Utilities Commission. The proceeds of the proposed issue are to be utilized for the purchase of additional cars and other equipment, and for improvements and repairs.

Ottawa Electric Ry.—At a meeting of the Ottawa Board of Control, May 28, the question of the construction of a loop around Cobourg, Murray, Charlotte and St. Patrick Sts., came up for consideration. A press report says the company's proposal to build the loop with a guarantee that it would replace any pavement damaged or torn up, and would maintain a proper service, was recommended to the council for approval. (Sept., 1918, pg. 403).

Quebec Ry., Light and Power Co.—The Quebec City Council accepted tenders recently for paving Beauport Road, provision being made for a double track electric railway in the center of the roadway, and for the paving of the western side of Charlesbourg Road, the street railway tracks occupying the western side. Subsequently the matter was discussed with a view of having the location of the railway changed on Beauport Road from the center to the side, and to make a boulevard along the center of both roads. A press report of June 11, stated that the paving contracts had been held up, pending a settlement of the matter. (June, pg. 324).

We are officially advised that the company is building about a mile of track on Beauport Road, from the Canadian Northern Ry. tracks to the city limits.

Toronto Civic Ry—Works Commissioner Harris, in a report to the Toronto civic works committee, recently reported against any immediate construction of the proposed Mount Pleasant Road civic car line. The estimated cost of building of such a line from Yonge St. to the city limit with bridges, etc., of a permanent character, is $2,224,164. Other estimates showing the cost of the line with partly permanent construction were also submitted. The committee decided, June 12, not to take any action in regard to the construction of the line until the question of acquiring the portion of the Toronto and York Radial Ry.'s Metropolitan Division on Yonge St., within the city limits has been settled. The residents of the Mount Pleasant area, which the line would serve, held a meeting June 12 and called upon the city council to pass a bylaw, authorizing the construction of the line.

Toronto Eastern Ry.—As stated in Canadian Railway and Marine World for June, pg. 322, President Hanna, of the Canadian National Rys., which now holds this company's charter, announced that it was intended this year to electrify the line from Bowmanville easterly to Pickering, on which track has been laid, and that it was intended to proceed with the construction of the line easterly to Toronto as soon as possible. On June 24 we were advised that no steps had been taken to go on with the work indicated above, on account of negotiations being in progress for the sale of the charter, property, etc., to the Hydro Electric Power Commission of Ontario.

London and Lake Erie Ry. and Transportation Co.'s Line Being Dismantled.

We were officially advised, June 6, that the whole of the rails on the line between London and Port Stanley, had been lifted and sold; 2,000 tons being sold to A. G. Kidston and Co., Montreal, through Jno. J. Gartshore, Toronto, who is taking the balance of the rails, some 800 tons, and selling them to various parties. The power has been shut off at St. Thomas, and the company is taking down the overhead work.

A steel bridge at London, Ont., has has been sold to the London City Council, but otherwise none of the real estate or buildings has been sold.

A St. Thomas press dispatch of June 11, states that a special committee of the City Council had arranged to buy the company's car barns, freight house, substation and other real and personal estate in the city, for $25,000, subject to the ratepayers' approval, payment to be made in 20-year city debentures. The despatch says the property to be acquired includes the tracks within the city, and the spur connecting with the Michigan Central Rd., together with the overhead work of the same; and the car barns, substation, freight house and other buildings on Talbot St. E. The company claims that this property cost $50,000 and could not be duplicated for $75,000. The city will use the newly acquired property in connection with the St. Thomas Municipal Ry.

Marine Department

The Minister of Marine on Dominion Government's Shipbuilding Programme.

In moving an amendment to the budget resolutions in the House of Commons, June 9, A. R. McMaster, M.P., for Brome, Que., criticized the government's shipbuilding programme. In replying, Hon. C. C. Ballantyne said: "I agree with one point Mr. McMaster made, and that is the necessity of Canada expanding her trade and reaching out for foreign markets. Now is the opportune time for this country to do this. But I was amazed to hear him say that he is opposed to the government's shipbuilding programme, that he considers it a waste of public money. I take sharp issue with him on that ground; I do not consider the policy a waste of public money. I am the minister responsible for recommending to the government the policy of creating a Canadian merchant marine. I think that policy is sound, the government is of the same opinion, and I believe the large majority of the people of Canada also think so. The gentleman overlooks the fact that a large transcontinental railway, such as the government owns and operates at present would be in a sad plight if it did not have ships to complete its transportation chain. The gentleman apparently does not understand that Canada is in need of shipping very badly at the present time. Lloyd Harris, when he was overseas as chairman of the trade commission, sent me a cablegram to that effect from London. He also stated in the press when he returned that the problem before Canada at present is one of shipping. If the government had every one of the 45 merchant ships for which it has planned with a total tonnage of 264,000 tons, in service at present, we could use every one of them and more. Every day I have people coming to me begging for tonnage. And still the gentleman states that the government shipbuilding programme is an unwise policy and involves practically a reckless expenditure. No one finds fault with good old England, which is still supreme as far as her mercantile fleet is concerned, for looking after her own commercial interests first; and she would be the first to applaud one of her overseas dominions for following her example and looking after our own interests with the same keenness that the mother country herself does. What is the United Kingdom doing at present with regard to shipping coming to Canadian ports? She declares that 70% of the available cargo space is reserved for the British Minister of Shipping. I would like the house to take note of this: only 30% of the available cargo space is left for the products that Canada wishes to export. That amount is totally inadequate. In addition to that handicap, our trade commission found, when it visited the United Kingdom, and other European countries, that discriminating freight rates exist against Canada.

"Canada has been for years handicapped in her export trade, and would be in the future also if it were not for the fact that we are building our own merchant marine. It works out like this, that if the United Kingdom has products to ship to South Africa, we will say, Canada, without ships, cannot compete with the mother country, because she gives such a favorable rate from the United Kingdom to South Africa. But now that we have our own merchant marine, D. B. Hanna, who has charge of the ships, intends to meet the competitive rates of the old country in order that the manufactured products of Canada can be put on the markets of the other overseas dominions and then on the foreign markets on an equality with the mother country as far as freight rates go. Would it therefore be an unwise expenditure for Canada to build up a mercantile marine?

"As I said before, we first of all required our mercantile marine to work in conjunction with our railway system. We hope to see Canadian merchant ships carrying cargoes to all parts of the world and bringing back raw materials required by Canadian manufacturers. I hope in the very near future, as I am sure all the people of Canada do, to see our splendid merchant ships running to Australia and to New Zealand—excellent markets are available there—also to the Orient, from Vancouver; and to South America, the West Indies, South Africa and the United Kingdom.

"There is another point that I would like to drive home. The millions of dollars that the government is putting into ships is expected to come back again into Canada's exchequer. When a year ago I introduced in this house our merchant marine policy I stated that while the rates of freight would probably go down—as they have done since the armistice was signed—that owing to the great loss in the world's tonnage as a result of the enemy's submarine warfare, the rates would still remain sufficiently high to reduce the cost of these ships that we are building, if not to entirely wipe off their initial cost. I am very pleased to say that the nine ships we have in service at present are earning very good gross profits, and I believe that within a year, or at least not more than a year, the initial cost of each one of those ships will be entirely wiped off. The other ships as they are ready to go into service from time to time, are going to make good gross profits, and net profits also, so that the money really is only being put out at the present time temporarily and will again return to the public exchequer. Therefore, I am at a loss to understand the member for Brome being so opposed to the government's shipbuilding programme. I am very glad that so many members on his side of the house have given their unqualified consent to our policy, and I do not believe that he has very much of a following in his opposition to it.

"We hear again and again that England, Scotland or Ireland can build ships cheaper than Canada; and, if the United Kingdom cannot build ships cheaper, then that Australia can do so. When I brought down my estimates I took the precaution to be well posted on shipbuilding costs, and I have a further supplementary estimate to bring down. I stated at that time, and I reiterate now, that all the yards in the United Kingdom are filled up with orders for shipbuilding on what is known as "cost and line." No one can get a fixed price per ton for a finished ship such as the Canadian Government is getting here, and their prices range anywhere from £28 to £33 a ton. I have the prices and the estimated cost on time and line for ships that are being built in the yards of the old country, i.e., cargo ships just the same as the Canadian Government is building, of 8,000 and 5,000 tons. I have not yet asked for prices until the supplementary estimate is approved by parliament, but I have good reason to believe that this government and the people of Canada will be able to have similar ships built in our Canadian ports at just as low a price as they can be built for in England, Ireland and Scotland—built just as well, and a better type of ship."

Shortage of Tonnage for Maritime Provinces Coal Shipments.

In reply to a question in the House of Commons, June 16, the Minister of Marine stated that the High Commissioner in London, Eng., has been requested by cable to urge on the British Ministry of Shipping, the necessity for the release of requisitioned steamships, and additional representations were being made through the Secretary for the Colonies. The government, he stated, was aware of the difficulty being experienced in delivering Nova Scotia coal at Montreal, owing to lack of tonnage. The majority of the steamships used in the coaling trade are registered in Great Britain, and are, practically, under the British Ministry of Shipping's control.

A London, Eng., press cablegram of June 15, says:—"Sir John Anderson, Secretary of the British Shipping Control, emphatically denies alleged discrimination against Canadian coal interests with respect to the release of tonnage. He says:—'We are concerned with ships, not charterers. We steer a perfectly straight course. Our only possible guiding rule is the public interest. We are bound to work to schedule. Certain ships are arriving, and certain work needs to be done, and the most suitable ships are allocated. It is like a game of chess. If we allowed our moves to be affected by individual interests we should lose the game. If we were guided by our own personal convenience we should long ago have released these ships, because extraordinarily powerful influences have been brought to bear. We do not lack sympathy with the charters, but are bound to place the public interest first. You may rest assured these ships will be released at the earliest possible moment.'"

The Marine Navigation Co. of Canada's barque Inversnaid, registered at Montreal, official no. 99,639, has had her name changed to Garthsnaid

Specifications for Machinery for 8,100 ton d. w. Steamships for Canadian Government Merchant Marine Ltd.

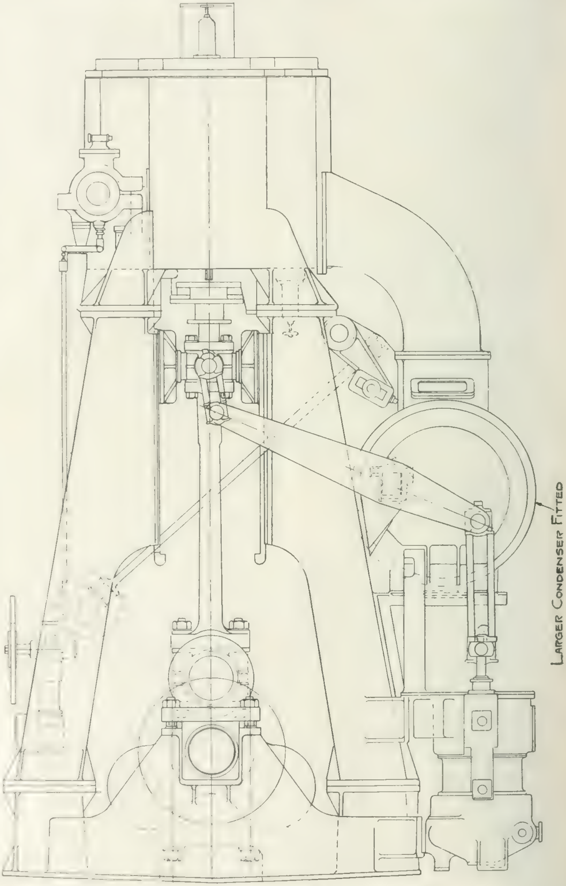
Of the 45 steel cargo steamships which the Marine Department has ordered, to be operated by Canadian Govt. Merchant Marine Ltd., 16 are to be of 8,100 tons d.w. each, representing a total dead weight carrying capacity of nearly 130,000 gross tons. These orders have been placed as follows: Canadian Vickers Ltd., Montreal, 6; J. Coughlan & Sons, Vancouver, 4; Halifax Shipyards Ltd., Halifax, N.S., 2; Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C., 2; Victoria Machinery Depot Ltd., Victoria, B.C., 2. Canadian Vickers Ltd., launched the first of these steamships, Canadian Pioneer, at Montreal, Dec. 3, 1918, the second, Canadian Ranger April 19, 1919, and the third, Canadian Seigneur, May 7, 1919. They have laid keels for five others. Halifax Shipyards Limited has laid keels for two, and J. Coughlan & Sons have also laid keels for two. Following are the specifications for the machinery of the s.s. Canadian Pioneer, the first of the 8,100 ton ships built:—

1. **General Description.**—The propelling machinery to consist of one set of inverted, vertical, direct acting, triple expansion, surface condensing engines, having 3 cylinders working on separate cranks placed at angles of 120 degrees with each other, supplied with steam from 3 multitubular boilers, at a working pressure of 180 lb. a sq. in. The machinery and boilers to be Lloyd's and Canadian requirements and inspection.

2. **Cylinders.**—To be cast of hard, tough, close grained iron and smoothly bored, fitted together and of the following dimensions: High pressure cylinder 27 in. diar.; intermediate pressure cylinder 44 in. diar.; low pressure cylinder 73 in. diar.; stroke of each 48 in. diar. H.p. cylinder to have hard cast iron liner. The piston valve chambers of h.p. and l.p. cylinders to have separate liners of hard cast iron. Stuffing boxes for i.p. and l.p. piston rods and valve rods to have brass neck rings, and cast iron glands bushed with brass. Gland studs to have double nuts and split pins. Escape valves with hoods to be fitted to i.p. and l.p. steam chests, and to top and bottom of h.p. and i.p. cylinders, and bottom of l.p. cylinders. Drains to be provided for the cylinders, and steam chests arranged to drain through pipes, the h.p. cylinder to the bilge, and the m.p. and l.p. cylinders to the condenser. Drains from m.p. and l.p. casings to be led to the hot well. Indicator cocks and pipes to be fitted to each cylinder, and levers for working the indicators to be fitted to the columns and crossheads. The sides of the h.p. cylinder and steam chest to be cleaded with silicate cotton or magnesia blocks, and the m.p. and l.p. with felt, the whole of the cleading to be neatly covered with sheet steel, secured with button headed screws to ribs or snugs cast on the cylinders.

3. **Cylinder and Steam Chest Covers.**—The cylinder chests are to be of cast iron, strongly ribbed, to be turned on [illegible], and to be corrugated on top. Holes for [illegible]ts and starting screws to be bored and tapped. Steam chest covers to be corrugated on top, and to be made sufficiently strong by deep ribs cast on [illegible]. Eyebolts to be supplied for all cylinder and steam chest covers to suit the lifting gear.

4. **A Steam Stop Valve** of Cockburn-MacNicoll, or other approved type, to be fitted on the h.p. steam chest, with a rod and wheel leading to a starting platform, convenient to quadrant for starting levers. Valve chest to be of cast iron, with valve, valve seat, and gland of brass. The control valve also to be fitted with gear, led to lever in quadrant for convenience in handling engines.



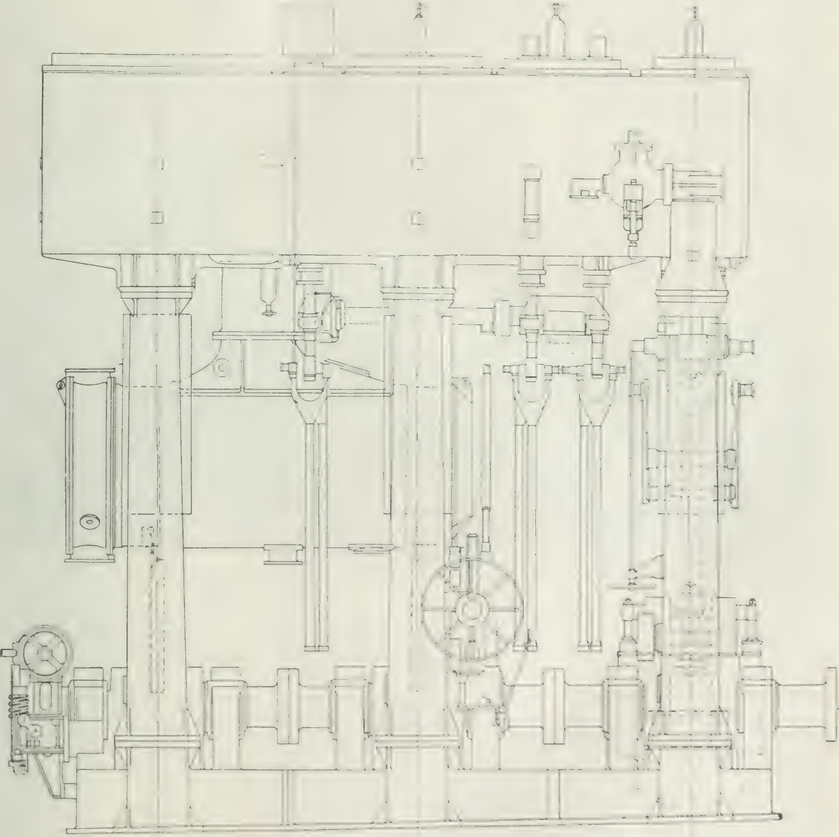
Engine arrangement, steamship Canadian Pioneer.

5. **The Pistons** to be of hard, close grained cast iron, of box form, having strong internal ribs. The core holes to be in the top, and the plugs firmly screwed into them, with red lead, each plug being fitted with a set screw to prevent slacking back. The junk rings are to be secured by collar studs, screwed into the pistons, and split pins fitted to prevent nuts slacking back. H.p. and l.p. to be fitted with Ramsbottom rings and l.p. of Lockwood and Carlisle or other approved packing.

6. **Packing Rods** to be of forged steel, and secured to pistons by a coned end

and nut, to have detachable crosshead, fitted with shoes of hard cast iron, fitted on ahead side and astern with white metal for working on the guide bars. H.p. piston rod to have U.S. metallic packing.

7. **Guide Bars** to be bolted to columns. Fitted with oil boxes at bottom, combs and pipes to lubricate each of the working parts. Water circulation to be arranged at the back of the go-ahead guides.



Engine Arrangement, Steamship Canadian Pioneer

8. **Connecting Rods** to be of forged steel, with forked top ends fitted with adjustable bearings. The bottom end fittted with cast steeel bearing, lined with white metal, and secured by bolts, nuts, and steel set pins.

9. **Slide Valves.**—The h.p. valve to be a piston valve, steam to be admitted on inside edges. I.p. valve to be a piston valve, piston valves to be fitted with rings. The l.p. valve to be a double ported slide valve, truly faced to the cylinder face, and kept in place by 2 guides, one on each side of the center line. Springs to be provided at the back of the valve to prevent it being thrown off its face.

10. **Slide Rods** to be of ingot steel, with solid forged eye at bottom, and fitted with adjustable brass bush. Valves to be secured to spindles, by large washers at bottom, and double nuts at top. The spindles to be guided at the lower end by a cast iron guide bracket with brass bush. The h.p. and m.p. valve spindles to be guided at the top end by cast iron domes lined with brass. Balance piston to be provided for l.p. valve. H.p. rod to have U.S. metallic packing.

11. **Reversing Links** to be of double bar type, with pins for the eccentric rods and drag links shrunk into the bars. Sliding blocks to be of ingot steel, with adjustable brass bearings top and bottom.

Eccentric Rods to be of best forged steel; each rod to have a T end forged on bottom to take the eccentric strap, and a forked end forged on top to take two adjustable brass bearings for the pins on the reversing links.

Eccentric Straps to be of steel, lined with white metal. To be secured in the eccentric rods by studs left long enough to admit liners.

Eccentrics, 6 in number, to be of cast iron, securely keyed to the crank shaft.

Eccentric Troughs of galvanized plate to be fitted under eccentrics.

Drag Links to be fitted with adjustable brass bushes at each end.

Wyper Levers to be securely keyed to the shaft, and each lever arranged with a slot and screw adjustment, to enable the cut-off in each cylinder to be altered independently. The variations in the cut-off to be marked on the levers.

Wyper Shaft to be of forged iron or steel and provided with adjustable bearings.

12. **The White Metal** throughout the machinery to be Stone's navy white bronze or Parson's no. 2 star white metal, or other approved metal.

13. **The Reversing Gear** to be of the "all round" type arranged for steam and hand power. To have a screw cut worm, working in a cast iron worm wheel. Reversing engine to be reversible, and to have single cylinder, piston rod and connecting rod, fitted with adjustable bearings, and slide valve worked by an eccentric. A compound regulating valve to be fitted, arranged to simultaneously shut off steam and exhaust, so as to bring the engine quickly to rest. A large polished iron hand wheel to be fitted to the crank shaft of the reversing engine, and the whole to be conveniently arranged within easy reach of the starting platform, with all necessary arrangements for draining and lubricating.

14. **The Bedplate** to be of cast iron, of box section, with recesses for 6 main bearing bushes. All joining surfaces to be accurately faced and fitted metal to metal. The main bearing bushes to be of cast iron, lined with white metal, to have square sides, accurately fitted to the recesses in the bedplate, metal to metal, without fitting strips and to be secured in position by keeps, with bolts, nuts and set pins. The bottom of the bedplate to have strong well ribbed flanges, secured to the heavy plating on the tank top, upon fitted cast iron chocks and teak filling wedges, by holding down bolts screwed through tank top and made waterproof by nuts and washers.

15. **The Columns** for supporting the cylinders to be firmly bolted to sole plate and cylinders, and to be of cast iron. Front columns to be fitted as oil tanks, with cleaning doors, lock cocks, and coupling at top for filling from deck. Go-ahead guide faces to be cast separate, and so bolted to the columns that crosshead shoes may be readily withdrawn. Go-ahead guide faces to have passages at the back for circulation of cold water. The guides to be marked to show the clearance of the pistons in the cylinders, and to be fitted with a strong plate, for supporting piston rods when the connecting rods are disconnected from the crank pins.

16. **Condensers** to be approved design, and of circular cast iron or built type, with rolled steel shell and cast iron ends. Cooling surface not less than 3,000 sq. ft. Tube plates to be of rolled brass. Tubes of brass, ¾ in. external diameter, and to have screwed brass ferrules. The ferrules at the end opposite to that at which the water enters, to be flanged inward to prevent the tubes moving endways. Perforated plate, for supporting the tubes, to be placed at about the middle of the condenser. Condenser doors to have snugs for lifting, cast on. All bolts in contact with sea water to be of brass. Plugs to be fitted in bottom of condenser. Division of condenser to be arranged so that water shall pass twice through it. A manhole for internal examinations to be provided. A supplementary feed cock to be fitted.

17. **Circulating Pump** to be of centrifugal type, driven direct by a vertical enclosed forced lubrication engine by Goldie and McCulloch Co., or other approved maker. Pump to have cast iron case, gunmetal impeller and bronze spindle, pipes 12 in. bore.

18. **The Air Pump** to be Edwards type, 24 in. dia. x 24 in. stroke, single acting. Valves to be of multiplex type, with brass guards, and seats of ample area, brass studs, brass nuts, and locking arrangement. Pump liner to be of brass, bored true and smooth, and fitted with a deep bucket arranged for water packing. Pump rod to be secured to the bucket, by a brass nut, with locking arrangement, and to work through a stuffing box, with brass neck bush and cast iron gland, lined with brass. The gland to have four studs, with locking nut. A soda cock with funnel to be provided for supplying soda to the boilers.

19. **Feed Pumps** to be 2 in number, 4 in. diar. x 24 in. stroke. Barrels to be of strong tough cast iron, with stuffing boxes, brass lined glands and brass neck bushes. Rams to be of steel, securely attached to pump crosshead. Chests to be of cast iron, fitted with brass valve seats, and flat brass valves, of the multiplex type. Each pump to be fitted with spring relief valve and pet cock. Shut off valves to be fitted on suction and delivery sides, so arranged that one pump may be overhauled while the other is working. Pumps to be arranged to draw from hotwell direct, and to discharge through an air vessel into the feed regulating valves on boilers.

20. **Bilge Pumps** to be 2 in number, 4 in. diar. x 24. in. stroke. Barrels to be of strong, tough, cast iron, with deep stuffing boxes, brass lined glands and brass neck bushes. Chests to be of cast iron, fitted with valve seats and valves of brass. Rams to be of steel, securely attached to pump crosshead. Pumps to be fitted with air vessel, spring relief valves and pet cocks. Shut off valves or cocks to be fitted on suction and delivery sides, so arranged that one pump may be overhauled while the other is working. Pumps to be arranged to draw separately or together from any compartment of the vessel and to discharge overboard. One of the pumps to be arranged to draw from the sea and to discharge to deck when required.

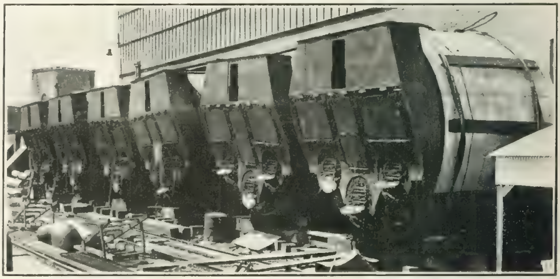
21. **Pump Gear.**—The air, feed, and bilge pumps to be worked from the engine crosshead by levers and links. The levers to be of the single plate stype, of forged iron or steel. The center gudgeon to work in 2 adjustable bearings of brass. The links to be fitted with adjustable bearings of brass at each end, secured by double nuts and split pins. One feed and one bilge pump to be at each end of crosshead.

22. **Turning Gear.**—A turning gear of cast iron to be securely keyed to the after end of the crank shaft, and to have geared into it a screw cut worm, fitted on the shaft of a second motion wheel having a worm arranged to be turned by a separate reversible steam engine. An arrangement to be provided for quickly throwing the first motion worm in and out of gear. A ratchet to be provided for turning the engines by hand.

23. **Crank Shaft** to be of the built type, in 3 sections, having solid flange couplings, secured together by carefully fitted bolts. The crank shaft and pins to be of best forged scrap iron or ingot steel, and the webs to be of forged iron or ingot steel. To be made without a coupling at the forward end.

24. **A Steam Starting Valve** to be fitted from boiler side of main stop valve, and gear to be held by starting quadrant. The steam branches to be placed so that steam can be admitted to the m.p. and l.p. steam chests.

25. **Thrust Shaft** to be forged with solid couplings at each end, and to have collars carefully turned out of the solid.



Boilers for steel cargo steamships for Canadian Government Merchant Marine Ltd., built by Canadian Vickers Ltd., Montreal.

26. **The Tunnel Shafting** is to be forged of ingot steel, with solid couplings in each piece, a guard to be fitted at each coupling.

27. **The Propeller Shaft** to be of forged ingot steel and to be fitted with a continuous brass liner extending the full length from the propeller boss to the forward end of the gland. To be shrunk on the shaft, and to be afterwards trued up in lathe. A ring of soft rubber to be fitted between the propeller boss and the end of liner, to protect the shaft in the boss. A bearing lined with white metal in top and bottom to be provided immediately forward of the stern tube gland.

28. **The Stern Tube** to be of cast iron, carefully fitted into the aperture of the stern frame, and secured to it by a nut, and the forward end to have a flange jointed to the peak bulkhead and secured by bolts and nuts. The after end to be fitted with a brass bush, lined with lignum vitae strips, arranged with channels. The forward end to be fitted with a brass neck bush and cast iron gland. The gland studs to be of brass, two of them being

long enough to allow the stuffing boxes to be packed without the gland leaving the studs. A cock, connected by a pipe to the inside of the stern tube, to be fitted to the forward side of the peak bulkhead, for running water on to the top of the gland.

29. **The Propeller** to be of bronze, having 4 blades secured to the boss, with steel studs fitted with capnuts. C.i. boss to be secured to the propeller shaft, on a carefully fitted taper, by a nut and a key extending the entire length of the boss. The propeller to be righthanded, and the nut lefthanded, the latter to be provided with snugs for driving and with a stop to prevent it slacking back.

30. **The Thrust Block** to be placed in the engine room in a recess aft of the engine room bulkhead. To be of cast iron, of box form, arranged for holding oil and water, for the thrust shaft collars to revolve in. A cleaning door to be provided, and means for draining the oil and water. The bottom of the block to have thick well ribbed flanges, secured to a strong built seat, provided by the shipbuilders, to be carefully bedded on cast iron chocks and teak filling wedges and held in place by holding down bolts. Strong knees to be fixed to the seat at the end of each block. The shoes to be of cast iron, cast hollow, and arranged for internal water circulation, and lined on both ahead and astern sides with white metal, and carefully fitted to the collars of the thrust shaft. Each of the shoes to be provided with an oil box with a hinged lid. Two bolts of forged iron or steel to be fitted, one on each side of the block, with a series of double brass nuts arranged so that each of the shoes may be independently adjusted for wear. A bearing to be provided at each end of the block, to take the weight of the thrust shaft.

31. **The Tunnel Shaft Bearings** to be of cast iron, lined with white metal, and provided with shell covers, having an oil box on top, divided so as to keep oil and water separate. The bearings to have a trough cast on each side, under the shaft, to prevent the oil running to waste. To be bedded on hardwood and securely bolted to the seat provided by the shipbuilders.

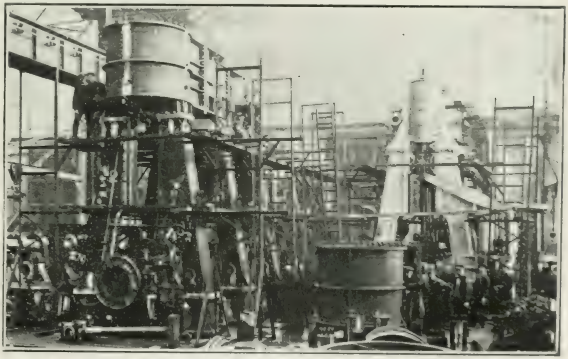
32. **The Bulkhead Stuffing Box** to be of cast iron, made in halves. To be fitted round the shaft, and bolted to the aft engine room bulkhead. The gland to be in two pieces bolted together.

33. **Water Service for Bearings Guides, etc.**—A main pipe to be fitted at convenient height above the bearings, a valve to be fitted to supply water from the sea. A telescopic pipe, with universal joint and stopcock, to be fitted for each main bearing, and cocks and pipes for supplying water to the ahead guides. A wrought iron pipe, connected to a branch on the main service pipe, to be led to the after end of the tunned, and arranged to serve as a hand rail. Cocks and swivel jointed pipes to be provided for thrust shoes and each of the tunnel bearings. A 2 in. cock or valve to be fitted to the donkey discharge, and provided with a coupling and hose of sufficient length to reach all the engine bearings, including thrust.

34. **Lubricators** to be provided for all the working parts. Four cast iron oil boxes with a hinged lid, to be fitted on the top of each main bearing keep, each box having syphon pipes. Oil boxes with syphon pipes to be provided for supplying oil to the top and bottom ends of the connecting rods. A sight feed impermeator to be secured to the engine room casing,, with a copper pipe leading to the h.p. steam chest.

35. **Engine Room Grating Platforms and Ladders.**—The top platform and middle oiling platforms to be steel rung gratings, with stanchions and hand rails. The main entrance ladder to have steel sides, neatly fluted cast iron steps and steel hand rails. The engine room floor to be of wood, supported on wooden bearers from the floors of the ship, and supplied and fitted by shipbuilders. Chequered plates to be fitted at front of engines. Splash plates to be fitted round crank and eccentric pits, and guard plates at sides of gratings, in way of moving parts. A wood platform to be fitted along the tunnel by the shipbuilders.

36. **Pipes and Connections.**—Main steam pipes to be of wrought iron or mild steel. Main and donkey feed pipes and boiler blow off pipes to be of copper, steel or iron. Steam and exhaust pipes to and from each donkey to be of copper, steel or iron. Winch exhaust pipes inside casing to be of cast iron with bands for expansion. Pipes connecting main and donkey pumps with the distribution boxes and valves on ship's side to be of cast iron, with bands to allow for expansion. Waste steam pipe up funnel to be of wrought iron, lengths inside casing to be of cast iron, with bands for expansion. Bilge and tank suction pipes to be of cast iron, with bands of lead where necessary. Lead pipes to have iron rings behind flanges and bolted, no plumber's joints. Strum boxes to be provided for the bilge pipes. The area through the holes in strum boxes to be well in excess of the area of pipe. Bilge and ballast distribution boxes to be of cast iron, to be bolted to the bulkheads or otherwise conveniently placed to suit the pumping arrangement. The bilge valve boxes to be fitted with brass valves, valve seats and spindles. A plate to be fitted to the hand wheel of each valve, with the name of the suction clearly shown upon it. Bilge connections to be entirely independent of the ballast, and so arranged that it will be impossible to run water from the sea into the bilges.



Engines for steel cargo steamships for Canadian Government Merchant Marine Ltd., being erected by Canadian Vickers Ltd., Montreal.

Main Injection and Tank Filling Valves to be of cast iron, fitted with brass valve, and valve seat and wrought iron bridge on cover, with screw for spindle. Each of these valves to be secured to a strong cast iron box on the ship's side, provided with a suitable strum. Discharge valves to be of cast iron, with brass valves, valve seats and spindles, the valves being arranged to lift by pressure of water from the inside or by hand.

Sea Cocks on ship's side to be of brass, and fitted with lock guards and keys. Suction cocks to be fitted with strums. Blow off cocks to be fitted with compound glands. To be secured by brass nuts and brass studs with conical heads screwed into the ship's plate from the outside. Each cock to have a spigot passing through the ship's plate, and fitted with a washer on the outside, the holes in the washer to be countersunk to take the heads of the studs.

Steering engine steam to be taken from main reducing valve, exhaust to be fed to engine room change valve box, and independent of winch exhaust. Dynamo engine steam to be taken from high pressure auxiliary steam range and provided with an independent reducing valve

37. **Feed Donkey.**—A vertical, double acting, single feed donkey to be provided and placed in a convenient position in the engine room. Diameter of steam cylinder, 9½ in.; diameter of water cylinder, 7 in.; stroke of pump, 18 in. The pump liner, bucket, valve seats and guards to be of gunmetal. The valves to be of bronze. The pump rod to be of manganese bronze. Steam cylinder to be covered with planished steel. To draw from hotwell, condenser, sea and double-bottom tanks. To discharge to main boilers, through main and auxiliary feed lines.

38. **General Donkey.**—A vertical, double acting, single donkey, to be provided and placed in a convenient position in the engine room. Diameter of steam cylinder, 9½ in.; diameter of water cylinder, 7 in.; stroke of pump, 18 in. The pump liner, bucket, valve seats, and guards to be of gunmetal. The valves to be of bronze. The pump rod to be of manganese bronze. Steam cylinder to be covered with planished steel. To draw from sea, double bottom tanks, hotwell and bottom of boilers To discharge to boilers, auxiliary condenser, wash deck pipe and sanitary tank, overboard

39. **Ballast Donkey.**—A vertical,

double acting single ballast donkey, to be provided and placed in a convenient position in the engine room. Diameter of steam cylinder, 10½ in.; diameter of water cylinder, 14 in.; stroke of pump, [illegible] in. The pump liner, bucket, valve seats and guards to be of gunmetal. The pump rod to be of bronze, and the valves of rubber. Steam cylinder to be lagged with composition and covered with planished steel. To draw from ballast tanks, sea, main bilge suction pipes, direct suction from engine room bilge. To discharge overboard, to e.r. hose, to main and auxiliary condensers, to ballast tanks.

40. **An Evaporator** to be provided, capable of supplying 25 tons of fresh water per 24 hours.

41. **Hotwell and Feed Filter** of approved design. The feed water to be filtered in a compartment of the hotwell, after it has left the air pump, and before it is taken by the feed pumps. The filtering material to be contained in an easily removable case, so that it may be renewed when required.

42. **Feed Water Heater** of approved design. Feed water to be heated in surface heater situated between feed pump and boiler.

43. **Winch Condenser** of approved design. A surface condenser, of approved make, of non-vacuum type, having a cooling surface sufficient to condense exhaust from all winches, to be provided and placed in a convenient position in the engine room. The body to be of cast iron, with door at each end, and hand holes where necessary. Tubes to be of solid drawn brass, tube plates of rolled brass, secured by brass studs and nuts and fitted with screwed ferrules. Supplementary feed and drain cock on water end to be provided. All auxiliaries to be of a make to be approved by the Marine Department.

45. **Steam Whistle** to be secured to forward side of funnel, and connected by a pipe to the main boilers, to have a spring valve and lever with cord led to bridge.

46. **Pressure Gauges.**—One steam gauge for each boiler to be fitted in the stokehold. One steam gauge in connection with all main boilers, one steam gauge for m.p. steam chest, one compound gauge for l.p. steam chest, and one vacuum gauge for condenser, to be arranged in a group and placed in a conspicuous position in the engine room, convenient to the starting platform. A steam pressure gauge to be provided for each reducing volve.

47. **Painting.**—Main engines and donkey engines, to be rubbed down with oil. Boilers, smokeboxes, funnel, etc., to have one coat of oil paint in works, the one coat on board vessel. Funnel to be painted with funnel paint.

48. **Main Boilers.**—Number in ship, 3; diameter, 15½ ft.; length, 11½ ft.; working pressure, 180 lb. per sq. in.

49. **Forced Draft.**—Air to be supplied by one 87 in. fan, driven by one single cylinder engine of James Howden & Co's. or other approved make.

50. **Plates** to be of Siemens-Martin mild steel. Edges to be planed and caulked, both inside and outside. To be flanged where necessary, and no angles to be used except where required to strengthen surfaces.

The shell plates to have longitudinal joints, with double butt, straps, treble riveted; the circumferential joints to be lapped and double riveted.

51. **Furnaces.**—Each boiler to have 3 corrugated furnaces, 46 in. least internal diameter, flanged at the back ends to take the tube plates, and carefully fitted to the front end plates which are to be flanged to receive them. Each furnace to be fitted with a separate combustion chamber. Furnaces to made withdrawable on the Gourlay-Stephen principle.

52. **Tubes** to be 3 in. external diameter, of solid drawn steel. Stay tubes to be screwed into both front and back tube plates. All tube holes to be carefully bored and plain tubes expanded at both ends. Retarders to be fitted in tubes.

53. **Stays.**—The boiler end plates to be stayed by round steel bars, secured by nuts both inside and outside. Combustion chamber stays to have continuous thread and to be tightly screwed into the combustion chamber plates and back and or circumferential plates. The tops of the combustion chambers to be fitted with girder stays. All flat surfaces are to be thoroughly and efficiently stayed, without unduly interfering with accessibility to all parts of the boiler.

54. **Manholes.**—Suitable manholes to be provided, the plates being flanged inward, or otherwise compensated for strength. To be provided with doors of mild steel, held in place by strong dogs and bolts.

55. **Testing.**—The boilers to be tested by hydraulic pressure, before leaving the works to 360 lb. per sq. in., to the satisfaction of the surveyors.

56. **Boiler Covering.**—The boilers to be covered with non-conducting mattresses or slabs, secured by steel wire. The covering to be carried down to about 5 in. from the top of the boiler seats, terminating with an angle fastened to the boiler, to which the wires are to be secured. The back of the boiler to be covered with mattresses or slabs all over. The covering on top and in way of foot traffic to be covered with sheet steel. The bottom of the boilers to be covered with same material.

57. **Boiler Seating.**—The boilers to be carefully bedded to the seats provided by the shipbuilders, and to be thoroughly secured in place at the bottom by knees at each end, and at the sides by strong stays secured to the seats.

58. **Smoke Box** to be firmly secured to the front of the boilers, the back of the box, above the tubes, being kept clear of the boiler end. Air heater to be arranged in smokebox. The smokebox to be constructed of double plates. The doors to be constructed in the same way, and in addition each door to have a baffle plate on the inside, and to be provided with all necessary hinges, catches and rings. The necessary chains and pulleys for opening and securing the doors when cleaning the tubes to be provided.

59. **Uptakes** to be constructed of double plates, with an air space between them. Strong plates, secured to the top of the boilers, to be arranged as struts, to take the weight of the uptake and funnel. Separate damper for each boiler to be fitted in uptake.

60. **Funnel.**—To be of single type and oval in section. An air casing to be provided on the top of the boiler hatch, covered by a neatly shaped cape riveted to the funnel. Pulleys to be provided at the top of the funnel, and all necessary studs and rings fitted for the stays supplied by the shipbuilders.

61. **Furnace Fittings.**—Fronts to be of cast iron arranged for forced draft. To be James Howden & Co's. or other approved make. Each furnace to be complete with dead plate, fire bars, and bearers of cast iron.

62. **Boiler Mountings.**—The following to be provided for each boiler:—

1 double safety valve with casing gear led to engine room, and drain pipe to tank in stokehold; main steam stop valve of cast iron, gunmetal fitted; steam stop valve for winches and auxiliary engines; main feed check valve, with renewable gunmetal seat and internal pipe; donkey feed check valve, with renewable gunmetal seat and internal pipe; bottom blow-off valve with internal pipe; scum valve with internal pipe; set of asbestos packed gauge glass fittings; set of asbestos packed test cocks; asbestos packed salinometer cock; asbestos packed pressure gauge cock. Main and donkey check valves to have screw down valve between check valve and boiler, and arranged to be operated from lower platform.

63. **Ash Valve and Hose.**—One ash valve, with screw nozzle for hose, to be provided and conveniently placed in stokehold, with connection to sea. A suitable length of hose pipe to be supplied, with director and coupling.

64. **Ventilators.**—Two 30 in. diameter ventilators to be fitted in fidley, each fitted with a pulley for steam hoist and one with a hand ash hoisting gear. To have large moveable cowls, carried well above deck erections and having turning gear to work from fidley. To be provided with all necessary doors, chains and hooks, and the insides to be fitted with guides for ash buckets. Two derrick posts, of 24 in. diar., to be extended down into wings of stokehold, and to be fitted with large moveable cowls having turning gear to work from deck. Two ventilators, with movable cowls, to be fitted at engine room skylight, for engine room.

65. **Ash Hoist.**—One double cylinder steam ash hoist, of approved make, to be provided and fitted fidley, with swivel pulley and wire rope to work in either ventilator.

66. **Stokehold Gratings Ladders and Floors.**—Rung gratings, ladders, and hand rails to be provided where necessary. Fidley gratings to be provided, with storm covers of steel plate. Stokehold floor to be of chequered steel plate. To rest on wood planks, supported by wood bearers, fitted by the shipbuilders. A row of cast iron floor plates, ⅝ in. thick, to be provided at the front of the boilers.

67. **Spare Gear.**—2 connecting rod top end bolts and nuts; 2 connecting rod bottom end bolts and nuts; 2 main bearing bolts and nuts; 3 crank shaft coupling bolts and nuts; 3 tunnel shaft coupling bolts and nuts; 3 tunnel shaft coupling bolts and nuts; 1 feed pump suction valve; 1 feed pump discharge valve; 1 bilge pump suction valve; 1 bilge pump discharge valve; 3 main feed check valves; 3 donkey feed check valves; 24 bolts and nuts, assorted; 6 cylinder cover studs and nuts; 6 steam chest covers studs and nuts; 12 junk ring studs and nuts; 5 bars round iron, ⅜ in., ½ in., ⅝ in. and 1 in. each, about 15 ft. long; 3 bars flat iron, 1 in. x ¼ in. 1½ in. x ¾ in., 2½ in. by ½ in., each about 15 ft. long; 2 propeller blades; 1 h.p. piston valve (solid cast iron); 18 ordinary boiler tubes; 6 boiler stay tubes; 24 main condenser tubes; 12 auxiliary condenser tubes; 50 condenser ferrules; 1 set fire bars for one boiler; 1 cwt. white metal, 1 cwt. rivets, 2 plates. A suitable amount of spare gear to be supplied for

forced draft installation and engine room auxiliaries.

68. **Tools and Outfit.**—Overhauling gear. 1 strong beam, running fore and aft in engine room, securely fastened at the ends to casing by strong brackets. To be provided with a runner and all necessary tackle for lifting covers of cylinders and slide valves; 1 pair 3 sheaf blocks; 1 pair 2 sheaf blocks; 2 manilla falls for blocks, 25 ft. drift each; 1 three-ton differential block and chain, 12 ft. drift; 1 beam grab; 1 set of eyebolts for pistons, cylinder covers, valve spindles; 1 screw jack, 2 in. screw.

A complete set of spanners for all nuts in connection with machinery and boilers, with suitable rack fixed in engine room; 1 shifting spanner, about 15 in.; 1 shifting spanner, about 8 in.

Oil Tanks. 1 tank, to contain 100 gallons engine oil; 1 tank, to contain 40 gallons cylinder oil; 1 tank to contain 40 gallons colza oil; 1 tank to contain 40 gallons paraffin oil; each tank to be fitted with a lock cock and drip tray. Pipe to be arranged for filling tanks from deck, with hose connection to tanks. 1 daily supply tank with lock cock and drip tray; 1 tank to contain 1 cwt. tallow; 1 tank to contain 2 cwt. soda; 1 gall. oil measure, tin; 1 quart oil can tin; 5 oil feeders, ¾ pin, with spring; 1 swabbing pot, tin; 1 oil filler, tin; 1 syringe; 1 tallow kettle and stand.

Lamps, etc. 2 globe lamps; 3 engine lamps; 2 boiler water space lamps; 4 hand lamps, with screw top and chain; 1 pair lamp scissors.

Engineers' Tools, etc. 3 chipping hammers; 1 sledge hammer; 1 flogging hammer;1 lead hammer, 7 lbs.; 1 copper hammer, 5 lbs.; 6 chipping chisels, assorted; 6 files, assorted; 3 file handles; 2 valve scrapers; 1 half round valve scraper; 6 drills, assorted; 1 ratchet and brace, about 18 in.; 1 ratchet knee; 1 ratchet clamp, 6 in. gap; 1 drilling post; 6 steel wedges, assorted; 3 steel drifts, assorted; 1 set boiler caulking tools; 1 set taps and dies, ¼ in. to 1¼ in. in case, 3 taps to each size; 1 bow saw and 3 blades; 1 grindstone and trough; 1 vise bench, with 6 in. staple vise, portable; 1 vise bench, with 6 in. staple vise, fixed in engine room; 1 pair lead vise grips; 1 pair copper vise grips; 1 hand vise; 1 pair cutting pliers, 7 in.; 1 pair calipers, inside, 12 in., and one pair outside, 12 in.; 1 set square, 12 in. blade; 1 pair compasses; 1 hand brace for condenser tube packing; 4 gland packing screws, assorted; 6 gland packing sticks, assorted; 1 gland packing knife.

Joiners' Tools. 1 hatchet; 1 screw driver, about 14 in.; 1 auger, to suit oil cock; 1 cross cut saw; 1 chisel, 1½ in.; 1 gouge, inside 1 in.; 1 gouge, outside ⅝ in.; 1 oil stone; 1 gouge slij.

Plumbers Tools. 1 soldering bolt; 2 lb. soft solder; ½ pint spirits of salts; 1 pair tin shears; 1 melting pot; 1 ladle.

Smiths' Tools. 1 bellows hearth, 24 in.; 1 anvil and hardy; 3 pairs tongs, assorted; 6 smiths' tools, assorted.

Painters' Tools. 2 paint brushes; 2 sash tools; 1 varnish brush; 2 paint pots.

Stokehold Outfit. 4 ash buckets; 2 water buckets, galvanized; 1 drinking can; 1 coal measure; 1 coal hammer, with iron shaft; 6 firing shovels; 6 trimming shovels; 2 long rakes; 2 short rakes; 1 rake, extra long, for back end; 1 rake for smokebox; 2 long slices; 2 short slices; 4 wire tube brushes; 2 handles for brushes; 2 tube scrapers; 6 scaling hammers; 6 scaling tools; 6 boiler tube stoppers, screw and washer; 6 patent tube stoppers; 1 tube expander.

Cleaning Utensils. 4 coir brooms and handles; 2 hand brushes, steel; 4 scrubbing brushes; 1 dusting brush.

Sundries. 1 clock; 1 copper salinometer and case; 1 copper dipper; 1 thermometer, for hot water. Any article specified twice to be supplied only once.

69. **General Conditions.**—The engines and boilers generally to be of suitable material and workmanship, in accordance with the foregoing specification, and to be guaranteed against all breakages arising from proved imperfect workmanship or bad materials, which may be discovered, and of which notice has been given, within 6 months of the completion of the engines. The engine builders not to be responsible beyond the repairing or replacing of such breakages at their works. The engineers of the ship during the time the engine builders are responsible for the engines to be approved by them and to be paid by the owners of the ship, the usual and customary wages, and if displaced, the responsibility of the engine builders under this clause to cease. The chief engineer to commence his duties at least 14 days previous to trial trip. The engine builders not to be liable for the detention of the ship, or consequential damages, accidents caused by the carelessness of the engineers in charge, whether appointed by them or not, or expenses of any description attendant thereon under any circumstances whatever. Before delivery, the machinery to be tried at moorings and afterwards at sea, the builders finding engine room crew, coal, oil, tallow, etc., for all purposes. If on trial any defects are observable the same to be made good by the builders.

70. **Plans** of engines, boilers, piping arrangement, and pumping arrangement to be submitted for approval before work is put in hand. Complete pipe and pumping arrangements (mounted on cloth), in tin case, to go with the vessel.

Welland Ship Canal Construction.

The Minister of Railways and Canals, Hon. J. D. Reid, during discussion on a vote of $35,000,000 for Welland Ship Canal construction in the House of Commons, June 5, stated that in order to build the canal between Lake Ontario and Lake Erie, the work was divided into 8 sections. Contracts have been awarded for 4 of these sections, chiefly consisting of lock work, which takes twice as long as other construction work. The intention is to commence the other sections when the lock work is about half through, so that it will be completed at the same time. Apart from the lock work the other work is somewhat like dredging and will have to be completed when prices are fairly reasonable. The prices of material and labor are so high at present that the work should not be proceeded with too rapidly, and it is only to give employment that it is now being gone on with. The depth of the canal is being made 25 or 30 ft., which is greater than the present depth of the St. Lawrence canals, so that a vessel can go to Kingston or Prescott, but it cannot go on to Montreal because there is only a depth of 14 ft. in the St. Lawrence canals. The original Welland Canal had a depth of 9 ft., which was later deepened to 12 ft. and later again changed to the present depth.

There are 63 engineers engaged on the work of whom 57 are returned soldiers. On May 2, 11,099 men of all classes of labor were engaged and of these, 228 were returned soldiers, 681 were skilled laborers and of the latter, 219 were returned soldiers.

Legislation re Pilotage and Harbor Masters.

Following is the full text of an act to amend the Canada Shipping Act, as passed by the House of Commons, June 5:—

1. Section 432 of the Canada Shipping Act, Revised Statutes of Canada, 1906, chapter 113, is repealed and the following is substituted therefor:—

"432. Notwithstanding anything in this part, the Governor in council may, when it appears to him to be in the interest of navigation, appoint the Minister to be the pilotage authority for any pilotage district, or for any part thereof; and the said Minister shall thereupon supersede the then existing pilotage authority for that district or part of a district: provided that nothing in this part shall authorize the Minister to sit as a tribunal for the trial of offences of which pilots may be accused before the pilotage authority; but such Minister may, in any case not provided for by part x of this act, designate a tribunal or officer to try any such offence."

2. Paragraph (h) of section 862 of the said act is repealed, and the following paragraphs are added at the end of the said section:—

"(h) for every ship over 700 tons and not over 1000 tons register, $5;

"(i) for every ship over 1000 tons register, $7."

3. Section 865 of the said act is repealed and the following is substituted therefor:—

"865. The salary or remuneration of each harbor master shall from time to time be fixed by the Governor in council, but shall not exceed the rate of $1,200 per annum, and shall be subject to the conditions hereinafter contained."

The Dominion Government's s.s. Lady Evelyn was sold recently to the St. Lawrence Shipping & Trading Co. for $40,000, of which $30,000 has been paid, the balance being held pending settlement of a claim that complete equipment was not delivered with the vessel. The Lady Evelyn was built at Tranmere, Eng., in 1901 for the West Cornwall Steamship Co., and purchased by the Dominion Government in 1907 for use as a mail tender at Rimouski, Que. She is a steel twin screw steamer of 83 tons gross, 39 tons register. Her dimensions are: Length, 189 ft.; breadth, 26.1 ft.; depth on hold, 9.5 ft.; draft, 8½ ft. She has triple expansion engines, with cylinders 16, 24 and 38 in. diam., by 24 in. stroke and is supplied with steam by 2 return tubular boilers at 160 lb., and one ton of coal an hour. She can steam 14 to 15 knots, and with forced draft can make 16 knots. The hull is divided by 5 watertight bulkheads, and she has 2 decks, the promenade deck being 150 ft. long. She is equipped with complete electric light plant, wireless telegraph, steering gear, etc.

Sorel Shipbuilding and Dry Dock Co. Ltd. has been incorporated under the Dominion Companies Act, with $750,000 authorized capital and office at Sorel, Que., to carry on shipbuilding and ship repairing.

Canadian Pacific Railway Steamships and Canadian Registry.

London, Eng., Press Cablegram, June 12.—What it is hoped may prove the foundation of a Canadian mercantile marine is the application by the Canadian Pacific Ry. for the transfer of its ships to Canadian registry. The rumor of such a step has been current in shipping circles for some time. Sir George McL. Brown admitted to your correspondent that he had heard of it, and it is understood the company has laid its case before the government. What it desires is the same privileges under Canadian registry as it at present enjoys under English registry, and there appears no reason why it should not be able to receive them. G. M. Bosworth, chairman of the Canadian Pacific Ocean Services Ltd., has sailed for Canada to discuss the matter with the company's head office.

Canada, if it is ever to attain its status as a great nation, must develop its shipping facilities and ultimately a merchant marine of its own. If the C.P.R. takes the first step, it is hoped others will follow. It is, of course, the only purely Canadian company involved and if any of the other steamship concerns decided to follow suit a division of their fleets between English and Canadian registry would be necessary. However, there are all sorts of possibilities in the shipping world, and the organization of a new company which aims to handle Canadian trade is not the least of them. Among the advantages which would accure to the C.P.R. under Canadian registry would be better control of their shipping space, 50% of which is still used by the British Ministry of Shipping.

We were officially advised June 17 that the C.P.R. Co. had not then made application for the transfer of its ships to Canadian registry.

Demountable Wooden Ships to Be Built in British Columbia.

A cargo of timber which is to built in British Columbia in the form of a ship will be self propelled, and will it is claimed be unsinkable. The craft will be something unique in the annals of marine architecture. The cargo will be the ship and the ship will be the cargo. The ship will consist, when completed, of about 5,000,000 board ft. of timber in the form of great sticks of Douglas fir, hemlock, and cedar from B.C. forests. Within the framework the timber will be laid in three tiers, with cross beams, and on top will be the main deck with forecastle and poop and room accommodation for officers and crew. Crude oil motor engines, driving twin screws, will supplement the sails. The length of the craft will be 250 ft., the beam 60 ft. and the depth 36 ft., with a displacement of about 9,500 tons. Her maiden voyage from British Columbia to England will be her last for she will be broken up to supply much needed timber. The vessel will be not merely a raft, but a demountable wooden structure of approximately ship shape form.

Vickers Ltd., London, Eng., are interested in the project and it is said that several of the ships will be built. The Furber Lumber Co. has been formed for the purpose of building them, being named after Percy N. Furber, President Oil Fields of Mexico Co., New York. J. H. Price, Price Shipbuilding Co., Seattle, Wash., has undertaken the construction.

We were advised June 14 that arrangements were being made to start building the first ship and that Mr. Furber would leave New York, June 16, for British Columbia in connection therewith.

The War Beryl-Beaujeu Collision.

A wreck commissioner's enquiry was held at Quebec, Que., May 27, before Capt. L. A. Demers, Dominion Wreck Commisioner, assisted by Capts. C. Lapierre and A. Hope, as nautical assessors, into the causes which led to the collision of Canadian Pacific Ocean Services' s.s. War Beryl and the Marine Department's dredge Beaujeu, while the latter was anchored in the St. Thomas Channel, River St. Lawrence, May 21. The court found that the master of the War Beryl erred in being absent from the bridge when the vessel was being navigated in such a narrow channel, but having regard to the straightforward evidence which he gave, and his long and successful career, the court cautioned him to be more careful in future, and to bear in mind that whether he can be useful or not, or whether his vessel is in charge of a competent pilot and officers, whilst navigating narrow waters, he is expected to be at his post. The first officer, by his evidence, gave the impression that he did not exercise all the judgment expected of him, and his action in ringing the telegraph, stop, instead of, slow, as ordered by the pilot, he thinking that it would be more expedient in such a crucial moment, caused the court to caution him only, to be more watchful in future. His error was all a question of seamanship and judgment, and not a matter of local knowledge. The certificates of the master, Capt. R. McKillop, and the first officer, H. A. More, were returned to them.

With regard to Pilot Delisle, the court stated that it could not use the same leniency as to the master and first officer. He attempted, unsuccessfully, to lead the court astray as to his motive for the order, slow. He erred gravely in judgment in maintaining such a speed, under the impression that the light which appeared dim was that of an overtaken vessel, and in view of the notice he had read the night before that buoys had been placed to indicate dredging operations, he should have been on the alert for the possible presence of the dredge in the area defined in the notice. Owing to the evidence that the War Beryl's movements were neutralized by the cable or wire of the dredge Beaujeu, the court felt that it could not be so severe as it otherwise would have been, and therefore suspended his license from May 28 to Oct. 1.

As to the master of the dredge Beaujeu, the court found that he should have had an officer on duty as well as a watchman, but as this did not contribute to the casualty, it is regarded as a lack of discipline, for which the master was severely reprimanded. The court considered that the dredge invited collision by remaining so close to the middle of the channel when not operating, merely to avoid trouble in raising the anchors, as stated. In view of the fact that there were no written orders given to the master of the dredge for his guidance, and that there exists, to a great extent, a difference between the responsibility of a master of an ordinary ship and the master of a vessel engaged in such special work as the Beaujeu, the master, Capt. Bourget, could not, in this instance, be criticized for his vessel's position.

Capt. A. Hope, one of the nautical assessors, dissented from the judgment in general, holding that the responsibility for the collision rested entirely on the dredge Beaujeu, on the ground that no measures whatever were taken by the master to ensure the safety of his vessel in case of accident.

Aids to Navigation on the Skagway Route—The Minister of Marine, in reply to a question as to negotiations with the U.S. Government, respecting the provision of aids to navigation on the Vancouver-Skagway route, following the loss of the C.P.R. s.s. Princess Sophia in Oct., 1918, stated in the House of Commons recently, that no negotiations were in progress. The loss of the vessel occurred on a part of the coast which is under U.S. control, and over which Canada has no jurisdiction. The Canadian coast line extends northward to the entrance to the Portland Canal, near Port Simpson, follows the Portland Canal to its head, and thence proceeds inland in a northwesterly direction.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marine Canals during May, 1919:

Eastbound.

Articles		Can. Canal.	U.S. Canal.	Total.
Lumber	M. ft. b. m.	430	28,325	28,755

General Shipbuilding Matters Throughout Canada.

Bigelow Bros., Canning, N.S., launched the tern schooner Cape Blomidon May 29. She is of 408 tons register, classed for 12 years, and is iron kneed throughout, and equipped with hoisting engines. A slight accident marred the launching, but, apparently, no damage was done to the vessel. She is owned by H. McAloney and others, Parrsboro, N.S., and will probably load deals there, for Great Britain.

Dominion Shipbuilding Co., Toronto, launched a full sized canal freight steel steamship, June 14, for private owners. Following the plan with some of its previous vessels the name of some Canadian General taking part in the war was given, in this case, General Williams being the one adopted. She is classed 100 A1, at Lloyds for Transatlantic service. Her dimensions are: Length over all, 261 ft.; breadth moulded, 43½ ft.; depth moulded, 28 ft. 2 in.; d.w. capacity, 4,300 tons. She is equipped with triple expansion engines, 1,400 i.h.p., by John Inglis Co., Toronto.

Harbor Marine Co. Ltd., Victoria, B.C., was incorporated under the British Columbia Companies Act, Mar. 28, 1919, with an authorized capital of $500,000, the directors being: President, C. J. V. Spratt, President Victoria Machinery Depot Co.; O. C. Bass, J. S. Clark, M.I.N.A., and J. W. Lennox. B. L. Robertson is Secretary-Treasurer. Its yard is on the north side of Victoria harbor, between the Foundation Co.'s lumber yard and the Cholberg shipyard. The Harbor Marine Co. is said to have been organized principally to build two steel cargo steamships of 8,100 tons d.w. each for Canadian Government Merchant Marine Ltd. for which the Victoria Machinery Depot Co. has contracts from the Marine Department, and further information about which is given under "Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc." on another page of this issue.

Midland Shipbuilding Co., Midland, Ont., Midland press dispatch, June 17:—After 10 days of negotiations between the striking iron workers and the company's officials, the plant has closed down. The strike started June 6, when 175 men walked out because the company refused to grant a 44-hour week and an increased scale. Two proposals were made by the company: first, that the men take over the ship now under constructon for the British Government and work such hours as they decided upon, the ship to be completed by a named date, the men to receive their present wages in the meantime and a bonus at the appointed date. The other proposal was that the iron work should be completed for a lump sum, to be divided as the employes saw fit. Both offers were refused, and the plant is therefore closed down, affecting 305 men, who were drawing weekly wages totalling $9,000.

National Shipbuilding Co., Levis, Que.—The successful completion of the transformation of the Dominion Government dredge Galveston into an ocean freight steamship, was marked by the launching of the s.s. Pomone at this company's yard, May 31. Several interesting features in connection with this work were fully described and illustrated in Canadian Railway and Marine World for January.

New Westminster Construction and Engineering Co., New Westminster, B.C.—It is reported that this shipyard at Popular Island, which was organized to build wooden steamships for the British Government under orders from the Imperial Munitions Board, will probably close entirely, as the terms under which it was to be taken over from the board do not appear to be satisfactory. The price named by the board was considered by the company to be much too high and it was agreed to submit the matter to arbitration, but nothing further has been done. The company built 4 wooden steamships for the British Government, these being namer, War Comox, War Edensaw, War Kitimat and War Ewen and it has under construction 3 wooden steamships of 3,200 tons d.w.. each for the Belgian Government. The last of these vessels was to be launched during June, after which it was expected the plant would be closed down.

Polson Iron Works, Ltd., Toronto—G. T. Clarkson, receiver and liquidator, has issued a statement of this company's affairs, showing assets consisting principally of real estate, buildings, machinery, plant, etc., of $1,938,993.43, unsecured liabilities, $1,727,208.58, and a nominal surplus of $211,784.85. The following is a summary:—

Assets.	
Real estate and buildings	$1,398,668.36
Machinery and plant	335,011.39
Patterns and drawings	50,000.00
Materials and supplies	438,295.30
Accounts receivable	9,000.00
Cash on hand	1,008.97
	$2,231,984,02
Less Bank of Nova Scotia claim, secured by first mortgage bonds..........	292,990.59
Nominal equity	$1,938,993.43
Liabilities.	
Preferred	$ 87,938.98
Direct	349,269.60
Unsettled claims..	1,290,000.00
	$1,727,208.58
Secured claim, Bank of Nova Scotia....$	292,990.59

The unsettled claims are as follows:—

C. Hannevig, New York, N.Y., and Aalesund Steamship Co., Aalesund, Norway. Advances against costs of construction of steamships 151 and 152, $568,000. Contractors claim ownership of materials and supplies on hand, to an inventory value of $312,487.43, which claim is not admitted.

Imperial Munitions Board estimated costs, in excess of contract price, for construction of six steamships for Imperial Government, $600,000; less amount claimed from board is respect of contracts for boilers, $13,000, net $587,000.

Heistein & Sons, Kristiansand, Norway. Damages for delays claimed in respect of delivery of s.s. Asp, $70,000, less deposit as security for fulfilment of contract, $15,000, net $55,000. This claim is disputed.

Toronto Harbor Commissioners. Claim for use and occupation of real estate, lease of which has not been executed, and claim for which is disputed, $67,500.

Sir Henry M. Pellatt, Toronto, claimed as having advanced to company, $80,000. Claim not admitted, pending investigation.

The Quebec Shipbuilding and Repairing Co. has gone into voluntary liquidation, and Maxham and Co., have been instructed to dispose of the plant, which is located at the Louise Docks, Quebec. The company was organized prior to the outbreak of war, and built the schooner M. P. Connolly, which was lost at sea during the war. The company also built two wooden steamship hulls for the British Government, under orders from the Imperial Munitions Board, viz: War Quebec and War Sorel, of 3,080 tons d.w. each, and which were launched June 28 and Sept. 7, 1918, respectively.

St. John Drydock & Shipbuilding Co., St. John, N.B. In a discussion in the House of Commons recently, it was stated that a large ship repairing plant is to be established in connection with the drydock which this company is building, and we are informed that the plans for this plant provide for an expenditure of at least $1,125,000, and that the equipment will be a very complete one. We are also advised that the company is still considering the possibility of establishing a large shipbuilding plant in connection, but that nothing definite has been decided on.

St. Martins Shipbuilding Co., St. Martins, N.B. The three masted auxiliary powered schooner, Quaco Queen, was launched by this company at the end of May for A. F. Bentley and others.

Wallace Shipyards Ltd., **Vancouver**, B.C.—The Public Works Department has awarded a contract to Wallace Shipyards Ltd., for docking, cleaning, painting and overhauling the dredge P.W.D. 305 (King Edward), for $5,885.

The Steamship Turbinia — Canada Steamship Lines s.s. Turbinia was offered for sale by public auction in London, Eng., June 17, by C. W. Kellock & Co., on behalf of the owners, as she lay at Southampton. She was built at Hebburn-on-Tyne, Eng., in 1904 for the Turbine Steamship Co., controlled by Hamilton, Ont., interests, and later owned by T. Eaton Co., Toronto, and for several years operated on Lake Ontario in the summer passenger trade. Towards the end of 1911 the vessel was acquired along with others by the Niagara Navigation Co., which later formed a part of Canada Steamship Lines, Ltd. During the period she was operated on Lake Ontario she lost money each year, except the first year, when a profit was shown. In the winter of 1905-06 she was chartered to Canada—Jamaica Steamship Co. and was operated on a day line between Santiago, Cuba, and Kingston, Jamaica. She crossed the Atlantic in the early stages of the war and has since been used carrying troops, etc., between England and France. She is equipped with three compound turbines of the Parsons type, one high pressure in the centre, one low pressure on each side, each operating a shaft carrying one propeller. The engine is about 500 n.h.p. Her dimensions are: length, 250 ft.; breadth, 33.2 ft.; depth, 12.6 ft.; tonnage, 1,064 gross; 603 register. She is equipped with wireless telegraph.

L'Heureux Lifeboat Launching Co. Ltd. has been incorporated under the Dominion Companies Act, with $250,000 authorized capital, and office at Montreal, to build and deal in steam and other vessels, and other means of transportation, and vessel equipment of all kinds. The incorporators are, F. Sidgwick, naval architect; H. S. Mathews, naval transport officer, W. F. Fletcher, engineer and naval architect; T. Hall, engineer; C. E. Gault, L. A. Lavallee and J. L. Bergeron, Montreal, E. M. Dechene and P. Paradis, Quebec, Que.

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Launchings of Steamships.—Since the launchings of steel cargo steamships for Canadian Government Merchant Marine Ltd., particulars of which were given in Canadian Railway and Marine World for June, the following additional ships have been launched:—
Montreal, May 7, 1919.

Marine Department Contract 25; builder's yard no. 69; s.s. Canadian Seigneur, 8,100 tons d.w., by Canadian Vickers Ltd.,

Marine Department contract 5; builder's yard no. 106; s.s. Canadian Trooper, [illegible] tons d.w., by Wallace Shipyards Ltd., Vancouver, B.C., May 31, 1919.

Marine Department contract 20; builder's yard no. 40; s.s. Canadian Sailor, 3,400 tons d.w., by Port Arthur Shipbuilding Co., Port Arthur, Ont., May 31, 1919.

Transfer of Steamships to Canadian National Ry.—The Dominion Government passed the following order in council, June 2.—The committee of the Privy Council have had before them a report, dated May 4, 1919, from the Minister of Marine, stating that he has had under consideration a memorandum from the Deputy Minister, submitting as follows: That contracts have been placed with shipbuilding firms in Canada by the Marine Department for the construction of 45 steamships of a total deadweight tonnage of approximately 263,950 tons, at an average cost of $199.62 a ton. That four of the vessels so contracted for have been completed and delivered to the department, viz: Canadian Voyageur, 4,300 tons; Canadian Pioneer, 8,100 tons; Canadian Warrior, 3,750 tons; Canadian Ranger, 8,100 tons. That the remainder of the vessels alluded to will be completed and delivered to the department at intervals during the present and next years.

That several plans for the disposition and operation of these vessels have been considered, viz:—(a) By the regular steamship operators on a basis of hire or commission to be agreed upon; (b) by an organization to be formed within the department subject to and under instructions from the Minister; (c) by the Canadian National Ry.; (d) sale to private interests on terms to be agreed upon and subject to the condition that they should be available for Canadian trade so long as any such trade is offering.

That he has been advised that the intention of the government is to have some or all of these vessels operated by the Canadian National Ry. The Minister therefore recommends as follows:—That any or all of the vessels may, on completion and delivery to the Marine Department be transferred to the Canadian National Ry. for operation and maintenance.

That the terms upon which the vessels shall be so transferred shall require repayment to the Consolidated Revenue of Canada by the Canadian National Ry. of the total amount of the cost of each vessel so transferred with interest at 5½% in the manner following:—1st year, 20%; 2nd year, 15%; 3rd, 4th, 5th, 6th and 7th years, 10% each year; 8th, 9th and 10th years, 5% each year. That the title to every vessel so transferred to the Canadian National Ry. shall remain in the Minister of Marine on behalf of the government until such time as the total cost of each such vessel with interest as aforesaid is fully paid; thereafter the title to be vested in the Canadian National Ry. The committee concurs in the foregoing recommendations, and submits the same for approval.

Management of Steamships.—As stated in Canadian Railway and Marine World previously, the management of the steel cargo steamships which have been built, and are being built, under the Marine Department's orders, has been placed in the hands of the Canadian National Ry. Co.'s directors, of which D. B. Hanna is President. Canadian Government Merchant Marine Ltd. was incorporated by Dominion letters patent, Dec. 30, 1918, with an authorized capital of $1,000,000. At present the company has five directors, all of whom are directors of the Canadian National Rys., as follows, viz: D. B. Hanna, President; A. J. Mitchell, Vice President and Treasurer; Major Graham A. Bell, C.M.G., acting Deputy Minister of Railways; Robt. Hobson and E. R. Wood. Four additional directors will probably be elected in the near future. The Secretary is R. P. Ormsby.

The supervision of the management of the fleet has been delegated to R. C. Vaughan, Assistant to President, Canadian National Rys. R. B. Teakle, formerly Manager of the Allan Steamship Co.'s Boston service, and latterly Manager of the France-Canada Line at Philadelphia, has been appointed Manager, Canadian Government Merchant Marine Ltd. H. Milburne continues as Superintendent. Thos. Todd, formerly Chief Accountant and Purchasing Agent, Allan Steamship Line, Montreal, and subsequently loaned by the C.P.R. to the Canadian Cheese Commission, has been appointed Auditor, Canadian Government Merchant Marine Ltd. These three officials have their offices at 230 St. James St., Montreal.

The s.s. Canadian Ranger, 8,100 tons d.w., built for the Marine Department by Canadian Vickers Ltd., Montreal, and launched Apr. 19, was delivered to Canadian Government Merchant Marine Ltd., May 23; sailed from Montreal with cargo June 1 for Liverpool, Eng., and arrived there June 14.

The s.s. Canadian Recruit, 3,750 tons d.w., built by Collingwood Shipbuilding Co., for the Marine Department and launched at Collingwood, Ont., May 3, ran her trial trips June 3, was transferred to Canadian Government Merchant Marine Ltd. and left Collingwood for Toledo, Ohio, to load for Montreal, where she took on a general cargo for Jamaica and Havana.

The s.s. Canadian Warrior, 3,750 tons d.w., was stated in Canadian Railway and Marine World for June to have left Collingwood, Ont., Apr. 30, for Port Huron, Mich., to load coal for Montreal. We were officially advised that she had left for Port Huron and concluded that it was Port Huron, Mich., but have since been advised that she went to Huron, Ohio, where she loaded about 1,200 tons of Pittsburg no. 8 three-quarter coal consigned to Canadian National Rys., Montreal and from there took a general cargo for Barbadoes, Trinidad and Havana.

The Minister of Marine stated in the House of Commons recently, in answer to a question, that the cost of the s.s. Canadian Warrior was $818,975 delivered.

British American Shipbuilding Co., Welland, Ont., which, as stated previously in Canadian Railway and Marine World, has contracts for 2 steel cargo steamships of 4,350 tons each for Canadian Government Merchant Marine Ltd., and which laid the keel for Marine Department contract 44; builder's yard no. 4; Mar. 29, advised us June 9 that the keel for Marine Department contract 25; builder's yard no. 5; had not been laid,

Launching of steel cargo steamship Canadian Sailor, 3,400 tons d.w., for Canadian Government Merchant Marine Ltd., by Port Arthur Shipbuilding Co., at Port Arthur, Ont., May 31, 1919.

owing to the yard having been closed since the middle of May, the workmen being on strike.

The Collingwood Shipbuilding Co., Collingwood, Ont., on June 3, ran the trial trips of the s.s. Canadian Recruit, 3,750 ton d.w., built for the Marine Department, June 3, after which she was transferred to Canadian Government Merchant Marine Ltd. and left Collingwood June 7 for Toledo, Ohio, to load coal for Montreal. The company advised us June 20, that it expected to launch the s.s. Canadian Signaller, also 3,750 tons d.w., on June 28.

J. Coughlan & Sons, Vancouver, B.C., who, as stated in Canadian Railway and Marine World for June, laid keels on Apr. 26 and May 3, respectively, for two of the 8,100 ton d.w. steel cargo steamships for Canadian Government Merchant Marine Ltd., advised us June 9 that they were unable to give any idea as to the launching dates, as a general strike was on in Vancouver, which had stopped operations in their yards. For the same reason they were unable to give any idea as to when keels would be laid for the two other similar vessels for the Marine Department.

Halifax Shipyards Ltd., Halifax, N.S., which, as stated previously in Canadian Railway and Marine World, has contracts for 2 steel cargo steamships of 8,100 tons d.w. each, and 2 for 10,500 tons d.w. each, for Canadian Government Merchant Marine Ltd., and which laid the keels of the two 8,100 ton ships, viz: Marine Department contract 21; builder's yard no. 1; s.s. Canadian Mariner, Feb. 24, and Marine Department contract 22; builder's yard no. 2; s.s. Canadian Explorer, Mar. 15, advised us June 6 that the erection of buildings for its plant was completely stopped, owing to a building trades strike; consequently the programme for the building of ships 1 and 2 had been altered, and could not be definitely rearranged until the settlement of the strike and recommencement of work. The keels for the two 10,500 ton steamships had not been laid and it could not then be stated when they would be. The company further advised us June 13 that the construction of its buildings was re-started on June 9, the few bricklayers and carpenters who had been on strike having returned to work, on the understanding that their wages would be readjusted, in accordance with the finding of the conciliation board, which was established to arbitrate the difference between the Halifax Shipbuilders' Exchange and the different unions interested.

Harbour Marine Co. Ltd., Victoria, B.C., particulars about the incorporation, officials, etc. of which are given under "General Shipbuilding Notes Throughout Canada," on another page of this issue, is said to have been organized principally to build two steel cargo steamships of 8,100 tons d.w. each, for Canadian Government Merchant Marine Ltd., for which the Victoria Machinery Depot Co. has contracts from the Marine Department. We were officially advised June 10 that neither of the keels had been laid and that no dates for their laying had been fixed, but that the first shipway had been completed, that keel blocks were being placed, that the second shipway was nearly finished, and that the erection of buildings, installing of plant, etc., was being gone on with.

The Port Arthur Shipbuilding Co., Port Arthur, Ont., launched, on May 31, the steel cargo steamship Canadian Sailor, 3,400 tons d.w., Marine Department contract 20; builder's yard no. 40; Miss Emmeline Paige, daughter of J. F. Paige, the company's General Manager, performing the christening. The Canadian Sailor is of steel, screw, single deck type, with a straight stem and semi-elliptical stern built on the transverse system with poop, bridge and forecastle; the principal dimensions being: Length over all, 260 ft.; length between perpendiculars, 251 ft.; breadth moulded, 40½ ft.; depth moulded, 23 ft.. She is built to British Lloyd's 100 A1 classification, and fitted out in accordance with British Board of Trade Rules. The propelling machinery is placed amidships. The main engine is of the triple expansion vertical inverted type, with cylinders 20½, 34, 56 x 40 in. stroke, developing about 1,500 i.h.p. The auxiliary machinery includes a feed pump evaporator of 15 tons capacity per 24 hours; auxiliary condenser, with attached air and circulating pumps; vertical duplex ballast pump and auxiliary feed pump. A steam ash hoist is located in boiler room. Steam supplied by 2 Scotch boilers, 15 x 11 ft., constructed according to Lloyd's and Canadian Rules, having working pressure of 190 lb.

The Canadian Sailor is the second ship to be launched out of an order for 4 precisely similar steamships, which the company has from the Marine Department; the first, Canadian Trader, having been launched May 5. The keels for the other 2, Canadian Adventurer and Canadian Cadet, were laid Mar. 31.

Port Arthur Shipbuilding Co., Port Arthur, Ont., launched on May 31 the steel cargo steamship Canadian Sailor, 3,400 tons d.w. for Canadian Government Merchant Marine Ltd., Marine Department contract 20; builder's yard no. 40.

Wallace Shipyards Ltd., Vancouver, B.C.—The second of the steel steamships being built for Canadian Government Merchant Marine Ltd., Marine Department contract 5; yard no. 106; Canadian Trooper, 4,300 tons d.w., was launched May 31, and christened by Mrs. R. Pemberton, wife of the overseer of the government steamship building there.

Newfoundland Coastal Service.

In our last issue particulars were given of the acceptance, by the Newfoundland Government, of the tender of Bowring Bros. for two steamship services between St. John's and northern coast ports, and St. John's and southern and western ports. Similar service has been rendered by the firm for the past 15 years, and the tender referred to was for a continuance of the service for a further 10 years, of course at new rates. After the acceptance of the tender there was a change of government, without a contract having been signed, and considerable opposition arose to the concluding of the contract by the new government. In the meantime, Bowring Bros. withdrew their tender, and are reported to have sent in an amended tender at an enhanced price, providing for increases in passenger and freight rates, necessitated by increases in operating expenses. The former contract expired in April, and it has been announced that, pending a settlement of the matter, the government has seized the steamships Portia and Prospero, under the War Measures Act, and is operating them under the Government Shipping Department, at rates for passengers and freight which the contractors charged under the last contract.

Details of the Different Types of Steamships for Canadian Government Merchant Marine Ltd.

The following are comparative details of the six different types of steamship being built for Canadian Government Merchant Marine Ltd.:

	2,800 ton.	3,400 ton.	3,750 ton.	4,300 ton.	5,100 ton.	8,100 ton.	10,500 ton

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. The following contractions are used in the column giving the type of the vessels to be built: s.d., single deck; 2.d., two deck; 3.d., three deck; lake, lake type; p., poop; b., bridge; f'c's'le, forecastle.

Contract	Contract date	Builder	Yard no.	Tons d.w.	Price per ton d.w.	Total price	Type	Classification	Speed, knots	Approximate delivery date	Keel laid	Launched	Name
1	Mar. 4, 1918	Canadian Vickers Ltd., Montreal	66	4,300	$207.	$ 890,100	S.d., p., b. and f'c's'le	Lloyd's	11	Dec. 31, 1918	June 11, 1918	Nov. 23, 1918	Canadian Voyageur

Cargo Steamship Building in Canada for British Government.

Engines for s.s. War Fundy, Etc.—In a description of the wooden cargo s.s. War Fundy, built for the British Government by Grant & Horne, St. John, N.B., which appeared in Canadian Railway and Marine World for May, it was stated that the boilers and engines were installed by the Union Foundry Co., under an Imperial Munition Board's officer's superintendence. We have since been advised that, while the engines were installed by the Union Foundry Co., as stated, they were built by Robb Engineering Works Ltd., Amherst, N.S., which also built 4 other engines of the same size for ships built for the British Government at different points.

Steamships Launched and Under Construction—Since the information given in our last issue respecting launchings of steamships under construction in Canada for the British Government, was published, the wooden steamship, s.s. War Moncton, 3,080 tons d.w., was launched, May 29, by Grant and Horne, St. John, N.B. This completes all orders for wooden steamships placed in Canada for the British Government by the Imperial Munitions Board. Orders for 2 steel steamships, from Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont., of 3,500 tons d.w. each, and for which, the names War Wallaby and War Wombat were selected, have been cancelled by the Imperial Munitions Board. This leaves 7 steel steamships still under construction with a total tonnage of 35,000. The total of steel steamships launched remains at 34 with tonnage of 169,300, and 46 wooden steamships have been launched with total tonnage of 141,680; an aggregate of 80 vessels of 310,980 tons. Following is a list of the steel steamships still under construction.

Builder.		Tons d.w.
British American Shipbuilding Co. Welland, Ont.	War Racoon	3,500
Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont	War Vixen	3,500
J. Coughlan & Sons, Vancouver, B.C.		
"	War Chariot	8,800
"	War Company	8,800
Midland Shipbuilding Co., Midland, Ont	War Fury	3,400
Polson Iron Works, Ltd., Toronto, Ont.		
"	War Algoma	3,500
"	War Halton	3,500
	7 steel steamships	35,000

Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont.—The Imperial Munitions Board has cancelled orders given this company for 2 steel cargo steamships of 3,500 tons each, viz: builder's yard no. 302, s.s. War Wallaby, and builder's yard no. 303, s.s. War Wombat. Canadian Allis-Chalmers Ltd. had orders for 4 steel cargo steamships of 3,500 tons each, one of which, the s.s. War Magic, was launched Mar. 3, and another one, the s.s. War Vixen, is being built.

Grant & Horne, St. John, N.B.—The s.s. War Moncton was launched at this yard May 29. This is the last of the wooden steamships to be built in Canada for the British Government under orders from the Imperial Munitions Board, and is the second one built by this firm, the first one, the s.s. War Fundy, having been launched in August, 1918. The War Moncton is of the standard type of wooden steamship adopted by the board; full descriptions of which, with equipment, have been given in previous issues.

Steamship War Moncton, built for British Government by Grant & Horne, St. John, N.B., launched May 29.

Imperial Investigation Board on Maritime Transport, Etc.

Ottawa press dispatch, June 6—Sir George Perley, High Commissioner for Canada in England, will, on the recommendation of the Minister of Marine, represent Canada on the Imperial Investigation Board to be appointed by the Crown to review questions relating to maritime transport and to the development of the Empire's sea communications.

The board is to consist of an independent chairman appointed by the Crown; of eight official members nominated by the Colonial Office, India Office, Board of Trade, Dominion of Canada, Commonwealth of Australia, Dominion of New Zealand, Union of South Africa and Dominion of Newfoundland, and of four unofficial members, two experienced in shipping and two experienced in commerce, appointed by the Board of Trade, after consultation with the Dominions. The duties of the board are to be:

To enquire into complaints from persons and bodies interested with regard to ocean freights, facilities and conditions in the interimperial trade, or into any question of a similar nature referred to it by any of the nominating authorities, and to report its conclusions to the governments concerned.

To survey the facilities for maritime transport on such routes as appear to it to be necessary for trade with the Empire, and to make recommendations to the appropriate authority for the coordination and improvement of such facilities, whether with regard to the type, size and speed of ships required for particular routes or purposes, the depth of water in locks or channels, the construction of harbor work, or similar matters. For this purpose the board is to appoint, where necessary, in consultation with the appropriate authority, standing or temporary committees, including persons with expert knowledge, to investigate particular problems.

The board is empowered to announce its conclusions publicly or otherwise as it thinks fit. Any published report to be signed by the concerning members of the board, and any dissenting opinion of a member or members to be published at the same time.

Care to Be Exercised in Lake St. Clair Flats Canal.

The United States District Engineer, at Sault Ste. Marie, Mich., has issued the following notice to vessel owners:—"The revetment on the channel side of the east dike, Lake St. Clair Flats Canal, has deteriorated markedly in the last two seasons. Several sections have collapsed, the timber work swinging out into the channel. This condition exposes anchorages adjacent to the portions collapsed to undue strain, and the backfilling to the effects of wash incident to the disturbances of water created by passing boats. Suitable repair is anticipated as funds become available and arrangements can be made. Meantime, it is highly desirable, in order to minimize further deterioration, that additional strain and disturbance be avoided as far as practicable. To this end it is requested that your vessel masters be instructed to check speed in passing through the east canal, reducing to about 8 miles an hour when weather conditions are suitable for that speed. It will, of course, be understood that it is not suggested that vessels check in storm, or when conditions to any extent render control uncertain, but only that throughout the variety of conditions encountered speed be reduced in reasonable accord therewith, and solely for the purpose above expressed, that further deterioration of the revetment be minimized."

Ships Built in Canada in 1918.

The Marine Department has issued the following statement, subject to revision, of ships built in Canada during 1918:

Wood	Sail.	Steam.	Gas
Number	81	43	18
Gross tonnage	31,012	86,479	9,757
Net tonnage	29,334	54,198	7,856
Steel			
Number		79	
Gross tonnage		137,004	
Net tonnage		[illegible]	
Totals			
Number			[illegible]
Gross tonnage			[illegible]
Net tonnage			[illegible]
Deadweight tonnage			[illegible]

La Cie. Canadienne Trans-Atlantique Ltee., the incorporation of which was announced in our last issue with $1,000,000 authorized capital and office at 9 Victoria Square, Montreal, was formed to operate a line of freight steamships between Montreal and Havre, France, and for this purpose is a consolidation of the interests of Canada Steamship Lines, Ltd., and La Cie. Generale Trans-Atlantique of France. It is intended to operate about 6 steamships in the service, 3 of which will be owned by Canada Steamship Lines and 3 by the French company, these companies acting, respectively in Canada, and France, in the interests of the new owners. The President is Pellerin Latouche, Paris, France, and the Vice President and Managing Director is J. W. Norcross, President and Managing Director Canada Steamship Lines, Montreal.

The United States Government's Shipbuilding Work, Its Costs, Etc.

E. N. Hurley, Chairman United States Shipping Board, wrote the Chairman of the House of Representatives' appropriations committee, June 4, as follows:—

In presenting to you the request of the U.S. Shipping Board for funds, I feel it my duty to give an outline of our shipping problem as a whole. The interrelation of the shipbuilding and ship-operating industries is very close, an dthe unprecedented conditions which the war has imposed upon both of them cannot safely be adjusted to normal without carefully considered action by the government, at whose call they abandoned the normal limitations of commercial organization and adjusted themselves to the abnormal conditions of war. Moreover, the importance of these two great industries to the prosperity of the U.S. people is so great that the necessity for establishing them upon a healthy commercial basis is widely recognized as a prime matter of national policy.

During the 19 months in which our country was actively engaged in the war, the U.S. Shipping Board Emergency Fleet Corporation, expanded the shipbuilding capacity of the U.S. from an unimportant position among the world's producers of ocean-going tonnage to first place. At the same time it has increased the U.S. overseas merchant fleet from a negligible quantity to second place. Our programme has been moulded, and its closing-out has been planned, with the idea of leading the two industries congress consigned to our administration during the war up to the point at which they may strike out and develop on a commercial basis. The consummation of our efforts is dependent upon and now awaits the action of congress in granting our request for funds, and in directing the manner in which we shall dispose of the government fleet.

Congress has authorized $3,671,000,000 and appropriated $2,625,451,000. We shall need all the money which has been appropriated, and in addition we shall require $673,368,301. However, the total of these two amounts ($3,298,819,301) is $372,180,699 less than the amount congress already has authorized us to spend. The shipbuilding programme has been greatly reduced since the signing of the armistice. We have suspended or cancelled contracts for 754 ships, aggregating 5,797,825 tons d.w., which would have cost $797,564,276 to complete. The cost of cancelling these contracts will be about $202,853,456, and the saving effected by cancellations will approximate $594,710,820.

The following is an account of our financial operations to date: Actual expenditures and net commitments for shipyard construction, housing, transportation, etc., $270,482,975, and it is estimated that the salvage will be $81,272,700. This means that we shall have to charge off from our shipyard, housing and transportation investment, $189,210,275, which is 5.6% of the total amount congress has appropriated and is requested to appropriate. On March 31 we had spent in the administration of the home office, the field establishment, and the district offices, $24,173,000. By July 1, this item will reach $29,[illegible]0. It will require an additional [illegible] to complete the programme. This makes a total administration outlay of $45,000,000, or 1.37% of the total amount congress has appropriated and is requested to appropriate.

The three net expenditures described above total $437,063,731. The subtraction of this amount from $3,298,819,301, the total appropriations made and requested, leaves $2,861,755,570 to be accounted for in ships. For this we have built and expect to build, 2,434 vessels, aggregating 13,885,106 tons d.w. On its face, this ratio of tonnage to monetary outlay would indicate a cost of $206 a ton d.w. However, the actual cost of the ships to the government is considerably less than this amount, for the following reason. Some shipbuilders have paid into the U.S. Treasury income and excess profit taxes aggregating $40 a ton d.w. on the vessels they have constructed. Others have paid the equivalent of $30 a ton. It is estimated that at least $25 a ton d.w. has been returned to the U.S. Treasury in this manner by all shipbuilders. This $25 does not include any taxes paid by the hundreds of subcontractors who manufactured the steel, the boilers, the machinery and the many other things which go into the ships; but when multiplied by 13,885,106 tons d.w., it indicates a rebate of $347,127,650, which, when subtracted from $2,861,756,570, leaves $2,514,527,920, or $180 a ton d.w. as the actual cost to the government of the fleet which played an essential part in the winning of the war, and which is now a permanent commercial asset of the U.S. people.

Yesterday we sold one of our 7,500-ton freighters to the National Shipping Corporation, New York, for $210 a ton d.w., and we have received from the Skinner & Eddy Shipbuilding Corporation an offer to buy at present construction costs four 8,000-ton freighters which that corporation is building. Today we sold one of our 5,075-ton freighters to the Omega Steamship Co., New York, for $210 a ton d.w., and we have received from another firm an offer to buy four ships at the same price.

In giving this picture of our finances, I have confined myself to facts and figures. I have made no mention of the unusual conditions under which our work was planned and carried out. However, it is interesting to note that the cost of our steel and machinery was three times its normal cost, and that the wages we paid to labor were based upon double the normal rate. Also, it is interesting to consider in connection with the foregoing figures the fact that we expanded the shipbuilding industry ten-fold in ten months, with high-priced materials, and under the handicap of transportation delays which made the work very costly. In the prosecution of our work, we have made many blunders, and finally, when we were compelled by the signing of the armistice, suddenly to stop and reverse the ponderous machinery we had been driving at full speed, we found ourselves confronted with new problems, through the mazes of which we are happy to report that we can now see our way clearly.

Amount authorized by congress.....	$3,671,000,000
Appropriated and will expend .	$2,625,451,000
Additional appropriation required	673,368,301
	$3,298,819,301
Credit for administration (1.37% of total amount appropriated and requested)	**45,000,000**
Credit for net cost of shipyard development, housing and transportation (5.5% of total amount appropriated and requested)......	189,210,275
Credit for cancelling ship contracts	202,853,456
	$ 437,063,731
Total appropriation	$3,298,819,301
Credit	437,063,731
	$2,861,755,570
Money spent and to be spent for construction of 13,885,106 d.w. tons of ships.....................................	2,861,755,570
Tax paid by shipbuilders ($25 x 13,885,106 d.w. tons)....	347,127,650
Net cost of 13,885,106 d.w. tons of ships	$2,514,627,920
Average net cost of ships per d.w. ton	180

Editor's Note—Mr. Hurley's plan of working out the average net cost of ships per d.w. ton, by deducting from the actual cost the amount paid by shipbuilders, as government taxes, is certainly ingenious, but the result arrived at is worthless for comparison with prices paid by the British and Canadian Governments, which are stated at the actual prices paid to the builders. On the same basis, the ships for the United States Government cost $206 a ton, if not more.

Mainly About Marine People.

Hugh A. Allan, formerly of the Allan Steamship Line, Mrs. Allan and Miss Rachel Allan, who have been living in England for several years, returned to Montreal early in June, and will spend the summer at St. Andrews, N.B.

The Hon. C. C. Ballantyne, Minister of Marine, Mrs. Ballantyne, and their family, will spend part of the summer at the Algonquin Hotel, St. Andrews, N.B.

J. Richard Clancy, whose appointment as General Agent for Ontario, Freight Department, Canadian Pacific Ocean Services Ltd., Toronto, was announced in our last issue, entered transportation service in 1883, with the G.T.R., and transferred to the Allan Line Steamship Co. in June, 1884, serving with that company until Apr., 1915, successively as Chief of the Export Department, and Manager at Portland, Me. He entered C.P.R. service in Apr., 1915, as Port Agent at Quebec, Que., in the summer, and at St. John, N.B., in the winter, and in 1918 was appointed Representative, Canadian Pacific Ocean Services Ltd., New York, which position he held at the date of his present appointment.

Capt. Samuel Crangle, retired master mariner and shipbuilder, of Toronto, who died at Los Angeles, California, Apr. 12, left an estate valued at $175,414. Among his bequests was one of $2,000 to J. H. G. Hagarty, with whom he was formerly associated in the St. Lawrence & Chicago Steam Navigation Co.

Capt. D. Kenny, Marine Superintendent, Head Line, Montreal, died there, June 18, aged 60, after a short illness. He was with the Head Line for about 30 years, and was at one time master of one of its steamships.

W. Grant Morden, M.P., of the Canada Steamship Lines, London advisory committee, and Mrs. Morden, have returned to England after spending several weeks in Canada.

Capt. W. Murphy, master of the Toronto Ferry Co.'s ferry steamboat Luella, died at Toronto, June 4, aged 54.

P. R. Peel, New Westminster, B.C.,

has been appointed measuring surveyor of shipping and of accommodation for seamen for that port, vice N. M. Matheson, deceased.

W. G. Roche, whose appointment as General Agent, Freight Department, Canadian Pacific Ocean Services Ltd., Chicago, Ill., was announced in our last issue, was born at Montreal, Nov. 3, 1880, and was educated at Detroit University, Detroit. He entered transportation service after leaving school, and served in clerical capacities with the G.T.R. and Pere Marquette Rd. He entered C.P.R. service, as Contracting Freight Agent, at Detroit, Mich., Aug. 7, 1903, and resigned on his appointment as General Manager, Reading Truck Co., Detroit, Mich., of which company he later became Secretary-Treasurer, and resigned, Oct. 1, 1918. He was appointed Special Representative of the U.S.Labor Department, Oct. 15, 1918, and was appointed to his present position, May 1.

Capt. Wm. Sprague, a former master mariner on the Pacific coast, died at Vancouver, B.C., at the end of May, after a long illness, aged 75. He was born in New Brunswick, and was associated with the sea from early boyhood. He is stated to have brought the first vessel loaded with steel rails across the Atlantic, for the Intercolonial Ry.

Robert B. Teakle, who has been appointed Manager, Canadian Government Merchant Marine, Ltd., Montreal, was born at Quebec, Que., and entered marine service there with Allan, Rae & Co., and subsequently became local manager of the Allan Line at St. John, N.B., and later at Boston, Mass. Since the taking over of the Allan Line by Canadian Pacific Ocean Services, Ltd., he has been Manager of the France-Canada Line at Philadelphia, Pa. He was presented with an engraved silver salver by the members of the Canadian Club at Melrose, Mass., recently, on leaving for Montreal.

Lorne C. Webster, President, Webster Steamship Co., etc., Montreal, has been elected a director of the Merchants Bank of Canada.

Harold Yarrow, General Manager, Yarrow & Co., Glasgow, Scotland, visited Yarrows Ltd., plant at Victoria, B.C., recently.

Norman Yarrow, Manager of Yarrows Ltd., returned to Victoria, B.C., recently, after a short holiday in Cailfornia.

Steamship Companies Incorporated

Binghamton Steamship Co. Ltd., has been incorporated under the Dominion Companies Act, with $50,000 authorized capital and office at Montreal, to own and operate steam and other vessels, and to carry on a general navigation and transportation business. It was the intention of this company, which was incorporated by United States interests, to transfer the U.S. steamship Binghampton to the Canadian register, but as permission for the transfer was refused by the Dominion Government the company is not being organized.

Donald Shipping Co. Ltd., which has been incorporated under the Dominion Companies Act with $50,000 authorized capital and office at Montreal, is in process of organization. The incorporators are L. P. Crepeau, K.C., S. Hinson, R. Bush, B. Robinson, and A. P. Grigg, all of Montreal.

Eldorado Steamship Co. (Canada) Ltd. has been incorporated under the Dominion Companies Act, with $1,000 authorized capital and office at Montreal, to own and operate steam and other vessels, and to carry on a general navigation and transportation business. The company was incorporated by New York interests and it was proposed to transfer the United States steamship Eldorado to the Canadian register, but as the Dominion Government refused permission the proposition has been abandoned.

Harvester Navigation Co. Ltd. has been incorporated under the Dominion Companies Act, with $128,000 authorized capital, and office at Sussex, N.B., to own and operate steam and other vessels for the conveyance of passengers, mails and merchandise, and to act as shipbuilders and common carriers. M. G. White, Sussex, N.B.; G. W. Smith, E. Taylor, W. A. Keirstead, Apple River, N.S., and J. A. Cleveland, Alma, N.B., are the incorporators.

Huron Steamship Co. Ltd., has been incorporated under the Dominion Companies Act with $50,000 authorized capital and office at Montreal, to own and operate steam and other vessels, wharves, docks and other transportation facilities, and to carry on a general navigation business. United States interests are concerned, but as the application to the Dominion Government to transfer the U.S. steamship Huron to the Canadian register has been refused the company is not being organized.

The Kingston Navigation Co. Ltd. has been incorporated under the Ontario Companies Act, with $40,000 authorized capital and office at Kingston, Ont., to operate vessels and other craft propelled by any means, and to carry passengers and freight by vessel or otherwise. J. M. Campbell, J. A. Carnegie, R. E. Burns, J. T. Bain, and C. J. Bolton, Kingston,

Steel Steam Trawlers and Steam Wooden Drifters, built for British Government, through Canadian Naval Service Department, at Canadian Vickers Ltd., Montreal.

[illegible] the incorporators.

Minneapolis Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with $50,000 authorized capital stock, and office at Montreal, to own and operate steam and other vessels, and to carry on a general navigation and transportation business. This company was incorporated by New York interests to operate the United States steamship Minneapolis under Canadian registry, but as the application to transfer the vessel was refused by the Dominion Government the organization of the company is not being proceeded with.

St. Paul Steamship Co. Ltd. has been incorporated under the Dominion Companies Act with $50,000 authorized capital and office at Montreal, to carry on a general steamship and transportation business, and to own and operate steam and other vessels, wharves, docks and other transportation facilities. This company, which was formed by U. S. interests, intended operating the United States steamship St. Paul under Canadian registry, but its application to transfer the vessel having been refused by the Dominion Government, the organization is not being proceeded with.

Tower Shipping Co. Ltd., the incorporation of which was announced in our last issue with $30,000 authorized capital and office at Montreal, is in process of organization. The company proposes to purchase and operate a schooner, and to carry on a general shipping business. The incorporaters are L. P. Crepeau, K. C., S. Hinson, R. Bush, B. Robinhon, G. Whittaker and A. P. Grigg, all of Montreal.

La Cie.de Navigation Tremblay Ltee. has been incorporated under the Quebec Comuanies Act with $99,500 authorized capital and office at Matane, Que., to own and operate steam and other vessels for marine and aerial transportation and to carry on a general navigation, transportation and towing business. The incorporators are Alphonse, Edmond, Alphonse (Jr.), Arthur, Gustave and Ulric Tremblay, all mariners of Matane, Que.

Atlantic and Pacific Ocean Marine.

Canadian Pacific Ocean Services Ltd. has changed the name of the s.s. Alsatian (Allan Line), to Empress of France, under which name she is now being operated.

It is reported that a French steamship line is preparing to inaugurate a steamship service between France and North American Pacific ports, making calls at Vancouver, Victoria, Tacoma and Seattle.

Canada Steamship Lines, Ltd., has purchased the s.s. Neepawa for the use of the Quebec Steamship Co., one of its subsidiaries. The Neepawa is 390 ft. long on the keel and 47 ft. 4 in. wide. It is said she will be operated in the West Indies trade.

The Union Steamship Co. of New Zealand, operating the mail steamship service between Canada and Australasia, is reported to have ordered a passenger steamship of 11,000 tons in Glasgow, Scotland, for the service, to be operated in conjunction with the s.s. Niagara.

The U.S. ship [illegible], of Boston, Mass., has been chartered by I. H. [illegible] & Son of New Glasgow, N.S., to load lumber for United Kingdom ports. She is an iron ship of 1,692 gross tons and 1,480 net tons, built at Glasgow, Scotland, in 1885, her dimensions being, length, 240.5 ft.; breadth, 38 ft.; depth, 21.7 ft.

The Ulster Steamship Co.'s (Head Line) s.s. Ballygally Head, was launched at Belfast, Ireland, recently for the North Atlantic service. It was expected she would make her first trip to Montreal about the end of June. Her dimensions are, length, 400 ft.; breadth, 52 ft.; depth, 31 ft.; tonnage, 5,300 gross, 8,250 d.w.

The s.s. Bermudian, arrived at New York early in June from Kingston, Jamaica, where she had landed colored British troops from Italy. She is owned by the Quebec Steamship Co., a subsidiary of Canada Steamship Lines Ltd., and until 1917, when she was requisitioned by the British Admiralty, was operated between New York and Bermuda. She was used chiefly for carrying troops between the West Indies and Europe, and was reported several times to have been sunk by submarines, and also to have sunk at Alexandria, Egypt. She was never hit by a torpedo, and the sinking at Alexandria, was due to an accident, an ash port having been left open.

Reports as to a large merger of steamship interests continue to come from London, Eng., where there is considerable activity in these circles. It is reported that the Peninsular and Oriental Steam Navigation Co., the Royal Mail Steam Packet Co., the Cunard Steamship Co. and Furness, Withy & Co., are to unite, with a probable total capital of £150,000,000. The matter of taking in the British owned steamships controlled by the International Mercantile Marine Co. is causing considerable interest. It is said that the British Government is arranging an option on the purchase of 80% interest in the vessels owned by the International Mercantile Marine Co., and it is possible that a law may be passed prohibiting any foreign corporation from owning or controlling more than a 20% interest in any British vessels. Steamship companies' stock quotations in Great Britain are, at present, very high, the P. & O. having a market value of 505.

Maritime Provinces and Newfoundland.

The Dominion Government's s.s. Scotia, registered no. 111,865, and operated by the Railways and Canals Department, has had its name changed to Scotia I.

The harbor bar range lights at the entrance to Richibucto harbor, on the east coast of Northumberland Strait, N.B., have been moved about 1,000 ft. eastward, owing to a change in the channel.

The North Shore Steamboat Co.'s s.s. Bras d'Or, which was launched at Mahone Bay, N.S., during June, is to be operated in the passenger and freight trade through the Bras d'Or Lakes to Mulgrave and Eastern Harbor, N.S. She will have accommodation for about 200 passengers, and for a considerable quantity of freight in addition.

The s.s. Troja, which went ashore on the Old Proprietor Ledge in the Bay of Fundy, Mar. 18, was refloated at the end of May, by the Maritime Wrecking and Salvage Co., Halifax, N.S. Temporary repairs were made to enable her to be taken to Halifax, where she will be overhauled. The Troja, which was built by the Dominion Shipbuilding Co., Toronto, was en route from Louisburg, N.S., to St. John, N.B. It was not expected that salvage operations would be successful, as the report stated that the decks were buckled, the bottom badly broken, and all the wood work, including the bridge, was smashed.

The Gulf of St. Lawrence Shipping and Trading Co. is reported to have chartered the United States s.s. Cerro Gardo for a direct freight service between Montreal and St. John's, Nfld. For the present the company, which was incorporated recently, will confine itself to the freight business, but expects to enter the passenger business in 1920, when it hopes to obtain a suitable passenger steamship. The company has two other vessels, the steamships Guide and Labrador, running between Quebec and Bras d'Or. It also operates the s.s. Lady Evelyn between Pictou, N.S., Prince Edward Island and Magdalen Islands, and the s.s. Tremblay on the Gaspe route.

Province of Quebec Marine.

The Dominion Public Works Department will receive tenders to July 2 for repairs and improvements to the pile work wharf at Fort William, Que.

The Central Ry. Co. of Canada, of which F. Stuart Williamson is receiver, is operating its steamboat Empress, between Montreal, Rigaud and Carillon, carrying mails and passengers for Ottawa River points. The Empress, on her down trip, goes through the Lachine Rapids.

The Montreal Harbor Commissioners have awarded a contract to the Dominion Bridge Co. for the steel work for extensions to sheds 17 and 18 on the Victoria pier. Considerable excavation work is in progress, under the direction of F. W. Cowie, Harbor Engineer, and it is expected that concrete work will be started shortly, and the erection of the steel work is expected to be begun about the end of July.

Ontario and the Great Lakes.

The Great Lakes Transportation Co.'s s.s. Glenisla, laden with coal, ran aground at Jackfish Point, Lake Superior, June 10.

The Dominion Public Works Department received tenders June 24 for renewal work to government wharves 1 and 2 at Midland.

A press report states that Kingston is to be made a national harbor, and terminal at the foot of the lakes, for grain transhipment.

Canada Steamship Lines' s.s. Toronto collided with the dock at Brockville, June 17, breaking up about 100 ft. of the timber work, and damaging one of her paddle wheels.

The Dominion Public Works Department will receive tenders to July 2, for the reconstruction of a portion of the superstructure of the east pier at the eastern entrance to Toronto harbor.

The Windsor, Ont., civic transportation committee is checking the passenger and vehicular traffic carried across the river by the ferry company, in order to prepare an estimate of the revenue, in connection with a proposed increase in rates.

The Montreal Transportation Co.'s barge Burma, when entering Port Dalhousie harbor, May 31, in tow of the company's s.s. Simla, struck the west pier and tore a hole in her bow. She was taken about 200 ft. into the harbor, where she settled down.

The Canadian Towing and Wrecking Co. has purchased the U.S. steamship Vulcan, which was wrecked at Portage Lake early this year, and abandoned to the underwriters. The price paid is stated to have been $20,000. It is reported that the vessel will be taken to Port Arthur for overhaul and repair and will be transferred to the Canadian register.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for May as follows:—Superior, 602.25; Michigan and Huron, 581.38; St. Clair, 576.38; Erie, 573.69; Ontario, 247.27. Compared with the average May levels for the past 10 years, Superior was 0.30 ft. above; Michigan and Huron 0.86 ft. above; Erie 1.04 ft. above; Ontario 0.59 ft. above.

Manitoba, Saskatchewan and Alberta.

The Peace River Tramway and Navigation Co.'s s.s. D. A. Thomas left Peace River Crossing at the end of May, for Hudson's Hope and Fort St. John, thus opening the Peace River navigation season a few days earlier than last year.

British Columbia and Pacific Coast.

The C.P.R. has placed the s.s. Princess Mary on the Vancouver and Nanaimo route, making six trips a week.

The Dominion Public Works Department will receive tenders to July 15, for repairs to the wharf at Comox, B.C.

The Dominion Public Works Department will receive tenders to July 9 for the construction of a wharf at Naramata, B.C.

The first steamer of the Yukon navigation season to clear from Whitehorse, the Alaska and the Casca, sailed from there, June 10, for Dawson.

The steam yacht Dolaura built in Scotland in 1908 for Jas. Dunsmuir, Victoria, B.C., is reported to have been sold to A. Meeker, Chicago, Ill. She was overhauled by Yarrows, Ltd., Victoria, during June.

The C.P.R. s.s. Princess Maquinna was placed on a special trip, June 10, sailing from Victoria for Port Alice, Quatsino Sound, and by the north end of Vancouver Island to Rivers Inlet, making calls at other ports en route.

The Grand Trunk Pacific Ry. has deposited with the Public Works Department, a description of the site and plans of a car ferry slip and works, which it proposes to build in Prince Rupert harbor, in front of water front block C.

A Victoria press report states that the C.P.R. is unable to make an attempt to salve the wrecked s.s. Princess Sophia, which was lost on the Vanderbilt Reef, in the Portland Canal last year, as the disaster having taken place in U.S. waters, the wreck is virtually U.S. property.

The question of a dry dock at the Pacific coast was discussed by the North Vancouver Council June 10, when a report on the location, etc. of the projected dry dock was considered. The idea of two dry docks, one to be built by the Dominion Government, and the other by private capital, is stated to have been abandoned. When a dock is built it will either be undertaken as a government work or under direct government subsidy. The location it is stated will be decided on the recommendation of a disinterested harbor authority of high standing and practical experience, and it is added that definite action will be taken next autumn.

The Pacific Salvage Co., Victoria, which purchased the sloop Algerine recently from the Dominion Government, is having her remodelled for use as a salvage vessel, at a cost of approximately $100,000, and she is expected to be ready for operation during July. The name Algerine will be retained. A new main mast, 64 ft. long, has been installed, equipped with 3 derrick booms, each capable of lifting about 40 tons. An additional deck has been built, from forward to abaft the engine room, and also a navigating bridge forward. She is being equipped with wireless telegraphy with a range of 3,000 miles. She has accommodation for a crew of 65, with large living quarters.

United States Grain Shipments via Montreal.

The following statement by the acting Minister of Trade and Commerce, was made public June 19:—"United States wheat, when arriving above Montreal in transit for export shipment will be permitted by license from the Trade and Commerce Department until further ordered. It is expected that this privilege will terminate about Sept. 1, or at least early enough to ensure the entire elevator capacity on the Great Lakes for Canadian grain when it commences to move forward and, as well, our railway facilities for handling Canadian grain. In a few days regulations will be formulated in respect to such shipments to ensure that shippers must provide tonnage to carry such grain from Canadian seaboard in order to prevent congestion in Canadian elevators. In the meantime, on application from shippers, licenses will be granted by the Trade and Commerce Department."

France and Canada Steamship Co. Ltd., the incorporation of which was announced in our last issue, with $10,000,000 capital and office at Montreal, was originally incorporated under the Dominion Companies Act in 1915 with $1,000,000 capital. During the war the company was chiefly engaged in conveying horses between North American ports and France, and chartered a number of vessels. It is allied with the France and Canada Steamship Corporation, of New York. F. R. Mayer, New York, is President; C. Mayer, Paris, France, Vice President, and S. H. McIntosh, New York, is Secretary-Treasurer and Comptroller.

The Central Ry. of Canada, which is in a receiver's hands, is operating the s.s. Empress this year, between Montreal, Rigaud and Carillon. She carries mails for ports on the Ottawa River, and does a passenger business. On her daily return trip to Montreal she shoots the Lachine Rapids, as she has done for several years. The s.s. Empress was built at Ottawa, in 1873, and named Peerless. She was practically rebuilt at Montreal in 1886, and renamed. She is paddle wheel driven by engine of 152 n.h.p. Her dimensions are: length, 185.8 ft.; breadth, 27.6 ft.; depth, 8 ft.; tonnage, 678 gross, 372 net. F. Stuart Williamson, Montreal is receiver.

Among the Express Companies.

The Canadian Northern Ex. Co., has opened an office at Westree, Ont., and has closed its office at Ostrom, Ont.

N. L. Preston, heretofore agent, Canadian Northern Ex. Co., Winnipeg, has been appointed agent at Edmonton, Alta., vice N. W. Storie, promoted.

J. H. Morrison, who was for a time acting as agent, Canadian Northern Ex. Co., Edmonton, Alta., has resumed his duties as chief clerk there.

W. F. Pillar, former agent, Canadian Northern Ex. Co., Edmonton, Alta., has been appointed travelling agent, with supervision of territory in Manitoba and Saskatchewan. Office, Winnipeg.

N. W. Storie, recently appointed agent, Canadian Northern Ex. Co., Edmonton, Alta., has been appointed travelling agent, with supervision of territory in Alberta and British Columbia. Office, Edmonton, Alta.

Express companies operating in Canada have issued a circular stating that they have adopted the 8-hour day as from June 1. Collection and delivery services will be given between 8 a.m. and 5 p.m., railway time.

A. Stillman, formerly A. Schussler, and in Canadian Ex. Co. service, has been appointed Inspector, lines east of Port Arthur, Ont., Canadian Northern Ex. Co., Toronto.. His change of name was effected recently by deed poll.

R. G. Wilson, General Agent, Canadian Express Co., Toronto, who retired recently, under the Pension Fund Rules, after 50 years service, as stated in Canadian Railway and Marine World previ[illegible] entered the company's service at [illegible]ys, Ont., in 1868. In [illegible] was appointed messenger on [illegible] Toronto-Montreal route, and in 1882 [illegible]s transferred as assistant agent at Toronto. He became General Agent at Toronto in 1895, upon the death of John D. Irwin. The employes gave him a well filled purse on his retirement.

Telegraph, Telephone and Cable Matters.

H.. S. Ingram has been appointed Inspector, C.P.R. Telegraphs, Toronto.

C. Stewart has been appointed Traffic Supervisor, Great North Western Telegraph Co., Toronto.

The Great North Western Telegraph Co. has opened offices at Fort Coulonge, Que., and Coldwater, Ont., and has closed its office at Crystal Beach, Ont.

G. C. Vaudrin, Montreal, has been appointed local manager, Great North Western Telegraph Co., Quebec, Que., vice T. Leslie, resigned.

It was stated in the British House of Commons, June 6, that there are 14 cables between Great Britain, Newfoundland and Canada, of which U.S. companies own and control 13, the British Government controlling the other one.

G. D. Perry, General Manager, Great North Western Telegraph Co., was presented with a cabinet of silver, June 12, in celebration of his recent marriage. The presentation was made by W. G. Barber, District Superintendent, Toronto, on behalf of officials and employes.

The Great North Western Telegraph Co. has discontinued its submarine cable between Port Angeles and Albert Head in the Juan de Fuca Strait, on the Pacific coast, and has laid a new submarine cable across Juan de Fuca Strait from Port Angeles, Wash., to Victoria, B.C., running out from Ediz Hook, Port Angeles, to the shore at the foot of Douglas St., Victoria, about a quarter of a mile off Finlayson Point.

The Board of Railway Commissioners passed general order 266, June 17, as follows: Re the Railway Act and amending act, 7-8 Edward VII., chap. 61, sec. 4, and the tariffs of telegraph companies; it is ordered that, subject to such order or orders as the board may from time to time issue, all telegraph companies within the legislative authority of the Parliament of Canada be authorized to charge the telegraph tolls published in their respective tariffs filed with the board.

The Postal Telegraph Co. has announced a reduction in cable rates from San Francisco to the Phillipine Islands, China and Japan, dating from Sept. 1. The charges are as follows: To Phillipine Islands, from $1 to 80c a word; to China, from $1.10 to 85c a word, and to Japan, from $1.21 to 83c a word. In the last two mentioned cases, the reduction is contingent on a proportionate reduction in terminal charges by the Chinese and Japanese Governments, to which no objection is anticipated.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading matter. In other words, our reading columns are not for sale, either to advertisers or others.

Canadian General Electric Co.—J. J. Ashworth, Secretary and Assistant General Manager, has been elected a director.

Canadian Locomotive Co.—Jas. Carruthers, grain merchant, Montreal, and M. J. Haney, Toronto, have been elected directors, succeeding J. J. Harty and Senator H. W. Richardson, deceased.

The Metal & Thermit Corporation, New York, has completed what it claims to be the largest marine weld ever recorded, on the cast steel sternframe of the U.S. army transport s.s. Northern Pacific. The section welded was entirely broken through by the severe strain to which the frame was subjected when the transport, laden with homeward bound troops, ran aground on Jan. 2, 1919, in a dense fog, off Fire Island, New York. The sternframe was broken just above the upper rudder lug, in a position where the casting was hollow and almost 2 ft. in diameter. The walls of the casting at this point were about 3 ins. thick. The company states that the weld, which required 1,400 lb. of thermit for the chemical production of the necessary amount of molten steel, and which was made without removing the casting from the ship, obviated the delay and expense which would have been entailed by the only alternative of purchasing an enormous new casting and installing it at a [illegible].

National Steel Car Co., Hamilton—In connection with the recent negotiations for the purchase of the National Steel Car Co.'s plant at Hamilton, Ont., by the American Car and Foundry Co., it is announced that the negotiations have fallen through. Sir John Gibson, President of the company, being reported as saying that the American Car and Foundry Co.'s offer was not considered satisfactory.

Transportation Conventions in 1919

September—Master Car and Locomotive Painters' Association of the United States and Canada, Chicago, Ill.

Sept 16-19.—Traveling Engineers' Association Chicago, Ill.

Sept. 16-18. Roadmasters' and Maintenance of Way Association, Chicago, Ill.

Oct 6-10 American Electric Railway Association, Atlantic City, N.J.

Oct. 21-23. American Railway Bridge and Building Association, Cleveland, Ohio.

Oct. 21-23.—Maintenance of Way and Master Painters' Association, St. Louis, Me.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Belleville Railway Men's Educational Club. Meets each Tuesday, 7.30 p.m. F. A. Pingston, Belleville, Ont.

Canadian Car Service Bureau -W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 305 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Railway War Board—W. M. Neal, Montreal.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 556 Church Street, Vancouver, B.C.

Toronto Harbor Improvements—Hon. F. B. Carvell, Minister of Public Works, inspected Toronto Harbor and Island, June 7. He was shown the damage being done to the Island's lake front, and the necessity for immediate action to prevent further washing away, and visited the ship channel turning basin; industrial sites on reclaimed land, and Roger Miller & Sons plant for breakwater construction and dredging at the west end. He was afterwards entertained at luncheon at the Royal Canadian Yacht Club, by the mayor, on the city's behalf.

The British Wrecking and Salvaging Co., Ltd., has been incorporated under the Dominion Companies Act, with $2,000,000 authorized capital, and office at Montreal, to carry on a general wrecking and salvaging business and do marine work of all kinds and to own and operate steam and other vessels.

Positions Vacant

WANTED

Freight Traffic Bureau Manager for commercial organization, Vancouver, Canada. Must have knowledge of Canadian and American Freight Classification and be able to prepare cases for presentation to Railway Commission. Apply Secretary, Board of Trade, Vancouver, Canada. Applications must be in before July 20th, 1919.

Department of Railways and Canals, Canada.

WELLAND SHIP CANAL.

NOTICE TO STEAM TUG OWNERS.

SEALED TENDERS, addressed to the undersigne dand endorsed "Tender for Tugs," will be received at this office until 12 o'clock noon on Monday, the 7th July, 1919, for two (2) tugs required for the Welland Ship Canal delivered at Port Dalhousie, Ont., and to be of the following dimensions:

Length—not less than 75 ft., not more than 110 ft.
Beam- not less than 18 ft., not more than 22 ft.
Draught—not less than 9 ft., not more than 10½ ft. aft.
Boiler pressure—not less than 125 lbs.
Engines fore and aft compound or triple expansion condensing.
Power—250 to 400 indicated H.P.
Steering gear (steam).
Hull—steel.

Tenderers to submit complete specifications and latest Inspection Report on the Boilers, etc., also to state where the tugs can be inspected.

An accepted bank cheque on a chartered bank of Canada for the sum of $1,000 made payable to the order of the Minister of Railways and Canals, must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract on the basis of his tender.

The cheques thus sent in will be returned to unsuccessful tenderers.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted. By order

J. W. PUGSLEY,
Secretary.

Department of Railways and Canals,
Ottawa, June 23 1919.

WELLAND SHIP CANAL.

NEW AND SECOND-HAND MACHINERY.

SEALED TENDERS, addressed to the undersigned and endorsed "Tender for Machinery," will be received at this office until 12 o'clock noon, on Thursday, the 3rd July, 1919, for the following new or second-hand machinery:—

1 only 27-inch by 18-ft. Heavy Duty Lathe.
1 only 68-inch 200-ton Hydraulic Wheel Press.
1 only 18-inch Slotting Machine.
1 only Gap Lathe to swing 48 inches in gap, to take 20 feet between centres; quick change gears; double back geared, and taper attachments.
1 only Extension Bed Lathe to swing 84 inches and take not less than 11 feet 6 inches between centres. Must be a screw cutting lathe.

Tenderers to submit full specifications and details of the machinery quoted on, and in case of second-hand machinery, to state where the same could be inspected. By order

J. W. PUGSLEY,
Secretary.

Department of Railways and Canals,
Ottawa, June 23 1919.

Allied Vessel Losses During the War—A statement in the British House of Commons shows that the losses of allied nations, in vessels, through enemy action, were as follows: Great Britain, 2,179 vessels, 7,638,020 gross tons; France, 238 vessels, 696,845 gross tons; Italy, 230 vessels, 742,365 gross tons; Japan, 29 vessels, 120,176 gross tons; United States, 80 vessels, 341,512 gross tons.

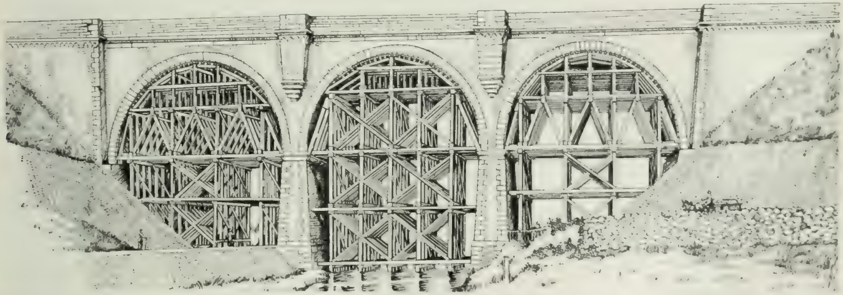
Canadian Railway and Marine World

August, 1919

The First Battalion Canadian Railway Troops' Work in Belgium and France.

Canadian Railway and Marine World has been favored with the following information about the overseas work of the 1st Battalion Canadian Railway Troops, which was raised and commanded throughout by Lieut.-Col. Blair Ripley, who when selected for the work, was Engineer of Grade Separation, C.P.R., Toronto, and who has since been made a member of the Distinguished Service Order and also a Commander of the Order of the British Empire:—

The battalion, which was recruited at various points throughout Canada, from Halifax to Vancouver, was mobilized at Valcartier, Que., left there Sept. 13, 1916, and went into camp at Witley, Eng., Sept. 24. During its stay in England, infantry training was carried on and the necessary papers made out for proceeding to France. The battalion was subjected to a dental examination, and at the last moment it was found necessary to leave 160 men behind in England for treatment, the deficiency in strength being made up by a draft of men selected from the 127th Battalion.



Wimereux Viaduct on Boulogne-Calais Railway.
Reinforced with heavy timbers, and provided with a steel floor, made up of two layers of steel railway rails, as a protection against enemy bombing. Designed and work carried out by First Battalion, Canadian Railway Troops.

The battalion entrained at Milford on Oct. 25, 1916, proceeded to Southampton, and sailed for Le Havre the same day. After a sojourn of three days at no. 1 rest camp at Le Havre, the battalion entrained for Aveluyom on the night of Oct. 28. The train was stopped at Albert and the unit taken back to Rouen and from there to Candas.

The battalion was given the task of putting in a water supply for the R.O.D. at Candas, and the double tracking of the line to Varennes. Subsequently the following work was added: A new yard at Candas and Varennes, with the maintenance from Candas to Beaussart and Colincamps. On Dec. 10, 1916, the battalion was ordered to proceed to Plateau, where decauville lines (23½ in. gauge) were being taken over from the French. Fortunately the battalion had sufficient personnel to maintain the then existing lines, to operate them, and to construct new lines required in the forward areas. Subsequently new areas were again taken over from the French and maintenance and construction turned over to the battalion, but it had insufficient men for this extra work, and it was decided to make up six light railway construction companies of 350 men each. This was done by drawing from front line units the necessary number of skilled men and when the companies were completed they were placed under the battalion's jurisdiction. This made the total strength approximately 3,200 men. On the work just mentioned the battalion controlled over one half of the light railways on the British front at the time. The men suffered a great many hardships, those in Pozieres Jct., Combles, Leforest and Rancourt areas being housed in rudely constructed dugouts for safety against enemy shelling. They, however, had good fortune as far as casualties were concerned, and when they went again on to standard gauge work their killed and wounded were only two, although their camp at Plateau was shelled for three hours on Feb. 7, 1917 by 15 in. guns.

On Mar. 24, 1917 the battalion was hurriedly taken off the light railways to build a standard gauge line from Maricourt to Ferme Rouge, thence to Clery and into Peronne. Notwithstanding the terrible weather, the shelled area in which the line had to be constructed, the then great shortage of standard gauge working tools, they managed to have trains into the Quinconce spur and were supplying food to 20,000 troops on the night of Apr. 10, 1917, and this line was finally got into Peronne on Apr. 14, 1917. The line was 11 miles long with numerous small bridges and culverts. Peronne station and yard was found in a terribly wrecked condition. On the work just referred to, the Guards Division was placed at the battalions disposal as labor, and they worked in a way that merited the warmest enthusiasm and praise from everybody. Although they were the flower of the British army, they seemed to feel honored by the work given them.

On Apr. 15, 1917 the battalion undertook the rebuilding of the double track line from Peronne to Roisel and on into Epehy. The line was completed to Roisel on Apr. 26. Roisel was still subjected to shelling, and the line into Epehy was not completed, because the Army Commander considered the battalion was too close to the Hindenburg line, and was causing too great an attraction, which was drawing fire unnecessarily. It, however, got within a mile of Epehy with the tracks.

On June 15, 1917, the battalion was ordered to cease work at Peronne and entrain for Dunkerque. We left Peronne at 6 a.m. on June 18 and at 5 p.m. had completed the journey. It took 133 cars to make the move, although the mechanical transport had gone by road. The battalion camped at Rosendael station, about half a mile from the seashore at Malo-les-Bains, where a pleasant stay was made. The work there consisted of building a new deviation line from Coudekerque around Dunkerque to Rosendael. The men rather enjoyed the stay, as more or less of a holiday. During it, however, Dunkerque was shelled on several occasions by 16 in. naval guns; one shell making a direct hit on corps headquarters in the casino at Malo-les-Bains.

On July 21, 1917, the battalion was under instructions to proceed to International Corner, in Belgium, to prepare for some very hot work, the building of the line from Elverdinghe to Boesinghe, and thence over Pilchem Ridge to Langemarck. On the morning of July 28, the men were taken out to commence work. This was the day of the big push and the feeling was very exhilarating, about 1,000 British shells were going out to every one of the enemy's coming in. Later on in the day the Huns put over a terrible barrage and little gain was made, no railway work being possible.

The weather was terrible, the shelling likewise, but by persistent efforts, the line was finally laid down as far as the Yser Canal. The last thousand feet of it, however, was blown to bits several times over, before anything further could be done. The battalion had most marvellous luck, or good fortune, and in getting from Elverdinghe to the Yser Canal at Boesinghe, its casualties were only 4 killed and 20 wounded. After a terrible artillery duel, lasting till Aug. 17, 1917, the battalion was able to build the bridge over the canal. The Canon farm siding on the line to Pilchem station was built under most trying circumstances and the officers and men took their lives in their hands every morning in going out to work. There was probably not a man in the battalion, who did not wonder how they could have such miraculous escapes, with so few casualties. The battalion's casualties east of the canal were 9 killed and 7 wounded. The artillery deserved great credit for their work in that area, and it was marvellous how the men and animals stood the strain. The punishment they took at the hands of the Boche was terrible.

During the winter of 1917-1918 the battalion was housed in Nissen huts and the men were very comfortable, they built the new Waanebeck yards, the Watou yard, and a number of artillery spurs, and re-ballasted and maintained the lines from Proven eastward. Headquarters were at International Corner, with A company nearby, B company at Nordhoek, C company at Eikhoek, and D company near Proven. On Mar. 10, 1918, the battalion was ordered to prepare to go to Egypt, to build railways and with some large bridges in prospect, and at once began to prepare for the trip. New equipment was ordered at once, packed and loaded on cars ready to proceed, via Taranto, Italy. The men were carefully picked over and medically examined and the battalion was brought up to strength again by drafts from every other battalion of the Canadian Railway Troops. But the trip to Egypt was not destined to be made. The Huns commenced shelling the back areas on Mar. 17, and while the battalion was loading its equipment on to cars at International Corner on the afternoon of Mar. 22, the track was broken on the main line in front of its living cars in six places, and it became so "hot" that everybody else had left the yard. It was found advisable to move about a mile west next day in order to complete the packing and loading in at least comparative safety.

On Mar. 23, 1918, the camp was all broken up and the battalion was ready to pull out. However, at 2 a.m. next day, the orders were cancelled and the battalion was ordered to Boves, just southeast of Amiens, to prepare trenches on a new line of defences. The 5th Army had given way and there was nothing else to do. Even harness for the battalion's transport had to be unpacked as well as its tools, but it left the same night for Amiens. The battalion detrained on Mar. 25 at Boves and its headquarters were at Thezy Glemont for three nights, after which it was ordered out again, and marched back to Bethencourt, doing 18 miles the first day and 10 miles the second day by 11 a.m. and then began at once to build trenches for a new [illegible] defences, completing 33 miles of [illegible] before being ordered back to railway work again. The bombing of [illegible] and the surrounding country was [illegible], and [illegible] seemed to be going west instead of east.

On Apr. 16, 1918, the battalion was ordered to proceed to Frevent, to build the new Frevent-Hesdin line, which was to have been used in case the Huns should cut our line at St. Pol. This at first was considered of great importance, but later developed into more or less of a peace time undertaking, which dragged on until August. On the line, however, there was one large bridge and subsequently some yards were put in. During this period the battalion made bomb-proof accommodations for the nursing sisters at Etaples, Boulogne, Outreau and Ligny, also for the W.A.A.C.'s at Montreuil (G.H.Q.) These had bomb proof covers, of from 25 to 30 ft. and the total accommodation would take care of about 1,000 of the women during unmerciful Hun raids.

During the early summer of 1918, when enemy bombing was at its height, the Wimereux viaduct, a 3-arch double track masonry viaduct, about 300 ft. long and 80 ft. high, on the Boulogne-Calais main line of the Nord Ry., was in very great danger. Numerous attempts had been made to destroy it by bombing, and its destruction would have cut off the main artery of supply for all Belgium and the northern allied front. The battalion was requested directly by the British authorities to undertake its reparation, in case of destruction by bombing, and to take steps to prevent its destruction, if found possible. The accompanying illustration shows the completed work. The timbers are all of 12 x 12 in. hard pine, and a solid steel floor or deck was made on the deck of the bridge by using slightly over a mile of steel railway rails. The work was greatly admired, not only by the British, but by the French Army authorities in Paris, where the scheme was unconditionally approved and endorsed. The Canadian Minister of Militia, General Mewburn and other notable Canadians, visited and reviewed the work during its construction. It is said to be undoubtedly the only work of the kind ever undertaken.

On Aug. 7, 1918, the officer commanding the battalion received a secret message to hold the battalion in readiness to proceed to the Amiens sector, as there were to be big things happening there very shortly. The work in hand was already completed and the battalion was practically standing-to. On Aug. 8 at 9 p.m., instructions were received to load up and proceed at once to Longeau, just east of Amiens and west of Villers-Brettonneux, and the battalion arrived there the next night at midnight. On arriving it was ascertained that the battalion was to assist the French in getting the line put into shape into Chaulnes. The Huns had blown up practically every rail in the track, and there were many nasty craters, besides they had not stopped shelling the area, and particularly the tracks. The 4th Battalion was working into Villers-Brettonneux and the 1st Battalion commenced about two miles east of there. It was a race with the Huns from that day till the day of the armistice, on Nov. 11, and the men did not have a Sunday off after getting into that area. By salvaging steel from the two lines taken over, it was possible to keep work going, but it was necessary to use new rails to close up the gap at Marcelcave on Aug. 12, which was the battalion's greatest day. It was very short of tools, but managed to get the tracks into Marcelcave by careful organization and handling of the men. On the night of Aug. 13, the tracks were got into Rosieres. The battalion had managed to get the assistance of two battalions of Australian Pioneers who worked well. Men were scattered over the entire line and salvaged rails from the enemy dumps at Rosieres, and were pushed westward to meet the ones being laid from the west end eastward. The French were very much pleased with this day's performance. Rails were also salvaged from Rosieres for building the new decauville tranship yard at Les Buttes. It was impossible to go east of Rosieres at that time so the battalion took over the supply siding at Boves. Much ammunition had to be moved to permit going on with the work. In the meantime also it took on the building of bridges at Froissy and Bray.

On Aug. 29, 1918, the battalion commenced on the line into Chaulnes and moved camp to Rosieres on Aug. 30, to be close to the work. On Sept. 3 track was into Marchelepot and the yard was used immediately. On Sept. 8 track was into Brie, and the battalion's train moved to Omiecourt to again be closely in touch with the work. On Sept. 10 track was at the Somme Canal at Peronne, and work was commenced driving piles for the bridge. Trains ran into Peronne on Sept. 12, into Doingt on Sept. 13, into Tincourt on Sept. 14, and into Roisel on Sept. 16, four days ahead of the date set by General Rawlinson. Double tracking was finished to Peronne on Sept. 19. On Sept. 24 16 of the battalion were killed and 11 wounded in Roisel yard, on Oct. 8 double track was laid into Epehy and over the bridge north of that point. On Oct. 10 track was laid into Gouzeaucourt and into Marcoing on Oct. 19. The Canadian Overseas Railway Construction Corps had already finished from Marcoing to Wambaix and the battalion jumped in ahead of them and put the tracks into Busigny, through Cattinieres, Caudry and Bertry, also assisting the French in getting into Wassigny. The delayed action mines in this section made the work particularly hazardous, in one instance blowing the center portion completely out of the trains, and the bridge at Caudry was blown up after the tracks had been completed over it.

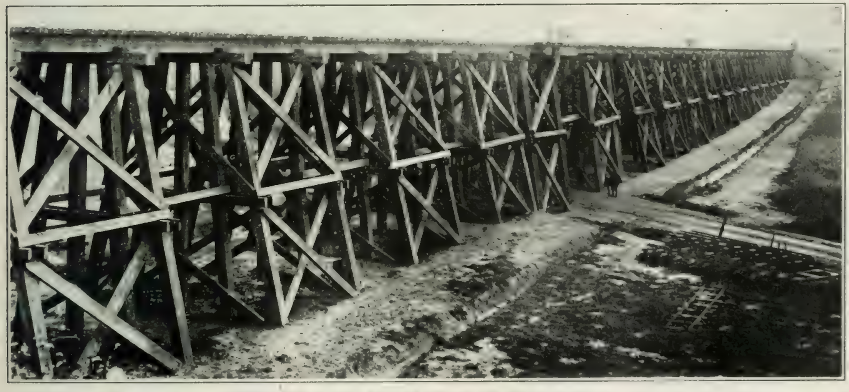
The 2nd Battalion was working between Wassigny and Le Cateau so the 1st Battalion again jumped ahead, taking the line from Le Cateau to Maubeuge, on which the bridge work was very heavy, particularly those east of Le Cateau, at Aulnoye, Hautmont, and Maubeuge. On this work, in two places, in a single half mile, were craters that amounted to 10,000 cu. yds. of earth in one of the very high fills. This line runs through Landrecies, Hachette, Halte, Sassegnies, Aulnoye, Hautmont, Louvroil, Sous Le Bois, into Maubeuge and thence to Charleroi, through some of the richest manufacturing districts seen. From Aug., 1918, the battalion worked full steam, not slackening in the terrible pace till armistice day, after which it had Sundays off.

Reference has been made in the foregoing to the Frevent-Hesdin line built by the battalion. The trestle bridge shown in the accompanying illustration is near the Frevent end of the line, and although it contains over 150,000 f.b.m. of timber and there was a very considerable amount of excavation work for the foundations, it was actually built and ready for operation in seven days. The work was of great interest to the French engineers who visited it during construction to learn Canadian methods in bridge building, and they were so impressed with the expedition with which the work was carried out that they had illustrations of it published in Le Miroir, in Paris. The construction was similar to that of a standard railway trestle in this country. It is 600 ft. long and about 40 ft. high. The work was carried out by the A company of the battalion, under command of Major J. B. Heron, with Lieut. John Hamilton, an old C.P.R. bridge man, in immediate charge. It was at first estimated by the army authorities that the work would take from a month to six weeks, but as before stated, it was built in seven days.

Officers of Battalion.

Following is a complete list of the battalion's officers, giving their former occupations and addresses as far as possible:—

Lieut.-Col. Blair Ripley, C.B.E., D.S.O., Engineer of Grade Separation, C.P.R, Toronto;
Major A. R. Ketterson, D.S.O., Assistant Bridge Engineer, C.P.R., Montreal;
Major T. R. Loudon, Civil Engineer, Toronto;
Capt. and Adjt. E. D. Toye, Storekeeper, Ontario District, Canadian Northern Ry., Toronto;
Major R. R. Holland, District Engineer, National Transcontinental Ry.;



Trestle Bridge on the Frevent-Hesdin Strategic Railway in France.
600 ft. long, 40 ft. high, containing over 150,000 f.b.m. of timber; built in 7 days by 1st Battalion Canadian Railway Troops.

Major F. G. Cross, Assistant Engineer, C.P.R., Calgary, Alta.;
Major H. B. Muckelstone, Assistant Chief Engineer of Irrigation, Natural Resources Department, Calgary, Alta.;
Major J. B. Heron, District Engineer, Canadian Northern Ry., Toronto;
Major W. Woods, Consulting Engineer and Contractor, Toronto;
Major A. T. MacDonald, Assistant Engineer, Halifax Ocean Terminals, Intercolonial Ry.;
Major L. B. Allen, City Works Department, Toronto;
Capt. J. H. Black, Resident Engineer, C.P.R., Sudbury, Ont.;
Capt. G. O. Fleming, Toronto Ry.;
Capt. W. J. Norman, Resident Engineer, C.P.R., Toronto;
Capt E. P. Muntz, Resident Engineer, Welland Canal, St. Catharines, Ont.;
Capt. G. H. Pethick, Engineer and Contractor, Vancouver, B.C.;
Capt. G. S. Grant, Contractor, Ottawa, Ont.;
Capt. G. B. Little, Toronto;
Capt. H. R. MacQueen, Civil Engineer, New Glasgow, NS.;
Capt. H. G. Hanson, Architect, Montreal;
Capt. C. P. Fenwick, Medical Officer, Toronto.
Lieut. O. P. Hertzberg, Assistant Resident Engineer, C.P.R., Toronto.
Lieut. F. A. R. McNair, City Works Department, Toronto;
Lieut. L. McD. Fleming, formerly secretary to Sir George Bury, as Vice President, C.P.R., Toronto.
Lieut. Joseph Johnston, Toronto;
Lieut. R. R. Hicks, Toronto.
Lieut. C. P. Van Norman, Toronto and York Radial Ry., Toronto;
Lieut. C. A. Scott, City Works Department, Toronto;
Lieut. P. L. Scott, Electrician, Toronto;
Lieut. John Hamilton, Bridge and Building master, C.P.R.;
Lieut. R. Francis, Contractor, Timiskaming, Ont.;
Lieut. J. E. Tremayne, Civil Engineer, Toronto;
Lieut. W. S. Hunter, Contractor, Vancouver, B.C.;
Lieut. J. M. Berry, Contractor, Toronto;
Lieut. R. Richards, Contractor, Toronto;
Lieut. M. L. Bouzon, Mining Engineer, Cobalt, Ont.;
Lieut. R. Nickle, Civil Engineer, London, Ont.;
Lieut. W. J. Nichol, Civil Engineer, Toronto;
Lieut. R. E. Lindsay, Civil Engineer, Toronto;
Lieut. F. O. D. Keily, Contractor, Winnipeg;
Lieut. H. M. Jupp, Contractor, Orillia, Ont.;
Lieut. E. Jupp, Civil Engineer, Orillia, Ont.;
Lieut. C. M. Lane, Civil Engineer, Montreal;
Lieut. A. S. Millar, Civil Engineer, Toronto;
Lieut. W. J. Wright, Civil Engineer, Toronto;
Lieut. T. Graedioger, Civil Engineer, Montreal;
Lieut. E. Thomas, Civil Engineer, Montreal;
Lieut. H. L. Gilmour, Civil Engineer, Ottawa, Ont.;
Lieut. F. G. Pusey, Contractor, Montreal.

Summary of the Battalion's Work.

Following is a summary of the work accomplished by the battalion, after going to France in Oct., 1916, up to Dec. 31, 1918:—

Decauville Railways—Somme Area, Dec., 1916-April, 1917.

Miles taken over from French for operation	30.0
Miles built by battalion	26.9
Miles maintained (about 30% was re-ballasted	169.7

Standard Gauge Railways—April, 1917-Dec. 31, 1918.

	Miles built.	Turn outs.	Yards graded.
Frevent-Hesdin line	13.12	33	55,600
5th Army, in 1916	8.0	33	30,320
Somme, 1917	45.42	52	72,000
Dunkerque area	5.87	15	22,000
Flanders front 1917-18	13.34	49	55,250
Amiens-Maubeuge line rebuilt	153.00	122	33,200
Total	238.75	304	268,370

On the reconstruction between Amiens and Maubeuge, 70 miles of new British rails were laid. German rails salvaged from their dumps and laid in the battalion's work, amounted to 5 miles. The balance of this work was construction, building one main line from two damaged ones, and 78 miles was thus built. The tracks were either systematically blown up or destroyed with a machine made for the purpose and which was dragged behind a heavy locomotive. This latter method rendered tracks more difficult to rebuild than the blown up ones.

Bridging.

Somme area, 1917	981 lin. ft.
Dunkerque area, 1917	276 " "
Flanders front, 1917-1918	345 " "
Hesdin to Frevent	630 " "
Amiens-Maubeuge, 1918	2484 " "
	4716 lin. ft.
Bridges re-inforced for French to carry British and U.S. heavy guns	511 lin. ft.
Bomb proofing of Wimereux viaduct	245 " "

This last item covers the recentering of a 3-arch, double-track, masonry bridge about 80 ft. high and the placing of a steel rail, bomb bursting, floor thereon. About 175,000 f.b.m. of timber and 3½ miles of steel rails were used. The Frevent trestle also contained about 150,000 f.b.m. of timber, and altogether, after going to France, the battalion placed in bridges, approximately 1,500,000 f.b.m.

Of culverts of various sizes over 6,000 ft. were laid of corrugated iron, concrete and wooden box.

Water supply works—At Candas, 8 miles of 4 in. pipe line were laid in trench 2 ft. deep, pumping station was built and pumps installed to deliver against a 200 ft. head. Earth work, 1400 cu. yd. Rock 400 cu. yd.

On Somme front, 1917—Water supply put in at Peronne and at Roisel. This included erection of water towers, stand pipes, pipe lines and putting in of permanent pumping plants.

On Flanders front, 1917—Six miles of 6 in. pipe were laid in 3 ft. trench, between pumping plant, west of Proven and International Corners. Ten miles of 4 in. pipe were lowered between International Corners and Poperinghe, without interrupting water supply. Excavation and backfill—12,000 cu. yd.

Boubers system, 1918—Laid 887 ft. of 3 in. pipe and 158 ft. of 6 in. pipe, also erected stand pipe and water tower.

Omiecourt system, 1918—Set up new pumping plant and repaired old line that had been broken by bombing.

Peronne, 1918—Repaired existing system that had been put in by the Huns and made extensions to it.

Roisel, 1918—Repaired existing system, erected new water tower and stand pipes to supply the yard.

Caudry, 1918—Repaired existing system that has been put completely out of business. This was a very tedious job as many pipes in the city had to be dug out and repaired, before water could be got into tank at station.

[illegible], 1918—Erected new pumps and boilers, repaired bad breaks in large concrete water tank, erected three new standpipes and repaired numerous breaks in old lines.

Steam shovel work—At Fillivres the battalion operated its own steam shovel to ballast the Frevent-Hesdin line, and some 36,272 tons were taken out of a chalk pit at that point. It had on almost constant loan a steam shovel crew, with the Royal Engineers.

Reballasting and maintenance—On the Flanders front the battalion reballasted 23 miles of tracks which the Royal Engineers had built, and during the winter of 1917-1918, maintained some 49 miles of track.

Letters of Appreciation From the High Command.

On Feb. 3, 1919, General Sir Henry Rawlinson, commanding the 4th Army, sent the following letter entirely in his own hand-writing:—

"Dear Colonel Ripley:—I am sorry not to have had an opportunity of seeing the 1st Battalion Canadian Railway Troops before their departure from France, in order to thank them personally for all the excellent work they have done on the many occasions when they have served with my 4th Army. I call to mind especially their work between Maricourt and Peronne in 1916, and on from there to Epehy in the same year, during the first battle of the Somme. I remember the difficult and exacting time they had in Flanders, in 1917, when they constructed the line from Elverdinghe to Pilkem and east of it, in mud that almost defied construction. But their services during 1918 were almost vitally important, during the battles of the hundred days east of Amiens. The rapidity with which they got the line through from Villers Brettonneux to the Somme has always filled me with admiration, and it was largely owing to their industry and enterprise that my army was able to advance from the line of the river to the attack of the main Hindenburg line. When I made a special call on them to complete the construction of the railway to Roisel, they responded with a spirit for which I can never be too grateful to them, for on the completion of that line depended the supply of ammunition for the force of 1,500 guns which did the bombardment of the enemy's main Hindenburg position. The date of the great battle of Cambrai-St. Quentin, which Marshall Foch has described as the most decisive battle of the war, depended on the results of the efforts of your men to reach Roisel. I asked them to be there by Sept. 20, they were through by Sept. 16, and we were, therefore, able to assemble sufficient shells in the gun positions to fight the general action on Sept. 29. I spoke to your men on several occasions when passing them at work on the railway, and both from personal observation, and the reports of my transportation department, their skill and perseverance seems to have been beyond praise. I thank both you and them most heartily for the splendid work they have carried out whilst serving with the British armies in France, and I wish all ranks every good fortune in years to come."

Major-General S. D. L. Crookshank, Director General of Transportation, wrote Feb. 6, 1919, as follows:—

"Dear Colonel Ripley:—I very much regret that I was unable to personally express to your officers, n.c.o.'s and men, my appreciation of the work of your battalion, prior to their departure for home. Your battalion, as the first construction battalion to come to France, established and maintained a very high standard of efficiency, of which the Corps Canadian Railway Troops, may well be proud and I would add that it has been a matter of great gratification to me to have been associated with you in your splendid career in France. I have had several opportunities of seeing your battalion at work, both on the Somme and on the Ypres salient, and, from my personal observation, the confidence I felt that any work assigned to your battalion would be carried out with expedition and skill, has always been most amply justified. You have never failed. The bridge work done by your battalion is especially worthy of mention, and it has been an example of what can be done, under difficult circumstances, in record time, by those who know how to do it. I hope that you will convey to all ranks my personal thanks for the magnificent work that they have done, and my best wishes for their future."

Over $80,000,000 Required for Canadian National Railways.

The Minister of Railways, Hon. J. D. Reid, in speaking in the House of Commons, July 5, said: "I desire to give some information as to the operation of the railways and the money that will be required in connection with them during the present fiscal year. For the Canadian Northern Ry. system the gross earnings will amount to $94,000,000 and the working expenses, including fixed charges, to $103,946,000, a loss of $9,946,000. The government system's earnings, it is estimated, will amount to $37,321,485, and the working expenses to $42,812,240, a total loss on the Intercolonial and Transcontinental part of the Canadian National system of $5,490,755. That is the statement made at the beginning of the year. It is estimated that the loss on the Grand Trunk Pacific will be about $9,000,000, and the loss on the Canadian National Ry. system as a whole, say, roughly, $19,000,000, or a total of $28,000,000. In reply to a question asked by a member last year, I would state that this estimate includes interest on all the Canadian Northern Ry. system. There is nothing for interest on capital in connection with the Intercolonial or National Transcontinental Ry. system.

"Expenditure on the construction of betterments this year on the Canadian Government end will be $11,121,600. On railway equipment, rolling stock, for the whole system, $20,000,000. That is the Canadian Northern, the Intercolonial and National Transcontinental. On the Canadian Northern system only we estimate $21,421,000, made up as follows: Western lines construction, $6,975,000; western lines betterments, $4,479,000; eastern lines construction, $2,082,000; eastern lines betterments, $6,885,000; and general, $1,000,000. This means a total of $9,057,000 for construction, and $12,000,000 for betterments.

"The following is a summary of the moneys to be supplied to the directors to meet the expenditures enumerated: Loss, $28,000,000; construction on Canadian Government Rys., $11,121,000; equipment, rolling stock, etc., $20,000,000; Canadian National Rys. construction and betterments, $21,421,000, or a total of $80,542,000. These are the figures as estimated for the coming year.

"The title for the rolling stock is in the Canadian National Rys. system and the government is nominally owner of all stock. Contracts have already been given for locomotives for some $2,850,000; freight equipment, $8,650,300; passenger equipment, $4,450,000; a total of some $16,555,000 odd."

Railway Department Estimates for 1918-1919 and 1919-1920.

In addition to the estimates of which particulars were given in Canadian Railway and Marine World for May, pg. 259, the supplementary estimates for the year ended Mar. 31, 1919, submitted to the House of Commons during the recent session, included the following items:—

Chargeable to capital:—	
Quebec and Saguenay Ry. construction, further amount required	$250,000.00
Chargeable to income:—	
Surveys and inspections, railways, further amount required	$ 10,000.00
Chargeable to collection of revenue:—	
Canadian Government Rys.—Working expenses, further amount required	$6,000,000.00

The supplementary estimates for the year ending Mar. 31, 1920, contained the following items:—

Chargeable to capital:—	
Hudson Bay Ry., construction	$300,000.00
Quebec and Saguenay Ry., construction	550,000.00
To provide for the purchase, at prices not exceeding the amounts herein specified, of the following railways (the debts of each railway to the Canadian Government Rys. to be cancelled); interest on the purchase price of each to be payable, at 5% a year from the date of taking possession to the date of transfer of title: (Such of the said railways as are within the jurisdiction of the Parliament of Canada are hereby authorized to sell their respective assets and undertakings accordingly):—revote—	
York & Carleton Ry	18,000.00
St. Martins Ry	65,000.00
Moncton & Buctouche Ry	70,000.00
Elgin & Havelock Ry	30,000.00
Salisbury & Albert Ry	75,000.00
Interest estimated from date of taking possession to Mar. 31, 1920, not exceeding	34,000.00
To Edmonton, Dunvegan and British Columbia Ry., for subsidy on its branch line from a point on its line as located, situated near the Spirit River settlement, to and through the Grand Prairie Land District, Alta., or on its main line. To be expended on such branch line or any portion of the main line of the railway or both, under the supervision and direction of officers of the Railways Department and upon such terms and conditions as may be approved by the Governor in council	258,797.16

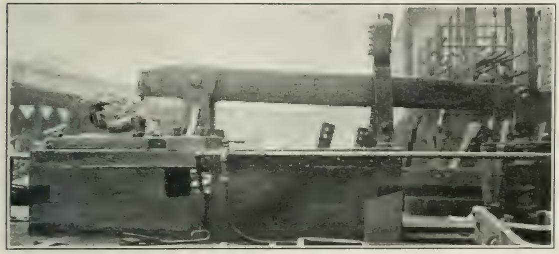
A Railwayman's Bravery—Charles Boutillier, a locomotive man of Stratford, Ont., has been awarded the Royal Canadian Humane Society's medal, suitably engraved, for saving the life of a two-year-old child who was playing on the track near Pleasant River station, on the Lake Erie and Northern Ry., in May. Noticing that it was too late to stop the locomotive, Boutillier climbed on to the pilot, and reaching out, lifted the child to safety.

Fuel Loss—On a recent test of a consolidation locomotive having 3,000 sq. ft. evaporating surface, and a 36-unit superheater, it was found that with 7 flues plugged, there was fuel loss of nearly 3%, and this increased in a nearly constant ratio to about 25% when 18 of the flues were plugged.

Railway Mechanical Methods and Devices.

Rivet Shears at Vancouver Shops, C.P.R.

Practically every railway shop has improvised some method of shearing off the rivets from coupler yokes, the principal method being to build up some simple machine that is operated by compressed air. The accompany illustration shows such a machine, but has the advantage of being much more massively built than usual.

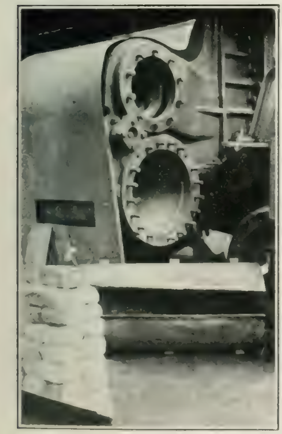


Air Operated Shear for Stripping Couplers.

The whole is built up on a base of wooden beams, with a solid cast iron base. Most of the parts are specially made, but the use of scrap material has been embodied as far as possible. The whole arrangement is self-explanatory.

Welding Cracked Cylinder, Grand Trunk Pacific Railway.

The G.T.P.R. had a locomotive with a cracked cylinder, the crack running the full length of the cylinder, and it was decided that the defect could be remedied by autogenous welding. The crack was enlarged by the use of an air hammer, forming a V-groove, about 2 in. wide at the top, tapering down to a width of from ¼ to ½ in. at the bottom.



Cracked Cylinder Repaired by Welding.

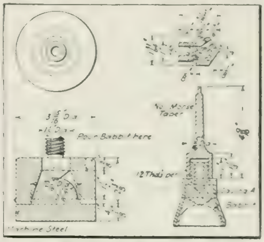
After this preparation, the whole bottom of the cylinder was heated to a cherry red, with a charcoal fire, and the weld made while in this condition. The V-groove was completely filled, and a slight seam was left for truing up later. On the completion of the welding, another charcoal fire was built inside the cylinder, a specially prepared shield being made for the outside of the cylinder, in order to hold the heat, and the whole cylinder was brought to a cherry heat, and held at this temperature for several hours, when the whole body was allowed to cool down slowly. 48 hours was then allowed to elapse before the boring bar was applied.

With this method, the whole cylinder cooled and contracted slowly and uniformly, and there was no sign of a crack, either in the fracture or in any other part of the cylinder. Only the welding seam needed to be trued off after welding, as the cylinder did not distort, but the cylinder expanded sufficiently to necessitate the truing down of each end about 1-32 in.

We are indebted to A. McTavish, formerly Master Mechanic, Transcona Shops, now Travelling Engineer, Dearborn Chemical Co., for the foregoing.

Tool for Grinding Superheater Joints.

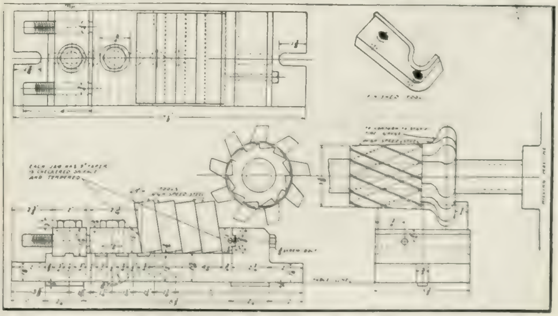
The tool illustrated herewith, for grinding superheater joints, is made partly of steel and partly of babbitt. The same steel shank is used for both the male and female grinders, for the tube seatings, or tube ends. The method of forming both grinding tips, is shown clearly in the illustration. The management has found this tool to be very successful for locomotive house work.—A. Connell, Tool Foreman, Kansas City Southern Rd.



Tool for Grinding Superheater Joints.

Chuck for Milling Wheel Lathe Forming Tools.

This chuck was designed in order that four tools might be milled at one setting, thus saving quite a lot of time where large quantities are to be milled. The greatest feature in using this style of cutter is keeping it cool. A constant stream of lubricant should be applied, the quality of the lubricant not being of such great importance as compared to the way in which it removes the heat. By keeping the cutter cool, very little resharpening is required. We use two cutters, one for road locomotives, and the other for switchers, this combination covering all the tires turned. W. C. Stephens, Machine Foreman, Atlantic Coast Line Rd.



Chuck for Milling Wheel Lathe Forming Tools.

Problems in Design and Maintenance of Car Trucks in Relation to Maintenance of Roadway.

By C. S. Gzowski, Jr., M.E.I.C.

The following are a few comments on the paper on problems in design and maintenance of car trucks in relation to maintenance of roadways by W. J. Hyman, then Chief Draftsman, Car Department, G.T.R., which was published in Canadian Railway and Marine World for May, with special reference to length of wheel base of trucks.

The difficulties in design for wheel truck as well as track lie almost within the passing of a train around curves. If all curves on the line were of the same radius, and all trains travelled at the same speed, a solution would be comparatively simple, but this not being the case, the design for wheels, trucks and track at best is always a compromise. If the sluing of the trucks on curves, or as Mr. Hyman terms the force to do this, the "turning moment" was the only force or cause which makes the outside wheels hug the rail, a longer wheel base would perhaps effect a cure. .

As those who have studied the problem know, there are three main forces or causes for a forward outside wheel on an ordinary railway truck to crowd the outside rail, viz: (1) centrifugal force, (2) the rigidly coupled wheels on an axle, acting as a rolling cylinder, always tending to roll in a straight line, and (3) the force necessary to swing the truck to the proper angle when first coming on to a curve, and again when leaving it.

The first, or centrifugal, force can be overcome by the correct elevation of the outside rail, but as the correct elevation is exactly relative to the speed and sharpness of the curve, in practice any elevation used is only exactly right for one certain speed around that curve, and therefore cannot be made to nullify centrifugal force on all trains, in practice. So that although this trouble no. 1 has an exact solution theoretically, practically a compromise has to be made, leaving it in part always with us.

The second trouble, of the pair of wheels rolling like a cylinder, always in a straight line, for any given curve in one direction, would easily be overcome (if this pair of wheels was not coupled to one or more pairs to revolve parallel to them, as in a truck) by making one wheel smaller and thus having a rolling cone. Raiway curves varying so largely in radius, and the necessity to provide for straight track prevents anything in this direction as a cure, except the very mild compromise of a new wheel shaped so the diameter of tread will be smaller on the inside wheel when it is thrown inwards, and this, of course, disappears in a worn wheel, and often becomes reversed in a wheel so badly worn as to become grooved.

Now we come to the point of the length of the wheel base. The coupling of a pair of rigidly fixed wheels on an axle to one or more other such pair of wheels, as in an ordinary railway truck, makes the action of these coupled rolling cylinders quite different to a single rolling cylinder forced to travel in a curve, and in reality add another cause to our troubles of rounding a curve. And this trouble is in more than a direct proportion to the distance apart the cylinders are coupled rigidly parallel to each other. (The same would be true with cones or with wheels not rigidly fixed to their axles). . This is so well known in practice that a wagon is built so that one pair of wheels will turn when rounding a curve, and that when railway "wagons" got beyond a certain length, instead of having only two pair of wheels under them, swiveled trucks were substituted. Of course the reason is plain, that each pair of wheels to travel around the curve most easily, whether fixed wheels rolling as a cylinder, or a cone, or loose wheels, on an axle—must be travelling in a plane, tangent to the radius of the curve. . So if a pair of wheels are coupled rigidly parallel to each other, both cannot fulfill this condition, and the further apart they are the greater is the discrepancy from this required condition. It is this condition of not being parallel to the rail which gives the climbing effect to a wheel. In other words, the longer the wheel base of a truck the more aggravated this trouble, which is subsiduary, in practice, or trouble no. 2 if not considered a main fourth one.

The third trouble, that of turning a truck on to and off a curve, in practice, particularly with curves spiraled, is certainly the least of all curve curses. If it was the major trouble, most of the flange wear of the rail would be on the ends of the curve, which is not the case, as from this cause no force would be applied after the truck was once turned, until it had to be straightened again.

Now the length of the wheel base of a truck, as in the other parts of the problem also becomes a compromise. For the curved track, certainly, it should be as short as will be consistent with good practice for the other consideration in the problem. . The conflicting points for the length of wheel base boil down to this. On a curve for turning, the truck to be as long as possible, but this is outweighted by the other consideration, to have itas short as possible on a curve, to make the axles radiate with the curve, so that on a curve we must vote for a short wheel base. On a tangent, of course, to be as long as a quarter the coupling length of the car, for equal load distribution on the track. For structual reason the ideal length would certainly be long; how long would depend on detail of design and material used.

As our troubles of wheels and track come mainly from the curved track, this must have the main consideration in design, and it seems to the writer a short, not a long, truck for this is more desirable, and that the present length as used, is a good compromise.

The Total Cost of Train Service per 1,000 gross ton miles in the U.S. in Feb., 1919, was 126.5c; this was made up of 43.1c for locomotive repairs and locomotive house expense, 40.3c for locomotive fuel, 3.4c for other locomotive supplies, 34.8c for locomotive men and trainmen, and 4.8c for train supplies and expenses.

The Cost of Locomotive Service, per locomotive mile in the U.S. in Feb., 1919, was 120.7c, compared with 106.3c in Feb., 1918, an increase of 13.5%; and the total cost of train service per train mile was 169.3c, compared with 155c, an increase of 9.2%.

Heavy Loading—Quick Release.

The Canadian Railway War Board has issued the following bulletin:

Every time a 1914 freight locomotive moved a string of loaded cars, it pulled 20 tons of freight and 20 tons of freight car. Taking a 155% locomotive on a 0.4 grade (hauling 2,500 tons in all), it could handle per average loaded trip 1,250 tons of freight and 1,250 tons of freight car. In 1919 the average load per car had risen to 27 tons, increasing the net freight hauling capacity of the same locomotive 7-47ths of 2,500, or 185 tons—15%! Such was the effect of one of the railway lessons taught by the war; heavy loading of freight cars.

To the railways this heavy loading meant: Fewer locomotives hauled a given amount of traffic. A greater number were free for extra trains or for emergency uses. Fewer cars were required for any given amount of traffic. Each act of every operating department employe had a higher efficiency.

To the shippers and general public: It increased the railway capacity of the country. It reduced their risk of delayed shipments. It mitigated the seriousness of delays—if any. It speeded up all business. It laid the ghost of general railway congestion.

For if, for example, 107 loaded freight cars must be moved over a given stretch of track before another train can be made up to carry your five cars—if 20 of the 107 carry only 20 instead of 27 tons —then it is clearly due to the light loading of those 20 earlier cars that your five cars are left behind!

A second sound practice established during the war had to do with loading and unloading cars promptly. If your city of Domville imports 1,000 tons of freight a day, exports 500 and has to handle 10,000 tons of through traffic through its railway yards. If it has three miles of delivery tracks and seven miles of receiving and classification tracks—10 miles in all—then the handling of your 11,500 tons of freight a day will require a loaded car for every 27 tons, half a car empty (the empty mileage of the average freight car is roughly one-half its loaded mileage) and 40 ft. of track room for every car, loaded or not. This works out at five miles of track, or half the terminal capacity to handle one day's business through your town. Of course this is ideal: we are allowing that the average car clears the terminal in a day, counting through cars with cars which are being loaded or unloaded.

But now assume that you and your neighbors relax your usual speed in loading and unloading. Perhaps you have cut down your shipping room staff, or your foreman is placing some other work ahead of this. "Well," you say, "we pay demurrage!" You do. But you do more. For every day's delay in releasing one car, you hold 40 ft. of terminal track capacity, for 2 cars 80 ft.! If half the shippers and consignees in Domville hold their cars one day longer than usual, then track capacity for 1500 tons of freight, plus 50% for empties is held up—83 cars or 3,320 ft. of track. Two days—6,640 ft. Four days—13,280 ft.—two miles!

There is only one safety valve for traffic pressure, the delivery track. The longer it remains closed the greater the pressure. For this is how the terminal works: The main lines empty into the receiving tracks. The yard locomotive "pulling his string" from the receiving track, shunts the cars from the end into the various classification tracks: Tracks 1-2-3-4 for, say, local delivery; tracks 5-6 for X-port; track 7 for Y-ville; track 8 for Z-ville; and so on. Later the yard crews clear these classification yards pulling out a string from track 8 for Z-ville; track 7 for Y-ville; tracks 1 to 4 for local delivery. But if you are not releasing yesterday's cars how can you take today's? If you can't take 'em the classification yard must! The more you give the classification yard the heavier it becomes to work—till it jams!

Here, heavy loading and quick release of cars work with double effect. If the freight imported and exported from your city is loaded merely by 1914 standards—seven tons less a car—862 cars will be required instead of 639! Seven miles of track instead of five! And 15% more locomotives.

Birthdays of Transportation Men in August.

Many happy returns of the day to,—

W. E. Allison, Assistant General Agent, Mail, Baggage and Milk Traffic, C.P.R., Montreal, born at St. Eugene, Ont., Aug. 1, 1886. .

V. T. Bartram, ex-Purchasing Agent, Timiskaming & Northern Ontario Ry., now of General Contracting & Dredging Co., Toronto, born at Ottawa, Aug. 2, 1880.

J. C. Beckwith, District Engineer, Levis, Edmundston and St. Maurice Divisions, Quebec District, Canadian National Rys., Quebec, Que., born at Fredericton, N.B., Aug. 1, 1875.

C. B. Brown, Chief Engineer, Eastern Lines, Canadian National Rys., Moncton, N.B., born at Ithaca, N.Y., Aug. 27, 1879.

J. S. Carter, District Passenger Agent, C.P.R., Nelson, B.C., born at Aurora, Ill., Aug. 14, 1864.

A. E. H. Chesley, General Accountant, Dominion Atlantic Ry., Kentville, N.S., born near Annapolis Royal, N.S., Aug. 27, 1877.

A. B. Chown, acting General Agent, Passenger Department, G.T.R., New York, born at Belleville, Ont., Aug. 4, 1887.

C. H. N. Connell, District Engineer, Montreal and Saguenay Divisions, Quebec District, Canadian National Rys., Quebec, born at Woodstock, N.B., Aug. 26, 1876.

H. W. Crawford, ex-General Agent, Canada Steamship Lines, Ltd., now of the U.S. Shipping Board, Emergency Fleet Corporation, Cleveland, Ohio, born at Bowmanville, Ont., Aug. 24, 1887.

E. L. Desjardins, Superintendent, Division 1, Quebec District, Canadian National Rys., Levis, Que., born at St. Jean Port Joli, Que., Aug. 1, 1859.

A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., and President, Canadian Electric Railway Association, born in Bosanquet Tp., Ont., Aug. 21, 1870.

L. C. Fritch, Vice President, Minneapolis & St. Louis Rd., and Chicago, Rock Island & Pacific Rd., Chicago, Ill., born at Springfield, Ill., Aug. 11, 1869.

J. V. Foy, General Passenger Agent, Canada Steamship Lines, Ltd., Toronto, born there Aug. 27, 1882.

Geo. H. Ham, Head Office Department, C.P.R., Montreal, born at Trenton, Ont., Aug. 23, 1847.

W. B. Harper, Resident Engineer, Laurentian Division, Quebec District, C.P.R., Montreal, born at Baie Verte, N.B., Aug. 15, 1882.

W. P. Hinton, Vice President and General Manager, Grand Trunk Pacific Ry. Co., and Grand Trunk Pacific Coast Steamship Co., and General Manager for the Receiver, Winnipeg, born at Hintonburg, Ont., Aug. 30, 1871.

F. S. Isard, Director of Finance, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., Aug. 14, 1888.

F. L. Lamplough, Superintendent, Ottawa Division, G.T.R., Ottawa, born at Cambridge, Vt., Aug. 15, 1867.

J. D. McDonald, General Passenger and Baggage Agent, Grand Trunk Western Lines Rd. (U.S.R.A.), Chicago, Ill., born at Toronto, Aug. 27, 1855.

M. K. McQuarrie, Engineer, Dominion Atlantic Ry., Kentville, N.S., born at Sault Ste. Marie, Ont., Aug. 17, 1884.

A. H. Mahon, District Locomotive Foreman, Grand Trunk Pacific Ry., Edson, Alta., born near Ottawa, Ont., Aug. 27, 1874.

W. J. Meakin, Locomotive and Car Foreman, C.P.R., Wetaskiwin, Alta., born Toronto, Aug. 22, 1872.

C. Montgomery, Master Mechanic, Pere Marquette Rd., St. Thomas, Ont., born near London, Ont., Aug. 29, 1860.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver, B.C., born at Greenwich, Eng., Aug. 27, 1875.

L. Palk, Assistant Secretary, Winnipeg Electric Ry., and Secretary, Winnipeg, Selkirk and Lake Winnipeg Ry., Winnipeg, born there, Aug. 14, 1885.

Hon. Gideon Robertson, Minister of Labor, born at Welland, Ont., Aug. 26, 1874.

J. M. Rosevear, General Auditor, G.T.R., Montreal, born at St. Lambert, Que., Aug. 9, 1869.

W. G. Ross, President, Montreal Harbor Commissioners, born at Montreal, Aug. 6, 1873.

W. LeB. Ross, Local Treasurer, G.T.P. Ry., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

F. C. Salter, European Traffic Manager, G.T.R., and Canadian Express Co., London, Eng., born at Sarnia, Ont., Aug. 31, 1863.

W. H. Sample, General Superintendent of Motive Power and Car Department, Grand Trunk Ry., Montreal, born at Altona, N.Y., Aug. 20, 1864.

A. O. Seymour, General Tourist Agent, C.P.R., Montreal, born at Ogdensburg, N.Y., Aug. 14, 1887.

S. A. Simpson, Superintendent, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Winnipeg, born at Toronto, Aug. 22, 1880.

J. F. Sweeting, Industrial Agent, Natural Resources Department, C.P.R., Calgary, Alta., born at Worthing, Eng., Aug. 20, 1872.

W. J. Sturges, acting Assistant Purchasing Agent, Grand Trunk Pacific Ry., Winnipeg, born at Fairfield, Vt., Aug. 28, 1877.

L. Tait, Secretary-Treasurer, London St. Ry., London, Ont., born at Hamilton, Ont., Aug. 9, 1882.

F. E. Warren, General Car Foreman, C.P.R., Winnipeg, born at Chelsea, Que., Aug. 29, 1872.

W. B. Way, Superintendent, Division 1, Central District, Canadian National Rys., Cochrane, Ont., born at Bowmanville, Ont., Aug. 22, 1867.

H. E. Weyman, Manager, Levis County Ry., Levis, Que., born at Guildford, Eng., Aug. 27, 1883.

War Purchasing Commission Urges Use of Government Lines.

The following appeared in a recent issue of the Canadian Official Record, which is published at Ottawa by the Dominion Government:—

" 'The War Purchasing Commission has sent out the following copy of a minute urging their clients to use government telegraph lines and ship by government railways:—

" 'In connection with freight, express, and telegrams, the government is anxious that as far as possible all business should be transacted over government lines, so that the public may receive as much benefit as possible from increased earnings. It will, therefore, be appreciated if, in so far as you control these matters, telegrams be sent by the Great Northwestern Telegraphs and express and freight over the Canadian National Railways.' "

On enquiry of the War Purchasing Commission, Canadian Railway and Marine World has been informed that the minute quoted above was issued to "all Dominion Government departments in connection with purchasing."

No Nationalization of British Railways.

London, Eng., copyright cablegram to Toronto Globe:—"The question of the nationalization of the railways and other transport undertakings of Great Britain, which the government raised in the hastily conceived Minister of the Ways and Communications bill, has met with a contemptuous negative from the House of Commons. There are pages of the measure as originally introduced by Sir Eric Geddes, which have been cut bodily out, one of them containing a clause empowering the minister to purchase and work any railway, tramway, canal or lock. Parliament took the strong position that it would have no veiled form of nationalization or permanent government control of transport, and as it stands the bill aims only at co-ordination and the avoidance of waste."

The Adoption of "Sailing Days" by the United States Railroad Administration, is said to have worked marked economy. The plan had for its purpose: The allocation of all less than carload traffic destined to certain designated common points to those lines which form the shortest routes and afford the most effective service; and the movement from the distributive centers to the smaller, or non-competitive points, upon all lines under government control, upon specified and convenient days of the week. Its adoption, through the elimination of some, and heavier loading of others, has resulted in the saving of thousands of cars, besides furnishing better service, through the avoidance of transfers.

About one-fifth the total U.S. export of car wheels and axles during Feb., 1919, was to Canada.

Steam Railway Statistics for Year Ended June, 30, 1918.

Following are extracts from the report of the Comptroller of Statistics, Railways Department, for the year ended June 30, 1918:—

The reports of the various railways show increases in gross earnings, as the result of a higher volume of traffic than in 1917, with material decreases in net earnings arising out of swollen operating expenses. There were added 274.32 miles to the railway mileage of the Dominion, bringing the total up to 37,878.52 miles. The additional mileage is chiefly in the western provinces. The factor of mileage as used in certain calculations which follow is not constant. It varies for the purpose of reckoning capitalization per mile and operating results per mile. In the latter instance, for example, regard must be had for trackage rights, and the average mileage in actual operation during the year.

Operating Mileage. Less Trackage Rights.

	1917-18	1916-17
Ontario	[illegible]	11,049
Saskatchewan	[illegible]	[illegible]
Quebec	[illegible]	[illegible]
Alberta	[illegible]	[illegible]
British Columbia	4,247	[illegible]
Manitoba	4,168	[illegible]
New Brunswick	1,959	1,959
Nova Scotia	1,428	1,422
Prince Edward Island	279	278
Yukon	102	102
United States	[illegible]	413
	38,879	38,601

The additions to second track in 1917-18 were 5.66 miles, making the total second track, 2,680.57 miles. The additions to yard track and sidings were 70.20 miles, making the total yard track and sidings 9,294.35 miles.

Capitalization.

	June 30, 1918	June 30, 1917
Stocks	$877,600,613	$872,829,993
Consolidated debenture stock	216,284,882	216,284,882
Funded debt	905,994,999	896,005,116
Total	$1,999,880,491	$1,985,119,991

Of the stocks $364,376,024 is classed as dividend paying, and $513,224,589 as non-dividend paying. The total dividends paid for the year were $30,103,982, equal to 8.26% on the dividend paying stocks, and to 3.43% on all stocks.

Cash subsidies paid to railways during 1917-18 amounted to $720,404.75. There was loaned to the Canadian Northern Ry. $25,000,000 and to the Grand Trunk Pacific Ry., $7,500,000 during the year.

The cost, including equipment, of government owned and operated railways, for which no capitalization is given in the foregoing statements, is as follows:—

	Miles	Capital cost	Cost per mile
Intercolonial	1,553	$141,636,812	$91,202
National Transcontinental	[illegible]	[illegible]	[illegible]
Prince Edward Island	[illegible]	[illegible]	[illegible]
Temiskaming and Northern Ontario	[illegible]	[illegible]	[illegible]
[illegible] Coal [illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	

Earnings and Operating Expenses.

Miscellaneous operations	4,443,665.75	3,962,543.94
General expenses	7,597,985.10	7,584,881.55
Transportation for investment cr.	8,056.58	18,207.15
Total	$273,995,435.79	$222,890,637.08

The average cost of maintenance of way and structures per mile of line was $1,327.57, against $1,006.17 for the year ended June 30, 1917. The average cost of maintenance of equipment per mile of line was $1,473.91 against $1,201.32 for the same periods.

Freight Traffic

	1917-18 Tons	1916-17 Tons
Products of agriculture	23,877,670	25,127,153
Products of animals	1,249,332	3,980,887
Products of mines	47,189,491	42,534,637
Products of forests	20,851,454	19,090,682
Manufactures	22,362,807	21,921,309
Merchandise	5,047,616	6,070,858
Miscellaneous	3,952,372	3,151,203
Undistributed	12,945	89,244
Total freight carried (tons)	127,513,687	121,916,272
Tons carried 1 mile	31,029,072,279	31,186,707,851
Tons carried 1 mile per mile of line	798,093	807,918
Average receipts per ton per mile	0.736	0.690
Average trainload (tons)	457	436
Average loaded cars per freight train	19.77	19.59
Average number of tons per loaded car	23.09	22.24
Average length of haul miles	243	256
Average revenue per ton	$1.789	$1.765
Tonnage per mile of line	3.281	3.159

The Origin of Freight was as follows:—

	1917-18 Tons	1916-17 Tons
Originating in Canada	68,385,790	67,134,164
Received from connecting lines	25,118,277	23,451,578
Received from United States lines	34,039,620	31,330,530
Total	127,543,687	121,916,272

Passenger Traffic

Passengers carried	50,737,291	53,749,680
Passengers carried 1 mile	3,190,025,682	3,150,127,428
Passengers carried 1 mile per mile of line	82,050	79,629
Passengers carried per mile of line	1,308	1,946
Passenger revenue	$67,089,363	$61,290,291
Passenger train revenue	$88,192,056	$80,767,114
Average receipts per passenger	$1.322	$1.140
Average number of passengers per train	64	59
Average number of passengers per car	17	16
Average number of cars per passenger train	5.8	5.7
Average passenger journey miles	63	59

The average earnings per passenger train car mile were 23.7c. This includes all classes of cars forming a passenger train.

Equipment.

	1917-18	1916-17
Passenger locomotives	1,372	1,389
Freight locomotives	3,603	3,490

Locomotives and Cars supplied to the American Overseas Expeditionary Force cost 245% and 214%, respectively, more than similar standard gauge equipment before the war.

Unit System of Handling Railway Correspondence.

By A. T. Roberts, Chief Clerk to Superintendent, C.P.R., Edmonton, Alta.

The unit system of handling railway correspondence undoubtedly commends itself to all who are conversant with the advantages to be derived from its adoption, and its superiority over any other system can hardly be disputed, ensuring as it does efficiency and economy; efficiency because delays on account of the temporary absence of the officer on the line are reduced to the minimum; economy because the necessity for writing to individual officers is obviated.

A properly organized superintendent's office, operating under the unit system, includes superintendent, trainmaster, division master mechanic, chief dispatcher, division engineer, bridge and building master, telegraph inspector and roadmasters, to whom the chief clerk is the chief assistant, as far as correspondence is concerned, and should insist on all telegrams and correspondence, both incoming and outgoing, passing through his hands, thereby precluding the possibility of erroneous or duplicated information being given. This method keeps him in touch with everything handled through the office. The system of recording and filing the multifarious correspondence handled in such an office is one which requires very careful study to obtain maximum results. Simplicity, for easy reference to records, is an essential factor, and the system adopted should be so complete that a comparative stranger may be able to locate correspondence in the shortest possible time. In order to achieve this objective, the numerical system of filing correspondence unquestionably stands pre-eminent.

Our system provides for numbers 1 to 1000 being used exclusively for handling telegrams. In the interests of economy, the file backs are used over and over again, filing the papers from which they are removed in numerical order and docketing them for the period covered. Letter numbers run from 1001 upwards. Registers are used for recording inward letters, mailgrams, and outward letters, mailgrams and telegrams. The register clerk should be an experienced man, thereby eliminating errors, and the necessity for the chief clerk, whose time is more valuable, assigning file numbers to correspondence.

The most important daily mail arrives in mail bag from the general su- clerk. By this time the important mail from district master mechanic, district engineer and car service agent. This arrives at 7.45k and the register clerk comes on duty at 8k, half an hour before the balance of the staff, in order to have the mail registered in, and ready for handling at 8.30k. The balance of the mail arrives at 8.30k and is opened by register clerk and junior clerk, after which it is handed to the chief clerk to look through, for the purpose of picking out, for preference handling, everything requiring the personal attention of an officer. While the mail is being opened, telegrams received during the previous night are given attention by the chief clerk. By this time the important mail is attached to files ready for reading, and distribution, by the chief clerk, to the different officers, followed by the less important mail as soon as attached, which is handled in the same manner.

A card index is used for recording important correspondence relating to the handling of different reports, such as conductors' train reports, heated cars, refrigerator cars, etc. General subjects, such as "Allowance for grain doors supplied by shippers," "Employment, requests for, 1919," "Engineers' seniority lists,“ are entered on red cards; everything pertaining to company's property, under station heading, such as "Edmonton," "Stockyards," "Water rates," "Electric light rates," is entered on blue cards; all private sidings, elevator and coal shed sites, under station heading, such as "Edmonton," "Smith & Co., spur track," "Burnwell Coal Co.'s site," etc., are put on blue cars, with the file number shown on the card opposite the subject.

Derailments, personal injuries, stock killed, washouts, slides, and fires, are also specially recorded on cards printed for that purpose. Staff records are kept in alphabetical order, in the different branches of the service, and file number assigned to each employe on entering the service, which number is shown on top left hand corner of staff card and copies of staff forms and medical reports are kept on that file.

Correspondence relating to bridges and culverts, is recorded in card index, a separate card for each subdivision, the mileage of the bridge or culvert, as the case may be, being shown on the card, with the file number opposite, in the same manner as other special subjects.

Car numbers appearing in correspondence are recorded in an indexed car record book, with a brief statement and file number opposite the car number: For instance, shipment in car 123,489 is pilfered in transit; this would be shown on page 89 in car book thus: "1234, pilfered, file 10139." By this means the information is immediately available and the possibility of duplicating the file is eliminated, as it is frequently weeks and sometimes months before the claim is referred to the superintendent's office. The time consumed in making this record is negligible.

Experience proves that particulars of delays to trains or locomotive failures are generally handled by telegrams, at least in the initial stages, and it is therefore good practice to note the file number against the train or locomotive concerned, on daily performance report.

The "Hand me" system of handling outstanding correspondence is particularly well adapted to reduce the number of files not in filing cabinets, to the minimum. In explanation of its operation, let us assume that on May 1 the agent at B—— was requested to furnish certain information, which in the ordinary course should be forthcoming in seven days; on the file copy we would write "Hand me May 8" and the file number of that particular file would be entered in a common diary under date of May 8, and file put in filing cabinet; if the reply had not been received on May 8, the file would be brought out and the agent in question traced for reply. For less important files it is only necessary to write the date on the file copy, the number being entered in the diary in the same manner. When replies are received the dates are cancelled. This system obviates the necessity of holding files in abeyance baskets, which is prevalent in some offices. It is very discouraging when looking for a file to have to search through a number of outstanding files in abeyance baskets and officers' desks, in order to locate a particular file required. This is unnecessary with the "Hand me" system, which reduces the number of files not actually in the filing cabinets to the minimum.

The system described in this article has worked out satisfactorily in this office since its inception nearly five years ago. Of course, it is admitted that no system is so perfect as to overcome the human failure of placing a file in its wrong place in the filing cabinet, but the possibility can be precluded to a great extent by the employment of a careful filing clerk.

I am an interested reader of articles written with the object of promoting efficiency in office organization and management. One article I had the pleasure of reading recently, was that by W. H. Mathews, chief clerk to Superintendent, Canadian National Rys., Capreol, Ont., appearing in Canadian Railway and Marine World for February, and while I do not wish to be too condemnatory, I would hesitate to adopt the system outlined, to replace the one in operation in this office, because the introduction of locomotive and car numbers into filing systems has a tendency to confuse rather than simplify the system. While Mr. Mathews dealt with a number of subjects handled in a division superintendent's office, there was no reference made to the method employed in recording "Applications for employment," "Enquiries regarding lost property left in passenger trains," "Requests for transportation," "Applications for bulletined positions," "Petitions for increased train service," "Increased facilities for handling livestock," "Car supply," and numerous other subjects.

F. W. Lambert, chief clerk to General Superintendent and Chief Engineer, Algoma Central and Hudson Bay, Sault Ste. Marie, Ont., in his article in Canadian Railway and Marine World for May, recommends the Williams filing system. That system, in my opinion, creates too many general files, all correspondence being classified and a number assigned to each class. There is nothing more provoking when looking through a file on a certain subject than to find correspondence relating to something entirely alien thereto, although, granted, it may come under the same category. It will be found that by reducing the number of general files to the minimum, a lot of time and labor will be saved, in fact there is no necessity for more than four of these files in a railway superintendent's office.

The Northern Pacific Rd. is using moving pictures, to demonstrate the advantages and disadvantages of different methods of firing, and the effects of wastefulness and carelessness in the operation of locomotive and the handling of fuel.

The Terminal Cartage Co. has been incorporated under the Ontario Companies Act with an authorized capital of $40,000 and office in Toronto, to carry on the business of carting, forwarding, transporting and distributing goods and merchandise of every description.

There are about 5,000 locomotives equipped with mechanical stokers in the U.S.

Steam Railway Statistics for Year Ended June 30, 1918.

Canadian Railway and Marine World for July contained a table giving the mileage of all steam railways in Canada, with details of the freight and passenger earnings and of the operating expenses and net operating earnings or deficits. In the following table the 1st column shows the net revenue or deficit on the railway operations of the several companies; where there was a deficit the figures are preceded by a minus mark, thus —; the 2nd the profit or loss from operations outside railways, and the 3rd the income from all other sources. The 4th column shows the taxes paid, the 5th gives the gross corporate income, from which is deducted the amounts in the 6th column, viz: rents, interest on funded debt, sinking fund, etc.; the 7th column showing the net corporate income available for special appropriations, dividends on common and preferred stock, or held in profit and loss account. The cents have been omitted in the columns, but are included in the totals.

Name of Railway	Net operating revenue or deficit	Profit or loss from outside operations	Other income from all sources	Taxes deduction	Gross corporate income or loss	Rents, interest, sinking funds, etc.	Net corporate income or loss
Alberta and Great Waterways	$ —9,856	$ —3,107	$ 23,217	$ 1,865	$ 8,387	$ 191,650	$ —183,262

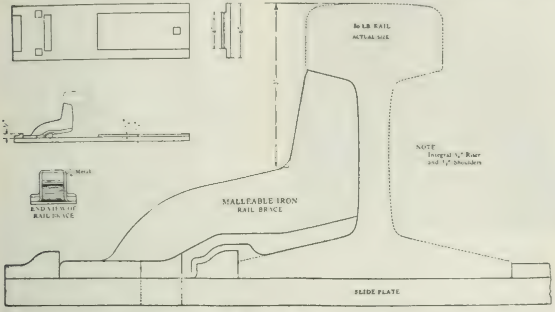
Labor Saving Devices for Railway Track Work.

Following is the report of the committee on labor saving devices as adopted at the Roadmasters' and Maintenance of Way Association's last annual meeting:—

Mechanical Tie Tampers—It is the committee's opinion that no tool in recent years furnished to the track forces made its appearance at a more opportune time or filled in a greater void than the power operated tie tamper. It may be reasonably said it is here to stay, although for several reasons it has been a somewhat difficult implement to introduce, the principal reason being the cost, and next the sceptical way in which many trackmen looked at anything capable of tamping ties other than the tamping pick or tamping bar in the hands of a competent laborer. Now, however, owing to the growing scarcity of labor and the inefficiency of many of those available for track work, the mechanical unit is brought into play and hailed gladly by those interested in track maintenance.



See section of report, "Switch plates."

The great majority of those who have used a tamping machine and given it a fair trial will testify to its wonderful value as a labor saving device. Any description of the construction or operation of this machine is unnecessary as the machines in general use have been widely advertised and many have seen them in operation.

It is the committee's observation that the work is more uniform and better than track that is tamped by hand, especially since we are getting such a poor class of labor. It has been proved that a tamping machine is of particular value around frogs and switches, water pans, tunnels, etc., as it is possible to tamp with it in places which cannot be reached by a tamping bar or pick.

Carefully compiled figures from several railways covering a period of three seasons are given below.

For a 2-tool machine: 1 foreman, 10 hours at 32c, $3.20; 4 men, 10 hours at 22c, $8.80; 12 gallons gasoline at 24c, $2.88; total $14.88.

Without machine: 1 foreman, 10 hours at 32c, $3.20; 4 men, 10 hours at 22c, $8.80; total, $12.00.

Cost per mile of track without machine, 32 days at $12, $145.92; cost per mile of track with machine, 16 days at $14.88, $238.08; balance in favor of machine, $145.92.

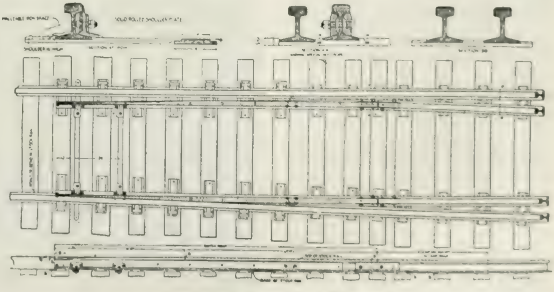
For a 4-tool machine the comparison between hand tamping and mechanical tamping was as follows:

Hand gang and foreman, 16 men, 8 hours, tamped 500 ft. of track; machine gang and foreman, 6 men, 8 hours, tamped 528 ft. of track; saving of 10 men and 80 hours for machine.

Expense: Hand gang and foreman, 16 men, $43.50; machine gang and foreman, 6 men, $18.50 (cost to run $6.95); $24.45; saving by machine, $18.05.

Fixed charges are given as follows as near as it is possible to get them: Depreciation at 10%, interest 5%, repairs 5%; total fixed charges, 20%.

Experience during the four years this machine has been in use teaches that under normal conditions in the northern states, each machine will be used during the season to tamp about 20,000 ties. The foregoing figures show a saving that can be effected by this machine which is in use on 54 roads in the U.S. and on some roads in very large numbers.



See section of report, "Switch plates."

Travelling Crane for Loading Cinders at Cinder Pit—At one cinder pit where crane is used, the cost of loading cinders for a year was $0.007 a yard, while at a pit where cinders where loaded by hand the cost was $0.13 a yard.

Cost of unloading cinders by hand, a yard, 16c; by dropping bottoms, Rodger ballast cars, a yard, 7c; steel gondolas, a yard, 7c.

Comparative statement of levelling cinders by hand and by the use of spreader, in one half hour a spreader has levelled 3,000 yards, costing less than $0.001 a yard. To do similar work by hand it cost $0.123.

Rail Handling Machines—As much new rail is received in high side coal cars, it has become absolutely necessary that some mechanical device be used for unloading it. Not on account of the labor shortage alone, but to avoid damage to rails by dropping or rough handling, is such a device needed. The constant demand for quick release of cars, the high cost of work trains and the few hours of actual work on a line of heavy traffic requires a device that will work rapidly with a maximum factor of safety to laborers.

There are rail handling machines in use which are capable of loading or unloading two cars of rail at the same time. For the operation of these machines nine men are required, one man to operate hoists, and 4 men to each car of rails. The machine is operated by air from the train line. Such machines will unload rails more quickly and without damage to rails or injury to men than could be accomplished by 40 men by hand, thus a saving of 31 men a day is made possible. This machine can also be equipped with tongs to load or unload as many ties with 3 men as can be loaded or unloaded by 20 men by hand.

Rail Laying Machines—Your committee recommends the use of rail laying machines, especially where rail is of a heavy section, thus relieving tongsmen for other work, the number released depending on the weight of the rail to be handled. To obtain the best results by the use of the machine, care should be used to unload the rails as near as possible opposite where they are to be laid.

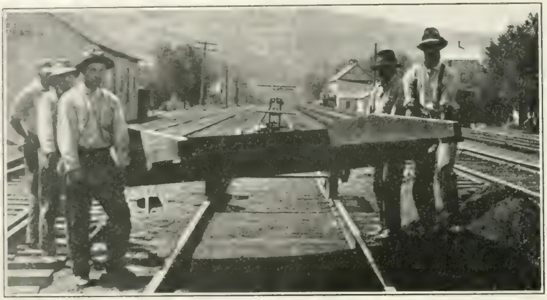
Snow Melting Device—Your committee is not unanimous in their views as to the benefits to be derived from snow melting devices, but the following results were submitted by one of the members:

Two laborers at $3.80 a day, $7.60; royalty on cans $5 a year (used about 5½ months, 2 cans) 6c; 6 gallons hydro-carbon oil at 11c a gallon, 66c; total cost with melting device, $8.32.

If done by hand: Foreman at $3.35; 10 laborers at $2.80, $31.35; 6 rattan brooms at 28c, $1.68; total cost by hand, $33.03. Saving by use of device, $24.71.

Another device which can be used successfully for the same purpose is the Hauck snow melting torch.

Switch Plates—We recommend under each point of a 15 ft. switch, 9 plates and under each point of a 16½ ft. switch, 10 plates with a uniform riser of ¼ in. on every tie.



Push car, dump box empty.

The risers should be solid and preferably obtained by machining a seat for the stock rail. At least 14 of the plates should be provided for braces and where braces are used there should be a shoulder to engage the rail brace and another under the rail brace engaging the base of the stock rail.

For heavy service the plates should be not less than ¾ x 7 in. under the stock rail. Heel plates should be provided a sufficient distance back of the heel to allow clearance for standard tie plates. Where ¾ in. plates are used under the points, the heel plates should be made from 1¼ in. stock with seats machined out for the lead rail and the stock rail. The depth of these cuts should be such that the elevation of the lead rail is graduated from ¼ in. on the first tie back of the heel to level with the stock rail at the last plate.

This construction provides positive shoulders for both the stock rail and the lead rail, and holds the switch to gauge at the heel where other construction requires the most maintenance. These plates can be made so that they will accommodate any angle of turnout used with a given length of switch by varying the tie spacing slightly for each angle of frog.

The accompanying plans confirm to the above recommendations.

Rigid Versus Safety Switch Stands for Use in Busy Yards—Automatic switch stands can be considered a labor saving device, as well as a material saving device, as switches can be run through without derailment or damage to the material or equipment. Your committee has given this subject considerable thought and collected much data in an effort to eliminate, if possible, the destruction of so many stands by the same being run, through. Scarcity of labor, with material 100% higher than in normal times, has brought about a serious condition and it is our opinion that the time was never more opportune for this association to go on record and recommend to our superior officers the adoption of the automatic safety switch stands, particularly for busy yard use. This stand should be as low as it is possible to make it. By adopting a stand of this kind, our material would be conserved and the small amount of labor which we can obtain will be available for the much needed repairs to track and will save considerable time in making reports of switches being run through. We are of the opinion that the extra cost of equipping a yard with such stands would be more than saved in a short time through the conservation of company property.

Motor Cars—The majority of your committee is in favor of the more general use of motor cars, particularly on lines of light traffic, where the length of sections are such as to warrant their use. Therefore it is the committee's opinion that the economy in the use of motor cars decreases in proportion to the additional number of main tracks, which in turn shortens the length of sections. We have obtained the following figures showing the economy effected by the use of motor cars:

Time spent in carrying 14 men and foreman by motor car, 14 miles, 30 minutes; for round trip, 1 hour, or total of 15 hours. Time spent for round trip by hand car, 3 hours, or a total of 45 hours, showing a saving in favor of motor cars of 30 hours. There is still a larger saving in the increased energy of the men when they arrive on the job, in the better class of labor attracted, and in the time saved on emergency jobs.

Perhaps the best argument in favor of these cars is in the fact that thousands of them were bought by the men themselves, whose wages were the lowest of all railway employes, they purchasing them to avoid the drudgery of handcars.

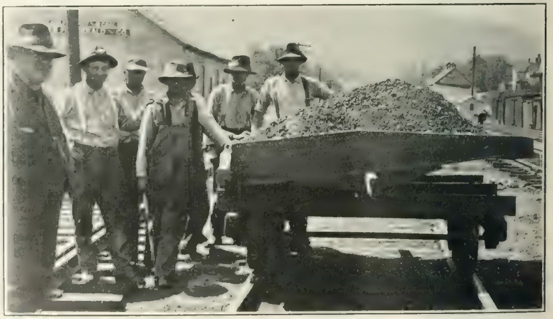
Mechanical Method of Mowing and Destroying Weeds—The use of mowing machines and weed burners, also chemicals to destroy weeds, are of great value in some territories.

Push Cars—A home-made dump box for use with a push car is preferable to the flat bottom for the work ordinarily done with the latter. The accompanying illustrations show the type recommended and is preferable for use on push car to that of ordinary flat bottom, as much time and labor can be saved by same.

Anti-Rail Creepers, Etc.—It was the unanimous opinion of the committee to recommend the extensive use of rail anchors, tie plates, guard rail clamps, tool grinders, etc. Many of these devices are practically self-maintaining. Their use prevents excessive cost in track maintenance and saves labor.

The Horse As a Labor Saver—On divisions where much ditching must be done by work trains or wheelbarrows, teams with scrapers have been tried with the following results and very little labor needed:

One laborer can fill scrapers for 2 to 4 teams, according to the distance and advantage of working. Two horses can easily handle a no. 1 scraper, which holds 7 cu. ft. and move at a 2 mile an hour rate, with some delay for filling, turning and dumping scrapers. One horse of good weight can handle a no. 2 scraper of 5 cu. ft., and after teams are trained a boy not able to do heavy manual labor can drive a team, or when in a narrow ditch and one horse is used, one boy can take two single horses with a scraper. Dirt can be handled in very short cuts, at the ends of cuts and across the track, for 20c to 25c a yard and haul it 500 to 600 feet for 50c to 60c a yard; this with teams at 80c an hour and labor at 35c an hour. Of course, where teams can be hired at 50c to 60c



Push car, dump box filled.

an hour, cost will be reduced accordingly. By starting teams early in the season, with an experienced man in charge to handle them, all ditching can be done and balance of gang left on other track work. Teams can also be worked in muddy cuts where men won't work. A horse with cart can also be used in terminals to good advantage cleaning yard, team tracks and driveways.

Where conditions of mowing right of way are such that it is possible to use teams and mowing machines, the work can be done by machinery much cheaper than by manual labor.

Ditching Machines, Dump Cars and Spreaders—When heavy ditching has to be done, the use of steam ditchers is recommended, together with the use of at least two 16 to 20 yard side-dump cars and a spreader car for short hauls. For a longer haul from 4 to 6 side-dumps should be used. A light locomotive can be assigned to handle this outfit and with an outfit of this kind, which includes a train crew, ditcher engineer and fireman, dirt can be handled for 10c to 25c a yard, according to the length of haul.

Through long usage the steam ditcher and spreader, especially when the latter is operated by air, has reached such a high state of efficiency that they are practically indispensable and the fact that they can be used for many different varieties of work, places them among the most important labor saving devices.

Push car, dump box being emptied. Material may be spread by moving car as load is released.

A saving of at least 60% over that of manual labor is obtained by using a no. 3 crane for removing ballast from between tracks, in preparing for stone ballast, digging drains under tracks, unloading old ballast on fills, to strengthen shoulder and fill up holes, load and unload rails and for various other purposes.

A machine known as the Magnet is used very successfully to load and unload scrap of various kinds. This machine is capable of picking up 6 or 8 33 ft. rails as rapidly as it will one, and eliminates handling the rails by hand, and reduces to a minimum the liability of injuring men.

Two-Wheel Pony Cars as Labor Savers—In rail laying, the pony car is very handy for distributing spikes, bolts, angle bars, tie plates and even scattered rails. Where a heavy rail is to be replaced in track by a small gang, a pony car makes it possible to load rail and move it to point where needed, without sending for additional help or using a flag to get rail to place; also useful handling ties. These cars with a dump box are very handy for distributing the surplus of gravel or stone ballast. Boxes hold 1-3 to ½ yard and can be handled without flag by dumping. They can be dumped inside or outside the rail.

Ballast Plough—There are many opportunities for improving devices now in general use. A ballast plough can be made to remove all the ballast from track, whereas at present they are made to remove the ballast level with the top of rail. All ballast may be removed by bolting a steel plate on to the present type of plough and permitting the plate to reach the entire length of the tie, only removing enough of the plate to clear rail and joint fastenings; the depth of plate depending on height of rail in track from which ballast is to be removed. An attachment to do this work can be made and applied by a blacksmith and helper, in two days, and material needed may consist of scrap bridge iron or angle bars and is a very inexpensive attachment and of great value for removing ballast that has been unloaded for backfilling. Removing and dressing ballast by hand is hard work and very expensive under ordinary conditions, and at present, when sufficient labor is unavailable, this device is of immeasurable value where much ballasting is in progress. In addition to this attachment, another plate with teeth may be applied to loosen up and level off ballast between parallel tracks and on shoulder. It will also destroy weeds. It can be operated at a speed of from 4 to 6 miles an hour. The saving effected per mile will depend on the amount of ballast to be removed and the density of vegetation.

Field Telephone—It is recommended that the field telephone be furnished to ballast and rail-laying gangs, also on work trains and snow ploughs, particularly on lines with heavy traffic. These outfits can be purchased for from $5 to $25 a set and will reduce to a minimum the delays to extra gangs and trains and will result in a saving of money which cannot be closely estimated.

Transferring Cars—When transferring grain, a big saving can be effected at points where it is possible to secure sufficient air pressure. One member reports the following results:

Transferring a carload of wheat by hand: 6 men, 10 hours at 30c an hour, $18; transferring by air: 2 men, 6 hours at 30c an hour, $3.60; with a small additional cost for the pumping of air, a saving by the latter method of $14.40 a car.

The transferring by air was accomplished by an arrangement consisting of a 4 in. pipe and attaching in one end an air nozzle similar to a back-up hose on a train, then attaching this to an air line, by which means the grain can be blown from one car to another.

There are many devices so universal in their use as to be practically a necessity for all roads, yet they have not been adopted. There should surely be no excuse for longer allowing a large force of men to dig ditches in a cut, when the ditching machine has reached the stage of perfection it has. Neither should there be an excuse for a large force of men wasting time and energy when machines can be secured which will accomplish the work with more safety and economy.

It has been truly said that no two railways are alike and for their maintenance requirements it may be as truly stated that no two sections are identical, what will prove of the greatest advantage on one road would be money uselessly expended on another. Therefore it is impractical for this committee to lay down hard and fast rules for the adoption of certain devices under all conditions. However, we are most earnestly convinced that the adjustment of little details very often means the ultimate success or failure of a machine or device.

Rail Handling Device—After the committee's report had been adopted, B. F. Brown, Supervisor, Boston and Maine Rd., Woodsville, N.H., gave the following description of a rail handling device in use on that line: The rail handling device we use, and of course there are many that answer the same purpose and do the same work, was designed by me in 1907 and put into operation that year. It is worked by compressed air taken from the train line into reservoirs and thence to the air hoist placed at each end of the car, with matched booms extending from the car at either end. The air hoists work each independently of the other. You can unload at one end and load on the other, or unload both at the same time. Each is independent of the other. The machine was thoroughly tested. As is the case with all new devices, our management requires a strict account of the performance, whatever the device may be, to compare with the work done by hand, or any other way, aside from the particular machine. On Oct. 27, 1907, with me in charge, and operating the rail loader, we distributed 160 tons of 75-lb. rails, from 5 high side coal cars, in 3 hours and 15 minutes, clearing for 3 trains during that time. The force consisted of one foreman at 30c an hour, and 8 laborers at 18c an hour. The total cost of labor for 3¼ hours was $5.66. If it had been done by hand it would have required a force of one foreman at $3 a day, and 40 laborers at $1.80 a day, making $75. There was a saving of 1-3 of a day with the loader against a full day by hand, or $69.34. That is exclusive of the train cost. I have many reports of work performed with the loader in distributing rails, from which the above were taken on account of its being an average day's work for a foreman and 40 laborers by hand. The old rates were in force at the time the work was performed. The saving would be increased in proportion to the increase in wages of laborers. In loading rails into high side cars, the loader will do work that would be impossible for any number of men to do by hand, and therefore there can be no comparison made of that. With the same force as used in the unloading, namely a foreman and 8 laborers, scattered rails may be picked from the ground into the coal cars at the rate of three rails a minute, with a train movement of ½-mile an hour. After giving a demonstration of the machine, a roadmaster said to me, "I do not want one of those, I would lose my work train in a week." But today he is the greatest rail machine man that I know of.

Piecework; an After War Problem.

By J. R. Macken, Montreal.

The greatest tragedy of modern history, the world war of 1914-1918, was pressed with relentless and ever developing energy by the entente nations, and brought to a final victorious conclusion, in the main, by the moral conviction that if mankind was destined for progress, autocracy must be destroyed beyond recovery. Democracy, which became in the verbosity of the paid politician, the utopian dream of a universal brotherhood, was preached broadcast and openly encouraged as a "win the war" measure. The evangelists of this ideal order of things found the masses willing converts, and labor welcomed the promised change which would level up the wide gulf that had existed for so long between the producer and the provider of the necessary capital to produce. In thus feeding labor with over doses of an advanced democracy, which, at the best, could only be a gradual and, probably, an inevitable development, with, or without, the great war, in our regular progression towards the millennium, there have been added many problems to our anticipated after-war troubles, and it is one of these, vitally affecting production, the writer proposes to discuss.

Piecework, as a means of increasing production, is just as old as the natural inclination of man to respond to encouragement. The only development of the principle has been in the conversion of the encouragement from mere words of praise, which, in earlier days, the "master" graciously gave to the "servant," to a bulkier pay envelop and increase his output. We gives to the efficient producer. Piecework, is operated in industrial plants, under many different systems, and many different names, but the underlying intention is similar throughout, viz.: the rewarding of the worker according to his physical or mental ability to develope and increase his output. We are not concerned very much with systems in this article, but rather with an analysis of our subject and an endeavor to explain away objections to piecework as a recognized method of manufacturing, or other shop operation, and the causes which may have given rise to the official opposition of labor.

At the first glance the definition of piecework—the remunerating of the producer, according to his ability to produce—would not appear to lend itself to such abuses that a large proportion of the labor community should vigorously, and, even bitterly, disclaim against its continuance, and, in many instances, with a full knowledge that the acceptance of their protest would result in a reduction of from 20% to 50% in their earnings. A condition of this kind requires some explanation, either with a view to confirming the protest or of locating the canker giving rise to it, and, if feasible, finding the cure. The following headings cover a wide field for investigation and the writer proposes to discuss the possibilities for abuse which each holds and the remedy which might be applied:—1. The system; 2. The application; 3. The object from the pieceworkers' point of view; 4. The object from the employers' point of view; 5. Results.

The System—Straight piecework has been claimed as the ideal system, the producer being paid just what he earns, when the total amount of work completed is turned into currency at so much per piece. There is no question of rate per hour or classification or basic trade. Ten articles, having a piece value of 10c each, have a wage value of $1, whether they are completed in one hour, or in 10 hours. Such a system lends itself to innumerable abuses. In principle, it is the exact opposite to trades unionism, as it does not require the recognition of trade at all. As a means of curtailing earnings, it provides unlimited possibilities. The piece value of a job must be set by some one responsible individual, and it is only necessary to set such a value sufficiently low to automatically control the possible earnings of the pieceworker. The straight piecework system should pass with the advance of democracy, and its passing carry no regrets either for the employer or the worker.

Any piecework system, be it premium or bonus, should initially accept the principle of the basic trade and the guaranteed rate, i.e.: the worker is hired first of all as a tradesman, and paid according to the recognized wage standard of his trade, and then is further remunerated for the extra physical, or mental, effort he puts into his work, at a piece value based upon his basic rate as a tradesman.. Here there is a direct incentive for the efficient worker to considerably add to his pay envelope, with a full knowledge that his extra effort has a direct translation into dollars and cents over and above his hourly rate, while his working time is fully protected at the recognized wage standard of his trade, and the setting of the piece price has a definite and easily checked value which, even at the worst, cannot represent less than the guaranteed rate paid per hour. For the employer, there is a positive return in the increased output of the worker another elimination of lost time, which, of course, has a money value, according to the rate paid per hour, while the guaranteed rate ensures the services of a skilled craftsman and a good finished job.

The Application—The very best of systems can only be applied and developed in the correct spirit if the responsible administration is fully alive to what is desired and departs not from the underlying intention. Only too often we find piecework systems administered by a personnel half auditors, half clerks, wholly out of sympathy with the tradesman, unfamiliar with mechanics, shop methods, shop organization and conditions, which so closely control the possibilities of output and frequently limit production, no matter what the physical effort of the pieceworker. When we recollect that any piecework system, to be at all successful, represents an additional outlay in wages of anything between 15% to 35% of the employers' payroll and that the return is shown only in increased production, reduced overhead and machinery charges, etc., it is really astonishing how haphazard a method has been followed, fairly generally, by the technical executive of manufacturing and other plants in selecting their piecework administrative personnel.

Piecework administration is responsible for setting the piece value of all work performed, and seeing that the shop organization and conditions are such that the average pieceworker may earn a reasonable bonus on his guaranteed hourly rating, by maintaining his output at the gait upon which the value has been set. Should the shop organization, or conditions, not permit this, either the original piece price should be revised, or the shop conditions improved. To permit the pieceworker to continue to work at a piecework gait, without alteration in either controlling conditions, is unjust and should not be tolerated. The piecework administration should, therefore, have enough organizing knowledge to improve shop conditions, when or wherever adversely affecting the earnings of the pieceworker, and as the earnings of the pieceworker and output are dependent one upon the other, the adjustment of the irregular shop conditions cannot militate against, but always in favor of, output. The piecework administration should have a sympathetic understanding of the labor conditions, and instead of taking advantage of irregularities which adversely affect output, treat them judiciously, and with a broad-minded understanding of how far the loss has been beyond the control of the pieceworker. No pieceworker should ever be penalized for a condition beyond his power to control.

From the foregoing, which but lightly touches upon the duties of a piecework administration, it will be readily noted that the personnel calls for considerable mechanical knowledge, executive ability, broad-minded and sympathetic administration and fair and honest dealings with labor. If the selection of the supervision is not guided along these lines, we are handing over a very important technical position, which carries a weighty influence upon the harmonious relations between the employer and the worker, to a personnel viewing its duties purely from a cost point of view, eager to snatch at mean advantages which penalize the pieceworker, and, inevitably, creating a spirit of distrust and suspicion in the mind of the worker, who will meet sharp practice with sharp practice, to the detriment of output, skimping of work and, finally, slander of piecework as a means for oppressing labor.

The Object, From the Pieceworkers' point of view. The day when the worker took a pride in his job, and in putting all his energy into his 12 or more hours of daily toil, just to keep the output on his bench, machine or shop ahead of the other fellow, has faded away with the stage coach and the postillion. We live, alas, in a mercenary age and "the almighty dollar is the thing." If the worker is producing under a piecework system, he knows that to increase his earnings over and above his guaranteed rate he must exert himself physically, or mentally, according to his occupation. That being so, he, very naturally, wants to know exactly how much this extra effort will be worth to him on next pay day, and should be in possession of the necessary information during the actual progress of his job, if not prior to the commencement of it. How often have we heard protesting pieceworkers disclaim, "I never know my price for any job, and when I believe I have earned $10 or $15, I get nothing extra at all in my pay envelope." The only object which interests the pieceworker is the development of his earning capacity, and to withhold complete information as to prices and earnings from the worker, who is putting extra effort into his daily toil, is scarcely believable, but, unfortunately, not infrequently practiced by inefficient piecework administration. The man who would not buy an article without an advance knowledge of the price, who would not, probably, sell his labor without an advance knowledge of the rate, is asked to exert himself physically and mentally, during the period of his working day, for an extra monetary consideration the value of which is unknown to him or when known uncheckable. We are asking much from modern labor when we impose such conditions, and that the protest should be bitter is not surprising.

The Object, From the Employers' Point of view. As stated already, the operation of a piecework system means an increase of from 15% to 35% in the shop payroll. For example, a shop carrying a payroll of $50,000 a month will pay out in bonus earnings from $7,500 to $17,500 a month. This addition to the payroll does not create a perfectly obvious inflation in the employer's net operating income, but, of course, actually does so in his reduced operating costs. The ability to produce in large quantities and with low operating costs is just what spells financial success to the manufacturer. The augmented output of the pieceworker enables the manufacturer to produce at a low unit cost, to undersell his competitor, to increase and extend his sales to the benefit of the consumer, the producer and himself.

There are two well-known makes of automobiles, one, an overseas product, is claimed to be produced by the efforts of the highest skilled mechanics, who are permitted to take their own time to complete any part, provided the finish of same is 100% perfect. This automobile is so costly in production that possession of one is to admit the owner into the exalted circle of war profiteers or heavily purpled nobility. There is another make of automobile, which is produced on this continent. This machine is modest (sic) in its claims for perfection, but it has never been known to buck a grade or let the other fellow 60 h.p. beat it on the level, and it is produced in such considerable quantities that labor and his family may enjoy all the delights of sniffing gasoline and "burning up the road" with a reasonably modest expenditure. These two examples represent the difference between augmented production, and what it means to the manufacturer, and production a secondary consideration, and what is means to the purchaser.

Results—The writer has endeavored to make an analysis of piecework and its troubles and from the foregoing consideration arrives at a finding on the following lines: The objections of labor to the piecework system of shop operation would appear to be reasonably well founded under certain conditions. 2. The cause for opposition has been, first, the system, second, the application. 3. The penalizing system known as "straight piecework" has to a large extent disappeared, and should be abolished completely. 4. The penalizing application has been due to careless selection of nontechnical, unsympathetic administration. 5. The remedy lies in the employer's own hands. The selection of a piecework administration should be as carefully made as any other executive. 6. Distrust and suspicion are prevalent, due to concealment of piece prices, sharp practice, etc. 7. Full and free information should be given the pieceworker, as to piece value and earnings. Uncontrollable loss in bonus to be protected either by adjustment of pricing, or improvement in conditions. 8. Fair and square dealings between employer and pieceworker will most surely result in the passing of labor's distrust and suspicion, and reciprocal honesty on both sides. 9. Piecework awards labor in direct proportion to physical or mental energy expended, increases earnings and production, reduces selling cost, and increases demand for labor. 10. Piecework reduces production cost, increases business and returns, and eliminates inefficient labor and waste time.

The Canadian Overseas Railway Construction Corps' Work in Belgium and France.

Lieut.-Col. C. W. P. Ramsey, C.M.G., who commanded the Canadian Overseas Railway Construction Corps, which left Canada in June, 1915, gave the following information in a recent talk:—

"Our work overseas was regarded as of considerable value to the combatant forces, and that work was largely due to the strong support we received from the first from the C.P.R. From the beginning of our organization to the time when we went overseas our work was aided in its entirety by the C.P.R. and its management, not only aided in our recruiting, but assisted in every way in the organization and equipment of the work. Further than that a very large percentage of the corps was supplied from the C.P.R. ranks. For the 900 men we needed there was keen competition. No less than 3,000 men, all experienced railway men, applied, and we had to do much careful work selecting the best men we could get for the work.

"We went over in June, 1915, and on reaching the other side there was little delay. We had two months in camp at Longmoor for training, after which we were sent over the English Channel. It was found then that the greatest need for railway work at the front was in Belgium, and we were sent there. We did not know just what the work was, but we were all keen for it, and we jumped in as hard as we could, every man doing his share with a desire to do all that he could.

"Our first work was at Dixmude, where we started in building concrete structures with a vast amount of miscellaneous work. From this we proceeded to the building of 10 miles of track, which was the first railway work done by the allied armies. The only previous railway was a wooden road, which was put down with wooden rails, with the idea of keeping down the noise so as to avoid warning the enemy of what was being done.

"Behind the British front, we put in the first advance railway for war purposes they had. Later on the British war people put in a great railway organization, which operated with much success back of the British front.

"The British had had a few railway men at work. But when the Canadians arrived the value of this work was at once seen, and the force grew very quickly so that the railway corps increased to 4,000, and eventually to over 100,000.

"In Feb., 1916, shipments of box cars began to arrive from Canada and the first plant for the erection of these cars was supplied from the equipment of the Canadian Railway Corps and installed at Andruicq.

"At that time a monster ammunition dump had been collected there, but the Germans, by their air service, and other means of information, had learned about it. Then when we had 20,000 tons of munitions and high explosives collected there, the Germans came and bombed it. The results were not pleasant, but there were only 40 or 50 Canadian casualties.

"Later on I went to the Somme front. They had tried in that area to handle transport, but all their roads had failed. They were trying to get railways to various points until the Canadians arrived. Then we built the most advanced railway in France, only 1,200 yards behind our front lines, which was a great saving in every way for our forces.

"In 1917 the Huns began their great retreat. It was evident that the retreat had been carefully planned long before, because anything that had not been carried away was blown up on a systematic plan. Further, they fixed time charges to blow up anything they could not get away with, in the hope that the charges later on would get the British troops, while other charges were so arranged that they would explode from the vibration of passing troops and material.

"During the summer of 1917 a large number of advanced railways had been that the November attack proved a success, 450 tanks being brought up under cover of night for the advanced troops in order to prepare for a surprise fire. But this was so well done that the November attack proved that a success, 450 tanks being brought up in one night, and brought up so well that the enemy never knew they were there until the attack developed.

"However, the Canadian Oversea-

Railway Construction Corps did two or three things during their service overseas that more than justified their existence. They laid the first standard gauge railway back of the lines. At that time their strength was only 500 men. Following that they increased their strength, and during the war they laid 400 out of 2,000 miles of track laid back of our lines. Eventually they finished their work by laying the tracks in the Valenciennes and Mons region, which had very much to do with the success of the closing operations of the war."

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the board's proceedings. No other paper has done this.

General order 266. June 17.—Authorizing telegraph companies to charge tolls published in their respective tariffs filed with the Board, subject to such order or orders as the board may from time to time issue.

General order 267. June 27.—Amending general order 231, re standard conditions and specifications for wire crossings.

28,426. June 9.—Authorizing London & Port Stanley Ry. to build station at Talbot St., St. Thomas, Ont.

28,427. June 11.—Rescinding order 27,841, Nov. 7, 1918, re commodity rates on ferro-silicon from Welland and Thorold, Ont., and Shawinagan Falls, Que.

28,428. June 11.—Ordering G.T.R. to build farm crossings for J. B. Moffatt, A. Boucher, D. [illegible], J. Duchene, A. Champagne, and W. Roy, in Nelson Tp., between Dosquet and Lyster, Que.

28,429. June 12.—Authorizing Vancouver, Victoria & Eastern Ry. & Nav. Co. (G.N.R.), to remove station building at Lincoln to Colebrook, B.C., and replace it with a car body.

28,430. June 12.—Authorizing C.P.R. to operate new interlocking plant at Kempton, Ont.

28,431. June 12.—Authorizing C.P.R. to build spur for Western Canada Steel Co., Redcliffe, Alta.

28,432, 28,433. June 12.—Authorizing Canadian Northern Ontario Ry. to rebuild bridges over Christie Road, Foley Tp. and Front St., Thorold, Ont.

28,434. June 12.—Authorizing London & Port Stanley Ry. to build branch line between G.T.R. at [illegible] St. and to extend the freight shed track south to Kain St., St. Thomas, Ont.

28,435. June 13.—Extending to July 15, time within which Canadian National Rys. may build third class station at Durban, Man.

28,436. June 13.—Ordering C.P.R. to file supplement to tariff W. 2,397, adding to item 87A of supplement [illegible] the 8th class rating for carload shipments of not less than 30,000 lbs. on all items of poultry food enumerated, and dismissing application of Taylor Milling & Elevator Co., Lethbridge, Alta., for privilege of including l.c.l. lots of poultry food with grain products at carload rates.

28,437. June 13.—Approving G.T.R. location and detail plans of passenger shelter at Jamiesons Siding, Ont.

28,438. June 12.—Authorizing C.P.R. to build extension to spur for North American Collieries Ltd., Edmonton, Alta.

28,439. June 13.—Authorizing Canadian National Rys. to build Y on n.e. ¼, Sec. 14, Tp. [illegible], Range 2, west 3rd meridian, Sask.

28,440. June 13.—Authorizing Canadian Northern Ontario Ry. to rebuild bridge over Irwin Creek, Laura Tp., Sudbury District.

28,441. June 12.—Approving Canadian Northern Quebec Ry. plans of dam across North River for Canadian Consolidated Rubber Co., St. Jerome, Que.

28,442. June 14.—Authorizing C.P.R. to build drainage for conveying water from its tracks between mileage 21.5 and 23.0, near St. Cleophas, Que.

28,443. June 13.—Authorizing C.P.R. to divert Fort Ellice Trail at the east end of Rocanville station grounds, Sask.

28,444. June 12.—Authorizing City of Ladysmith, B.C. to make highway crossing over Esquimalt & Nanaimo Ry., north of station.

28,445. June 12.—Authorizing C.P.R. to remove agent at Illecillewaet, B.C., caretaker to be appointed.

28,446. June 17.—Authorizing Canadian National Rys. to cross highways on its Jackfish Lake Branch, through Tps. 51 to 55, Ranges 21 to 24, west 3rd meridian, Sask.

28,447. June 14.—Authorizing C.P.R. to build spur for Peterborough Cereal Co., Peterborough, Ont.

28,448. June 18.—Ordering Grand Trunk Pacific Ry. to make highway crossing over its tracks at [illegible] Fort George District, B.C., construction and maintenance to be paid by British Columbia.

28,449. June 18.—Amending order 28,417, June [illegible] agent at Baxter station, Ont.

28,450. June 13.—Relieving Grand Trunk Pacific Ry. from providing further protection at crossing of main line between Saskatoon and Yorath Jct., Sask.

28,451. June 18.—Approving C.P.R. plans of bridge to be built at Hunter St., Peterborough, Ont.

28,452. June 18.—Authorizing Grand Trunk Pacific Ry. to make crossing over its tracks at mileage 1115, Fort George District, near Croydon, B.C., construction and maintenance to be paid by the province.

28,453. June 18.—Authorizing Algoma Eastern Ry. to discontinue signalman at crossing of its main line by Canadian Copper Co.'s spur at Copper Cliff Jct., Ont.

28,454. June 18.—Authorizing City of St. Boniface, Man. to make highway crossing over C.P.R. at Dupuy Ave.

28,455, 28,456. June 16, 17. 'Authorizing Hydro Electric Power Commission of Ontario to build power canal and construction railway across Toronto & Niagara Power Co.'s and Toronto, Niagara & Western Ry.'s right of way in Stamford Tp., Ont.

28,457. June 24.—Approving C.P.R. bylaw authorizing Vice President, Freight Traffic Manager, Assistant Freight Traffic Manager, Eastern Lines, and Assistant Freight Traffic Manager, Western Lines, to issue tariffs of tolls for carriage of freight upon its railway and vessels, and also authorizing the Passenger Traffic Manager to issue tariffs of tolls for passengers.

28,458. June 23.—Approving G.T.R. plan of location and details of stock pens to be built at Thornbury, Ont.

28,459. June 23.—Authorizing Grand Trunk Pacific Ry. to build spur for Dome Mountain Lumber Co. at mileage 1189.23, British Columbia.

28,460. June 23.—Authorizing Canadian Northern Ontario Ry. to rebuild bridge at Orient Bay, mileage 43.5 from Jellicoe, Ont.

28,461. June 23.—Authorizing C.P.R. to build extension to passing siding at mileage 24.75, Prescott Subdivision, Ont.

28,462. June 19.—Authorizing C.P.R. to rebuild bridge 65.1 over Massawippi River, near Lennoxville, Ont.

28,463. June 20.—Authorizing G.T.R. to rebuild bridge carrying highway over its tracks at mileage 16.08, Hamilton Division, Ont.

28,464. June 19.—Authorizing C.P.R. to rebuild bridge 46.9 over Eaton River near Cookshire, Que.

28,465. June 19.—Approving G.T.R. plans of interlocking plant to be built at swing span in bridge over Richelieu River, at Beloeil, Que.

28,466. June 21.—Authorizing St. Laurent municipality, Man., to make highway crossing over Canadian National Rys. in Lot 14.

28,467. June 21.—Authorizing Grand Trunk Pacific Branch Lines Co. to cross highway at mileage 105.5, Sec. 48, Range 26, Tp. 28, west 2nd meridian, Sask.

28,468. June 21.—Authorizing Canadian National Rys. to cross and divert highway between Secs. 26 and 23, Tp. 48, Range 26, west 3rd meridian, Sask.

28,469. June 21.—Authorizing C.P.R. to divert road allowance on north boundary of northeast ¼ Sec. 20, Tp. 14, Range 32, west 1st meridian, at mileage 95, Sask.

28,470 to 28,473. June 23.—Authorizing Canadian Northwestern Ry. to cross 4 highways in Alberta.

28,474. June 21.—Authorizing Quebec, Montreal & Southern Ry. to build timber trestle over Salvial River at mileage 18½ from Junction to Bellevue, to replace steel structure there which was destroyed by landslide Apr. 16.

28,475. June 26.—Authorizing Ferris Tp., Ont., to make crossing over G.T.R. on Lot 28, Con. 5.

28,476 June 25.—Extending to Oct. 31, time for installation of interlockers at crossing of Canadian National Rys. by Fort William Municipal Ry., at intersection of Victoria Ave. and Vickers St., Fort William, Ont.

28,477, 28,478. June 19.—Authorizing Eastern Canadian Passenger Association, to publish for three weeks in Canada Gazette, rule 23 for regulations governing baggage car traffic in Canada, respecting free storage period, and rule 26 (d) of regulations governing baggage car traffic respecting notice of nondelivery, loss or damage to baggage.

28,479. June 25.—Ordering that crossing by Vancouver, Victoria & Eastern Ry. and Navigation Co. of British Columbia Electric Ry. on Harris St., Vancouver, be protected by interlocking plant with derails on V.V. & E. Ry. and signals on B.C.E.R.

28,480. June 17.—Authorizing Eastern Canadian Passenger Association to publish general orders 191 and 262, May 26, 1919 and May 8, 1919, respectively, re rules governing baggage car traffic, in two issues of the Canada Gazette.

28,481. June 25.—Approving proposed G.T.R. passenger train service between Montreal and Ottawa, effective June 29.

28,482. June 26.—Ordering Pere Marquette Rd. within 30 days to furnish an adequate supply of drinking water at Blenheim station, Ont.

28,483. June 28.—Suspending, pending hearing, cancellation by Bell Telephone Co. of district rates between Weston and Islington, New Toronto; Dundas and Hamilton; Ridgeville-Welland and Marshville; Wellandport and Smithville; and Rockwood and Guelph, Ont.

28,484. June 19.—Authorizing C.P.R. to connect interchange track with St. John & Quebec Ry. at mileage 49.22, Shogomac Subdivision, N.B.

28,485. June 24.—Approving C.P.R. plan F-14-8B, June 10, standard bridge warning, and rescinding order 13,468, Apr. 20, 1911.

28,486. June 26.—Authorizing Canadian Northern Saskatchewan Ry. to cross and divert road between Sec. 35, Range 25, and Sec. 2, Range 26, Tp. 1, west 2nd meridian, Sask., 400 ft. west of location approved by order 24,612, Dec. 1, 1915.

28,487. June 30.—Authorizing Canadian National Rys. to rebuild bridge over Trent River at Glen Ross, Ont.

28,488. June 24. — Approving Niagara, St. Catharines & Toronto Ry. of proposed interlocking plant at crossing at G.T.R. on Elm St., Port Colborne, Ont., and rescinding order 27,545.

28,489. June 27.—Ordering Canadian Northern Quebec Ry. to build shelter and platform at Fitzgerald, Que., and to stop local trains 81 and 82 regularly for milk traffic.

28,490. June 30.—Authorizing C.P.R. to build Y at mileage 92.65, Sherbrooke Subdivision, in Bolton Tp., Que., within three months.

28,491. June 30.—Authorizing C.P.R. to rebuild bridge 33.7 over Stulkawhits Creek, Cascade Subdivision, B.C.

28,492. June 27.—Recommending to Governor in council for sanction, St. Lawrence and Adirondack Ry. operating rules.

28,493. June 27.—Recommending to Governor in council for sanction U.S. Railroad Administration's rules for Ottawa & New York Ry.

28,494. June 27.—Extending to June 5, 1920, time for building C.P.R. spur for Dryden Timber and Power Co., near Eagle River, Ont.

28,495. June 30.—Approving C.P.R. station to be built at Horizon, Sask.

28,496. July 8.—Approving portion of C.P.R. Langdon North Branch location mileage 71 to 122.74 and authorizing the crossing of a number of highways at grade.

28,497. July 7.—Ordering Toronto, Hamilton and Buffalo Ry. to convey certain lands to Saltfleet Tp., Ont., for highway purposes, and authorizing C.P.R. to build bridge over its tracks near Vinemount, Ont.

28,498. July 3.—Ordering C.P.R. to make the necessary arrangements forthwith to have a man on duty at St. Hugues station, Que., to attend last train at night and close up premises.

28,499. July 4.—Relieving Canadian National Rys. from providing further protection at crossing of Richmond Road, Bells Corners, Ont.

28,500. July 3.—Approving agreement, June 21, between Bell Telephone Co. and Normanby Telephone Co.

28,501, 28,502. July 4.—Authorizing Canadian National Rys. to build spurs for P. Burns & Co., Prince Albert, Sask., and Excelsior Coal Co., near Wayne, Alta.

28,503. July 4.—Authorizing C.P.R., pending further order, to remove station agent at Windy Lake, Ont.

28,504. July 3.—Authorizing G.T.R. to operate over C.P.R. Weyburn-Lethbridge and Soo Branches, at Weyburn, Sask., until Jan. 1, 1920, pending installation of interlocking plant, crossings to be protected by flagmen.

28,505. July 4.—Amending order 28,368 re Canadian Northern Western Rd., location from mileage 92.40 to 128.68.

28,506. July 3.—Extending to July 31, time within which the work required to bbe done at Chatham, Ont., by the G.T.R. under order 27,940, Dec. 16, 1918, may be completed.

28,507. July 4.—Authorizing Niagara, St. Catharines and Toronto Ry. Co. to build spur for Reid Bros., Niagara Falls, Ont.

28,508. July 8.—Approving agreement Apr., 1919, between Bell Telephone Co. and Ayton Telephone Co.

28,509. July 8.—Approving plan of station at Mille Roches, Ont., to be built under order 28,226, Apr. 10.

28,510. July 8.—Recommending to Governor in councl for sanction C.P.R. bylaw 97, amending general train and interlocking rules.

28,511. July 8.—Ordering C.P.R. to provide proper station building at Vantage, Sask.

28,512. July 8. Extending time within which C.P.R. is to complete installation of automatic bell at crossing of Bull St., Woodstock, N.B., for 30 days from date.

28,513. July 9.—Ordering C.P.R. to connect N. M. Paterson & Co.'s elevator spur on Montreal St., Fort William, Ont.

28,514. July 8.—Authorizing C.P.R. to rebuild 12, Greere Ave. subway, Montreal Terminals.

28,515. July 10.—Authorizing Montreal & Southern Counties Ry. to build siding from Common St., Montreal, crossing G.T.R. and Montreal Tramways Co.'s tracks 1581 and 1582, St. Anne's ward.

28,516. July 10.—Ordering Grand Trunk Pacific Ry. to provide a one-car stock pen at Cedoux station, Sask., within 30 days.

28,517. July 8.—Approving location of portion of C.P.R. Archive-Wymark Branch, mileage 0 to 25.2.

28,518. July 11.—Dismissing complaint of Ontario Paper Co., Thorold, Ont., against rate of 22c per 100 lbs. on newsprint from Thorold to Chicago charged by G.T.R.

28,519. July 9.—Authorizing Canadian Northern Saskatchewan Ry. to build across and divert highway in the n.e. ¼, Sec. 33, Tp., 22, Range 9, west 3rd meridian.

28,520. July 12.—Extending to Oct. 1, time within which C.P.R. may complete spur track authorized by order 26,728.

28,521. July 9.—Authorizing C.P.R. to build spur for Colonial Co., mileage 90.52, Chalk River, Subdivision.

28,522. July 10.—Authorizing G.T.R. to build spur for Libby, McNeill & Libby of Canada, Ltd., Chatham, Ont.

28,523. July 12.—Ordering Grand Trunk Pacific Ry. to appoint caretaker at LeRoss, station, Sask.

28,524. July 12.—Approving Canadian National Rys. plan, showing alterations to station building at Manville, Alta.

28,525. July 10.—Authorizing Grand Trunk Pacific Ry. to cross and divert highway at mileage 629.8 in east half of Sec. 10, Tp. 43, Range, 1, west 4th meridian, Alta.

28,526. July 12.—Authorizing Kettle Valley Ry. to open for traffic, extension of its North Fork Branch from mileage 19, Grand Forks to Franklin Camp, to mileage 20.3.

28,527. July 14.—Authorizing Alberta Public Works Department to make highway crossing over C.P.R. in n.e. ¼, Sec. 12, Tp. 40, Range 27, 4th west meridian.

28,528. July 10.—Authorizing G.T.R. to build timber trestle 135 over creek at mileage 31.20, from Lndsay, Ont.

28,529. July 11.—Approving Esquimalt & Nanaimo Ry. bylaw 63 and rescinding orders 5,126 and 25,641.

28,530. July 11.—Dismissing application of holders of property and ratepayers at St. Eustache, Que., for order directing Canadian National Rys. to build station at a point on Range du Lac, near the Oka Road.

28,531. July 9.—Approving agreement between Bell Telephone Co. and Byron Telephone Co., and rescinding order 21,902.

28,532. July 10.—Approving plan showing dwarf signal 7, Michigan Central Rd., changed to a high signal to improve engineers' view for tower 2, Windsor, Ont.

28,533. July 9.—Authorizing Canadian Northern Saskatchewan Ry. to build across and divert highway in n.w. ¼, Sec. 19, Tp. 22, Range 9, west 3rd meridian.

28,534. July 11.—Authorizing C.P.R. to make highway crossing between Secs. 2 and 3, Thessalon Tp., Ont.

28,535. July 10.—Authorizing Saskatchewan Highways Department to make highway crossing over Canadian National Rys. in s.w. ¼, Sec. 5, Tp. 11, Range 4, west 3rd meridian.

28,536. July 11.—Authorizing G.T.R. to use bridge 125, over Pottawattami River, Owen Sound, Ont.

28,537. July 12. Dismissing Chicoutimi Pulp Co.'s complaint, relative to rates on woodpulp from Chicoutimi and Val Jalbert, Que., to U.S. points.

28,538. July 9.—Authorizing C.P.R. to divert road allowance at mileage 16.6, Lac du Bonnet Subdivision, Man.

28,539. July 10. Authorizing Michigan Central Rd. to build spur for Imperial Tobacco Co., Mersea Tp., Ont.

28,540. July 12.—Relieving C.P.R. from providing further protection at crossing east of Oshawa, Ont.

28,541. July 11. Dismissing application of residents, Notre Dame de Grace Ward, Montreal, Montreal, for order authorizing City of Montreal and C.P.R. to build subway at Oxford Ave.

28,542. July 11. Ordering C.P.R. to build new freight shed and team tracks at Kingston, Ont.

28,543. July 15.—Ordering Canadian National Rys. to build freight and passenger shelter station and one-car stock pen and shed at Katrine, Man.

28,544. July 14.—Ordering C.P.R. to build permanent culvert with opening 20 ft. wide at mileage 37.56, near Golden, B.C.

28,545. July 16.—Authorizing City of Port Arthur, Ont., to build temporary roadway across C.P.R. at northerly end of city.

28,545. July 16.—Authorizing City of Port Arthur, Ont., to build temporary roadway across C.P.R. at northerly end of city.

28,546 and 28,547. July 16.—Ordering Michigan Central Rd. to install wig-wag signals at Ferry Road crossing and Bender Ave., Niagara Falls, Ont.

28,548. July 15.—Authorizing London & Port Stanley Ry. to build a footpath on its trestle over Kettle Creek, Yarmouth Tp.

28,549. July 21.—Authorizing C.P.R. to build a grade across Victoria St., Cobourg, Ont., spur to connect with the Hydro Electric Power Commission's pole yard tracks mileage 32.78, Oshawa Subdivision.

28,550. July 18.—Authorizing C.P.R. to build branch for C. H. Boyd, Moose Jaw, Sask.

28,551. July 21. Amending order 14,485, Aug. 2, 1911, re authorized crossings.

28,552. July 21.—Authorizing Esquimalt & Naimo Ry. to rearrange spur, built for Imperial Munitions Board under, order 26,506.

28,553. July 21.—Authorizing G.T.R. to rebuild bridge between Lots 150 and 151 in Range St. Edward, and Lot 313, St. Patrick. St. Liboire Parish, Que.

28,554 and 28,555. July 18.—Authorizing Canadian National Rys. to rebuild bridges over Burnt Creek, Neelon Tp., Ont., and over Shawanaga River, mileage 16.5, from Parry Sound, Ont.

28,556. July 21.—Approving G.T.R. plan showing elevation and location of station and freight house at Gravenhurst, Ont., and authorizing it to build three additional tracks across Church St., Gravenhurst, Ont.

28,557. July 18. Authorizing Canadian National Rys. to rebuild bridge over Irwin Creek, mileage 89.10 from Parry Sound, Ont., and rescinding order 28,440.

28,558. July 22.—Approving Esquimalt & Nanaimo Ry. crossing of Burrard Sawmills, tracks to Deep Bay, B.C.

28,559. July 22. Authorizing Canadian National Rys. to build branch line for Imperial Oil Co., Dauphin, Man.

28,560. July 18.—Authorizing Canadian National Rys. bridge over Laronde River, mileage 71.7 from Brent, Ont.

28,561. July 22.—Approving form A and B containing conditions of acceptance of Marconigrams for transmission via C.P.R. and Great North Western Telegraph and Western Union Telegraph Cos., respectively.

Fuel Consumption on Railways in 1917-18.

The consumption of fuel of all kinds on Canadian railways, as reported by the Railways Department, increased from 10,130,.799 tons in the year ended June 30, 1917, to 10,173,344 tons in the year ended June 30, 1918. The average cost for 1917-1918 was $5.17 a ton, against $3.63 a ton for 1916-1917. Following are details:

Class of locomotive.	Coal. Anthracite.	Coal. Bituminous.	Wood. Hard.	Wood. Soft.	Other Fuel Oil.	Other Fuel Charcoal	Total	Miles Run.
	Tons	Tons	Cords	Cords.	Gallons.	Bushels	Tons	
Freight	1,143	5,644,451	—	22,093	29,869,871	59,054	5,852,935	[illegible]
Passenger	665	2,002,343		12,915	14,118,330	39,738	2,092,912	[illegible]
Mixed	1,475	455,316	159	2,394	1,181,725	3,988	445,058	[illegible]
Switching	....	1,427,370	—	8,047	3,872,502	21,124	1,454,384	[illegible]
Special	.	307,143		972	3,465,100	4,211	328,055	[illegible]

Canadian National Railways Earnings.

The gross earnings of the system from Jan. 1, compared with those for the same period of 1918, are as follows:

	1919	1918
January	$ 6,744,018	$ 4,696,567
February	6,000,312	4,421,504
March	6,827,491	5,710,660
April	6,909,632	7,165,890
May	7,518,244	6,580,745
June	6,009,585	6,868,864
	$40,009,585	$35,444,230

Approximate earnings for three weeks ended July 21, $4,939,254, against $3,491,894 for same period 1918.

Canadian Northern Railway Earnings.

	1919	1918
January	$ 4,026,000	$ 2,715,300
February	3,363,800	2,691,000
March	3,554,350	3,436,300
April	3,878,149	3,958,100
May	4,337,750	3,762,000
	$19,160,049	$16,562,700

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, from Jan. 1, 1919, compared with those of 1918:

	Gross	Expenses	Net	Increases or decreases
Jan.	$13,028,328	$11,474,816	$1,553,512	$ 385,519
Feb.	11,064,167	10,083,051	981,116	390,218

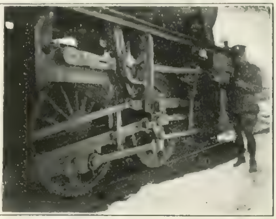
Government Loan for Canadian Northern Railway—The House of Commons on June 5, voted $35,000,000 as a loan, repayable on demand, with 6% interest, to be used to meet expenditures made or indebtedness incurred in paying interest on securities in excess of amount available from net earnings, or paying maturing loans of the Canadian Northern Ry. or any company included in the C.N.R. system, and for construction and betterments; the loan to be secured by mortgage upon the undertaking of the C.N.R. system, containing such terms and conditions as the government may approve.

Features of German Rolling Stock.

The rolling stock handed over to the allies by the Germans in accordance with the armistice terms, contained many points of constructional design that were of interest to anyone accustomed only to American practice. The writer was fortunate in being able to examine quite a number of locomotives, as well as other freight and passenger equipment in France and Belgium.

The freight equipment seen, was almost entirely of the same type—small 4-wheel wooden box cars, with the usual wooden side slide door. They give the impression of more careful finish than does the American car, corresponding in that regard to the finish customary with the usual American refrigerator cars.

German Locomotive Feed Water Heater.



German Locomotive Walschaert Valve Gear.

German Locomotive Feed Pump and Markings.

Many of them were in general use for transporting troops, and are much more air-tight than the usual box cars.

Many types of passenger cars have been turned over, varying from the old short cars, to the modern express passenger cars, which appear to be from 60 to 70 ft. long. Some of the more recent ones are very handsomely finished both inside and out, and some are of a semi-steel construction. Of these recent cars, the compartment type, similar to recent English practice except that they have end entrances only, seems to be the prevailing type, but as the clearances on the continental lines are considerably greater than in England, they are much more roomy, with wider and higher compartments and corridors.

The accompanying illustrations are of some of the motive power taken over. There is a wide variety of types, of various ages. The illustrations show some of the refinements introduced in the latest types. In this particular instance, the locomotive is an 8-wheel switcher, built in 1918, and consequently of the most recent type. On the running board is a feed water heater of simple design, arranged in a very accessible position. The lagged pipe along the top of the running board carries the exhaust steam back to the heater. The locomotive may be operated either with or without the heater, of the simple system of piping shown. Just back of the check valve, there is three-way valve, from which are four pipe connections. The front one is to the check valve; the central one, running to the rear, is the direct feed connection; while the top and bottom ones connect with the heater. When operating without the heater, the water comes through the direct connection, straight through the 3-way valve, and on to the check valve. When operating with the heater, it passes from the direct connection, back through the heater by way of the 3-way valve, and thence back through the 3-way valve to the check valve. The whole operation is controlled at the 3-way valve.

Another interesting feature to be noted is the feed water pump, located on the running board alongside the air pump, immediately in front of the cab. This is a simple, vertical-acting pump, in general appearance very similar to the air pump. The pump must have proved very dependable, as no auxiliary pump or injector was applied on the locomotive examined.

The type of Walschaert valve gear used on the recent locomotive is shown. In most particulars, it seems to be very similar to existing American practice.

The allies' practice of marking the German rolling stock, is shown on the locomotive cab. All the German rolling stock seen, was from the several German state railways and all were adorned with the German double eagle. This was very unceremoniously obliterated by the simple means of a rough paint daubed cross over the double eagle plate. Adjoining is stencilled the allies' marking, which are in three lines: "Cirm," for the operating commission; "Guerre," war service; and either "France," "Anglais," "Belge," or "Etats-unis," depending on the ally to which they are allocated. All acquired rolling stock is marked in this manner..

From a motive power standpoint, the situation that prevailed after the armistice was most interesting, as there were then operating, frequently on the same lines, French, Belgian, British, American and German locomotives, all quite distinctive in design. The same applied in a somewhat lesser degree, to freight and passenger equipment. Were it not that each army looked after the maintenance of its own equipment, the problem of maintenance and repair would have been a very troublesome matter.

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—The House of Commons on July 5, passed a vote of $35,000,000 by way of loan at 6%, repayable on demand, to be used to meet expenditures made, or indebtedness incurred, in paying interest on securities in excess of the amount available from net earnings, or paying maturing loans of the C.N.R. or any company included in the C.N.R. system and for construction and betterments; the loan to be secured by mortgage upon the undertaking of the C.N.R. system, the mortgage to set out such terms and conditions as the government may approve.

W. A. Read and Co. are credited by a press dispatch as stating that the $10,000,000 C.N.R., 2½-year and 5-year notes offered by them on a 6% basis have all been sold. The last previous issue of C.N.R. notes secured by familiar collateral matured Sept., 1918, and was paid off in cash and the new issue is in effect a deferred refunding operation.

Duluth, South Shore and Atlantic Ry.—The annual report for 1918, of this C.P.R. subsidiary, shows a deficit after payment of taxes and fixed charges of $417,131, compared with a deficit of $69,- for 1917. The U.S. Railroad Administration's operating account is not given in the report.

Grand Trunk Pacific Ry.—Interest on the company's bonds to the amount of about $2,000,000 fell due July 1. An Ottawa dispatch, July 1, stated that it had been intimated that the Grand Trunk Ry. would take care of its liability for such of the bonds as it had guaranteed. The Dominion Government is the guarantor of the balance.

Timiskaming and Northern Ontario Ry.—Passenger earnings for April, $79,431.89; freight earnings, $155,056.22; total earnings, $234,488.11, against $55,547.60 passenger earnings; $238,616.16 freight earnings; $294,163.76 total earnings, for April, 1918.

Watchmen at Crossings. The Board of Railway Commissioners has issued a circular stating that it has considered replies from various railways, in answer to its letter of Mar. 4, re watchmen at crossings, where there are more than four tracks, when gates are out of order, and is of the opinion that it will be sufficient for the present if the railway companies undertake to appoint two watchmen in such cases, and when the traffic or other conditions justify the same, for the public's adequate protection. Railway companies are requested to file an undertaking on the lines as set above, together with a statement in detail of the crossings involved.

The Grand Trunk Railway's Chairman States Company's Case for Consideration.

A special general meeting of the Grand Trunk Ry. Co. of Canada was in London, Eng., June 30, for the purpose of submitting the Grand Trunk Act, 1919, together with a resolution authorizing the directors to create and issue the perpetual 4% consolidated debenture stock under the powers conferred by the act.

A. W. Smithers, M.P., the company's chairman, who presided, said: "The bill we introduced into the present session of the Canadian Parliament to increase our borrowing powers by the creation of £2,500,000 4% debenture stock, has been passed by parliament and received the royal assent, and we have called you together today for the purpose of obtaining your approval of the act. As the government has not yet made any proposition to us beyond its original and only offer, it is necessary for the company to carry on its business in the meantime and perform its duties to the public, and the powers given under this act are to enable us to carry out necessary financing. This is the act which I told you at our special meeting on Mar. 21 was held up by the parliamentary committee in Canada. The holding up of the act was naturally an aggravation of our difficulties, and I expressed the great regrets of the board that such action should have been taken. I am glad to say, as the result of that special meeting—at which, you will remember a resolution was passed conveying to the government that the original and only offer made by the government was insufficient to effect a friendly settlement—the proprietors desired the board to convey to the government their wish for a friendly settlement.

"The resolution of the meeting was conveyed to the then acting Premier, Sir Thos. White, by our President in Canada, H. G. Kelley, and Sir Thos. White promised that the bill would proceed, and it is that bill to which we ask your assent today. As you know, we were able to form a committee to consult with on behalf of the shareholders, of some of the first bankers in London, and we agreed on terms which we thought we could recommend the shareholders to accept, and Mr. Kelley has been in negotiation with the government since April. Sir Thos. White announced in the Canadian House of Commons on more than one occasion that the government did not wish to treat us harshly. Still, nothing was done. Of course, we realized that the Prime Minister was absent in Europe attending the Peace Conference. Sir Robert Borden returned to Canada about May 25, and we hoped that the government would then make a move. Unfortunately, labor troubles had developed, and this may have prevented Sir Robert giving the Grand Trunk Ry. negotiations the attention for which we were all anxiously waiting. In my speech on Mar. 21, supplemented by the one I made at the annual meeting on April 28, I fully stated our case, and both statements were unanimously approved.

"We are in our present position today from circumstances entirely beyond our control—viz: enormously increased expenses, arising from high wages and increased cost of material, and not being allowed sufficent increase of rates to meet the increased expenditure. In one way or another, the governments of Canada, America and Great Britain have had to assist the railways under present exceptional conditions, and the only railway, left to its own resources is the G.T.R., the oldest railway in Canada, which has rendered 65 years of service, which has received practically no assistance from the government in all that long period, and which has rendered splendid service to the country during the war, as the following figures will show:—Our gross traffic in 1913, the year before the war, was £9,133,000, and we were able to pay the full dividends for the year on the guaranteed and first and second preference stocks, and 2½% on the third preference, or a total amount of £973,000 divided among the shareholders for 1913. In 1918 our gross traffic was £12,655,000, an increase of £3,522,000 on that of 1913, and we distributed £973,000 less; or, in other words, we only covered our fixed charges, and the shareholders received nothing. Similar conditions prevailed in 1917. Thus, for two years, when the company was carrying immense traffics and performing splendid service to Canada, the shareholders received nothing. Thus, had we been treated as the British Government treated the British railways, the shareholders would have received £973,000 in each of the years 1917 and 1918, instead of nothing, or if the immense traffic we carried in those years had been carried under pre-war conditions, we could have paid a dividend on the ordinary stock. The government knows we wish to make a friendly settlement; the government has declared in parliament it does not wish to deal harshly with us.

"In Jan., 1918, the government asked the board to name the amount we would be prepared to recommend the shareholders to take for their property as an annual payment beyond the fixed charges. We did so. The government did not accept our offer, and made a counter offer in Mar., 1918. Ever since that time we have been negotiating. We have continually reduced our terms, in order to do our utmost to come to a friendly agreement. The government has not altered its terms and it is impossible on its terms to come to a friendly agreement, as their acceptance would mean, as I have pointed out on several occasions, the confiscation of a considerable portion of the shareholders' property. The difference now between us, although vital to the attainment of a friendly settlement, is comparatively a small thing for Canada. We are not asking for any consideration for any stock only represented by paper; we are only asking for fair consideration for actual money actually put into the undertaking. The money for which we ask consideration was not invested with the idea of great reward. A little over 4% interest was the inducement to the investor, and such a low rate certainly showed the faith of the British investor in the stability and future of Canada. Was that faith justified or was it not? I for one cannot doubt the answer, but is it right, when we have just emerged victoriously from the most terrible war in history, that a company which has so largely contributed to the prosperity and upbuilding of Canada, and which has rendered such splendid service during that war, contributing its full share to its success, should be left for nearly two years in a state of anxious suspense?

"There are thousands of poor and suffering shareholders, scattered throughout the length and breadth of the British Isles, who have either put their hard-earned money into the company expecting a moderate return, or they have invested their money in their belief in the future of Canada, which has been so eloquently and frequently expatiated upon by Canadian statesmen. In the terms we have proposed we have taken no account of the future, and we could only carry those terms by asking you—all of each class of security other than the fixed charges—to make some sacrifice in order to arrive at a friendly settlement. Surely it cannot be for the honor or interest of Canada, the leading British Dominion overseas, to keep these anxious people longer in suspense. Their suffering is very real, and I again on their behalf and on yours, appeal to the Canadian Government for a fair and speedy settlement."

In reply to remarks by shareholders, the chairman said: "I am very much obliged for the various criticisms which have been made, and I heartily agree with nearly all that has been said, but I am sure you will realize that, whatever our difficulties are, those difficulties will be best surmounted by a united board and a united body of shareholders. With regard to Mr. Woodward's suggestion as to asking the Imperial Parliament to interfere in this matter, well I will not go so far as to say that under no circumstances could that be done, but I will go so far as to say that it would be a most delicate matter, and might, except under very special circumstances, which have not yet arisen, do considerable harm. The Canadian people and the Canadian Parliament are very jealous of their independence, and I think the Imperial Parliament would at once decline to interfere. If it did interfere, it would only be under quite extraordinary circumstances, which have not yet arisen. As to Mr. Woodward's opinion that it is the desire of the Canadian Government to get our property at a bankrupt price, I am bound to say that the delay which has gone on for such a long time is some excuse for people to hold that opinion. I cannot, however, but believe that a nation which has behaved to the mother country as Canada has during the war must be filled with high and noble ideals, and therefore, until it is proved, I for one refuse to believe that the Canadian Government could entertain such an unmentionable design. I hope we shall not believe it until it is driven into us by hard facts, which we hope will not arise. As to Mr. Sherme's question about the guarantee, Mr. Rodocanachi has explained to him that the guaranteed stock was originally stock issued long before our time, and was given to the Great Western Ry. of Canada in exchange for the latter company's ordinary shares, and was guaranteed to that extent on the year's earnings and payable before our preference."

Railway Lands Patented—Letters patent were issued during June of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia as follows:

	Acres
Central Canada Ry	204.27
Qu'Appelle Long Lake and Saskatchewan Rd. and Steamboat Co.	161.10
Total	36[illegible]

Fuel Controller's Report on Coal Conservation, Shipments, Etc.

The final report of C. A. Magrath, Fuel Controller to the Dominion Government, contains a review of the work done from the establishment of the office in June, 1917, to Mar. 28, 1919. The first part of the report deals with the fuel situation in Canada during the war, and is mainly of historical interest; the second part attempts to forecast fuel conditions of the future with particular reference to means of promoting the conservation of coal.

The economies effected by railways during the war are referred to as follows:—

"The principal saving in fuel effected by the railways was accomplished through a reduction in the number of passenger trains operated, and the general slowing up of schedules to a speed which permitted of a maximum efficiency for the coal consumed. They further co-operated by making use of old ties, which had in the past been burned along the right of way, and in generally promoting conservation by cautioning their employes against overloading locomotive tenders, and preventing waste of steam through locomotive safety valves. As far as possible bituminous coal was substituted for anthracite in heating waiting rooms.

"In the work of coal conservation, as in other lines of war activities the efforts of the railways throughout the Dominion were co-ordinated, and in a broad way directed, by the Canadian Railway War Board. Not only were fuel saving measures adopted by various lines themselves, but their efforts extended to effecting conservation of fuel in its larger aspects. Preference was given to coal mines in the matter of coal mining supplies, their demands ranking second only to those of actual war materials. The railways co-operated with the Fuel Controller in publicity work designed to promote the early stocking of coal, and special attention was given to coal carrying routes, so as to maintain an uninterrupted flow from Canadian mines or United States gateways to our consuming areas.

"In the west the increase of tonnage handled between Apr., 1918, and the end of the year was 25% more than that handled during the same period in the previous year. The heavier loading of cars also contributed a saving of coal, which has been estimated at 256,972 tons. Through the elimination of duplicate and continual passenger train services an additional saving of 600,000 tons was effected. During Jan. and Feb., 1918, over 5,000 cars (200,000 tons) of coal were worked through the Niagara gateway for points in Ontario, and through the diversion of box cars to the Delaware and Hudson, an increase of 14,457 cars (505,000 tons), destined principally for points in the Province of Quebec, was secured.

"On the railways themselves, employes were drilled in the most scientific methods of firing both on locomotives and stationary boilers; and in locomotive houses and shops the utilization of scrap and waste wood in place of coal was effected. Steam also was supplanted where possible through the utilization of electricity generated by water-power. In all, it has been estimated that not less than 1,000,000 tons of coal was saved by Canadian railways during 1918."

In the second part of the report the Fuel Controller, after reviewing the sources of supply of coal and Canada's requirements, deals with the question of distribution. He points out that approximately 42% of the coal imported into Canada is brought in by ships, 46% by all rail, and 12% by car ferries. In connection with the car ferry routes, it is mentioned that there are two points of entry on Lake Ontario and four on Lake Erie. The storage accommodation at the different water route terminals is as follows:—

	Number of plants	Capacity tons	Rate of discharge per hour tons
St. Lawrence	44	1,766,000	7,807
Lake Ontario	9	28,750	230
Lake Erie	3	5,500	310
Lake Huron and Georgian Bay	52	815,300	4,783
Lake Superior	11	2,792,000	3,580
Sault Ste. Marie....	4	715,000	1,405
Total	123	6,122,550	18,115

The equipment of ports in the Maritime Provinces is sufficient to handle the cargoes of small sailing vessels and barges, but not of large vessels, consequently during the last two years much difficulty was experienced in securing anthracite by water from New York. In order to provide against this difficulty in future it is suggested that the dockage and unloading capacity of these ports should be enlarged. Such cities as Toronto, Hamilton and even Ottawa, it is recommended, should eventually get in more coal by water, which would necessitate the construction of adequate unloading and storing facilities for which conditions are said to appear favorable. With reference to the importation of coal by rail one of the chief dufficulties center about the Niagara gateway. The situation there is that, during the winter, especially, the Canadian railways are unable to accept freight in the quantity and at the rate at which it is delivered by the U.S. lines. In ordinary winter weather, Canadian railways are not in a position to handle much over 100 cars a day over this frontier. This is a serious matter, especially to southwestern Ontario, which, in view of the comparatively short haul from the Pennsylvania mines has depended in the past on all-rail coal, rather than on the development of water facilities on Lakes Erie and Ontario.

Railway Supplies Needed in Siberia

The Canadian Government Trade Commissioner at Vladivostok, Siberia, writes that Lt.-Col. MacFeat, British representative on the Inter-Allied Purchasing Committee, formed recently to obtain supplies required for the Siberian railway systems now under control of the Inter-Allied Railway Committee, has requested that Canadian manufacturers of railway materials send catalogues.

Canadian manufacturers in a position to supply rolling stock, rails or other railway supplies should send catalogues addressed to Lt.-Col. MacFeat, care of L. D. Wilgress, Canadian Government Trade Commissioner, Suifunskaya St. 10, Vladivostok, Siberia.

The Cost of Stopping an 8-car passenger train, weighing 623 tons, from a speed of 30 m.p.h., is said to be 61.4c.

Canadian Northern Railway Equipment and Other Liabilities.

The Minister of Railways stated in the House of Commons, June 30, that the volume of equipment trust obligations outstanding in the name of the Canadian Northern Ry., when that line was taken over by the Government, was $13,526,000; there were $2,659,000 of such securities outstanding executed in favor of the Fidelity Trust Co. of Philadelphia, but none executed in favor of the Case Fidelity Trust Corporation of Philadelphia. These bonds represent a direct mortgage on the equipment until such time as the bond issue is retired when the equipment becomes the property of the C.N.R. The total cost of C.N.R. equipment at the time the government took it over was $61,398,385. Of this amount $39,588,643 was pledged as security for the equipment bonds outstanding at that time. The Dominion Government are shareholders of the C. N.R., and, as such, do not necessarily assume all its liabilities, but the equipment trust bonds are a direct liability of the C.N.R. The only difference between a bond secured by equipment and a bond secured by mortgage upon the physical assets, is that the interest and sinking fund payable on account of equipment bonds are part of the working expenses of the railway, therefore they have priority over interest and sinking fund payments on the bonds secured by the physical assets.

The Minister of Railways also stated that the outstanding bonds of the C.N.R. system will remain a direct liability of the C.N.R. and subsidiary companies. The Government has arranged that if the net earnings of the C.N.R. are insufficient to pay the bond interest, the government will provide for such interest for the current fiscal year. The government are the owners of the C.N.R. capital stock and the title to the physical property is visited in the name of the C.N.R. This company is, therefore, directly liable for payment of the interest charges on the bonds issued on such property.

Doheney, Quinlan and Robertson, Ltd., has been incorporated under the Dominion Companies Act with authorized capital of $2,000,000, and office at Montreal, to carry on business of general and railway contractors, engineers and builders, and allred operations. The Provincial directors are: H. Doheney, H. Quinlan, A. W. Robertson, G. A. Campbell, K. C., and J. Karry, advocate, Montreal. The first named has been engaged in railway contracting for some years, either independently or in association with M. J. O'Brien, while H. Quinlan and A. W. Robertson have been associated in carrying out a large number of Government works.

Hugh Doheney & Co., Ltd., has been incorporated under the Dominion Companies Act, with authorized capital of $2,000,000 and office at Montreal to carry on business as general and railway contractors, engineers and builders, and various other businesses connected with the carrying out of public works. The provisional directors are Hugh Doheney, G. A. Campbell, K. C., A. Angers, J. Kerry, Mr. M. Hartley, Montreal.

Vapor Car Heating Co. of Canada, taken over the business of the Vapor Car Heating Co. Inc., Canadian branch at Montreal.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska.—When the United States Congress made the original vote for the construction of the Alaska Ry., the estimated cost of the line from Seward to Fairbanks was $35,000,000. The vote asked for this year is $12,000,000, and it is expected that $4,475,000 more will be required for the next financial year, so this will bring the total cost of the work to $50,436,971, an increase of 300.1 per cent. over the original estimated. line is expected to be ready for operation in 1921. (April, pg., 190).

Alberta and Great Waterways Ry.—J. D. McArthur, President, is reported to have said in Edmonton, Alta., July 4, that a steam shovel had been sent out to a point north of Lac la Biche, where a gap of about 20 miles of track was unballasted. At the McMurray end of the line there remained about 35 miles of line to be ballasted and completed, and it was hoped to have this work finished this year. (May, pg., 253).

Athabasca, Grande Prairie and Fort Vermillion Ry.—The bill providing for the incorporation of a company to build a railway from the junction of the Athabasca and Solomon Rivers, northerly to the junction of the Smoky and Muskeg Rivers, thence through the Grande Prairie district northerly to Peace River Landing, and thence to Fort Vermillion, was passed by the House of Commons, and was read a second time in the Senate, but when up for the third reading, on July 2, it was held in connection with allegations concerning the cancellation of coal land leases held in the name of a German-American, and their re-issue to interests allied, with the promoters of the bill. The Senate ordered the bringing in for a return of correspondence, etc., in connection with the matter, and Sir James Lougheed, on behalf of the Government, made a statement of what had taken place. On June 26 the Senate appointed a special committee to investigate the matter, but it was announced, July 3, that the regranting of the leases to Colonel Shellington and C. A. Barnard had been cancelled. The proceedings in regard to the biil then fell through, and the House of Commons, on July 4, directed the return of fees to the promoter, less the cost of printing and translation. (April, pg., 190).

Canadian Niagara Bridge Co.—The Dominion Parliament has authorized the company to build 12 miles of railways in connection wits its projected bridge, instead of 6 miles, as prevailed in the general traffic bridge across the Niagara River in the original act. The company was incorporated in 1918, to build a railway and general traffic bridge across the Niagara River, the Canadian end of the bridge to be located between Chippawa and Fort Erie, Ont. The provisional directors of the company are Lord Shaugnessy, J. N. Beckley, E. S. Cahill and W. P. Torrance.

When the measure came up for its second reading in the Senate, June 26, it was explained that, since the act of incorporation was passed in 1918, the Michigan Central Rd., the owner of the land over which the approaches to the bridge were to be built, had taken the land for its own purposes, and it would therefore be necessary for the bridge company to build from Welland to Bridgeburg, 12 miles. It was stated that all arrangements had been made for the building of the line and the bridge; the necessary United States legislation has been passed, and the company desired to go on building of the bridge, in fact everything was ready for this purpose on the passing of the bill into law.

A press report of July 13 states that options have been secured on property along the Niagara frontier, which, with the other property acquired previously, will give the company the additional land required for its project. It is also reported that there is much activity on Grande Island, in the middle of the Niagara River, opposite to where the company's lands are, owing to reports of the actual starting of construction on the bridge. The bridge is to be erected jointly by The Toronto, Hamilton, Buffalo Ry., and the New York Central Rd. (July, pg., 253).

Dolly Varden Mines Ry.—The agreement reached with the Taylor Engineering Co., under the provisions of the act passed recently by the British Columbia Legislature, was not consummated, consequently the property passed over to the Taylor Engineering Co., subject to the conditions mentioned in the act. The Taylor Engineering Co. is the title under which the whole property will be operated. A press report of July 12, states that the officers of the company are: President, R. P. Butchart; Directors, A. J. P. Taylor, J. F. Tener, H. C. Chiene; General Manager, D. D. Young; Superintendent, A. W. Davis. The same report states that it is the company's intention to complete the railway from the mines to tidewater, immediately, in order to provide for the transportation of the ore immediately available, and that the ore will be shipped to the smelters on vessels chartered by the company. (June, pg., 313).

Edmonton, Dunvegan and British Columbia Ry.—J. D. McArthur, President, is reported to have said in Edmonton, Alta., July 4, that 100,000 ties were being put in to replace old ties on the line between Edmonton and Sawridge, 163.7 miles, that ballasting operations were going on along the Grande Prairie branch, from a gravel pit about 19 miles south of Spirit River, and that when this work is completed, the ballasting of the main line east of Spirit River will be gone on with.

The supplementary estimates voted in the House of Commons, July 5, included $258,797.16 to the E. D. and B. C. Ry., for a subsidy on its branch line from a point on its line as located, situated near the Spirit River settlement, to and through the Grande Prairie Land District, Alta., or on to main line. Ths amount is to be expended on such branch line or any portion of the main line, or both, under the supervision and direction of officers of the Railways Department, and upon such terms and conditions as may be approved by the Dominion Government.

The Board of Railway Commissioners is being asked for a recommendation to the Dominion Government to sanction an agreement dated May 3, 1918, between the Edmonton, Dunvegan and British Columbia Ry., and the Alberta and Great Waterways Ry. (June, pg., 313).

Grand Trunk Pacific Ry.—We are officially advised that the company proposes to build a car ferry slip at Prince Rupert, B. C., and that it is intended to go on with the work as soon as the Dominion Government has approved of the plans.

The slip will be located in Waterfront block C., and will be 450 ft. long by 75 ft. wide. The trestle will consist of 21 bags, of pile work, with a rail and plank walk at the side. At the end of the trestle there will be a 3-track 40-ft. apron to enable the barges to be removed at any stage of the tide.

The ferries that will operate in connection with the slip are remodelled G. T. P. Ry. lumber barges. They will be equipped with trackage, housing for the crew, and all facilities essential to a regular car ferry. They will operate between Prince Rupert and Swansea Bay at the present tme, with a probable extension later to Ocean Falls and possibly Anyox. (June, pg., 313).

Great Northern Ry.—The President, in his report for the year ended Dec. 31, 1918, states that 203 miles of new sidings and spurs were added to the company's lines in Canada, and that there was a short change of line made at Spencer, B. C., on the Vancouver, Victoria and Eastern Ry's. Grand Forks and Phoenix branch.

Hudson Bay Ry.—The House of Commons on July 5, voted in the supplementary estimates $300,000 on capital account for construction purposes on this railway, and in the main estimates voted $100,000 on account of terminal work at Port Nelson. The Minister of Railways said the $300,000 is to cover the cost of ties to complete the railway to Port Nelson. The rails will be taken from the Canadian National Railways main line, where new rails are being put in. As soon as the ties and rails are obtained the work of completing the line will be gone on with. The $100,000 for the Port Nelson terminals is to pay for items in connection with the staff, and for cleaning up work in and around Port Nelson during the year.

The Senate, during its recent session, appointed a special committee to investigate the navigability of Hudson Bay and Straits, and other matters, as the result of a discussion on the building of the Hudson Bay Ry. The committee reported that 14 sittings had been held and considerable information gathered, and asked for power to sit after the closing of the session, and to report at the next session of Parliament. (May, pg., 253).

Lacombe and Northwestern Ry.—The Premier of Alberta is reported to have said at Calgary, Alta., July 3, on his way home from Ottawa, that he had been in the east trying to secure rails for the completion of the Lacombe and Northwestern Ry., from near Bentley to Rimbey, but found it impossible to obtain relaying rails at reasonable prices. The Alberta Government was now about to call for tenders for the completion of the line. It was the Government's intention to sell the line as soon as an equitable and favorable arrangement could be made with some other railway company or experienced railway operators. (July, pg. 381).

Maritime Coal Ry. and Power Co.—A coal train running on this company's railway between Joggins Mines and Maccan, N. B., is reported to have dropped into the Maccan River, through the bridge, on July 13. The company applied recently for approval of plans for new piers for this bridge, and had invited tenders for the work. (June, pg., [illegible]).

Montreal Central Terminal Co.—The Minister of Public Works is reported to have formally disapproved of the company's plans for the building of a bridge over, or the construction of a tunnel under the St. Lawrence River, connecting Montreal with the South Shore, under the provisions of the Navigable Water Act. This bridge or tunnel formed part of a project initiated by C. N. Armstrong for the laying out of a central station and terminals in Montreal, which has been extensively pushed during the last few years. It is reported that the plans for the development of the part of Montreal as outlined by the Harbor Commission, include a bridge, at or near the site proposed to be used by the company.

Owing to the opposition which developed in the Senate to the project, the company's application for an extension of time for construction was withdrawn. (June, pg., 315).

Naas and Skeena River Ry.—A petition was reported to be in circulation in the Prince Rupert, B.C., district recently, asking the British Columbia Government to give some encouragement to the building of a railway within the Groundling coal area, which lies about 200 miles from Prince Rupert. A company of which the late Lord Rhondda was head, had under consideration before the war. the construction of a railway from Kitimat, along the Naas River, and the Kitsumkalum River valleys to the Groundling country. The report states that a more suitable route for a railway would be from the Groundling country to Kiwangar, just below Hazleton, mileage 1576 on the Grand Trunk Pacific Ry. The estimated cost of a line is put at $15,000,000, and it is suggested that a grant of 10,000 acres a mile, and the right to exploit 250,000 acres of coal land on royalty, be given in aid of construction. (June, 1917, pg., 225).

Pacific Great Eastern Ry.—The British Columbia Minister of Finance left Toronto for Victoria, B. C., July 2, after placing a loan of $3,000,000 with city bondhouses. He is reported to have said that the whole of this loan will be applied to construction on the Pacific Great Eastern Ry's. line, 200 miles of the railway being operated, leaving about 180 miles to be completed in order to reach Fort George and on the completion of the line to that point arrangements will be made for pushing on into the Peace River country.

A press report of July 11 states that 18 miles of additional grading on the uncompleted section of this line towards Fort George, B. C., has been completed; that tracklaying was expected to be started on July 13, towards Williams Lake; that ballasting and surfacing operations were being carried on on the mileage completed recently westerly from Clinton, and that the foundation work for the bridge at Sheep Creek was being gone on with.

Quebec and Saguenay Ry.—In the supplementary estimates passed by the House of Commons, July 5, there is an item of $550,000 for construction work on the Q. and S. Ry., for the year. The line has just been opened to Murray Bay, but there is considerable finishing up work to be done, buildings to be erected, etc. (May, pg., 254).

Quebec and Ungava Ry.—St. Felicien and Ungava Ry.—A press report states that N. L. F. Blake left Quebec recently with a party for Chicoutimi and Lake Chibougamou. At the latter point they expect to joint another party, reported to have already reached there. These two parties are reported to be making surveys in connection with the Quebec and Ungava Ry., and it is stated that the second line will start from St. Felicien, and will finally connect with the Q. and U. Ry. at Lake Chibougamou. (May, pg., 244).

St. John and Quebec Ry.—A press report of July 13 states that the contractors expected to have the section of the line from Gagetown to the junction with the Canadian Pacific Ry. at Westfield, N. B., ready for operation before Aug. 1, which was the date set some time ago. The completion of this section of the line will give the Canadian National Rys. a second entrance into St. John, the intention being to operate trains over the National Transcontinental Ry., from McGivney Jct., into Fredericton, and thence over the St. John and Quebec Ry. and the C. P. R. (July, pg., 382).

Canadian Pacific Railway Construction, Betterments, Etc.

Fairville-West St. John Second Track—The Board of Railway Commissioners made an order recently authorizing the opening for traffic of the second track between Fairville and West St. John, N.B., mileage 0.07 to 1.11.

Ottawa, Northern and Western Ry.—The Dominion Parliament has authorized the building of a line from the present terminus at Waltham, Que., through Waltham, Chichester and Sheen Tps., and across the Ottawa River to a junction with the C.P.R. main transcontinental line at Chalk River, Ont.

Kingston Freight Terminals—A press report states that the Board of Railway Commissioners has issued an order directing the company to begin the construction of its new freight terminal at Kingston, Ont., not later than May 1, 1920.

Western Branch Lines Contracts—The Dominion Parliament has authorized the company to build seven branch lines and extensions of lines, full details of which were given in Canadian Railway and Marine World for June, pg. 319. As foreshadowed by the President in a statement made at Saskatoon, Sask., June 6, referred to in our last issue, construction is to be gone on with at once. We are officially advised that contracts for grading have been let as follows:

From Lanigan northerly for 50 miles, being part of a line of 150 miles from Lanigan, through Watson and Melfort, to Tp. 57, Range 17, west 2nd meridian, north of Carrot River, Sask. John Stewart, Construction Co., Vancouver.

For 25 miles on the projected branch from Rosetown, Sask., southerly for 50 miles, thence southwesterly to Wymark on the Swift Current southwesterly branch. This 25 miles will be started from the end of the section of the Milden-Empress line, put under contract and run generally southerly. Canadian Construction Co.

From near Leader, Sask., on the Swift Current northwesterly branch, generally southerly for 25 miles. John Stewart Construction Co., Vancouver.

From Wymark, Sask., on the Swift Current, southeasterly branch, easterly branch, easterly for 25 miles, being part of a line to connect with Archive, on the Moose Jaw southwesterly line. John Stewart Construction Co., Vancouver.

From Russell, northerly for 12 miles, being an extension of a Manitoba and Northwestern Ry. branch, now in operation from Hazelcliffe to Russell, 11 mlies. Northern Construction Co., Winnipeg.

From Milden, Sask., on the Moose Jaw northwesterly line, for 34 miles, being part of the projected extension of the Bassano easterly branch from Empress, Alta. The total length of this line is 132 miles. John Stewart Construction Co., Vancouver.

Acme to Drumheller, Alta.—We are officially advised that it is proposed at present to build 37 miles of line, that work will be started at once, and that it is expected to have this mileage completed by Nov. 10. The location shows a maximum gradient of 0.65%, and a maximum curvature of 10 degrees. The track will be laid with 80 or 85 lb. steel rails. The contract for grading has been let to the John Stewart Construction Co., Vancouver.

A press report states that the general contractors have sublet the grading for this line to Burris, Jordon and Welsh, and that the second member of this firm is in charge of the work with headquarters at Granger, Alta. The route is reported to be through the Knee Hill River Valley, and the Red Deer Canyon, and through Carbon.

Columbia Gardens to Trail—A press report states that it is possible the company will soon begin the construction of a line from Columbia Gardens to Trail, B.C., 7 miles. This line was surveyed some years ago. Columbia Gardens is on the Great Northern Ry. line from Marcus to Nelson, at mileage 43, and Trail is on the C.P.R. Nelson-Rossland line.

Vancouver Pier Construction—Work is reported to have been started on the new pier on Burrard Inlet, the engineers being engaged in making borings for the foundations. We were officially advised at the end of February that the pier to be built is one of two which had been recommended by a committee of the company's officers which had considered the question of the facilities required for the company's ocean traffic. The dimensions of the piers had not then been settled, and the report referred to states that the details of the pier have not yet been finally settled. The work reported to be in progress probably has to do with the final settlement of the plans. (July, pg. 383).

Freight Traffic Manager for Vancouver. The Vancouver Board of Trade, and a number of other business organizations in that city, have joined together to establish a freight traffic bureau, with a view to securing alterations in existing conditions, with regard to freight rates both east and west, and also to look after the adjustment of claims, prepare cases for presentation to the Board of Railway Commissioners, etc.

Railway Rolling Stock Orders and Deliveries.

The C.P.R. between June 15 and July 15, received 3 locomotives from its Angus shops, Montreal.

The Cordoba Central Ry., (South America), a British owned railway, has ordered six 2-8-2 locomotives from the American Locomotive Co.

The G. T. R., between June 12 and July 15, received 4 switching locomotives from its Montreal shops, leaving one, of an order of 20, still under construction there.

The National Steel Car Co. between June 13 and July 15, delivered 276 box cars to Canadian National Rys. and a quantity of miscellaneous railway material for the Federated Malay States Railways.

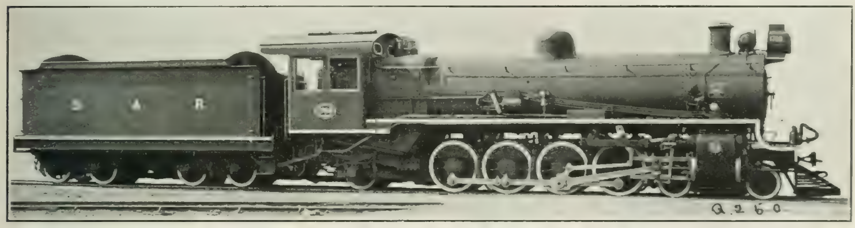
Canadian National Rys. have ordered 18 twelve section, single drawing room, standard sleeping cars, and 9 dining cars, from Canadian Car and Foundry Co., to be built at its Montreal plant.

The Nigerian Rys. (British West Africa), have ordered 10 locomotives from the American Locomotive Co. These will be similar to those built previously for the same system by the company.

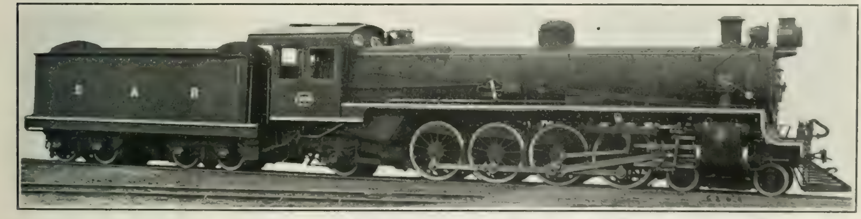
The Minister of Railway stated in the House of Commons July 5, that orders then given for rolling stock for the Canadian National Rys. were approximately as follows: Locomotives, $2,350,000; freight equipment, $8,650,300; passenger equipment, $4,450,000; a total of about $16,555,000.

The House of Commons, on July 5, voted $35,000,000 to acquire directly or indirectly, or to assist in acquiring during that fiscal year, railway equipment and materials for the purposes, and upon the terms, save as varied by the vote, mentioned in Chap. 38 of the statutes of 1918. The assistance as provided by the vote may be by way of advances to any Canadian railway or any Canadian rolling stock company, or by way of equipment or materials acquired by the Minister of Railways. This vote is chargeable to capital.

Canadian National Rys. has given the Canadian Car and Foundry Co. an order to build 20 of the colonist cars it has on order as previously mentioned, as tourist cars. This work is being undertaken at the company's Montreal plant. These cars will be of the C.N.R. standard tourist car type, 81 ft. 10 in. over couplers; 73½ ft. over end sills; 68½ ft.; total wheel base; 57½ ft. truck centers; 11 ft. truck wheel base, and with 4 ft. 2 in. vestibules. They will be equipped with 6-wheel trucks, with 5 x 9 in. axles, McCord journal boxes, rolled steel wheels, with latest type of clasp air brakes, Westinghouse L. N. equipment with 18 in. brake cylinder, Safety Car Heating and Lighting Co.'s electric lighting system, 30 volts, 300 ampere hour battery and lights so arranged inside of car as to provide half light on night circuit, 4 separate circuits arranged for lighting, and no gas to be used for auxiliary purposes, Vapor Car Heating Co.'s latest vapor heating system. DuPont fabrikoid seat covering, pantasote curtains, composition flooring, wood interior finish, steel exterior finish, gravity water system supplied from overhead tanks with special filling device from side of car, 3 wash basins at men's end, and 2 at women's end.



Locomotive, class 484 S 188, built at Montreal for South African Railways.



Locomotive, class 482 S 194, built at Montreal for South African Railways.

The Montreal Locomotive Works is, as stated previously in Canadian Railway and Marine World, building 40 mountain type locomotives for the South African Railways, duplicates of those built for the same system by the American Locomotive Co. last year. These are of two classes, 20 being built to each specification, an illustration of each type being given on this page. Following are the chief details:

	Class 482. S. 188	Class 482. S. 194
Gauge	3 ft. 6 in.	3 ft. 6 in.
Fuel	Soft coal	Soft coal
Cylinders, diar. and stroke	22 x 26 in.	22 x 28 in.
Driving wheel, diar	48 in.	57 in.
Boiler, inside diar	67½ in.	64 13-16 in.
Boiler pressure	190 lb.	185 lb.
Firebox, length and width	79⅞ x 65⅛ in.	88⅞ x 64¼ in.
Tues, no. and diar	139-2¼ in. 24-5½ in.	113-2¼ in. 21-5½ in.
Tubes, length	19 ft. 1⅞ in.	19 ft. 1⅞ in.
Wheel base, driving	12 ft. 9 in.	15 ft.
Wheel base, engine	30 ft. 8 in.	33 ft. 9 in.
Wheel base, engine and tender	59 ft. 9¼ in.	62 ft. 7¼ in.
Weight on leading truck	25,000 lb.	27,000 lb.
Weight on drivers	143,000 lb.	144,500 lb.
Weight on trailing truck	19,500 lb.	22,000 lb.
Weight, engine	188,000 lb.	194,000 lb.
Weight, tender	177,000 lb.	177,000 lb.
Heating surface, tubes	1,555 sq. ft.	1,265 sq. ft.
Heating surface, flues	657 sq. ft.	575 sq. ft.
Heating surface, firebox	138 sq. ft.	188 sq. ft.
Heating surface, total	2,350 sq. ft.	2,028 sq. ft.
Heating surface, superheater	558 sq. ft.	484 sq. ft.
Grate area	36 sq. ft.	40.2 sq. ft.
Maximum tractive power	42,300 lb.	37,400 lb.
Factor of adhesion	3.38	3.86
Tender, type	8 wheeled	
Capacity, water	4,250 imp. gals.	
Capacity, coal	22,400 lb.	

It is announced that 20 of these locomotives were shipped from Montreal on Elder Dempster and Co.'s s.s. Kwarra, July 18, to South Africa.

Demurrage Rates — The Board of Railway Commissioners will, on Aug. 2, at Ottawa, bring up the question of demurrage rates. In Aug., 1917, a standing scale of demurrage rates was put into effect to meet war conditions, and upon the cessation of hostilities a number of trade associations asked that the old rates be restored.

Canadian National Railways Construction, Betterments, Etc.

Appropriations—The House of Commons on July 4, passed an item in the estimates of $11,121,681 for construction and betterments on Canadian Government Railways to this amount; $6,[illegible] is to be expended on lines east of Quebec; $993,280 on the National Transcontinental Ry. west of Quebec; $1,600,000 on Halifax terminals; $524,[illegible] on the mechanical department, and $1,500,000 on general appropriations for construction and betterments.

Betterments Programme — We have been officially advised that the betterments on the Canadian National Railways for this year include the following: Nearly $6,000,000 will be spent on bridge work. This will include filling and replacing timber bridges with steel and concrete to take care of heavier power. One new structure included in this amount, is the overgrade highway bridge at Halifax docks in connection with the ocean terminals. New 85 lb. steel rails will be laid on 710 miles on a number of different sections, 350 miles of which will be on prairie lines and 360 miles on eastern lines. This will release about [illegible] miles of 80 lb. relay steel which will be used for relaying important branches. Roadbed and track work will include ditching, draining, trimming, tie plates, interlockers and signal apparatus, and various other items. On the eastern lines four sections of second track are to be constructed from Truro to Belmont; Springhill Jct. to Maccan; a section at Moncton; and from St. Rosalie to Bagot, these items alone representing over $1,650,000. This expenditure is being made to facilitate operations in and out of adjacent terminals, where in the past congestion has been experienced, and siding additions and improvements will be made at many places, including additions to west yard at Chaudiere, yard addition at Moncton and improvements in grades at McGivney Jct. to Fredericton. The expenditure on ballasting will amount to about $1,700,000, which will cover a large mileage on various lines in eastern and western Canada. Buildings will form a large item of expenditure, amounting to over $2,000,000, which will include extensions to locomotive houses, new stations and section houses, freight sheds, coaling plants, repair shops, water tanks, etc.

Prince Edward Island Ry.—The Minister of Railways stated in the House of Commons July 4 that the work to be done on the P.E.I.R. includes new 85 lb. rails, $1,900; Wellington section of extension, $390; North Wiltshire business siding, $1,600; Fredericton, two sidings, $2,700; third rail, Borden-Charlottetown-Summerside, $200,000. It is intended to complete the laying of a third rail on the line between Charlottetown and Summerside, so that it can be operated as either gauge. It is expected to get this work completed during the summer. The steamship Scotia, which ran formerly between Mulgrave and Point Tupper, is being fitted up so that she may be used between Borden and Cape Tormentine, when the Prince Edward is off for overhaul during the summer, or as an extra to take care of certain special kinds of traffic, such as gasoline in carload, or 10 [illegible].

Sydney, N.S., Coaling Plant—We have been officially advised that a contract has been let to Williams and Wilson Ltd., Montreal, for the erection of a coaling plant at Sydney, N.S.

Moncton Freight Shed—Tenders were received to July 17, for the construction of a brick and steel freight shed, 450 ft. long, and a brick freight office building at Moncton, N.B.

St. John, N.B., Station—A press report states that announcement of the decision to build a new station and to extend the yards at St. John, is expected to be made shortly. The report states that engineers, in addition to carrying out a survey in connection with the proposed new station and yard extension have made enquiries about property which will be required to provide additional space at the terminal. The plans for the new station are said to provide an elevated entrance.

Fredericton-McGivney Jct. Improvements.—We are officially advised that an engineering party is making surveys between Fredericton and McGivney Jct., N.B., on the old Canada Eastern Ry., in connection with the proposed revisions to make the line a circle in a direct route from the National Transcontinental Ry. into St. John.

Fredericton Bridge.—A. P. Barnhill, K.C., a director of the Canadian National Rys. is reported to have said recently that a new bridge across the St. John river at Fredericton, N.B., will be built as soon as possible.

Sackville Double Track Bridge.—We are officially advised that a contract for the construction of a double track bridge over the Tantraman River, about a mile east of Sackville, N.B., has been let to the Nova Scotia Construction Co., Halifax, N.S.

Intercolonial Ry. Second Track Line.—We are officially advised that contracts for the second track and diversion work, which was fully described in Canadian Railway and Marine World for July, pg. 379 have been let as follows:—

Truro to Belmont.—Grading for one additional main line track, for approximately 7.57 miles, Bate, McMahon Co., Ltd., Ottawa.

Springhill Jct. to Maccan.—Grading for one additional main line track for approximately 9.13 miles, A. Wheaton, and Dominion Construction Co., Ltd., Halifax, N.S.

Moncton.—Grading for double track railway, approximately 3.35 miles, consisting of grading on the north siding and parallel to the present track on the St. John subdivision from mileage 1.44 (approximately), and grading for double track from mileage 2.53, St. John subdivision to mileage 3.50 Newcastle subdivision, A. Wheaton and Dominion Construction Co. Ltd., Halifax.

St. Rosalie and Charlotte.—Grading for double track diversion from mileage 108.21 to 112.91, approximately 4.7 miles, Walters, Dobenny & Co., Montreal.

Section House Contracts.—We are officially advised that contracts have been let for the erection of standard section houses as follows:—To Hamilton and Collier, Campbellton, N.B., section houses at Sirois and near Grog Brook, N.B. To T. Roy, Green Point, N.B., section house at Grog Brook, N.B. To A. J. Morin, Garthby, Que., section houses at Lapoint, Picard, Bretagne, Lefebvre, Que.

Chicoutimi Station—Tenders will be received to Aug. 9 for the erection of a station at Chicoutimi, Que., at the Quebec and Lake St. John Ry. terminus.

Cap Rouge to Portneuf, Que.—We are officially advised that the rebuilding of some 20 miles of the Canadian Northern Ry. between Cap Rouge and Portneuf, Que., which was washed out last year, has been let to Vivian T. Bartram, of Toronto. The work will consist of heavy rock filling rip-rapping, broken stone ballasting and shore protection work along the St. Lawrence River. K. A. Morrison, railway sub-contractor, is General Manager of the work, and J. E. McDonald, of Whitley, Ont., is Superintendent.

Tenders for Ties—Tenders will be received to Aug. 28 for 1,375,000 railway ties, to be made and delivered between Oct. 1, 1919 and Oct. 1, 1920, to be delivered as follows: 1,000,000 between Port Arthur and Pembroke, Ont.; 50,000 on lines in Central Ontario; 25,000 on lines between Ottawa and Quebec; 200,000 on the Canadian National Rys. between O'Brien and Quebec, and 100,000 on lines in the Lake St. John district, Que.

Ontario District Buildings—Tenders will be received to Aug. 1, for the erection of 3 section houses and 2 stations of frame construction on concrete foundations, at different points in the Ontario District; also for 5 coal and oil houses and 21 bunk houses, all of frame. These two latter classes of buildings are to be loaded on flat cars and delivered f.o.b. to any C.N.R. siding in Ontario.

Port Arthur Elevator—We are officially advised that the workhouse to be built at Port Arthur, Ont., of which a contract has been let to the Barnett McQueen Co., will be 78 ft. 4 in. wide by 210 ft. 4 in. long by about 200 ft. high, and will have a grain storage capacity of about 700,000 bush. The unloading shed, at the end of the workhouse structure, will be 110 ft. 2 in. wide by 150 ft. long and will contain 4 automatic box car dumpers and 4 unloading pits. All buildings will be of reinforced concrete construction throughout. The equipment will be electrically driven with separate motors for each machine. The new workhouse will be built to handle the three present tile and concrete storage units, having a total capacity of 7,000,000 bush., and will take the place of the two timber workhouses, used formerly for that purpose. The elevator will have an unloading capacity of 300 cars a day, and a shipping capacity to steamships of 75,000 bush. of grain an hour. The cleaning equipment will consist of 15 no. 11 monitor receiving separators, 3 monitor northwestern separators, 2 no. 9A screening separators, 3 no. 8A flax separators, and 3 Richardson wheat and oat separators. The installation will include a complete dust collector system. A novel feature of this elevator will be the installation of 4 automatic box car dumpers, to take the place of the old system of hand shovelling. It is anticipated that the unloaders will greatly increase the speed of unloading cars, and, at the same time, will considerably reduce the number of men usually employed in this operation. The elevator equipment will be modern in every respect and the workhouse, when completed, will be the handling house for the largest grain elevator in the world.

Western Lines Contracts—The Canadian Construction Co., which has the contract for grading on the Hanna-Medicine Hat line, in Alberta, and the Lampman-Peebles line in Saskatchewan, is a recently organized company, with authorized capital of $200,000, office at Winnipeg, and the following officers: President, J. D. McArthur; Vice President, W. A. Dutton; Secretary, D. N. McLeod; Treasurer, E. J. Rankin. The company is reported to have sublet its contracts.

We are officially advised that J. W. Stewart is personally in charge of the various contracts in the prairie provinces and in British Columbia, let to John W. Stewart & Co., Vancouver, B.C.

Warman-Prince Albert Track Relaying—A press report of July 15 stated that the relaying of track from Warman, to Prince Albert, Sask., 75 miles, had been completed.

Kamloops - Vernon - Lumby Line. — A press report states that J. W. Stewart & Co., who have the general contract for grading, etc., on this line, have had to sublet the work in stretches of about 10 miles each to Angus Stewart, J. B. L. Macdonald, A. E. Griffith, ... Sharpe, C. Tupper, H. G. Barber, ... McLeod, Raubeim Bros. and Bouley & Co. With the exception of the latter two firms all the holders of sub-contracts are said to be returned officers, and it is reported that they are employing returned soldiers as far as available. Work is reported to be in progress at Kamloops, Armstrong, Monte Creek, and Long Lake.

New Westminster - South Vancouver Line—We are officially advised in connection with the projected line from New Westminster to South Vancouver, that it is proposed to build it from the end of the Fraser River bridge into New Westminster, a distance of 2,000 ft. at present. This short bit of line is one cutting, the contract for which was let to 15 returned soldiers with the city's approval to furnish needed work to the men, and to get a cutting which would take much line out of the way. For the remainder of the line, a trial survey has been run down the north arm of the Fraser River and around Point Grey to Kitsilano Reserve in order to get general information. No further construction is contemplated at present. (July, pg. 379).

A Reinforced Concrete Gondola Car has been built in the U.S. It has a steel skeleton body mounted on the standard center sills and bolsters of the U.S.R.A., 40 ft. 50 ton gondola car, and is designed for a capacity of 100,000 lb., plus the usual 10% overload. The end load was assumed at 200,000 lb., with an allowance of 25% for impact, equivalent to an end load of 250,000 lb. The floor is 2⅛ in. thick, and the sides, 1¾ in. thick, of reinforced concrete, ribbed at critical points. The total weight is 53,600 lb., but it is estimated that with proper facilities for construction, a similar car could be built weighing between 46,000 and 48,000 lb. It was in service recently on the Illinois Central Rd. for a 30 day test.

Mechanical Stokers—It is contended that all locomotives which weigh 200,000 lb. or more on the drivers, have a tractive effort of 50,000 lb., a grate area of 60 sq. ft., and which require more than 4,000 lb. of coal an hour for long periods, should be equipped with mechanical stokers.

Traffic Orders by Board of Railway Commissioners.

Regulations Governing Baggage Car Traffic.

28,477. June 19.—The application of Eastern Canadian Passenger Association under Sec. 31 of the Railway Act, for leave to publish for three weeks in the Canada Gazette, rule 23 of the regulations governing baggage car traffic in Canada, as amended by general order 191, May 26, 1917: It is ordered that leave be granted the applicants to publish for three weeks in the Canada Gazette said rule, which reads as follows: "Storage—Rule 23. Exception (4)—Immigrant baggage will be stored free of charge for any portion of a period of, but not exceeding, five days after arrival at the ports of Montreal, Toronto and Winnipeg."

28,478. June 19.—Re application of Eastern Canadian Passenger Association, under sec. 31 of the Railway Act, for leave to publish for three weeks in the Canada Gazette, rule 26(d) of regulations governing baggage car traffic in Canada, as amended by general orders 179, 181 and 262, dated, respectively, Jan. 29 and Feb. 3, 1917, and May 8, 1919: It is ordered that leave be granted the applicants to publish for three weeks in the Canada Gazette said rule 26(d), which reads as follows: "26(d)—In case of non-delivery of baggage or other articles checked, notice must be given in writing to the originating or terminating carrier within 20 days after arrival of passenger at destination. In case of damage or delay to baggage or other articles checked, or loss of any of the contents from a receptacle, such notice must be given within 20 days after delivery of such baggage, article or receptable. Otherwise the carrier shall not be liable."

28,480. June 17.—Granting application of Eastern Canadian Passenger Association, under sec. 31 of the Railway Act, for permission to publish general orders 191 and 262, dated, respectively, May 26, 1917, and May 8, 1919, in two consecutive issues of the Canada Gazette.

Newsprint Paper Dates From Thorold.

28,518. July 11. — Re complaint of Ontario Paper Company, Thorold, Ont., against rate of 22c per 100 lb. charged by G.T.R. on newsprint paper, in carloads, from Thorold to Chicago, Ill. Upon hearing the complaint at Ottawa, June 10, 1919, in the presence of counsel of the complainant and counsel and a representative for the G.T.R., the evidence offered and what was alleged, and upon reading the exhibits filed, and the report of the board's Chief Traffic Officer, it is ordered that the complaint be dismissed.

Wood Pulp Rates From Quebec Points.

28,537. July 12.—Re complaint of Chicoutimi Pulp Co, that the Canadian Northern Ry. tariffs on wood pulp from Chicoutimi and Val Jalbert, Que., to points in the United States, known as Central Freight Association territory, are 6c per 100 lb. higher than those from Hawkesbury, Ont., instead of 5c as formerly, and that the rates on wood pulp from Hawkesbury to points in Central Freight Association territory are ½ per 100 lb. higher than the rates prescribed by order 26,547, Sept. 20, 1917. Upon hearing the matter at Ottawa, July 5, 1919, in the presence of counsel for the Canadian National Rys., and counsel and representatives for the G.T.R. and C.P.R., the complainant, the Montreal Board of Trade, the New York Central Rd. and the Riordan Pulp and Paper Co. being represented, it is ordered that the complaint be dismissed.

Freight and Passenger Traffic Notes.

A petition of the Acadia Sugar Refinery, against railway freight rates on sugar, was heard by the Privy Council at Ottawa, July 9.

The Canadian Pacific Ocean Services Ltd., general passenger department has been removed from 2 St. Peter St., Montreal, to the ground floor of the Dominion Express Building, 141 St. James St.

It was reported in Winnipeg, July 14, that the accumulation of freight and express matter gathered at various points in the west, consequent on the recent strike in Winnipeg, had been cleared away, and that traffic was again practically normal.

The Alberta and Great Waterways Ry. put in effect July 24, a change of train service between Edmonton, and Lac la Biche, Alta. The train leaves Edmonton, as formerly, at 7.20 a.m., but on Thursdays instead of Fridays, and returns from Lac la Biche at 5.30 a.m. on Fridays instead of Saturdays.

The Board of Railway Commissioners made an order June 3 authorizing the Canadian National Rys. to operate trains and establish a service over the portion of the Victoria and Sidney Ry. from Sidney to the point when it crosses the Canadian Northern Pacific Ry., for three months pending the making of a traffic agreement between the railways.

J. D. McArthur, President, Edmonton, Dunvegan and British Columbia Ry., Alberta and Great Waterways Ry. and Central Canada Ry., is reported to have said in Edmonton, Alta., July 4, that since Sept., 1918, the railways had carried 25,000 cattle into the Peace River Country, of which only one carload had been returned, and that over 100,000 tons of hay had been taken out during 1918.

The Canadian National Rys. is operating a train daily except Sundays on the Halifax and South Western Ry., leaving Halifax at 7.05 a.m., and arriving at Yarmouth at 6.30 p.m., in connection with which steamships leave Yarmouth for Boston, Mass., Tuesdays, Wednesdays, Fridays and Saturdays. Steamships arrive in Yarmouth from Boston the same mornings connecting with the train which leaves Yarmouth, daily except Sundays, at 8.45 a.m., reaching Halifax at 7.05 p.m. A parlor buffet car is attached to these trains.

The Quebec and Saguenay Ry. began on July 1, operating daily, except Sundays, a train leaving the Quebec Ry., Light and Power Co.'s station at St. Paul St., Quebec, for Baie St. Paul, Les Eboulements, St. Irenee, Pointe a Pic, Murray Bay, and all intermediate stations. The train leaves Quebec at 8 a.m., reaches Murray Bay at 1 p.m., leaves there on the return trip at 3 p.m., and arrives at Quebec at 8 p.m. It carries passengers and express matter. Freight is carried by a train for all stations to Murray Bay on Wednesdays and Saturdays, and from Murray Bay to Quebec, Tuesdays and Fridays.

Mainly About Railway People Throughout Canada.

E. W. Beatty, K.C., President, C.P.R., is announced as one of the speakers at the industrial congress to be held at Calgary, Alta., Aug. 13 and 14.

Senator F. L. Beique, one of the C.P.R. directors, has been elected President Saguenay Pulp and Power Co., which owns the Roberval-Saguenay Ry.

Major Graham A. Bell, C.M.G., who was appointed acting Deputy Minister of Railways and Canals in June 1918, has been appointed Deputy Minister.

Sir George McLaren Brown, European General Manager, C.P.R., and Lady Brown, were entertained to dinner at London, Eng., July 5, by the local staff, in honor of Sir George's recent knighthood. Among the several congratulations received, was a letter from E. W. Beatty, K.C., President, C.P.R., which was sent overseas by the Vickers-Vimy aeroplane which made the first non-stop trans-Atlantic flight recently.

Sir Geo. Bury, who has removed from Montreal to Vancouver, on his election as President, Whalen Pulp & Paper Mills Ltd., has taken a house on Shaughnessy Heights, Vancouver.

Mrs. H. R. Charlton, wife of the General Advertising Agent, G.T.R. and G. T.P.R., is spending the summer at Old Orchard, Me.

Jas. D. Coleman, who died at Winnipeg, July 1, aged 75, was, for some time in C.P.R. service at Winnipeg, as Inspector of Ties for Manitoba. D. C. Coleman, Vice President, Western Lines, C.P.R., Winnipeg, and G. T. Coleman, Inspector of Transportation, C.P.R., Montreal, are sons.

Sir Henry Drayton, Chief Railway Commissioner, Ottawa, accompanied Sir Robert Borden on the latter's cruise down the St. Lawrence River in July. He is mentioned as being about to resign his position, and to enter the Dominion Government, probably as Finance Minister.

J. L. Englehart, Chairman, Timiskaming & Northern Ontario Ry. Commission, Toronto, has been staying at the Algonquin Hotel, St. Andrews, N.B., since early in July and will probably remain there until towards the end of August.

N. J. Fraser, who died at Peers, Alta., July 5, aged 57, was in G.T.R. service for some time as Foreign Freight Agent, after which he managed the Johnston Steamship Line at Montreal, resigning in 1904.

J. P. Gordon, of Pas., Man., ex-Assistant Chief Engineer, Hudson Bay Ry., is reported to have discovered a solid dyke of quartz, containing gold at Copper Lake, north of Pas, and east of Flin Flon copper mines.

Henry E. Graves, who was for 26 years in G.T.R. service, as Commercial Agent in the U.S., and who retired from active service several years ago, died at his home at River Forest, Ill., June 25.

Grant Hall, Vice President, C.P.R., left Montreal, July 7, on an inspection trip of the company's lines to the Pacific Coast, and was accompanied over the Western Lines by D. C. Coleman, Vice President, Western Lines. Mr. Hall was expected to return to Montreal about Aug. 1.

C. M. Hamilton, of McTaggart, Sask., who is one of the Canadian National Rys. directors, has been elected, by acclamation, as member for Weyburn, in the Saskatchewan Legislature. He was the Liberal nominee.

John Harrower, who has been appointed acting Chief Draftsman, car department, G.T.R., Montreal, was born at Glasgow, Scotland, Dec. 23, 1883, and from June, 1897, to Sept., 1902, junior draftsman, Glasgow Locomotive Works, Glasgow, Scotland; Sept., 1902 to Apr., 1904, draftsman, Babcock and Wilcox Ltd., Renfrew, Scotland; May to Sept., 1904, draftsman, Hamilton Patent Office, Hamilton, Ont.; Sept, 1904 to Nov., 1911, draftsman, G.T.R., Montreal; Nov., 1911 to Nov., 1912, chief draftsman, Motive Power & Car Department, Grand Trunk Pacific Ry., Rivers, Man.; May, 1912 to May, 1919, draftsman and supervisor of apprentices, G.T.R., Montreal.

Mrs. W. P. Hinton, wife of the Vice President and General Manager, Grand Trunk Pacific Ry. Co. and Miss Hinton, are spending the summer at their cottage at Minaki on the National Transcontinental Ry.

Robert Bernard Jennings, who has been appointed Division Engineer, Canadian National Rys., Toronto, was born at Paris, Ont., June 29, 1888, and entered transportation service in Apr., 1906, since when he has been, to Oct., 1906, chainman, Toronto-Sudbury Line, C.P.R.; Oct., 1906 to Oct., 1907, rodman, Saskatoon-Edmonton Line, Grand Trunk Pacific Ry.; Oct., 1907 to Dec., 1908, instrument man and Resident Engineer, Saskatoon-Edmonton Line, same road; Dec., 1908 to Oct., 1909, leveller, Toronto-Ottawa Line, Canadian Nothern Ontario Ry.; Oct., 1909 to Jan., 1916, Resident Engineer, Toronto-Ottawa, Sudbury-Port Arthur and Hawkesbury-Montreal Lines, Canadian Northern Ry.; Apr., 1916 to Jan., 1917, Manager, Jennings and Ross Co., Milwaukee, Wis.; Jan., 1917 to May, 1919, Major, 10th Battalion, Canadian Railway Troops, C.E.F., in service in France.

Mrs. Johnson, of Montreal, widow of Lacey R. Johnson, formerly of the C.P.R. Mechanical Department, and who, when he died, was that company's General Welfare Agent, is visiting her daughter, Mrs. W. F. Evans, in Vancouver.

Sir Hormisdas Laporte, one of the Canadian National Rys. directors, is spending the summer at his house, at Coteau du Lac, Que.

R. S. Logan, Vice President, Land, Tax and Claims, G. T. R., Montreal, and his family, visited the Saguenay district recently.

George Peter MacLaren, who has been appointed Engineer, Ontario District, Canadian National Rys., Toronto, was born at London, Ont., Apr. 4, 1878, and was, from Jan. to Dec., 1897, rodman, draftsman and instrument man on sewage disposal work, under the City Engineer, London, Ont.; Jan. to Nov., 1898, Resident Engineer between St. Thomas and Walkerville, Ont., Lake Erie and Detroit River Ry.; Jan. to Dec., 1899, draftsman, Algoma Central and Hudson Bay Ry.; 1900 to 1910, transit man on location, Canadian Northern Ry.; 1902 to 1904, Resident Engineer on construction, same road; 1904 to 1911, Division Engineer on construction, in Nova Scotia, Quebec and Ontario, same road; 1911 to 1915, District Engineer, North Bay District, same road; 1915 to 1916, Division Engineer, Toronto Division, same road. In 1916 he enlisted and went overseas as Chief Engineer, of the 10th Battalion, Canadian Railway Troops, and was appointed to his present position on his return to civil life recently.

A. C. Mackenzie, formerly of Mann & Mackenzie, railway contractors, and for some years President of the Northern Construction Co., who had been a prominent railway contractor for many years, died suddenly, July 25, at the Winnipeg Electric Ry.'s new power plant on the Winnipeg River, where his company had a contract. "Big Archie," as he was familiarly known, was about 56 years of age, and had his home at Beaverton, Ont., where he is survived by a son and three daughters, and where he was buried.

Sir Donald Mann, who visited British Columbia recently, going to Prince Rupert by the G.T.P.R., does not intend to leave Toronto, to reside in the Pacific province, as stated in a Vancouver press dispatch. He will, however, probably spend considerable time there in the future, in connection with extensive mining interests which he has acquired in the Cassiar district, in northern British Columbia, in the vicinity of the Portland Canal, where he built the Canadian Northeastern Ry. a few years ago.

F. H. McGuigan, at one time Fourth Vice President, G.T.R., is representing the Toronto master bakers on a board of conciliation as to journeymen bakers' wages.

W. H. Moore, ex-Secretary, Canadian Northern Ry., and General Manager, Toronto & York Radial Ry., who wrote "The Clash," a book dealing with racial strife in Canada, has been given the degree of doctor in letters, by Laval University, Quebec.

A. Z. Mullins, who was appointed Division Freight Agent, G.T.R., Grand Rapids, Mich., recently, was born at Appin, Ont., Feb. 14, 1862, and entered G.T.R. service Feb. 10, 1884, since when he has been, to May, 1887, telegraph operator, Komoka, Ont.; May, 1887 to Oct, 1896, rate clerk, chief clerk and Travelling Freight Agent, Buffalo, N.Y.; Oct., 1896 to Apr., 1900, Agent, National Despatch—Great Eastern Line, Grand Rapids, Mich.; Apr., 1900 to June, 1907, Agent, Lackawanna—Grand Trunk Line, Detroit, Mich.; July, 1907 to Apr. 30, 1919, Commercial Agent, Grand Rapids, Mich.

Arthur Osmore Norton, President of A. O. Norton, Ltd., Coaticook, Que., and of A. O. Norton, Inc., Boston, Mass., died suddenly at his house at Coaticook, June 8, while writing a letter to his wife. He was born on a farm in Barnston Tp., near Coaticook, Feb. 17, 1845, and began his business career as a clerk in a country store. When about 30 years old, he started a jewelry business in Coaticook, and subsequently established a wholesale jewelry business there; then he started a wholesale jewelry business in Boston, Mass., under the firm name of Norton Bros. & Butters. In 1888 he started manufacturing the Norton ball-bearing lifting jacks, having factories at Coaticook and Boston, and is said to have been the first manufacturer of non-fluid, self lowering jacks, and he was also a pioneer in making ball-bearing screw jacks. He has been succeeded as President by his son, Harry A. Norton, heretofore, Vice President, Treasurer and

General Manager, and F. L. Gormley, heretofore Mechanical Superintendent, has been elected Vice President.

Senator M. J. O'Brien, President, Canada & Gulf Terminal Ry. and railway contractor, Renfrew, Ont., has been elected a director of the Bank of Nova Scotia.

Hiram L. Piper, of the Hiram L. Piper Co., railway and steamship supplies, etc., Montreal, left Montreal, July 12, for an extended motor trip in the United States.

C. W. Rennells, passenger agent, North Street station, Canadian National Rys., Halifax, N.S., has been superannuated after 47 years service. The station staff presented him with a club bag.

Col. G. S. Rennie, Chief Medical Officer, Toronto, Hamilton & Buffalo Ry. and Dominion Power & Transmission Co., Hamilton, Ont., has been appointed chief coroner for Hamilton.

Reuben S. Richardson, who has been appointed Superintendent, Canadian National Rys., Fort William, Ont., was born at Napanee, Ont., Apr. 9, 1865 and entered transportation service in 1878, since when, in 1884, he filled various positions from messenger to freight clerk, operator, ticket clerk, switchman and baggage master, Canadian Express Co. and G. T. R., at various points; 1884 to 1887, brakeman, conductor, station agent and Soliciting Freight and Passenger Agent, Bay of Quinte Ry., at various points; 1897 to 1901, brakeman, conductor and Terminal Yardmaster, Canada Atlantic Ry., Ottawa; 1901 to 1907, General Yardmaster and acting Trainmaster, C.P.R., Smiths Falls and North Bay, Ont.; 1907 to 1911, Assistant Superintendent, Canadian Northern Ry., Montreal, Quebec and Ottawa; 1911 to 1913, Superintendent of Operating and Construction, MacDonnell and O'Brien, contractors on the National Transcontinental Ry., La Tuque, Que., 1913 to May, 1915, General Yardmaster of Terminals and Assistant Superintendent, Intercolonial Ry., Halifax, N.S., Moncton and St. John, N.B., and from May, 1915 to Mar. 27, 1917, Superintendent, District 3, Transcontinental Division, Canadian Government Railways, Fort William, Ont. In Mar., 1917, he was given leave of absence for military duty, went overseas as Lieutenant, no. 2 Section, Skilled Railway Employes, and was later transferred to No. 13 Light Railway Company R.E., British Expeditionary Force.

Lord Shaughnessy, Chairman of the C. P. R. Co., arrived at St. Andrews, N. B., early in July, to spend some time at his summer house, Fort Tipperary.

A. W. Smithers, Chairman G.T.R., sailed from England, for Canada, July 25. It is said to be his intention to endeavor to complete the negotiations between the Dominion Government and the company regarding the G.T.R.'s future.

Lord Mount Stephen, first President, C.P.R. Co., who was 90 years of age on June 5, and Lady Mount Stephen, were paid a visit at Brocket Hall, near Hatfield, Eng., recently, by the Queen and Princess Mary.

Percy R. Todd, formerly President, Bangor and Aroostook Rd., Bangor, Me., and latterly Assistant to District Director, U. S. Railroad Administration, and General Manager, Bangor and Aroostook Rd., Bangor, Me., has been appointed District Director, New England District, U. S. R. A., vice, J. H. Hustis resigned. He was born at Toronto, Dec. 4, 1859, educated at Ottawa, Ont., and commenced railway work as clerk and telegraph operator, St. Lawrence & Ottawa Ry., now part of the C. P. R., and from 1875 to 1882 was Canadian Agent, Ogdensburg & Champlain Ry.; to 1885, General Travelling Agent, National Despatch Line, Chicago, Ill.; July to Dec., 1885, Commercial Agent, New York, West Shore & Buffalo Ry., Albany, N. Y.; to Oct., 1886, chief clerk, General Freight Department, same road, New York; Oct., 1886, to Dec., 1889, General Freight and Passenger Agent, Canada Atlantic Ry., now part of the G. T. R., Ottawa; Dec., 1889, to Feb., 1901, General Freight Agent, West Shore Rd.; Feb. 1901, to Nov., 1903, Second Vice-President, New York, New Haven & Hartford Rd.; Nov., 1903, to 19005, First Vice-President, same road; Jan., 1907, to Jan., 1913, Vice-President, Bangor, Aroostook Rd., and subsequently President same road, Bangor, Me.

Guy Tombs, Assistant Freight Traffic Manager, Canadian National Rys., Montreal, has resigned on his appointment as Traffic Manager for the Canadian Export Paper Co., representing eight of the chief pulp and paper companies of the Dominion and several in the U.S. He is in direct charge of the transportation by land and sea, and will also act as Traffic Manager for the Laurentide Co., Price Bros., Brampton St.; Maurice and Belgo-Canadian companies, and J. H. A. Acer Co., export agents, handling 1,000,000 tons a year. He was born near Lachute, Que., Nov. 22, 1877, and entered railway service in Sept., 1892, since when he has been, to Apr., 1895, junior import clerk, C.P.R., Montreal; Apr., 1895, to Aug., 1897, secretary to General Manager and Secretary, United Counties Ry., St. Hyacinthe, Que.; Sept., 1897, to May, 1899, chief clerk to Canadian Agent, Central Vermont Ry., Montreal; June, 1899, to June, 1900, rate clerk, Division Freight Office, G.T.R., Montreal; June, 1900, to Apr., 1901, Travelling Freight Agent, Central Vermont Ry., St. Johns, Que., and St. Albans, Vt.; May, 1901, to May, 1903, General Northern Ry. of Canada, Quebec, Que.; May, 1903, to June, 1912, General Freight and Passenger Agent, Canadian Northern Quebec Ry., also from Apr. 1, 1908, same position, Quebec & Lake St. John Ry., and also from Apr., 1910, Montreal Representative, Canadian Northern Steamships, Ltd.; June, 1912, to Nov., 1916, General Freight Agent, Quebec Division, Canadian Northern Ry., Montreal; Nov., 1916, to Feb., 1917, General Freight Agent, Eastern Lines, Canadian Northern Ry., Montreal; Mar. 1, 1917, to Dec., 1918, Assistant Freight Traffic Manager, Canadian Northern Ry., Montreal, and from Dec., 1918 to July, 1919, Assistant Freight Traffic Manager, Canadian National Rys., Montreal.

William Walkden, who has been appointed Bridge Engineer, Western Lines, Canadian National Rys., Winnipeg, was born at Alderley Edge, Cheshire, Eng., June 1, 1885, and served as an indentured pupil and assistant with P. Pierce and Son, Architects and Engineers, Stockport, Eng., from Oct., 1902 to July, 1907. He entered transportation service in Nov., 1907, since when he has been, to July, 1909, draftsman, Engineering Department Canadian Northern Ry.; July, 1909 to May, 1912, draftsman and Assistant Engineer, Bridge Engineer's Department, same road; May to Nov., 1912, chief draftsman, same road; Nov., 1912 to Feb., 1917, Assistant to Bridge Engineer, same road; Feb., 1917 to Apr., 1919, acting Bridge Engineer, same road, all at Winnipeg.

Mrs. T. Walklate, wife of the General Tie & Lumber Agent, C.P.R., Montreal, and Miss Walklate, are spending the summer on the Maine coast.

J. J. Warren, President, Kettle Valley Ry., and Managing Director, Consolidated Mining and Smelting Co., has also been elected President of the latter company, and will combine that position with that of Managing Director. Both companies are closely associated with the C. P. R.

The Inverness Railway & Coal Co.'s Financial Difficulties.

Towards the end of June application was made to the Nova Scotia Supreme Court, at Halifax, by the National Trust Co., of Toronto, for foreclosure of its mortgage on the Inverness Ry. & Coal Co.'s property. It was stated that Jno. MacGillivray, formerly General Manager of the company, who had been receiver and manager since July, 1915, had resigned, and that the Eastern Trust Co. had been appointed as his successor. The hearing of the application was adjourned to July 29. We have since been advised that R. E. McLeod, heretofore Chief Accountant and assistant to the Manager, is in charge of the mines and railways for the receiver. While the appropriation of $11,121,681 for construction and betterments on the Canadian National Rys., was under discussion in the House of Commons, July 4, attention of the Minister of Railways was called to the fact that the Inverness and Richmond Ry. and Coal Co.'s railway was to be closed at an early date, and that it was reported that the Inverness coal mine was to be closed July 10, and he was asked as to the probability of the government taking the property over. The Minister of Railways said he made up his mind a year or two ago that the government should take over the branch lines in Nova Scotia and New Brunswick and so do away with all the troubles the people were having because of those lines not being operated properly. Last year the government made arrangements for taking over several of the branch lines in New Brunswick, but the owners of two of these lines had not accepted the offers made. The government had been urged to take over the Inverness Ry. and Coal Co.'s line and another line on Cape Breton Island. The owners valued the Inverness and Richmond Coal Co.'s line at $150,000; the rolling stock and equipment, including 7 locomotives and 131 coal cars at $175,000, and supplies on hand at $25,000, and offered to accept those prices. He replied that the offer to sell the line at $150,000 would be submitted to the government, with a proposition to take the equipment and supplies on the basis of a valuation to be made by D. B. Hanna, President Canadian National Rys. The government could act under the Branch Lines Act, and the agreement could be submitted for ratification next session. In the meantime, in order that operations might not cease, orders had been given for 1,800 tons of coal a week.

An Inverness correspondent writes us that the Canadian National Rys. will take all the Inverness Coal & Ry. Co.'s railway in the near future and that the company's colliery property will, in all probability, be leased to some one who will operate it for a fixed period.

Acquisition of Maritime Province Railways by Dominion Government.

The House of Commons on July 5, passed in the supplementary estimates by way of revote the following amounts for the purchase of branch lines in Nova Scotia and New Brunswick: York and Carleton Ry., $18,000; St. Martins Ry., $67,000; Moncton and Buctouche Ry., $70,000; Elgin and Havelock Ry., $30,000; Salisbury and Albert Ry., $75,000, interest on these amounts estimated from the date of taking possession to Mar. 31, 1920, not exceeding $34,000. The details of the vote set out that the purchase price is not to exceed the amount stated above for each railway (the debts of each railway to the Canadian Government Railways to be cancelled); interest on the purchase price at 5% to be paid from the time of taking possession to the date of the transfer of title, and authorization is given to such of the railways as were under the Dominion Parliament's jurisdiction to sell their lines.

The supplementary estimates passed by the House of Commons, May 20, 1918, contained similar amounts to those mentioned above for the purchase of the railways named, together with $200,000 for the purchase of the Caraquet and Gulf Shore Ry., and $60,000 for the Kent Northern Ry. The owners of these two companies declined to accept the prices offered, but the other five did, viz: the Elgin and Havelock Ry., the Moncton and Buctouche Ry., the St. Martins Ry., and the York and Carleton Ry., being taken over as from June 1, 1918, and the Salisbury and Albert Ry., as from July 1, both 1918, since which dates they have been operated as Canadian Governments Railways branches.

We were officially advised July 15, that the details of taking over these five railways had not been completed, and that it was not expected that all the papers in connection with the transfer of title would be in shape before the end of September. The New Brunswick Legislature passed an act last session giving or confirming titles to right of way to small lines, and giving permission to sell their undertakings.

Ontario Workmen's Compensation Board Report for 1918.

The total number of accidents reported to the Board during the year was 47,848, and the amount of compensation awarded was $3,514,648.57, including claims in respect of a number of 1917 accidents which had not been adjusted at the close of that year, and not including the amount required to meet unadjusted claims of 1918, which it is estimated will amount to $157,852.18.

Accidents in connection with railway and canal construction, dredging, fishing, etc., are classified under Schedule 1, which come under the assessment or collective liability system. The total amount collected on estimated pay rolls from the employers of the above mentioned classes of labor was $83,675.78, and the total amount available to meet claims for the year was $83,318.13. The total expended for medical aid, compensation, pensions, etc., was $40,313.64, leaving a balance of $42,986.19.

Accidents to workmen occurring in connection with steam railways, electric railways, navigation companies, express and sleeping car companies, telephone and telegraph companies, are dealt with under Schedule 2, in which the employer is individually liable for payment of compensation for accidents as they occur. The amounts paid during 1918 as compared with 1917, were as follows:—

	1918	1917
Pensions	$511,964.32	$392,404.71
Other awards	251,546.70	231,151.66
Total	$763,511.02	$623,556.37

The increase was due in the main to the increased pension cost in the fatalities to railway employes during the severe weather of early 1918. During 1917 the pension awards in the steam railway industry group were $290,245.21, and in 1918, $379,263.66.

The cash in bank and invested in connection with schedule 2 industries at Dec. 31, 1918, was $1,036,251.99 against $589,608.45 at Dec. 31, 1917. The amount of the awards in connection with transportation companies was as follows:—

	Awards, not pensions	Pensions.	Total
Steam railways	$153,183.06	$379,263.66	$532,446.72
Electric railways	9,421.20	21,278.23	30,600.43
Navigation companies	6,526.12	14,429.05	20,955.17
Ex. and sleeping car companies	1,699.13	723.06	2,422.19
Telephone and telegraph companies	596.25	7,725.47	8,321.72
Total	$171,425.76	$423,419.47	$594,845.23

Accidents on Steam Railways in 1917-1918.

The Railways Department report for the year ended June 30, 1918, deals with accidents to life and limb under two heads, viz: those caused by the movement of trains, and those from other causes. The following tables give the details:

By Movement of Trains.

	Killed		Injured	
	1917-18	1916-17	1917-18	1916-17
Passengers	32	24	322	410
Employes	154	177	1,868	1,909
Trespassers	129	150	140	124
Non-trespassers	64	64	173	193
Postal clerks, etc	4	4	46	46
Total	383	419	2,549	2,682

Other Causes.

	Killed		Injured	
	1917-18	1916-17	1917-18	1916-17
Passengers	....	....	22	22
Trackmen, etc.	6	8	798	653
Station men	3	0	434	371
Shopmen	4	7	1,188	952
Other employes	11	17	1,064	711
Other persons	3	1	34	38
Total	27	33	3,540	2,747
Grand total	410	452	6,089	5,429

The number of accidents at railway crossings of highways was 132, against 144 for the year ended June 30, 1917. The number of highway crossings by railways at June 30, 1918, was 26,894, of which 2,077 were protected by gates, bridges, subways, or other means, and 24,817 were unprotected.

Great Northern Railway's Report for 1918.

The directors report for the calendar year 1918, states that the company's railways were taken over for operation by the United States Government Jan. 1, 1918. The contract under which this was done provides that each of the Canadian railway companies which had theretofore been operated with and as a part of the Great Northern Ry.'s system of transportation, shall continue to maintain and operate its railways in conjunction and co-operation with the Director General's operation of the G.N.R. Co.'s railways, as nearly as possible, in the same manner as they were operated prior to U.S. federal control. The Canadian companies thus included in the contract are: The Midland Ry. of Manitoba; Manitoba Great Northern Ry.; Brandon, Saskatchewan and Hudson Bay Ry.; Crowsnest Southern Ry.; Nelson and Fort Sheppard Ry.; Red Mountain Ry.; Vancouver, Victoria and Eastern Ry. and Navigation Co.; New Westminster Southern Ry.

The annual compensation to be paid by the U.S. Government for the use of all the G.N.R. lines is $28,771,360.78, which is the average annual railway operating income of the several companies for the three years from July 1, 1914 to June 30, 1917.

The company's investment in Canadian companies, on account of advances made to pay for property, construction additions and betterments was increased during the year as follows:—Brandon, Saskatchewan and Hudson Bay Ry., $1,276.26; Manitoba Great Northern Ry., $4,840.30; Nelson and Fort Sheppard Ry., $1,846.65; Red Mountain Ry., $28.74; Total, $7,991.95.

Taxation of Steam Railways.

Taxes are collected from Canadian railways by the various provinces, as well as by the municipalities therein. The total amount paid by the Canadian railways in respect of lines in Canada, and to state and municipal authorities in respect of their lines in the United States, for the year ended June 30, 1918, was $4,011,088.38, against $4,354,172.52 for the year ended June 30, 1917. The following are details as given in the Railways Department's report:

	Provincial tax.	Municipal tax.	Total tax
Nova Scotia	$ 25.00	$ 1,680.13	$ 1,705.13
New Brunswick	54,262.11	4,184.10	58,446.21
Quebec	117,756.25	507,060.11	624,816.36
Ontario	702,756.25	990,589.39	1,693,129.38
Manitoba	234,543.48	102,597.34	337,140.82
Saskatchewan	135,999.20	27,187.17	163,186.37
Alberta	112,611.82	97,455.51	210,067.33
British Columbia	457,819.91	291,602.88	749,422.79
Yukon	6,826.17	....	749,422.79
Outside of Canada	159,476.45	6,871.37	166,347.82
Totals	$1,981,860.38	$2,029,228.00	$4,011,088.38

Ties Used for Maintenance on Steam Railways.

The consumption of ties on Canadian steam railways during the year ended June 30, 1918, apart from those used for construction work on new mileage was, according to the Railways Department's report, as follows:

	1917-1918	1916-1917
Ties used	7,785,831	8,852,861
Total cost	4,701,312	4,368,124
Cost per tie	60.3c	49.3c

The following details are given:

	Number	Total cost	Average
Cedar	610,158	$ 381,377	62.5c
Oak	686,886	592,747	86.3
Hemlock	301,103	137,211	45.1
Spruce	88,087	28,645	32.4
Fir	63,678	25,903	40.6
Tamarack	180,269	102,526	56.8
Pine	1,309,852	995,596	54.0
Chestnut	131,087	24,724	67.7
Treated	3,106,636	1,471,266	53.8
Unclassified	1,233,655	941,317	76.3
Total	7,785,831	$4,701,312	60.3c

PERSONAL NOTES.

Mrs. Insketter, widow of Lt.-Col. G. A. Insketter, who was killed in France, while in command of the 4th Divisional Canadian Engineers, in 1916, died at Waterdown, Ont., July 18, aged 31.

Lt.-Col. C. W. P. Ramsey, C.M.G., formerly Engineer of Construction, Eastern Lines, C.P.R., Montreal who has returned to C.P.R. service after four years active service overseas, was born at Bury, Que., Jan. 15, 1883, and entered C.P.R. service as apprentice in the Mechanical Department, in 1893, in the company's Delormier Ave. shops, Montreal. From that date to Sept. 19, 1903, he served the company in various minor capacities, and on the latter date he was appointed draftsman in the Construction Department, Montreal, and then passed through the various grades of transitmen, Assistant Engineer and Division Engineer, to Mar. 15, 1912, when he was appointed Engineer of Construction, Eastern Lines, and continued in that position until Feb. 25, 1915, when he was granted extended leave of absence to take command of the Canadian Overseas Railway Construction Corps. He was made a Companion of the Order of St. Michael and St. George, for services in the field, in June 1916, and in 1918 was seconded to the War Department, London, Eng. for special services there. During his connection with the C.P.R. he was closely identified with the construction of the Lindsay, Bobcaygeon & Pontypool Ry., the Toronto-Sudbury Branch, and the double tracking of considerable portions of the Eastern Lines, and lastly he had charge of construction of the Campbellford, Lake Ontario & Western Ry., which constitutes the C.P.R. Lake Shore Line from Glen Tay to Agincourt, Ont. He is at present relieving superintendents on Eastern Lines, who are on their vacations.

Lieut.-Col. Blair Ripley, C.B.E., D.S.O., formerly Engineer of Grade Separation, C.P.R., Toronto, who has returned to the company's service after his active military service overseas, was born at Oxford, N.S., Aug. 29, 1880, and was from 1901 to 1903, Assistant Engineer, Canadian Northwest Irrigation Co.,Great Falls & Canada Co., Alberta Ry. & Coal Co., and St. Marys River Ry., in Alberta and Montana respectively; 1903 to 1905, Chief Engineer of Construction, St. Marys River Ry. in Alberta, and from 1904 to 1905, also Chief Engineer of Construction, Alberta Ry. & Irrigation Co.; 1905 to 1907, Resident Engineer on Construction, Grand Trunk Pacific Ry. in Manitoba and Saskatchewan, and Assistant Engineer on harbor work, G.T.P. R,. Prince Rupert, B.C.; 1907 to May 1, 1916, Resident Engineer on grade revision, C.P.R., Maple Creek to Medicine Hat, Alta.; Resident Engineer on field work, Lethbridge viaduct, C.P.R.; Assistant Engineer in charge, Old Man River viaduct, C.P.R., Macleod, Alta.; Assistant Engineer in charge, Outlook viaduct, C.P.R., Outlook, Sask. On the completion of these works he was sent by the C.P.R. to Nova Scotia to report on betterments and improvements for the Dominion Atlantic Ry., and to organize and prepare for the replacement of some large and difficult bridges on the waters of the Bay of Fundy. In 1912 he was appointed Engineer in charge of Grade Separation, C.P.R., North Toronto. In 1916 he was appointed Lieutenant-Colonel of the Canadian Railway Troops, raised for general railway and bridge construction work at the front. He was subsequently given the D.S.O. for services in the field and at the close of the war was made a Commander of the Order of the British Empire.

Lieut.-Col. John Wise, who has been given the Distinguished Service Order, the Military Cross and the Croix de Guerre, entered the Nova Scotia Tramways & Power Co.'s employ, as a motorman, Apr. 29, 1913, working in that capacity until Apr. 28, 1914, when he was granted three weeks leave of absence on account of illness. He did not return to work, and in Oct., 1914, enlisted in the 25th Nova Scotia Battalion, as a private. When the battalion left for England, about six months later, he was acting sergeant. He received his commission as lieutenant in France, was promoted to captain, then major, and finally lieutenant-colonel of the battalion in which he enlisted.

Major G. A. Wood, M.C., who returned to Toronto from overseas, July 9, was, before entering military service, with the Toronto Harbor Commission, and is a son of D. O. Wood, Traffic Manager, Export and Import Department, Canadian National Rys., Toronto. He graduated from the School of Practical Science, Toronto University, in Apr., 1915, with the degree of B.A. Sc., and entered Toronto Harbor Commission's service in that year under the Chief Engineer. He received a commission as lieutenant in the Corps of Guides and went overseas in Nov., 1915, joining the Royal Flying Corps in England, where he received his training. He was later selected as a flying patrol man, and was sent to France in June, 1916, beginning his work in the Somme offensive, July 1, 1916. He was made captain on the field in Nov., 1916, and was awarded the Military Cross in June, 1917, for good services in France, having, after 9 months of flying, many enemy machines to his credit, and several narrow escapes. In 1917 he was transferred to the United Kingdom, having passed through his service in France without a scratch and with nerves unshattered. On account of his knowledge of the aeroplane, and being a science graduate, he was selected to lecture on construction matters to young officers, on the various subjects connected with flying, and he also designed a strengthener for the substructure of battle planes, which was adopted by the Air Board, and used on several machines in active service. He was promoted to major in Mar., 1918, and was specially selected to establish the first Royal Air Force training camp in Ireland, and later established a second one, at Collinstown, Ireland.

Montreal Incline Ry.—A press report, July 14, states that the company, which is in the hands of a receiver, has refused the terms offered by the Montreal Administrative Commission, and that the railway will not be operated this year.

Transportation Appointments Throughout Canada.

The information given under this head which is gathered almost entirely from official sources is compiled with the greatest care so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Government Merchant Marine Ltd.—D. O. WOOD, Traffic Manager, Export & Import Department, Canadian National Rys., Toronto, is handling traffic matters for Canadian Government Merchant Marine Ltd., until such time as it may be necessary to appoint a separate staff. W. A. CUNNINGHAM, Export & Import Freight Agent, Canadian National Rys., Montreal, is doing the booking of traffic intended for C.G.M.M. ships.

Canadian National Rys. — W. H. BEVAN has been appointed Division Engineer, Ottawa Division. Office, Ottawa.

R. B. JENNINGS has been appointed Division Engineer, Toronto Division. Office, Rosedale, Ont.

R. KING, who has been acting as Superintendent at Fort William, Ont., during the absence of R. S. Richardson on active service, is now acting as relieving Superintendent on Western Lines.

J. J. LEYDON, heretofore City Ticket Agent, Halifax, N.S., has been appointed City Passenger Agent there as reported in our last issue.

S. McILWAIN has been appointed Division Engineer, Nipissing Division. Office, Capreol, Ont.

K. E. McLEOD has been appointed District Passenger Agent, British Columbia Lines. Office, Vancouver, B.C.

G. P. MacLAREN, has been appointed District Engineer, Ontario District. Office, Toronto.

W. C. MOIR, has been appointed acting City Ticket Agent, Halifax, N.S., vice J. J. Leydon, City Ticket Agent, promoted.

H. K. MORRISON has been appointed Division Engineer, Superior Division. Office, Hornepayne, Ont.

L. F. MUNCEY has been appointed Assistant Superintendent, Pacific District, Vancouver, B.C.

R. S. RICHARDSON, recently on active service as Lieutenant, with No. 13 Light Railway Company, B.E.F., and formerly Superintendent, District 3, Transcontinental Division, Canadian Government Rys., Fort William, Ont., has resumed duty there as Superintendent, Canadian National Rys.

GUY TOMBS, Assistant Freight Traffic Manager, Montreal, has resigned an appointment as Traffic Manager, Canadian Export Paper Co. and allied interests.

Canadian Pacific Ocean Services Ltd.—CAPT. A. W. DAVISON, R.N.R., master of the company's s.s. Empress of Asia, is reported to have been appointed Marine Superintendent at Hong Kong, China.

Commander THOMAS FISHER, R.N., has been appointed General Manager, Atlantic Lines. Office, 8 Waterloo Place, London, Eng.

G. N. JACKSON, heretofore Agent, Manila, Phillippine Islands, has been appointed Agent, New York, vice E. T. Stebbing, whose appointment as Passenger Manager for Great Britain and the European Continent, Liverpool, Eng., was announced in our last issue.

JOHN R. SHAW, heretofore Agent, New York, N.Y., has been appointed Agent, Manila, Philippine Islands, vice G. N. Jackson, transferred to New York.

Canadian Pacific Ry.—K. K. DONNELLY, heretofore Purchasing Agent, Vancouver, B.C., has been appointed Purchasing Agent, Winnipeg, vice F. E. Gauthier, deceased.

A. HAYWARD, has been appointed Locomotive Foreman, Red Deer, Alta., vice J. McGown.

Grand Trunk Ry.—W. BIBBY, Supervisor of Track, District 4, Montreal Division, has had his jurisdiction changed to cover section 516, Cornwall, east to Montreal West station. Office, Montreal.

N. C. FOSS, Assistant Purchasing Agent, and General Storekeeper, Pere Marquette Rd., Detroit, Mich., is reported to have resigned to enter G.T.R. service.

J. B. FRANKLIN, Supervisor of Track, District 5, Montreal Division, has had his jurisdiction changed to cover sections from Cornwall, Ont., including Sec. 517 to Manitoba Yard. Office, Brockville, Ont.

JOHN HARROWER, heretofore draftsman and supervisor of apprentices, has been appointed acting Chief Draftsman, Car Department, vice W. J. Hyman, Chief Draftsman, resigned. Office, Montreal.

C. A. SAYLOR, heretofore Locomotive Foreman, Windsor, Ont., has been appointed Locomotive Foreman, Sarnia, Ont.

A. A. SNYDER has been appointed acting Supervisor of Track, District 4, Montreal Division, vice W. Bibby, assigned to other duties. Office, Montreal.

W. H. WENSLEY, has been appointed Locomotive Foreman, Windsor, Ont., vice C. A. Saylor, transferred to Sarnia, Ont.

Grand Trunk Lines in New England (U.S.R.A.), A. B. McNAUGHTON, Superintendent, has had his office removed from Island Pond, Vt., to Portland, Me.

Inverness Ry. & Coal Co.—J. MacGILLIVRAY, Receiver and Manager, having resigned, the Eastern Trust Co., Halifax, N.S., has been appointed Receiver, and has appointed R. E. McLeod to manage the mines and railway.

Pere Marquette Rd. (U.S.R.A.)—W. BRACY, has been appointed Tie and Timber Agent. Office, Detroit, Moch.

C. R. COUCHMAN, heretofore Tie and Timber Agent, is reported to have been appointed Assistant Purchasing Agent, and General Storekeeper, vice N. C. Foss, resigned to enter G.T.R. service.

United States Railroad Administration—A. T. HARDIN, heretofore Assistant Regional Director, Eastern Region, has been appointed Regional Director, Eastern Region, succeeding A. H. Smith, resigned.

The Cornwall Terminal Co., is the title of a business concern which purposes to handle pulpwood from Quebec and New Brunswick, destined for pulp mills in various parts of New York State. Among those interested are B. H. Brown, W. T. Rodden, F. C. Shorey, Montreal, who are reported, July 17, to have visited Cornwall, Ont., and interviwed the municipal authorities with a view to securing a guarantee of $50,000 of bonds.

The Canadian Railway Troops' Splendid Work in the War.

Since the article under the above heading was published in Canadian Railway and Marine World for July, we have received some additional information which enables us to give a number of names not mentioned in the Minister of Canadian Overseas Military Forces' report.

It was stated that in 1914 some well known Canadian railway contractors requested the Militia Department to be allowed to raise a railway construction unit, but on account of the French General Staff having at that time assumed the entire responsibility for the maintenance and construction of railways in the British Armies' zone on the western front, the proposal was not approved. The contractors referred to were: Angus McDonnell, J. W. Buchanan and "Jim" Macdonald, British Columbia.

The two railway construction companies which in the spring of 1915, the War Office requested the Canadian Government to send over and of which the Canadian Pacific Railway Co. undertook the organization, and which proceeded overseas in Aug., 1905, were under command of Major C. L. Hervey and Major A. T. Lefevre, respectively, both of Montreal, each of whom now has the D.S.O.

The Canadian Overseas Railway Construction Corps, which went over in June, 1915, was under command of Lt.-Col. C.W.P. Ramsey, formerly Engineer of Construction, C.P.R., now C.M.G.

The ten battalions of Canadian Railway Troops were under the command, respectively, of the following officers, whose present ranks, ets., are given in each case. Lt.-Col. Blair Ripley, C.B.E., D.S.O., Toronto; Lieut.-Col. J. B. L. MacDonald, D.S.O., Vancouver; Lieut.-Col. C. L. Hervey, D.S.O., Montreal; Lieut.-Col. A. E. Griffin, D.S.O., Vancouver; Lieut.-Col. A. Earchman, D.S.O., Toronto; Lieut.-Col. J. B. Harstone, D.S.O., Edmonton; Lieut.-Col. J. K. Cornwall, D.S.O., Croix de Guerre, Edmonton; Lieut.-Col. W. H. Moodie, D.S.O., Winnipeg; Lieut.-Col. W. A. McConnell, D.S.O., Toronto; Lieut.-Col. W. A. Munro, D.S.O., Winnipeg; Lieut.-Col. A. C. Garner, D.S.O., Winnipeg; Lieut.-Col. S. P. McMordie, D.S.O., Prince Rupert.

Other commanding officers were as follows: Canadian Overseas Railway Construction Corps: Lieut.-Col. J. G. Reid, D.S.O.; 58th Broad Gauge Operating Co., Captain A. H. Kendall, M.C.; 13th Light Railway Operating Co., Capt. R. McKillop; 69th Waggon Erecting Co., Captain H. H. Pinch; 85th Locomotive Crew Co., Lieut. and Acting Capt. B. B. Shaw.

Brevity in Railway Reports.

"Don't be so long-winded in your reports as you have been in the past," said the manager of the Wild West Railway to his overseer. "Just report the condition of the track as ye find it, and don't put in a lot of needless words that ain't to the point. Write a business letter, not a love letter."

A few days later the railway line was badly flooded, and the overseer wrote his report to the manager in one line:—

"Sir—Where the railway was the river is.—Yours faithfully, ——." —Blighty (London).

Steel Rails for Canadian Railways.

We are officially advised that up to July 12, the Dominion Iron and Steel Co. had delivered 95,257 gross tons of steel rails, on orders placed by the Dominion Government in Nov., 1918. The rails were distributed to the following railways:—

	Tons.
Canadian Government Rys.	33,212
Canadian Northern Ry.	1,593
Canadian Pacific Ry.	30,878
Grand Trunk Ry.	29,413
Timiskaming and Northern Ontario Ry.	161
Total	95,257

Telegraph and Telephone Line Estimates for 1919-1920.

In addition to the Public Works Department estimates of which particulars were given in Canadian Railway and Marine World for May, pg. 287, the supplementary estimates for the year ending, Mar. 31, 1920, submbitted to the House of Commons during the recent session, contained the following items, chargeablbe to income:—

NOVA SCOTIA.	
Cape Breton telegraph system, renewal of poles between Grand Narrows and Beaver Cove	$ 1,275
Cape Breton telegraph systems, renewals of poles between East Bay and Ball's Creek	1,600
NEW BRUNSWICK.	
Chatham, Escuminac and Point Sapin telephone line extension from Point to Kouchibouguac, revote, $2,000	2,500
QUEBEC.	
Long Point of Mingan, to rebuild office and residence	2,800
ONTARIO.	
Bath, Amherst Island telephone line, to grant subsidy of $1,200 to Amherst Island Telephone Co., and to provide able	2,200
BRITISH COLUMBIA.	
Caribou District, branch line, Clinton to Gong Ranch, via Kelly Lake, 50 miles	10,000
Construction to telephone line from Slocan Jct. to Slocan City	6,000
Kamloops District, completion of Heflly Lake line to Blucher Hall and Adams Lake, 22 miles	4,500
Kamloops District, extension from Goose Lake to Long Lake (south of Kamloops), 10 miles	2,000
Kamloops District, Merrit to Kingsvale via Coldwater Valley, 20 miles	3,800
Kootenay, extension, Windermere to Fairmount, 18 miles	3,120
Mainland telegraph and telephone lines, general repairs and improvements, further amount required	16,000
Mainland telegraph and telephone lines, to provide for second wire between Similkameen and Princetown	7,300
Skeena District, to complete branch line, Houston to west end, Ootsa Lake	1,516
Skeena District, establishment local exchange, Smithers	850
Skeena District, extension from west end Ootsa Lake to Ootsa Lake post office and Francois Lake	7,200
South Okanagan, extend Marron Lake Branch 4 miles to Lusk's Ranch	700
South Okanagan, branch line from Okanagan Falls to Mathison wharf to Myers' Flat, 15½ miles	3,000
Vancouver Island, extension of telegraph or telephone line, Shaw Cove to Egmont	3,350
Vancouver Island, construction of branch telephone line from Sechelt to Shaw Cove	2,500
Vancouver Island, extension from Squamish (Newport) to Cheakamus House	2,100
Vancouver Island, construction of branch telephone line from Vancouver Island to Port Harvey on Cracroft Island	7,500
VARIOUS.	
Contingencies	5,000
	$ 97,111

During the last 8 years, revolutionists and bandits have destroyed 10,000 freight cars, and many passenger cars, in Mexico.

Telegraph, Telephone and Cable Matters.

The Board of Railway Commissioners has approved the Marconi Wireless Telegraph Co. of Canada's conditions for the acceptance of marconigrams filed for transmission via C.P.R. telegraphs, Great Northwestern Telegraph Co. and Western Union Telegraph Co.

A London, Eng., dispatch of July 25, states that the Marconi Co. has been awarded £500,000 damages against the British Government, for breach of contract in connection with the construction of an Imperial wireless telegraph system. The company's claim was for £1,000,000.

It is announced that cablegram and telegraph money transfer business is now conducted between Canada and points in Germany. The restrictions which were in force during the war have been modified to the extent that business messages in plain English or French may be accepted for German points. Personal messages, or personal matters in business messages, are not permitted, and code addresses must not be used.

The laying of the Atlantic cable has always been a source of dispute as to who is entitled to the credit. It is generally claimed that the credit should go to the U.S. and the U.S. Ambassador, at a recent dinner in London, Eng., claimed that "Cyrus Field tied the two sides together with cables." Chas. Bright, in the London Times, however, has said "that the first Atlantic cable was laid by my father, the late Sir Chas. T. Bright, for which he was knighted at the age of 26. Cyrus Field was Managing Director of the company concerned in the project."

Judgment on Express Companies Application for Increased Rates.

The Board of Railway Commissioners gave judgment recently in regard to the express companies' application for increased rates. The judgment is a lengthy one, and declares that railways and express companies are carrying on business at a large loss. Increases are allowed in the general merchandise scale, and in the special scale N, those in the former case averaging 45.94% in the east; 23.75% in the prairie provinces, and 11.48% in British Columbia. The higher rates in the east are accounted for by the abolition of discriminatory rates and the extension of similar treatment to all districts. The present rates in the prairie provinces average 39.55% higher than those in the east, and under the new rates are 17.88% higher; in British Columbia the averages are, 29.29% and 15.01%, respectively, above those in the east.

The increases in scale N are tempered by changes in the basing and graduate tables, and the reduction from first class by absolute, instead of average, deductions. The result in this scale will be to increase the cost per lb. by one-fifth of a cent for the 50 mile distance, and for a movement of 450 miles, to increase the cost of transportation two-fifths of a cent per lb.

In giving judgment, the Chief Commissioner said: "I am ready to admit that the value of all the commodities has very greatly increased since commodity rates first came in, and that one of the elements in rate making relates to the value of the commodity carried and to the increased risk undertaken. As against the shippers and vendors of these articles of daily necessity, there is no difficulty in the express companies justifying a reasonable increase. I do not think, however, that the matter ought to be considered at the moment. The companies will obtain a fair measure of increase in their first and second class rates. That increase, it is hoped, will prove sufficient to properly maintain the companies and the business, but whatever increase is placed on these commodities would form a reason, a comparatively small one, it is true, in most instances, but still a reason, for further increases in the charge made to the consumer. In the past experience it would appear that the increase in charge to the consumer would be much greater than the increased cost per pound or per pint of the commodity. The cost of living is still mounting. As I see it, it is not to the public interest, and not to the interest of the express companies themselves, to afford the excuse that a raise in the price of transportation of these essential commodities would give for still higher charges against the public. Over and above the essential interest of the consumer, a further and very real ground for withholding increases in these commodity rates, unless it proves to be absolutely necessary, lies in the position of the producer. The commodity rates are the producer's rates. He produces in quantity and ships in bulk. On the pound unit of production his resultant profit is small. His costs have greatly increased. I would dismiss the companies' applications, in so far as the commodity rates are concerned, entirely."

The judgment also increased the wagon service of the companies, extending it on the basis of population. Other changes were made in the companies' tariffs, providing that goods will be carried at a lower rate than hitherto, when originating in, or being delivered to, points without a wagon service. This reduction is 30c per 100 lb., and between points where but one wagon service exists, 15c per 100 lb., having regard in each case to the appropriate graduate table. The graduate table has been recast under multiples of 5, and the pound unit is extended from 10 to 15 lb.

CANADIAN NATIONAL RAILWAYS —EASTERN LINES

Quebec District.

SEALED TENDERS addressed to the undersigned will be received until 12 o'clock noon, Saturday, August 9th, 1919, for the erection of a Station Building at Chicoutimi.

Plans and specifications may be seen at the office of the District Engineer, Champlain Market, Quebec, Que., and at the office of the Division Engineer, Tunnel Terminal Station Building, Cor. Lagauchetiere and St. Monique streets, Montreal, Que.

Tenders will not be considered unless accompanied by an accepted cheque on a chartered bank equal to 5% of the full amount of the Tender, payable to the order of Treasurer, Canadian National Railways.

Lowest or any Tender not necessarily accepted.

A. F. STEWART,
Chief Engineer,
Eastern Lines, Can. National Raiways,
No. 27 Wellington St. East, Toronto.

Electric Railway Department

Proposed Lease of Guelph Radial Railway by Grand River Railway.

Negotiations have been going on for some little time between Canadian Pacific Ry. and Grand River Ry. officials on the one hand, and Guelph, Ont., city officials on the other hand, for the leasing of the Guelph Radial Ry. to the Grand River Ry. At a special meeting of the Guelph City Council, July 15, it was decided to submit to a vote of the ratepayers, Aug. 11, a bylaw approving of an agreement between the city as owner of the Guelph Radial Ry., and the Grand River Ry. Co., for the lease of the Guelph Radial Ry. to the Grand River Ry. Co.

The agreement, as set out in the bylaw, is made between the Grand River Ry. as purchaser of the franchise of the Galt, Preston and Hespeler St. Ry., the Guelph Radial Ry., and the corporation of the City of Guelph, and is to run for 25 years, from Sept. 1, 1919. The Grand River Ry. agrees to undertake the management and operation of the Guelph Radial Ry., in all respects the same as its own line, provided that the cost of management, as distinct from the cost of operation shall be no greater than that of its own line; as soon as the bylaw approving the agreement is passed to spend $16,500 on the roadbed, overhead work and equipment (other than rolling stock), of the leased line, and any additional amount required for repairs to be provided from time to time from the gross earnings of the leased line; to build a line from its present terminus at Hespeler to connect the same with the leased line in Guelph, and to build a spur or branch line from some point on that line to the city's property at Puslinch Lake. This line is to be built within a year, and the city agrees to grant land at the lake for terminal purposes, such land to be returned to the city in the event of the spur line ever being taken up. The Grand River Ry. is to operate a service on the leased line on a 10-minute headway, as soon as the improvements have been effected. The leased line is to be operated for the joint benefit of the two railways, and the proceeds after paying operating expenses, etc., are to be divided equally between the two companies. The fixed charges to be met are stated to be interest on $169,000 of debentures, issued by the city, and it is provided that the city may issue other debentures in respect to capital expenditure for which it may be liable. Any deficit is to be borne by the city, and the Guelph Radial Ry. All rolling stock, plant and material on hand at the time of transfer may be used or sold by the lessee, but the value of the same is to be credited to the Guelph Radial Ry., the proceeds of the sale of the present cars to be applied to the cost of purchasing 10 one-man cars, or such other number as may be required to provide the 10-minute service agreed to. Such additional rolling stock as may be required and the purchase of which is agreed upon is to be paid for out of the Guelph Radial Ry. share of the profits of operation. The fares are to be as follows: Single cash fare, 5c; six tickets to be sold for 25c for limited hour traffic, and children's tickets, 10 for 25c. Other provisions in the agreement refer to the carrying of freight traffic; the method of accounting, the contracts with the Hydro Electric Power Commission of Ontario for power, etc. The final clauses provide that the agreement may be cancelled at any time by the city on the non-fulfilment of any of its terms, and that it may be renewed upon termination for a further term of 25 years. In the course of the discussion it was stated that the city would probably have to issue an additional $30,000 of debentures in connection with the line; that the estimated cost of the extension from Hespeler to Guelph was $400,000, and that the spur to Puslinch Lake would leave the main line either at Kribbs Mills, or the lime kiln, approximately the same point as was projected when the city proposed to build a line to Hespeler with a branch to Puslinch Lake.

The agreement has to receive the Hydro Electric Power Commission of Ontario's consent; the City of Guelph having passed a bylaw in 1916 with respect to the construction of an electric railway from Toronto to Windsor, under the terms of the Hydro Electric Railways Act of 1914.

The Guelph Ry. Co was incorporated by the Ontario Legislature in 1895 to carry out an agreement made Aug. 7, 1894 between the Guelph City Council and George Sherman for the construction of an electric railway in the city. The title of the company was changed in 1903 to the Guelph Radial Ry., and the line subsequently passed under the city's control. The company has power under the act of 1908 and amending acts, to build a line to Hespeler with a branch to Puslinch Lake. The Guelph Radial Ry. has 8.03 miles of first main track. It has $193,000, of common stock, held by the city. It has 8 closed and 3 open cars, 1 snow plough, 1 sweeper and 1 locomotive. For the year ended June 30, 1918, its gross earnings from all sources were $52,814, and its operating expenses $41,280. No taxes were paid. It carried 1,125,552 fare passengers and 23,712 tons of freight.

The Grand River Ry. Co. is a C.P.R. subsidiary owning or controlling the Galt, Preston and Hespeler St. Ry. and the Preston and Berlin Ry., and has power to build a number of other lines which was obtained under the title of the Berlin, Waterloo, Wellesley and Lake Huron Ry. Co. This company took over the G.P. and H. St. Ry. and P. and B.R. and subsequently its name was changed to the Grand River Ry. at the Dominion Parliament's recent session, the section of the act authorizing the amalgamation of these two lines of railway, but which declared that they were still to remain subject to the jurisdiction of the Ontario Legislature was repealed, thus bringing them under the control of the Dominion Parliament. The Grand River Ry. is operated under the same management as the Lake Erie and Northern Ry.; another C.P.R. subsidiary, with which it connects at Galt and which runs from there to Port Dover, 51 miles.

Sir Adam Beck Intervenes—The Ontario Hydro Electric Railway Association's executive committee, at a meeting in Toronto, July 23, at which Sir Adam Beck was present, passed the following resolution:—"That the executive officers of the association be directed to assist Guelph citizens in the defeat of the proposed bylaw in the agreement with the Grand River Ry. and any such agreement which is against the interests of other municipalities having a hydro electric railway agreement which Guelph is party thereto. The executive council associations strongly urges the Hydro Electric Power Commission of Ontario to withhold its consent to all agreements with municipalities, which in any way conflict with any proposed or contemplated hydro electric railway when a contract with such railway has received the assent of the electors, having in view not only the interests of other municipalities, but the contemplated provincial system of hydro electric railway construction."

The Winnipeg Sympathetic Strike and the Winnipeg Electric Railway.

Winnipeg's general sympathetic strike was called off by the strike committee on June 26, at 11 a.m., having lasted exactly six weeks, and having accomplished practically nothing. An article in Canadian Railway and Marine World for July described the early developments of the strike, and told of the attempt of the strike leaders to completely tie up all industries and public utilities in the city. The splendid voluntary services of the citizens, who resisted such a ruthless assault, and who saw in it an attempt to establish the rule of the Soviet, kept all utilities operating, and after the third week of the strike, employes began to drift back to their respective jobs. The city council, however, decided not to take back any employes who refused to sign a pledge, expressing complete loyalty to the city, declining to join a union affiliated with any outside organization, and also refusing at all times to go out on sympathetic strike. This applied to the firemen and policemen, who went out on strike at the strike committee call, and now all utilities are manned by regular staffs, while the majority of the former police and firemen are back on their old jobs, having "signed the pledge." The ignominious ending of the strike, resulting in complete defeat for the strikers, when, had they accepted the proferred arbitration at first they would most certainly have gained something, has resulted in a serious split in the labor ranks. The saner element are dissociating themselves from the more radical trade unionists, and denunciation of the strike leaders by the mass of the workers is general.

As previously stated, the Winnipeg Electric Ry. was ordered by the city council to resume service after the strike had been in progress four weeks. The company made an appeal to the men to return, but without success, and on June 17, A. W. McLimont, Vice President and General Manager, issued an ultimatum, which stated "Employes who do not report, and are not available when required to enable the company to resume service, will be replaced by permanent new employees, and will lose their seniority. New employes taken into the service will not be dismissed, to make places for any old employe who may subsequently decide to return to duty." This ultimatum expired at 8 a.m., June 19th, and resulted in several employes returning to work. These, together with supervisors and inspectors, manned the cars and gave service on the principal lines of the city. Fourteen cars were operated on June 19, and this number was gradually increased up to 50 cars by the time the strike was called off. Upon "peace" being declared the company's employes returned in a body and normal service was restored in the course of a day or so.

The strike, on a whole, was a very orderly one. On two occasions the strikers clashed with the special police, but only on the recent occasion, June 21, were street cars running. One of the cars had to pass a large crowd of strikers, who were forming up in a parade in defiance of the mayor's proclamation. The crowd attacked the car, pulled the trolley off, smashed every window, and tried many times in vain to upset the car. Unable to do this they piled newspapers in the interior, and set fire to them. Just at this moment a detachment of Royal Northwest Mounted Police arrived on the scene, the fire was put out, and the car was driven back to the barns. At the time they sought to rescue the car the mounted police were stoned by the crowd, and this resulted in the police retaliating with their revolvers. Two of the crowd were killed, and scores injured.

One offshoot of the strike is the arrest of a number of the strike leaders, who face charges of seditious conspiracy.

During the six weeks of the strike many employers filled the vacancies caused when their workers were called out on sympathetic strike, and the ending of the strike left hundreds of men and women without employment.

The strike was called off by the strike committee unconditionally, but the Manitoba Government has appointed H. A. Robson, former Public Utilities Commissioner for Manitoba, as a commissioner to enquire into the origin and the whole circumstances surrounding it.

Increases in Electric Railway Fares, Etc.

British Columbia Electric Ry.—The first case to come before the Public Utilities Commissioner for British Columbia recently in connection with electric railways, was the application of the British Columbia Electric Ry. for power to increase its fare to 6c on its Vancouver lines. The application was heard July 10, and decision was reserved on certain points of procedure. Section 11 of the act provides that no new rates of fare can be put in operation without the commissioner's approval, but subsection 2 makes an exception in favor of the B.C.E.R. Co. in respect to its Vancouver and mainland lines. The effect of the subsection is that the company was permitted to charge a rate of 6c from April 9, the excess over the former rate to be paid into a special account and retained there until the commissioner should fix a rate, when, in the event of the 6c rate being established, the money was to be paid over to the company, or in the event of the old rate being established the money would be paid to the Vancouver City Hospital. The burden of proof of the necessity for an increase of rates rests with the company.

At the opening of the hearing the commissioner laid down the mode of procedure viz: that the company's case be presented in two parts: (1) The investment and the present value of the property, with reference to the appraisal, and (2) revenue and expenditure, with reference to profit and loss and maintenance and operation. W. G. Murrin, Assistant General Manager, argued that the investigation must cover the company's business as a whole, as no one rate was independent of the others. Of the company's total revenue, 28% comes from Vancouver, and any serious interferance with that would affect the credit of the company, and make it difficult, if not impossible to raise money for equipment, rolling stock, extensions, etc. The highest return during the last five years was 3.5% on the book values; and no dividend has been paid to the holders of ordinary stock since 1914. G. E. McCrossen, counsel for the city, claimed that the application should be tried on its merits as a local issue arising out of a violation of the franchise and that the issue should be limited to the city limits of Vancouver, except to include Hastings Townsite and D.L. 301. The mayor claimed that the company should be required to operate its lines under the terms of the franchise granted by the city.

The Hull Electric Co. made a number of changes in its passenger fares June 15. The fares within Hull city limits remain as before, the changes affecting suburban points only and being in several cases an advance of 5c on previous fares, but they do not exceed the standard mileage rate of 2.875 which the Board of Railway Commissioners authorized some time ago.

Lethbridge Municipal Ry.—The Lethbridge, Alta., City Council took up recently the consideration of a proposal to increase the charges for all public utilities. The proposal includes, according to a press dispatch, the raising of fares on the municipal railway to 10c cash, or 4 tickets for 25c. The reason for this proposal is stated to be the recent devision of a board of conciliation granting an all round increase of 15% to civic employes.

London and Port Stanley Ry.—The Dominion Parliament has confirmed the agreement with the City of London authorizing the charging of 50c return fares for adults and 25c return for children between 4 and 12 years on the semi-weekly excursion trains from London to Port Stanley, Ont., in place of the 30c return fare for adults and children, between May 15 and Oct. 15, authorized by the original agreement of Nov. 28, 1913. The new fares are to be in operation on Wednesday and Saturdays, from May 24 to Sept. 10.

Moncton Tramways, Electricity and Gas Co.—The New Brunswick Public Utilities Commission is reported to have made an order June 26, authorizing the Moncton Tramways, Electricity and Gas Co. to do away with special tickets for workmen and children. In Nov., 1918, the commission authorized the raising of the fare from 6 tickets for 25c, to a straight 5c rate, and gave power to abolish the limited hour tickets for workmen at 8 for 25c, but made no change in regard to the school children's tickets at 8 for 25c. The new schedule was to remain in force for four months. An investigation of the company's books was directed to be made and R. Carter, Halifax, has been engaged in the work. The order made in Nov., 1918, now appears to have been varied so as to authorize the company to charge a straight 5c faire for all classes of passengers, and at all hours of the day.

Montreal Tramways Co.—The Montreal Tramways Commission was reported on July 2 to be studying the fare question on the M.T. Co.'s lines for this year. The increase of wages agreed to recently means that an additional expenditure of approximately $1,300,000 will have to be provided for as well as some other expenditures. The commission has before it the complete figures of the operations for the year ended June 30, and the estimates of the requirements for this year. Under the new franchise plan the commission has power to fix the fares at such figures as will produce the revenue required to pay operating expenses, maintenance, interest at 6% on a capital of $36,286,000, and a rental to the city of $500,000.

Waterloo-Wellington Ry. Offered for Sale.

A press report states that the electric railway owned by the Berlin and Bridgeport Electric St. Ry., the title of which was changed in 1912 to the Berlin and Northern Ry., and which was further changed at the Ontario Legislature's last session to the Waterloo-Wellington Ry., has been offered to the City of Kitchener, Ont., which already owns the street railway in the city. The line extends from Kitchener to Bridgeport, Elora and Fergus. The present franchise has three years to run. W. H. Breithaupt, Kitchener, Ont., is President.

We are officially advised that the proposal is being considered by the Kitchener Light Commissioners who have charge of the city's street railway department. Under the terms of the franchise the city has the option of taking over the railway in 1922, but Mr. W. H. Breithaupt is willing to sell the line, plant, etc., at once. The property consists of [illegible] miles of line, with a park and casino at Bridgeport; 1 double track car and 2 single track cars. Power is supplied from the Kitchener and Waterloo St. Ry.'s plant.

Kamloops - Kelowna Power Development—A project is reported to have been initiated at Vernon, B.C., for the development of a hydro-electric power plant at Shuswap Falls, on the Adams River, for the supply of power for the district lying between Kamloops and Kelowna. It is stated that one of the objects of the promoters is to supply power for the operation of the Canadian National Rys'. Kamloops-Vernon-Lumby line, now under construction. Arrangements are reported to be in progress for holding a conference of the municipalities of the area to give further consideration to the plans.

The Toronto Railway Employes' Strike.

The strike of Toronto Ry. employes, which commenced at midnight, June 21, ended with the renewal of car operation on July 4 at 5 a.m. The wage schedule under which the men were working, expired June 15, and prior to this, they had given notice of a demand for a flat rate of 55c an hour, an 8 hr. day, and several changes in working conditions. An agreement, made between the company and the men on June 16, 1917, for two years, provided wages, per hour, as follows:

Motormen, conductors and motor and truck repair men: First 6 months, 30c; second 6 months, 32c; second year, 35c; third and subsequent years, 37c.

Shedmen: Foremen, 37c; operating shedmen, 33c; general shedmen, 32c; car cleaners, 31c.

Sunday work was paid an additional 1c an hour, platform time, and emergency crews and motor and truck repair men were paid time and one-fifth. Towards the end of 1918, the men decided to ignore this agreement, and asked for an increase by way of bonus, commensurate with the increased cost of living, which they claimed to average from 29.7 to 53.3%. They applied for the appointment of a board of conciliation, but the company objected on the ground that a wage agreement was in existence. The Labor Department, however, granted the application, and a board was appointed, consisting of County Judge Barron, Stratford, Ont.; F. H. Phippen, K.C., representing the company, and H. W. Harper, the men. A majority report, signed by the two first named, recommended that employes, whose wages under the schedule were 30c an hour, be given an increase of 2½c, and all other employes an increase of 2c an hour, dating from Nov. 1, 1918. The men's representative, in a minority report, held that the men were entitled to their full demands, but the award was put into effect.

During June, steps were taken by various public bodies with a view to heading off a strike, and the mayor held numerous conferences with the company's officials, the employes, the board of trade, and the Ontario Government, as well as the board of control and the city council, when numerous suggestions, practicable and impracticable, were made and discussed, several of them being of a more or less intimidatory nature, either to the company or its employes, and as a consequence, considerable bitter feeling was engendered. A proposal to the Ontario Premier, that a royal commission be appointed to investigate the company's affairs, elicited the fact that the government had no power to grant such an application, but suggested in response that both sides agree to submit the dispute to a commissioner to be appointed by the government, on the understanding that the decision be binding on both parties, but this offer was declined.

The Toronto Ry.'s General Manager received a delegation of the employes June 6, to consider their demands, and after definitely stating that the company was not in a financial position to meet the same, and on June 10, the company applied to the Labor Department for the appointment of a board of conciliation under the Industrial Disputes Investigation Act, and named F. H. Phippen, K.C., as its representative. The men opposed the appointment of a board, and declined to nominate anyone to act on their behalf, and at a mass meeting, June 14, confirmed this position, but decided to postpone any action for a week, pending the outcome of negotiations between the city council and the Ontario Government. On June 20, the Labor Department appointed W. H. Hevey to represent the men on the board of conciliation, and County Judge Barron, Stratford, Ont., was appointed chairman. The board held its first meeting at Toronto, June 21, making it a general conference of all concerned, and it was agreed to hold a public meeting the same night, to further ventilate the matter. This meeting was more or less of a fiasco, each party strongly maintaining its previous position, without any signs of compromise, thus creating an impossible situation.

The men ceased work at midnight, June 21, and at a meeting of the board of control, June 23, it was decided to apply to the Ontario Railway and Municipal Board for an order to compel the Toronto Ry. to operate its cars and give an adequate service, and the board made such an order. In the meantime the city was without an electric car service, except such as is operated in some of the outlying districts, by the Toronto Civic Ry., the Toronto & York Radial Ry. and the Toronto Suburban Ry. Vehicles of all kinds were utilized in an endeavor to handle the traffic, the police commissioners fixing the maximum fare for an unlicensed jitney at 25c, but omitting to specify what distance was to be covered for that fare. The consequence was that in many cases, 50c and more was often paid for a ride, which the Toronto Ry. is compelled by its franchise to give for less than 4c.

The conciliation board held several meetings, but for some time, any usefulness it possessed, was, to say the least of it, obstructed by the interference of outside parties on questions of jurisdiction, first, it being claimed that it had too much jurisdiction, which the mayor desired curtailed; second, that it had too little jurisdiction, which the mayor desired should be increased, and third, that it had no jurisdiction at all, on account of a temporary change in the management.

On June 24, the company gave notice that it intended to attempt to carry out the Ontario Railway and Municipal Board's order to operate its cars, and requested that it be given adequate police protection for the purpose. This had been promised, but the company was advised not to proceed with the attempt, and on June 26, on the city's application, the Ontario Railway and Municipal Board issued the following order:—

"It having been made satisfactorily to appear to the board that the agreement between the City of Toronto and the Toronto Ry. Co. has been violated by the company by reason of its failure to operate its railway on June 23, 24 and 25, and that the railway is not being operated. And it appearing that the board's order, June 23, directing the company to commence forthwith to operate its railway, and to continue to operate an adequate service, has not been obeyed by the company;

"The board orders and directs that for the proper enforcement of such order the board do enter upon, seize and take possession of the railway of the said company, and the real and personal property of the company, together with its books and offices, for the purpose of preventing the violation of the said agreement and disobedience to said order, and ensuring a car service pursuant to the terms of the said agreement; and for that purpose do assume and take over all powers, duties, rights and functions of the directors and officers of the said company so far as may be necessary for the foregoing purpose; and do supervise and direct the management of the said company and its railway in all respects, including the employment and dismissal of officers and servants of the company until such time as the board shall otherwise order. And in order to carry into effect the foregoing purposes, the board doth hereby appoint and employ Roland C. Harris, Commissioner of Works of the City of Toronto, to be the Manager of the said railway while it shall be and remain in the board's possession as aforesaid."

In an endeavor to settle the strike, R. C. Harris, acting for the Ontario Railway and Municipal Board, offered the men the rates per hour paid to the civic railway employes, as follows:

First 6 months, 40⅛c; second 6 months, 42⅜c; second year, 45¾c; third and subsequent years, 48c. He also agreed that if the conciliation board recommended a higher rate, it would be paid. At a meeting of the men, this offer was rejected by a large majority.

On June 30, the conciliation board made an interim report recommending the following scale per hour: First 3 months, 50c; next 9 months, 52½c; thereafter, 55c, and also recommended that 8 hours constitute a day, with an extra half hour for the completion of run; time and a half after 8½ hrs.; time and a quarter for Sundays, and time and a half on holidays. It was also recommended that an investigation of the company's books be made, for the purpose of ascertaining the correctness of the company's claims, and if it be found that the operating revenue is insufficient to meet the situation the fare be raised to a straight 5c, except for children's tickets, the whole of the increase to be available to pay the increase in the men's wages, and not to be subject to any percentage payment to the city, which is to be based on the present average fare. At a mass meeting of the employes, July 2, the interim award of the board was accepted as regards the wage scale, and on July 3, the Ontario Railway and Municipal Board agreed to pay this, no further mention being made as to the straight 5c fare.

Following on the pressure that was being brought to bear on the authorities for an examination of the company's books to refute, or otherwise, the company's contention that it was not in a financial position to pay the men's demands, without some modification of the franchise terms as to fares or percentage payable to the city, what was termed a "sensational development" occurred, when it transpired that the company's books had been sent to Montreal. Immediately, on the Ontario Railway and Municipal Board's request, the books were returned to Toronto, for an audit under the board's order.

On July 8, D. M. McIntyre, K.C., chairman of the Ontario Railway and Municipal Board, issued the following statement:—"R. J. Fleming, representing the directors of the company, elected by the shareholders, on the evening of July 4, advised the Ontario Railway and Municipal Board that the aforesaid directors were desirous of regaining control of the company's affairs and service, which the board agreed to restore upon the company agreeing to observe the terms of the interim award of the conciliation board, as to wages and hours and days of labor, with the further stipulation that such observance is to continue for the period ending June 16, 1920, and irrespective of the gross revenues of the company. The directors, under seal of the company, authorized Mr. Fleming to act in their behalf. This morning the requisite written undertaking, as approved by the board's counsel, I. F. Hellmuth, K.C., was deposited with the board, whereupon we relinquished possession of the company, having accomplished the resumption of the street railway service, the purpose for which we took possession of the railway."

The company announced July 22 that schedules were being prepared, so that an 8 hr. day might be made effective Aug. 1.

The conciliation board resumed its sittings, July 23, to deal with working conditions, etc.

Nova Scotia Tramways and Power Co. Issues $1,000,000 Securities to Prove for Improvements.

The Nova Scotia Public Utilities Commission had before it on June 25 an application by the company to issue $1,000,000 of 3-year gold coupon notes at 7%, being the first half of an issue of $2,000,000 of such notes the issue of which had previously been authorized by the company's shareholders. It was reported to the commission that proceeds of the issue would be used to make improvements to the company's gas and power plants and its electric railway, the total estimated cost of the improvements, according to the schedule submitted being $1,021,000. This amount it is proposed to spend as follows:—Power house, $147,500; gas depot, $79,000; track, $452,000; electric distribution, $122,000; car barns and cars, $221,000. The commission granted the necessary approval July 11.

An issue of 3-year 7% coupon gold notes, due June 1, 1922, was offered to the public in July. The prospectus states that the notes are a direct obligation upon the company and rank senior to the $2,0778,800 of 6% preferred stock and $2,510,000 of common stock, and that with the exception of first mortgage bonds, no mortgage bonds or debentures may be issued unless the coupon gold notes are secured in the same manner as such new issue. The company's gross earnings for 1918 are stated to have been $998,702, and the earnings for the current year, on the basis of earnings ascertained to date, are estimated at $1,325,000. The management of the company has been entrusted recently to Stone and Webster, Inc., of Boston, Mass.

British Columbia Electric Ry.—A London, Eng., cablegram states that the company has declared an interim dividend of 2½% for the half-year to be paid June 29. The payment of an interim dividend was omitted for June, 1918.

Ontario Hydro Electric Railways.

The Hydro Electric Power Commission of Ontario in its annual report for the year ended Oct. 31, 1918, gives the following information with regard to its work in connection with the promotion of the construction of electric railways under the provisions of the Hydro Electric Railways Act of 1914:—

As the 1916 amendment to the Railway Act forbade active construction of the proposed hydro electric railways during the continuance of the war, the staff was reduced to a minimum, but the general work of the department in compiling specifications and preparing standard designs, was carried on. The freight traffic data, collected by canvass in the more important cities, towns and villages of the province, was carefully gone over and classified and is now in a convenient form so that it may be used for future estimates. Some time has been spent in arranging the details of the preliminary estimates that were prepared on the Toronto Northeastern, Toronto-London and other lines. When these estimates were prepared, time was not available for presenting them in as complete detail as might be desired, but this work is now well in hand. During the past year all the agreements made by the commission and the various companies absorbed by the commission, in regard to wire crossings, underground crossings, and matters referable to the Board of Railway Commissioners and the Ontario Railway and Municipal Board have been placed under one complete filing system. All engineering matters pertaining to agreements, leases, etc., effected with the various railway companies operating under these boards are now handled through a branch of the commission's railway department.

Acting on a request from the City of London a number of estimates were prepared showing the effect of uniting the London & Lake Erie Ry. and Transportation Co.'s line, and the London & Port Stanley Ry.; also estimates of the probable operating revenue and expense of operating of portions of the Lake Erie line. Several meetings were held at London during the year but it was found impossible to recommend the purchase of any portion of this line, with a view to putting it in operation, as the receipts appeared to be too low to warrant such action. Negotiations having failed, it was found advisable by the owners of the line to dispose of the property as scrap, which is now being done.

Work in connection with estimates on a proposed line between Kinmount Jct. and Minden was proceeded with and when the estimates were completed, it was found that sufficient business could not be secured to allow of a favorable report being presented. The municipalities having been so informed, a deputation called at this office in Mar., 1918, and it was the opinion of those present that further traffic could be located. A committee was appointed to look into the matter but they were unable to secure any further traffic than that which had already been located by our men; however, on their request, an engineer visited the district in Sept., 1918, and an active canvas was commenced of the shippers in the district. The data so secured are being compiled but the outlook for a favorable report is not promising.

Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario, is reported to have stated in Toronto, July 23, that he had that day been given authority by the commission to sign all the agreements with municipalities, under the Hydro Electric Railways Act of 1914, and amendments thereto. These acts not only authorized the building of electric railways within Ontario by the commission, but confirmed agreements with a large number of municipalities for the construction of electric railways, including one from Toronto easterly to Whitby, etc., with a number of branches; one from Toronto to Guelph, towards Sarnia, and a third from Toronto to Hamilton and the Niagara frontier. An act passed at the Ontario Legislature's last session authorized municipalities which had passed bylaws approving of the agreements, to enter into supplementary agreements under which they are to deposit debentures, pro rato, to cover the cost of the lines through municipalities where the bylaws were defeated. These supplementary agreements were on July 23, all reported to have been signed, notwithstanding a press report of July 17 that the mayor of St. Catharines had stated he would not sign.

The report of July 23, also credited Sir Adam Beck with stating that engineers were in the field revising surveys for the Toronto-Hamilton line, and that construction on it would probably be started in the autumn.

Edmonton Radial Railway Finances.

The City Comptroller of Edmonton, Alta., presented his annual review of the financial condition of the city's affairs to the city council recently. Referring to the Edmonton Radial Ry. he he said:—"The accumulated deficit of the department is now $363,102.38, and attention is again directed to the necessity of providing for it, especially in view of the interest charges, which are steadily increasing and creating an additional handicap on the successful operation of the utility.

"In spite of loss in revenue of approximately $20,000, due to the influenza epidemic during Oct. and Nov., 1918, an increase in gross earnings is shown by this utility of $19,407.60 over the previous year, and a somewhat exceptional coincidence is that the cost of operation and maintenance, which in every other department reflects a considerable advance, in the case of the street railway shows a reduction of $554.98. This is mainly due to the adoption of one-man cars, as wages and materials have of course increased in this class of service here as well as elsewhere. The net result, however, shows a deficit of $143,732.11, compared with $163,731.94 for 1917.

"Comparative figures of mileage and passengers carried for 1917 and 1918 are as follows: Car mileage: 1917, 1,860,883 miles; 1918, 1,972,461. Passengers carried; 1917, 10,086,213; 1918, 9,909,529."

Nova Scotia Tramways and Power Co.—We have been officially advised that it is the new directors' intention as soon as they have had sufficient time to study the company's lines, to improve and build up the property both by making betterments and extensions.

Electric Railway Statistics for Year Ended June 30, 1918.

Following are extracts from the Railway Department's report on electric railway operations in Canada for the year ended June 30, 1918:

Length of Lines, Miles.

	1918-19	1916-17
[illegible]	[illegible]	1,743.54
[illegible]	[illegible]	345.72
[illegible]	[illegible]	188.70
Total	[illegible]	2,277.96

In connection with the figures given above, the Comptroller of Statistics says: "There was not an actual reduction of first track mileage in 1918. There was merely an accurate statement of second track mileage, following special correspondence with units which had been making incorrect returns, the immediate effect of which was to reduce first track mileage. The mileage of all tracks remained practically unchanged."

When the Railways Department's statistics for 1916-17 were issued, it was apparent that the mileage figures given for electric railways were incorrect. As an example, the Winnipeg Electric Railway was shown as having 110.20 miles of first main track, and no second main track. Canadian Railway and Marine World called the attention of the Comptroller of Statistics to this and to some similar errors in regard to other companies, in consequence of which he said he would issue a special circular to the companies so the figures for 1917-18 may be considered more reliable than those for previous years.

Capitalization.

	1917-18	1916-17
[illegible]	[illegible]	$ 70,606,520
[illegible]	[illegible]	90,628,219
[illegible]	[illegible]	$161,234,793

Earnings, Operating Expenses, Etc.

	1917-18	1916-17
[illegible] earnings	$21,943,644.04	$27,621,582.36
[illegible]	[illegible]	1,[illegible]47,909.69
[illegible]	268,122.82	96,803.64
[illegible]	512,414.26	471,357.94
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	$ 1,209,900.62
[illegible]	[illegible]	1,646,611.02
[illegible]	[illegible]	3,012,809.71
Operation of cars	7,801,063.13	[illegible]
Total operating expenses	[illegible]	$20,098,634.35
[illegible]	[illegible]	$10,030,029.19
Miscellaneous income	2,311,176.60	2,292,200.76
[illegible]	[illegible]	$12,415,229.95
Taxes, interest, etc.	6,150,074.21	7,552,368.55
[illegible]	[illegible]	[illegible]
Appropriated to re[illegible]	[illegible]	[illegible]
[illegible]	1,671,358.93	2,468,686.61
[illegible]	[illegible]	
[illegible]		[illegible]

Miscellaneous Statistics.

	1917-18	1916-17
[illegible]		
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	629,441,997
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	—
[illegible]	[illegible]	—
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	4,295
[illegible]	[illegible]	11,696
[illegible]	[illegible]	[illegible]
[illegible]	77	63
[illegible]	[illegible]	2,728

It will be noted that there are several matters in connection with the above figures requiring explanation to account for their differences. The figures covering capitalization do not include $493,346 cash aid given to electric railways by governments and municipalities. The fact that the Montreal Tramways Co. and two other units do not make reports to the department is explained as the reason for variations in other figures. For 1916-17 the earnings of the Montreal Tramways Co. were included, but not for 1917-18; while that company's operating expenses are included in the total operating expenses, but do not figure in the details. The amount required to meet appropriations for reserves and dividends exceeded the amount available for that purpose, from the 1917-18 earnings, by $212,680.83, but was apparently not out of the undivided surplus of $1,124,620.57 carried over from 1916-17.

Standard Safety Cars for Levis County Railway.

The Levis County Ry., Levis, Que., bought recently, in the U.S., 12 standard safety cars, specially fitted for the Canadian climate. Following are the principal dimensions:

Length over all	28 ft. ½ in.
Length over dashers	26 ft. 9½ in.
Length over body corner posts	17 ft. 9½ in.
Width over all	8 ft.
From floor to point of arch	6 ft. 6 in.
Aisle width	22 in.

The cars have straight sides, round ends, arched roof, top sash stationary, lower sash to raise, platform floor on same plane as body floor, folding doors and steps, 2-motor electrical equipment and air brakes with safety features. These cars are of the double end type and have 14 reversible cross seats of the waylo type. The seats will fold up towards the back to allow one passenger to pass the other. The total seating capacity of each car is thirty-two, and there are 7 windows on each side of the car, equipped with special rubber seat, winter sashes. All the windows are provided with pantasote curtains and guarded with five bar guards.

The cars are double lined throughout and have double floors, with roofing paper between, and are finished in cherry. They have Agasote inside lining below window sills. There is a 12 in. foot gong at each end of the car. Electric bells are installed, operated off the trolley circuit. Twelve consolidated truss plank electric heaters are installed. Eight exhaust ventilators are placed in the roof, and one 56-watt Ohio Brass Co. golden ray headlight is placed at each end of the car. There are also an Ohio Brass Co's. trolley retriever at each end of the car. One illuminated car sign is placed at each end of the car, over the right hand vestibule window.

Two sand boxes are provided, with Ohio Brass Co's. sanding valves. Fenders of the wheel guard type are provided at end of the car.

One 12 in. drop handle brake and shaft is installed at each end of the car. Westinghouse air brakes and equipment are installed, together with safety car automatic devices. Two 4 in. semaphore tail and marker lights are provided at each end of the car.

The trucks with friction bearings have a wheel base of 8 ft. Wheels 26 in diameter.

The electrical equipment consists of G.E. No. 258 two-motor equipment, with K-10 controller, and includes solid pressed gears, together with all the necessary equipment.

The cars have been specially designed for operation in cold weather. The installation of the air equipment and the automatic devices are special for cold climates, the interior of the car being lined for warmth, and special storm sashes provided all around the car. It is claimed that the Levis County Ry. is the first to be properly and fully equipped with the new standard safety car in Canada.

Mainly About Electric Railway People.

Lieut.-Col. G. D. Fearman, Chief Accountant, Dominion Power & Transmission Co., Hamilton, Ont., has retired from the command of the 13th Royal Regiment.

James Gunn, Superintendent, Toronto Ry., died in Toronto, July 25, aged 80. He was born in Scotland and came to Canada in 1867 and entered Toronto St. Ry. service in 1869 as Secretary and occasionally took his turn as a conductor on the old horse cars. He continued in the service of the railway during the various changes in ownership, and when it was taken over from the city, was appointed General Manager, and when the present company acquired the property was appointed Superintendent, and early this year he completed his 50th year of street railway service. He was for some time a director of the company as well as Superintendent.

Geo. Kidd, General Manager, British Columbia Electric Ry., was expected to return to Vancouver about the end of July from England, where he has been for some time on the company's business.

W. H. Moore, General Manager, Toronto & York Radial Ry., who wrote "The Clash," a book dealing with racial strife in Canada, has been given the degree of doctor in letters, by Lavalle University, Quebec.

Sir Augustus Nanton, President, Winnipeg Electric Ry., has been elected a vice president of the Dominion Bank.

J. I. Newell, Electrical Superintendent, British Columbia Electric Ry., Vancouver, B.C., has taken over the Hydro Electric Engineer's duties, F. S. Easton, who occupied that position, having resigned to enter the Mexican Light & Power Co.'s service.

R. M. Reade, Superintendent, Quebec Ry., Light & Power Co., who is a member of the Quebec Board of Trade's Industrial Committee, is taking a very active interest in securing new industries for the city.

David A. Starr, M.I.E.E., General Manager, Clyde Valley Electrical Power Co., Glasgow, Scotland, who died recently, was born at Halifax, N.S., April 11, 1858. Last December he left Glasgow, on extended leave of absence, to recuperate after an attack of pneumonia, going via New York to Florida, Cuba and Jamaica, thence to New York again, and after visiting Toronto, Ottawa, Montreal, and Halifax, he sailed towards the end of April for Glasgow to resume his duties.

Nova Scotia Tramways and Power Co.—We are officially advised that although there has been a change in the directorate, there has been practically no change in the stock ownership.

CANALIZED WELLAND RIVER

In order to provide additional power the Hydro-Electric Power Commission of Ontario, decided to undertake the construction of the Queenston-Chippawa power canal. After three years of exhaustive surveys and investigation, the route was finally fixed in 1917. It is about 12.75 miles long with the intake on the Niagara River at Hog Island, Chippawa, above Niagara Falls, and the tail race on the Niagara River about a mile above Queenston. A full description, with plan showing route of canal and of the construction railway, etc., appeared in Canadian Railway and Marine World for Dec., 1918. The report of the commission for the year ended Oct. 31, 1918, issued recently gives some additional details as to the work to be done, and what has been accomplished.

For the purposes of construction, a double track railway is being built for the full length of the canal from Montrose, near where the canal leaves the Welland River, to the forebay at the power house, 8.50 miles, and a 2.50 mile spur connects the main line with the 200 acre area bought at St. Davids as a dumping ground for the disposal of excavated earth and rock. Various other branches of the railway will be built from time to time as needed. One railway will probably be built from the power house to connect with the Michigan Central Rd. at Queenston to bring in the machinery and to take out the material excavated from the power house substructure. Preliminary work was done during the year in the location of this piece of line.

During the year, under review, 11 miles of double track construction railway were electrified along with the yards and sidings. A special form of overhead trolley support was designed by the commission's line construction department so as to locate the trolley wire 7 ft. to one side of the center line of track, thus leaving a clear overhead above the running rails to enable the locomotive cranes and other similar equipment to operate up and down the tracks without fouling the trolley wire. The trolley wires are carried in clamps, which, with the hangers suspending them from the poles, are all made up of standard material, and are so arranged that the temporary use of the material does not injure it. Framed timber trestles are set alongside the dump and other temporary track to carry the trolley wire. These trestles are mounted on wheels or skids and can be moved readily by a locomotive crane, when it is necessary to shift the track. The construction department reports that this system is working satisfactorily.

The rolling stock in use on the line consists of 150 20-yard western air dump cars of 80,000 lb. capacity each; 7 40-ton steam locomotives, and 12 50-ton electric locomotives. The steam locomotives are switchers bought in the United States. The electric locomotives were built by the National Steel Car Co., Hamilton, Ont., 6 of them having the General Electric Co.'s equipment, and 6 the Westinghouse Co.'s equipment. There are also 3 40-ton and 2 15-ton locomotive cranes for general utility work.

In connection with the canal excavation work four bridges have to be built to carry railways under or over the canal—one for the Niagara, St. Cath-
will be reinforced concrete arch bridges.
arines and Toronto Ry., one for the Wabash Rd., one for the Michigan Central Rd., and one for the Grand Trunk Ry., and the Michigan Central Rd. These The following information with respect to the construction of them is given in the report:—

The undercrossing of the N.S. & T.R. involved the diversion of the existing single track to one side of the bridge [illegible] and the construction of a double track reinforced concrete arch with 86 ft. span, having a rise of 25 ft. This arch was designed for Coopers' E-60 loading, and contained approximately [illegible] cubic yards of concrete and over [illegible] tons of steel. The depth from base of rail to foundations was 52 ft. Lackawanna sheet piling was driven around the abutments, coffer dams were unwatered and material excavated to required depth during the winter of 1918. A great deal of trouble was occasioned with water due to saturation of surrounding subsoil. The concrete in the abutments and arch ring was poured during the summer of 1918, and arch completed and traffic restored to the original alignment in December. A temporary timber trestle was designed to carry the N.S. & T.R. main line over the construction railway tracks. which are in the canal prism paralleling the center line of same.

The Wabash Rd. main line was diverted on a timber trestle over 40 ft. high, extending across the previously excavated canal section. The excavation of the canal prism thus provided natural drainage for the foundations which are in the course of preparation for the 100 ft. reinforced concrete arch to be built. This arch differs in design from that of the N.S. & T.R., having straight wing gravity walls, instead of the reinforced cantilever type used in that arch. There are approximately 3,000 yds. of concrete and 65 tons of reinforcing steel involved in the construction. It is proposed to get all the form work in place during the winter of 1918, and proceed with the concrete work as soon as weather conditions permit. Upon completion the structure will provide for the carrying of two tracks, spaced 13 ft. centers, which will take care of the immediate requirements of that railway for a great many years to come. The main line tracks of the Wabash Rd. are carried over the construction railway by means of a temporary trestle.

A 3-track trestle about 400 ft. long has been built for the diversion of the main line of the Grand Trunk and branch line of the Michigan Central Rd. When the traffic diversion is effected on these two lines the portion of the arch lying to the north and south of the diverted tracks will be constructed. Upon completion of the outside portions of the arch it is intended to re-divert traffic to the present alignment. The structure at this point consists of a reinforced concrete arch, having a span of 72 ft. and rise of 20 ft. and involves the placing of 10,000 cubic yards of concrete and 325 tons of steel. The structure thus built will provide for 10 tracks. Owing to the high cost of the diversion of these lines, and the probable need of future extensions, it was decided to carry the arch through under the M.C.R. and G.T.R., making one continuous structure. In the restoration of the G.T.R. and M.C.R. to the original alignment, a temporary timber trestle will carry tracks over the construction railway undercrossing. The [illegible] for the diversion and relocation of railway involves the use of over 300,000 ft. of timber.

Upon the completion of the three arches above described the construction railway and excavating equipment will be free to move, and the innumerable delays already occasioned will be entirely removed. This will facilitate matters very generally in the pursuit of disposal tracks from a junction with the main line construction railway between the Wabash Rd. and M.C.R. and G.T.R. It is thus important that these structures be completed at the earliest possible moment, so as to interfere as little as possible with the output of the excavating equipment.

New Brunswick Power Co.'s Employes Offered Representation on Directorate.

L. R. Ross, President, New Brunswick Power Co., which owns and operates the electric railway in and around St. John, issued the following circular to all employes recently:—"In order that the employes may be kept more closely in touch with the company's affairs, and to promote a better mutual understanding, it has been decided to give the employes the right to elect an employe as a member of the board of directors of the company, with all the authority and privileges enjoyed by other directors. This director shall be elected by a popular vote of all the empoyes in the following manner: Any employe being properly nominated by five employes shall be considered a candidate. Nomination papers to be placed in the hands of the Secretary of the company on or before July 12 and the Secretary will then forthwith post the names of all candidates in conspicuous places throughout the company's premises. On election day, July 22, a locked ballot box will be taken to the different departments, into which each employe may place his ballot. Each candidate may select a scrutineer, and they, together with the company's Secretary, will count the ballots, and the candidate having the largest vote will be a director of the company until its next annual meeting. July 22 has been selected as the election date for this year, thereafter the election date will be that of the company's annual meeting."

The date for receiving nominations was extended from July 12 to July 17, when the employes decided not to take any action for at least six months.

Electric Railway Notes.

The City of Saskatoon, Sask., has asked tenders to be sent in by Aug. 20 for 5 fully equipped one-man supply cars to be delivered before Dec. 1.

The Nova Scotia Tramways and Power Co., according to a press report of July 14, expects to buy shortly 12 or perhaps 20 new cars for its electric railway in Halifax, N. S.

The Nipissing Central Ry., the electric railway operated by the Timiskaming and Northern Ontario Ry. Commission, has received 2 electric car bodies from Preston Car & Coach Co.

Property owners of River Ave., Winnipeg, waited on the city council, July 15, to advocate the removal of the Winnipeg Electric Ry. tracks from that street and the operation of a bus service in place of electric cars.

The Montreal Tramway Co., by order of the Montreal Tramways Commission, put in effect July 28, a new schedule on Notre Dame St., limiting the number of stops, and establishing definite transfer points, with a view to giving a more rapid service.

The Edmonton, Alta., Radial Ry. is reported to have under consideration the adoption of a plan for marking the street cars, so that the route and destination of an approaching car can be readily distinguished. Each route will have a different shaped and colored sign, placed over the route board.

The expected report on the electric railway situation in Hamilton, Ont., has not yet been presented to the city council, and Alderman Aitchison, chairman of the Street Railway Committee is reported to have said, July 10, that the matter had been sidetracked for the time being, but that something would be doing very soon.

The Levis County Ry. laid a complaint before the Quebec Public Utilities Commission, against the South Shore Turnpike Trust for failure to clear the public road of snow, whereby the company was inconvenienced in the operation of its electric railway. The company, at a hearing before the commission recently, made an offer of $1,000 a year towards the cost of the work, on the section of road on which its car line was placed. Judgment was reserved.

Hamilton, Ont., west end residents are agitating for a more efficient service on the portion of the Hamilton and Dundas Electric Ry. within the city. The bylaw passed in 1897, provides for the running of cars as the public convenience may require under such directions as the city council may from time to time prescribe. It is claimed that traffic has increased fivefold, and that the hourly service that has been given since 1897, is not sufficient.

Ontario Liberals' Policy Respecting Public Utilities.

Among the resolutions passed by the Ontario Liberals, at their recent convention in Toronto, were two pledging the party to the following measures:—"The construction of a system of hydro-radial railways throughout the province wherever conditions warrant expectation of successful operation. In the construction of these railways there should be co-operation with the directors of the Canadian National Rys. so that duplication of service shall be avoided and the Dominion and provincial authorities may work together for the development of province-wide systems of transportation.

"Refusal to confer franchises hereafter upon private corporations for railways, power, lighting, heating, telephone or other services requiring for their successful operation the use of the highways, or which come into competition with similar services owned and operated by public authorities."

Electric Railway Situation at Niagara Falls—A committee is reported to have been appointed by the Niagara Falls Chamber of Commerce to investigate the electric railway problem in that town. The ratepayers in January voted in favor of taking over the Niagara Falls, Wesley Park and Clifton Tramway, 456 miles, a part of the Niagara-St. Catharines and Tralo Ry. on the expiration of the franchises in Mar. and April, 1920. The N. St. C. and T. Ry. is owned by the Canadian Northern Ry., which now forms part of the Canadian National Railways, owned by the Dominion Government, and since the vote in January, a feeling has developed in favor of government rather than municipal operation of the line.

Electric Railway Projects, Construction, Betterments, Etc.

Calgary Municipal Ry.—A press report states that work will shortly be started on a new line, which will run up Center St., over the bridge, and as far as 16th Ave. North, at Calgary, Alta. The new line will be about 0.75 of a mile long, and will consist of a single track. The same report states that an extension will be made on the Killarney line for a short distance on 29th Ave. We had already been advised of the proposal to rebuild the first mentioned line, and that the necessary material for its construction was on hand. (July, pg. 392).

We were officially advised July 18, that in addition to the one wide extension on the Carter St. worth line, the city council had in contemplation the construction of a half-wide extension of another line. (July, pg., 392).

Cape Breton Electric Co.—A deputation from New Waterford, N.S., waited on A. S. Pratt, President, Cape Breton Electric Co., in Sydney, N.S., recently to discuss a proposal to extend the company's line to New Watford. Mr. Pratt is reported to have informed the deputation that the extension would not earn the operating cost and the interest on the cost, which would be about double what it would have been when the proposal was last considered in 1913. At present money could not be obtained to build such an extension, therefore the company could not undertake it. If the people of New Waterford were prepared to build the line the company would cooperate with them in every way. (June, pg. 324).

Fort William Electric Ry.—We are officially advised that the finishing up work is about to be undertaken on a mile of track laid on Frederick St., Fort William, Ont., in 1914. The line is yet to be ballasted, for which purpose 2,000 cubic yds. of gravel are required. A. F. Farquharson, Fort William, Ont., is Manager. (July, 1918, pg. 308).

Montreal Tramways Co.—In connection with the projected construction of a new line on Park Ave., the Montreal Tramways Co. has applied to the Board of Railway Commissioners for leave to cross their track with a double track line between Atlantic and Beaumont Aves., Montreal.

G. A. Mountain, the board's chief engineer, reported recently that after the application had been heard by the board, he visited the site of the proposed crossing in company with engineers representing the M. T. A., the C. P. R., and the city, and as a result of the inspection he came to the conclusion that the crossing was one that he could not recommend. He thought that the third track, which was an industrial spur, could be moved to the west of Park Ave., and would leave a 2-track subway proposition. A 60-ft. subway could be built at a cost of approximately $200,000, exclusive of land damages. The highway is junior to the railway, and was opened across the railway on an order by the board. The two tracks are not used to any particular extent for passenger purposes, but as an outlet to the outramont yard.

The Board of Railway Commissioners is also being asked for leave to carry the M. T. Co's. tracks across the Canadian National Ry., on Mariev Ave., in order to connect the M. T. Co's. branch track on Mariev Ave. with the main double track on Notre Dame St. E.

Negotiations are reported between the Montreal Harbor Commissioners and the city council with respect to the location of the tramway line on Commissioners and Common Sts. The tramway lines are on the side of the streets named beside the revetment wall, and as the commissioners wish to use this part of the street for an extension of the harbor railway lines, it is desired to have the tramway lines removed to the other side of the street. (July, pg. 392).

Nova Scotia Tramways and Power Co.—A press report, July 11, states that is expected that the projected extension across the common will be made at an early date. As originally planned the line was to run up Cogswell St., across between the north and centre commons to Queenpool Rd., and join the belt line there. A suggestion has been made that the line run out Cunard St. and join the belt line there instead of across the common.

W. L. Webster, of Stone and Webster's emergency staff, is reported to have said, July 14, that men were employed on the line , removing faulty roadbed, laying new rails, and generally putting the track in order. It was also planned to change all single track intersections to double track intersections, and that the amount to be spent on track improvements this year would depend, to some extent, on the city's paving programme. (July, pg., 392).

Oshawa Ry.—A press report states that it has been decided to extend the track on Duke St., Oshawa, Ont., and to put in a switch to the new plants of the General Motors and Steel Products Co.

The Vancouver Sympathetic Strike and the British Columbia Electric Railway.

Street railwaymen on the British Columbia Electric Ry's. Vancouver city lines resumed work on June 30, after a strike of 25 days. They stopped work on the night of June 4, in sympathy with the general strikes in Vancouver and Winnipeg, which took on revolutionary aspects. The car men went back, although the general strike in Vancouver had not been called off, but was collapsing. Following telegrams from the international officials, ordering the men back to work in accordance with their agreement, a meeting was held on June 25, which was addressed by union leaders and W. G. Murrin, the company's Assistant General Manager. It was then decided to take a ballot. The vote taken the following Saturday showed a majority of 45 in favor of resuming work out of a total vote cast of 750.

New Westminster city lines and the Central Park and Burnaby Lake interurban lines, all of which come under the New Westminster local, were not in operation from June 18 to June 23 at 4 p.m. The New Westminster Trades and Labor Council declared a general strike, on the arrest of the strike leaders in Winnipeg, and although the street and interurban railway men voted 70 per cent. to stay at work, they were forced out. On June 23, however, of their own volition, they decided to go back to work. Station agents and dispatchers on the Fraser Valley and Lulu Island lines were involved in this phase of the strike, and the company reduced its passenger service by one train a day on the Fraser Valley line, and discontinued most of its freight service. The trainmen on these lines are members of the railway brotherhoods, and did not strike.

In Vancouver, jitneys charging 10c fares, plied during the strike. After midnight, they charged 20c and more. On the morning the street cars resumed, the jitneys practically disappeared.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies—

	May, 1919	May, 1918	11 mons. to May 31, 1919	11 mons. to May 31, 1918
Gross	$628,847	$486,876	$6,650,954	$5,497,564

The Niagara, St. Catharines and Toronto Ry. freight sheds at Niagara-on-the- Lake, Ont., were destroyed by fire, due to lightning, July 10.

London & Lake Erie Ry. & Transportation Co.—We were officially advised July 14 that the dismantling of this company's line was being proceeded with, the principal work then going on being the taking down of the wire and overhead work, which it is expected to sell in the near future.

The Winnipeg River Power Co., which is closely allied with the Winnipeg Electric Ry. Co., is reported to have started the construction of a power development plant at Lac du Bonnet Falls, on the Winnipeg River, about 75 miles northwest of Winnipeg. The plant will, it is said, when fully completed, consist of 6 units of 28,000 h.p. each, and is estimated to cost between $6,000,000 and $7,000,000.

Railway Statistics, Collection, Etc. Canadian Railway and Marine World is officially advised that the collection, compilation, etc., of railway statistics, heretofore carried on in the Railways & Canals Department under the Comptroller of Statistics, is after this year to be done by the Dominion Bureau of Statistics, transportation division, which will work in close co-operation with the Board of Railway Commissioners, and that it is the intention to transfer the Department of Railways and Canals' statistical staff to the Dominion Bureau of Statistics, in due course.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Additional Steamship Construction—In speaking in the House of Commons on May 8, in committee of supply, on an item of $30,000,000 for the construction of ships in accordance with the Dominion Government's shipbuilding programme, the Minister of Marine said: "The value of the contracts which have been placed is, in round figures, about $52,000,000 and up to the end of the present fiscal year $20,000,000 of that will have been paid. The item that we are asking the committee to pass is for $30,000,000, which with the $20,000,000, constitutes, in round figures, the total amount of all the contracts, $52,691,450."

Further on in his speech the Minister said:—The $30,000,000 I am dealing with now is to complete the contracts we have already let, but in view of the fact that there is a great demand for ships and also that we could sell some of our ships under contract at present, if the government deemed it wise to do so, we are not going to discontinue shipbuilding for the moment. We realize that there are 30,000 men engaged in the shipyards throughout Canada, from Prince Rupert to Halifax, and there are fully 10,000 more engaged in making engines, boilers, etc., and to cause 40,000 men to be out of employment at this time would be rather a dangerous thing. It is therefore not the government's intention to cease its shipbuilding programme now. We are going to order additional ships, at least to keep the yards that are requiring work busy throughout the balance of 1919, and probably for a few months in 1920. I do not want this house or the shipbuilders to think that the government can go on forever ordering ships, because there must be a limit to the number of ships that the government can use, and we are getting very near to that point. So that when I say that it is the government's intention, subject to parliament's approval, to order more ships, the shipbuilders must not expect that there will be many more orders to follow, and they must therefore look for orders for their shipyards in the same way as any other industry in the country would."

The item of $30,000,000 was passed by the House of Commons May 8, and a further sum of $10,000,000 was passed in the supplementary estimates for the year ending Mar. 31, 1920, making, with the $20,000,000, provided previously, a total of $60,000,000.

Canadian Railway and Marine World was officially advised July 15 that in pursuance of the policy as outlined by the Minister, he had decided to give contracts to the Collingwood Shipbuilding Co., Collingwood, Ont., for 2 more steel cargo steamships of 3,750 long tons d.w. capacity each, which will be duplicates of the 4 ordered previously from that company, to be built at its Collingwood yard, and of the one to be built at its Kingston yard. The price for the two additional steamships is to be $180 a long ton d.w., against $205 for those ordered previously. They are to be ready by the opening of navigation next spring. Up to July 15 no other additional orders had been placed, but it is expected that some will be in the near future.

Delivery of Steamships—The steel cargo steamships which are being built for the Marine Department, and which have been completed so far, were delivered to Canadian Government Merchant Marine Ltd., for operation, as follows:

Feb. 22, s.s. Canadian Voyageur, 4,575 tons, d.w.; Canadian Vickers Ltd., Montreal.

April 26, s.s. Canadian Warrior, 3,995 tons, d.w.; Collingwood Shipbuilding Co., Collingwood, Ont.

May 9, s.s. Canadian Pioneer, 8,408 tons, d.w.; Canadian Vickers Ltd., Montreal.

May 23, s.s. Canadian Ranger, 8.382 tons, d.w.; Canadian Vickers Ltd., Montreal

June 7, s.s. Canadian Recruit, 3,964 tons d.w.; Collingwood Shipbuilding Co., Collingwood, Ont.

Steel cargo steamship, Canadian Volunteer, approximately 4,300 tons d.w., built for Canadian Government Merchant Marine Ltd., by Wallace Shipyards Ltd., North Vancouver, B.C.

June 19, s.s. Canadian Volunteer, 4,530 tons, d.w.; Wallace Shipyards Ltd., North Vancouver, B.C.

July 16, s.s. Canadian Trader, approximately 3,400 tons, d.w.; Port Arthur Shipbuilding Co., Port Arthur, Ont.

Dead Weights of Vessels—In the table "Orders for steel cargo steamships for Canadian Government Merchant Marine Ltd.," which has appeared in each issue of Canadian Railway and Marine World for several months past and, which has been brought up to date and is repeated on page 454 of this issue, the deadweight tonnage of the ships is given, with other information. Except when preceded by an asterisk, these figures are approximate only, and are subject to revision after the completion of the respective ships. The contracts between the Marine Department and the various shipbuilders contain a clause similar to the following, which is in the contract with the Collingwood Shipbuilding Co. for the s.s. Canadian Warrior.

"It is understood that it is contemplated to build one cargo vessel, having a total deadweight capacity, as specified, of approximately 3,750 tons, and it is agreed that should the total deadweight vary above or below 3,750 tons, on the British Corporation summer load line for salt water, the price of the ship to be modified accordingly, so that the total price shall be $205 per ton deadweight."

As the various ships are completed, and their deadweight capacity determined, and advices of same are received by Canadian Railway and Marine World, the approximate figures given in our monthly table are changed, and the final ones inserted. The following table shows the variations between the approximate deadweight figures for six of the vessels and the finally determined figures:

	Approximate	Determined
Canadian Pioneer	8,100	8,408
Canadian Ranger	8,100	8,382
Canadian Recruit	3,750	3,964
Canadian Volunteer	4,300	4,530
Canadian Voyageur	4,300	4,575
Canadian Warrior	3,750	3,995

These changes in tonnage, of course, caused a corresponding change in price. For example, the approximate price of the Canadian Warrior, as first stated, was $768,750, while the price actually paid was $818,975, an increase of $50,225.

Officers of Steamships—Following is a list of captains and chief engineers of steamships so far appointed by Canadian Government Merchant Marine Ltd., the first column containing the name of the vessel, the second that of the captain and the third that of the chief engineer:

Canadian Pioneer	T. R. Coffin	P. C. Bennett
Canadian Ranger	A. S. M. Nicholls	R. J. Webster
Canadian Recruit	J. D. MacKenzie	J. W. Ayers
Canadian Seigneur	F. Ferguson	J. Gladstone
Canadian Trader	D. Campbell	....
Canadian Volunteer	A. O. Cooper	John Young
Canadian Voyageur	A. L. Starrett	J. T. Meredith
Canadian Warrior	E. C. Sears	L. Marshall

Voyages of Steamships — Following are particulars of voyages made by Canadian Government Merchant Marine Ltd., steamships, after they were transferred to that company for operation:—

Canadian Voyageur, voyage one, sailed from Halifax, N.S., Mar. 2, with miscellaneous cargo, for Barbadoes, Trinidad and Demerara, and returning, carried a cargo of sugar to New York, arriving there Apr. 4. Voyage two, sailed from New York, Apr. 17, with miscellaneous cargo for St. Kitts, Antigua, Guadeloupe, Martinique and Barbadoes, returning carried a cargo of sugar to Montreal, arriving there June 5. Voyage three, sailed from Montreal July 10, for Barbadoes, Trinidad and Demerara, with miscellaneous cargo of hay, oil, meals, oats, cement, bran, flour, lumber and fish, etc., and Canadian Warrior, sailed from Montreal, May 20, with miscellaneous cargo of flour, oats, bran, cement, lumber, hay, etc., arriving at Barbadoes, June 1, at Trinidad, June 4 and Havana, June 14. Left Havana June 24 with cargo of sugar, arriving in Montreal July 8.

S.S. Canadian Pioneer, sailed from Montreal, May 22, for Buenos Ayres, with general cargo of newsprint paper, agricultural machinery, malt, automobiles, window glass, etc., arriving at Buenos Ayres, June 21.

S.S. Canadian Ranger, sailed from Montreal May 30, with general cargo of sugar, meats, canned goods and lumber, arriving at Liverpool, Eng., June 13.

S.S. Canadian Recruit, sailed from Montreal, June 20, with general cargo of flour, cement, oats, lumber, bran, etc., arriving at Kingston, Jamaica, July 1, and Havana, Cuba, July 7, bringing back a full cargo of raw sugar from Cuba.

S.S. Canadian Volunteer, sailed from Victoria, B.C., July 11, with a cargo of lumber for the United Kingdom, via the Panama Canal.

Names of Steamships—Since the last list of names chosen by the Marine Department, for steel cargo steamships for Canadian Government Merchant Marine Ltd., was published in Canadian Railway and Marine World, we have been advised of the following additional ones:

Canadian Sealer; Marine Department contract 40; builder's yard no. 5; Nova Scotia Steel & Coal Co., New Glasgow, N.S.; approximately 2,800 tons d.w.

Canadian Miner; Marine Department contract 40; builder's yard no. 6; Nova Scotia Steel & Coal Co., New Glasgow, N.S.; approximately 2,800 tons d.w.

Canadian Otter; Marine Department contract 44; builder's yard no. 4; British American Shipbuilding Co., Welland, Ont.; approximately 4,350 tons d.w.

Canadian Squatter; Marine Department contract 45; builder's yard no. 5; British American Shipbuilding Co., Welland, Ont.; approximately 4,350 tons d.w.

It is possible that some of the names chosen previously for other vessels of the fleet will be changed, and that names ending with "er" will be substituted, so as to have the names of all the vessels in the fleet end in that way.

Directors of Canadian Government Merchant Marine Ltd.—As stated in Canadian Railway and Marine World for May, Canadian Government Merchant Marine Ltd., which is operating the steel cargo steamships build for the Marine Department, had then five directors, all of whom are directors of the Canadian National Rys., viz: D. B. Hanna, President; A. J. Mitchell, Vice President and Treasurer; Major Graham A. Bell, C.M.G., Deputy Minister of Railways; Robert Hobson, Hamilton, Ont., and E. R. Wood, Toronto. On July 10, four more of the Canadian National Rys. directors were also elected directors of Canadian Government Merchant Marine Ltd., viz: Sir Hormisdas Laporte and F. P. Jones, Montreal; Thos. Cantley, New Glasgow, N.S., and A. P. Barnhill, St. John, N.B.

The s.s. Canadian Volunteer, the first of the Canadian Government Merchant Marine vessels to be built in British Columbia took on a cargo of lumber at Victoria, B.C., for Great Britain early in July. The loading was considerably hindered, owing to a longshoremen's strike. The Canadian Volunteer was built by Wallace Shipyards, Ltd., North Vancouver, and is of the single deck, poop, bridge and forecastle type, 4,300 tons d.w. The keel was laid Oct. 1, 1918 and she was launched Apr. 5.

The Minister of Marine stated in the House of Commons recently, in answer to a question, that the s.s. Canadian Volunteer, has a gross tonnage of 3,188. The department had no information as to the port for which she was to sail, what cargo she carried, or what rate was paid for freight.

The s.s. Canadian Warrior—The Minister of Railways, in answering a question in the House of Commons recently as to the rate of freight per ton received on 2,000 tons of general cargo and 76,000 ft. of lumber carried from Montreal to Barbados and Trinidad by the s.s. Canadian Warrior, said:—"The Canadian Warrior is operated by the Canadian Government Merchant Marine Ltd., who advise that it is not in the company's interest that rates of freight paid by private shippers should be made public. They advise full information covering the company's operations will be submitted to the shareholders, who are the government, at the close of the company's fiscal year."

British American Shipbuilding Co., Welland, Ont., which is building 2 steel cargo steamships, each approximately 4,350 tons d.w., for Canadian Government Merchant Marine Ltd., and, which laid the keel of one, its builder's yard no. 4, on Mar. 29, laid the keel of the second one, builder's yard no. 5, July 14. These ships will be named Canadian Otter, and Canadian Squatter, respectively. They will have approximate d.w. capacity of 4,350 tons each, and will be of the single deck, poop, bridge and forecastle type, of the following dimensions, length overall, 333 ft. 7 in.; length, b.p., 320 ft.; breadth moulded, 43 ft. 10 in.; depth moulded, 25 ft. They will be equipped with triple expansion engines, with cylinders 23 x 38 x 63 in. diar. and 42 in. stroke, and supplied with steam by 2 Scotch boilers, each 15½ x 11½ ft. at 180 lb.

J. Coughlan & Sons, Vancouver, B.C., advised us July 14 that, while work was going on at their yard, conditions had not returned to normal. There had been a decided split in the labor ranks and while some of the trades were will to return to work others were not, and as a consequence only about half of the firm's normal force was working. They expected to lay the keel of the s.s. Canadian Inventor, Marine Department contract 36; builder's yard no. 13, approximately 8,100 tons d.w., about July 25. This would leave one more keel to be laid under the Marine Department's order, viz: the s.s. Canadian Prospector, Marine Department's contract 37; builder's yard no. 14, also approximately 8,100 tons d.w. No dates had been set for the launching of the s.s. Canadian Importer and the s.s. Canadian Exporter, both also approximately 8,100 tons d.w., the keels for which were laid Apr. 26 and May 3, respectively.

Halifax Shipyards Ltd., Halifax, N.S. —We were advised July 10 that the construction of all the company's buildings was held up for six weeks in May and

Details of the Different Types of Steamships for Canadian Government Merchant Marine Ltd.

The following are comparative details of the six different types of steamship being built for Canadian Government Merchant Marine Ltd.:

	2,800 ton.	3,400 ton.	3,750 ton.	4,300 ton.	5,100 ton.	8,100 ton.	10,500 ton

[illegible] on account of a local strike of the building trades. On the date of our advices, the construction of a power house building was completed, the boilers and machinery were being erected and the first turbine generating unit, of 1,000 k.w. capacity, was expected to be in operation in August. Good progress was being made with the erection of the plate shop and of the office and stores building.

Harbour Marine Co. Ltd., Victoria, B.C.—The keel of the first of 2 steel cargo steamships of approximately 8,100 tons d.w. each for Canadian Government Merchant Marine Ltd., was laid July 14. It is stated that practically all the steel required for the first hull has been delivered at the yard and that rapid progress in construction will be made during the next few months. The construction is under the supervision of J. Clark, Naval Architect and Engineer. It is expected that the vessel will be ready for launching during Jan., 1920. The contract for these two vessels was awarded to the Victoria Machinery Depot Co. and the Harbour Marine Co. was organized to carry out the work.

A great deal of work was entailed in preparing the yard. A large electrical crane has been erected which travels on a 20-ft. gauge track between the slipways, and has a radius of action of 75 ft. and serves two ships. It has a lifting capacity of 3 tons at the extreme distance. A 60 x 5 ft. bar furnace, burning oil fuel, has been constructed. The erection of large septic and oil tanks was necessary before the yard was ready for operation. The main plate shop is 60 x 100 ft., equipped with shears, punches with automatic tables, planer, rolls and other tools. The frame setting and beam bending shops, 180 x 80 ft., are equipped with the above mentioned furnace, horizontal punch, beam bender, angle cutter, friction cut off-saw, and [illegible] slab floors and forge fires.

The company employs ex-service men and the large majority of the employes are war veterans, though there are quite a number of naval and military men who have seen active service in previous wars. [illegible] of the watchmen was serving in the Royal Navy in 1858. Another was soldiering in Africa before the Franco-Prussian war. The most friendly relations exist between the employes and the management. A suggestion box is kept so that any man can convey his ideas direct to the management and suggestions which are adopted are paid for. The company has its own restaurant, which is managed by a disabled soldier and his family. A yard association has been formed to further employes' interests. The scope and activities of this association are very varied, and embrace all forms of games, together with sick relief and provision for dependents. There is a grievance committee, which deals with all trouble in the yard, and a fire committee which looks after fire protection. Under these conditions mutual confidence and co-operation are developing in a marked degree. The idea of building up a shipyard with service men is an experiment introduced by the President, C. J. V. Spratt. When the recent strikes were on, the company was able to carry on its work steadily, owing to the understanding which existed between the management and the men.

The Nova Scotia Steel & Coal Co., New Glasgow, N.S., which is building 2 steel cargo steamships, of approximately 2,800 tons d.w. each, for Canadian Government Merchant Marine Ltd., and which laid the keels of the s.s. Canadian Sealer, builder's yard no. 5, Mar. 27; and of the s.s. Canadian Miner, builder's yard no. 6, Mar. 31, expects to launch Canadian Sealer in September and Canadian Miner in November.

Steel cargo steamship, Canadian Recruit, approximately 3,750 tons d.w., built for Canadian Government Merchant Marine Ltd., by Collingwood Shipbuilding Co., Collingwood, Ont.

Port Arthur Shipbuilding Co., Port Arthur, Ont., advised us recently that it had not laid the keels for the 2 steel cargo steamships of 4,300 tons each for which it has contracts from the Marine Department, viz: Marine Department contracts 32 and 33, builder's yard nos. 43 and 44, and that owing to the delay in securing material, it was impossible to say when they would be laid.

The company delivered the s.s. Canadian Trader, approximately 3,400 tons d.w., Marine Department contract 19; builder's yard no. 39, to the Marine Department, July .....

The Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C., advised us recently that it was impossible to tell when the keels for the 2 steel cargo steamships of 8,100 tons d.w. each, for which it has contracts from the Marine Department, for Canadian Government Merchant Marine Ltd., would be laid, as its operations had been badly handicapped by the strike prevalent on the Pacific coast.

Tidewater Shipbuilders Ltd., Three Rivers, Que., which has contracts for 4 steel cargo steamships of approximately 5,100 tons d.w. each, for Canadian Government Merchant Marine Ltd., expects to launch the s.s. Canadian Settler, builder's yard no. 5, about Aug. 15; and the s.s. Canadian Rancher, builder's yard no. 6, about Sept. 1. The keels for the s.s. Canadian Fisher and the s.s. Canadian Forester, builder's yard nos. 7 and 8, respectively, will be laid immediately after the launchings of the s.s. Canadian Settler and the s.s. Canadian Rancher respectively.

Wallace Shipyards Ltd., North Vancouver, B.C.—Immediately after the launching of the s.s. Canadian Trooper, 4,300 tons d.w., Marine Department contract 5; builder's yard no. 106, on May 31, this company laid the keel of the s.s. Canadian Scout, 5,100 tons d.w. Marine Department contract 7; builder's yard no. 102, the laying of the keel and the erection of the whole center vertical girder only taking 33 minutes.

The s.s. Canadian Volunteer, 4,300 tons d.w., Marine Department contract 4; builder's yard no. 100, was completed and delivered to the Marine Department, June 10.

Naval Service Department Estimates for 1918-1919 and 1919-1920.

In addition to the estimates of which particulars were given in Canadian Railway and Marine World for May, pg. 283, the supplementary estimates for the year ended Mar. 31, 1919, submitted to the House of Commons, during the recent session, contained the following item:—

Patrol of northern waters of Canada, further amount required	$25,000

The supplementary estimates for the year ending Mar. 31, 1920, contained the following items:—

Fisheries protection service, to provide for new vessels on Lake Erie	$150,000
Customs dues	500

Steamships for Pulpwood Trade—In reply to a deputation of pulp and paper manufacturers, at Montreal, July 11, the Minister of Marine, Hon. C. C. Ballantyne, in dealing with their complaints of difficulty in securing vessel room for shipments to England, stated that little relief could be expected until Canada owned and operated her own merchant marine. The Dominion Government could not influence the British Government to relax the restrictions placed on all British tonnage, but he pointed out that strong representations had been made on the matter. Speaking of what the Dominion Government was doing to provide the necessary accomodation, he stated that by the end of this year the government will own and operate 20 steamships, and that by the end of 1920 it would own and operate 50. At present controlls 264,000 tons of shipping.

Sorel Shipbuilding Yard—The estimates for the year ending Mar. 31, 1919, passed at the Dominion Parliament's recent session contained an item of $76,267 to pay estate D. & J. McCarthy the price fixed by Exchequer Court for expropriated land at Sorel on which the government shipyard is situated.

The Australian Government is reported to have placed orders with Vickers, Ltd., in England, for 3 cargo steamships with line capacity of 900,000 cub. ft. of which 400,000 cub. ft. is to be insulated.

Public Ownership of United States Steamships Opposed.

Following is a summary of recommendations made to the U.S. Congress recently by E. N. Hurley, Chairman U. S. Shipping Board:—

The shipping board recommends private ownership and operation as a fundamental policy for commercial shipping. The government should, therefore, contemplate retirement from commercial ship building, ship owning and ship operating activities at the earliest date which may be convenient and practical in order to give our overseas trade the full benefit of competitive service; to leave steamship operators free to render this competitive service, and to impart to present and prospective steamship operators that confidence which they must feel before they can be expected to invest their money in existing ships, and to place the orders for new ships without which the outlook for the U.S. shipbuilding industry will be not encouraging.

In order to carry out this policy, the government should construct no more ships, other than those now in the programme except such new vessels as may be needed to balance the fleet, and for the construction of which funds may be provided as specified. It should adopt, and rigidly adhere to, a definite plan for selling its ships. Obviously it would be impossible to sell the whole fleet at once, but during the period in which the ships are being sold it is essential that the government handle the unsold ships in a manner which will not permit their operation to react unfavorably upon the operation of the ships which have been sold, and will definitely tend to stimulate the purchase of more ships by private operators. This double purpose can be served by assigning unsold ships to managers, or operators, as has been, and still is, the shipping board's practice or by chartering vessels to private operators for limited periods and on terms which will not tend to remove the incentive to buy.

Act Respecting Transfer of Vessels Registered in Canada.

An act to amend the Canada Shipping Act re transfers of mortgages of ships, which has been passed by the Dominion Parliament, provides that a transfer, mortgage, or transfer of a mortgage of a British ship registered in Canada by a person not qualified to own a British ship, or to a foreign controlled company, shall not have any effect unless it be approved by the Minister of Marine, and any person who makes or purports to make such a transfer without such approval shall incur a fine not exceeding $5,000, or imprisonment for not exceeding 5 years, or both fine and imprisonment, on summary conviction, or on indictment.

A foreign controlled company means any corporation where the majority of directors are not British subjects; where the majority of the voting power is in the hands of persons who are not British subjects or who exercise directly or are in control on behalf of persons who are not British subjects; where the control is by any other means in the hands of persons who are not British subjects, and where the executive is a foreign controlled company, or where the majority of the executive are appointed by a foreign company. A corporation shall not be deemed to be a British subject, unless it be established in, and subject to the laws of some part of the British Dominions or a British protectorate, and has its principal place of business there. The Minister of Marine may require any person who is an owner, or mortgagee, of a British ship registered in Canada, or who applies to be registered as the owner or mortgagee, to furnish such particulars as appear necessary for the purpose of ascertaining if such person has been, or is, trustee for, or represents a foreign controlled company, and, in the case of a corporation, it may require the secretary, or other officer performing such duties, to furnish these particulars.

A fine of $1,000, or imprisonment for five years, or both fine and imprisonment, is provided for in the case of any person who fails to supply such particulars as are in his power that may be required.

The act is to remain in operation for three years.

Decision on a Salvage Claim.

Justice Hodgins gave judgment recently in the Exchequer Court, Toronto Admiralty District, in an action for salvage of the steamship Keyvive vs. the tug S.O. Dixon et al, as follows:—

"Under all the circumstances this should be considered upon the basis of a salvage claim in the sense that there was danger, apprehended danger at all events, and very real apprehended danger to these vessels, and that the Keyvive undertook the work under the belief that they were in some danger and at some risk to herself. I agree with the argument that has been made that a vessel of this size, 260 ft. long, and with the engines at the stern, a steel vessel, having to undertake to gather up and tow in waters that were somewhat confined, a tug and two barges, all of them unable to help themselves, would mean fairly good seamanship and might very easily have resulted in an injury to the salving vessel. I therefore pronounce in favor of plaintiffs that the claim is a proper salvage claim and they are entitled to recover upon that basis. Let judgment be entered for plaintiffs for $2,500 for salvage services, of which $2,000 will be apportioned to the owner, $200 to the master, and $300 to the crew of the Keyvive, according to their ratings. The defendants to pay the costs of the action, except those relating to the arrest and release on bail, including any applications relative thereto." Francis King, of Kingston, Ont., was counsel for plaintiffs.

The Dominion Steel Corporation's Requisitioned Steamships.

Mark Workman, President Dominion Steel Corporation, in speaking at its recent annual meeting, said:

Publicity has been given to the progress of negotiations in reference to the return of our chartered steamers which are in the hands of the British Shipping Controller. I would like to amplify the information already imparted by stating that we have succeeded in our actions against the owners of our British chartered vessels, by decisions in our favor, both in the court of first instance and in the court of appeal. As a result of these decisions it is established that the charters have not been "frustrated" by the requisitioning of the vessels, but remain in full force and effect.

Several months ago the British authorities issued a statement to the effect that all requisitioned vessels would be released on Mar. 1, 1919, or as soon after that date as the vessels' current voyages would permit. I found, however, that certain powers had been vested in the Shipping Controller, whereby he is authorized to "direct" steamers as he may desire, which, as far as we are concerned, amounts to virtual requisitioning. Representations have been and are being made to the Shipping Controller, both directly and indirectly, urging the immediate return of our vessels, in addition to which we are in almost daily communication with the steamship owners. I am distinctly hopeful in regard to the situation, and am confident that at least a portion of the tonnage will shortly be in our possession.

Dry Dock Subsidies Act Amendment.

An act was passed by the Dominion Parliament at its recent session amending the act to encourage the construction of dry docks in Canada by repealing the section which provided for the payment of a subsidy of not exceeding 3½% annually of the cost of construction of second class docks, and fixing the amount to be paid at 4½%, half yearly, for 35 years from the completion of the work.

The amended section is not to apply to any agreement heretofore made for the construction of any dry dock.

It also provides that no bonds or other securities are to be issued as a charge upon any dock until not less than $500,000 has been spent on the work and material, and that there are no outstanding liens or claims against the property, when such securities may be issued with the consent of the Minister of Public Works and any subsidy may be assigned to a trustee for the bondholders, to whom subsidy payments will be made direct. Until the dock is completed to the minister's satisfaction, the total amount of bonds to be issued shall not exceed 75% of the amount actually expended for work and materials, and the minister's consent must be obtained before any bond issue is made. Half-yearly payments may be made on account of the subsidy, at the rate of 4½% a year on 75% of the cost of work and materials, after an expenditure of $500,000 on the certificate of the Public Works Department's engineers.

Subway Under Detroit River.—The Mayor of Detroit, Mich., is reported to have sent a memorial to the Dominion Government, and to the United States Government, favoring the construction of a subway under the Detroit River, to connect Detroit, Mich., and Windsor, Ont. The distance between the two cities is approximately 1,200 yards, and it is suggested that the subway be constructed of such a size that, in addition to general traffic, electric cars may be operated through it. A press report, July 5, states that a Detroit contractor has made tentative proposals for building such a subway, and that the city engineer puts the cost of the work at $6,000,000. The plan suggested is that each city should build its own approaches to the subway, which would be built by a joint stock company.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. The figures given in the column headed "Long tons d.w." and which are preceded by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The other figures in that column, not preceded by an asterisk, show the approximate total deadweights, subject to modification as they may vary above or below the figures given and as may be ascertained after the ships are completed, and of course, the total prices will vary accordingly.

The following contractions are used in the column giving the type of the vessels to be built: s.d., single deck; 2.d., two deck; 3.d., three deck; lake, lake type; p., poop; b., bridge; f'c's'le, forecastle.

Con. No.	Contract date	Builder	Yard no.	Long tons d.w.	Price per ton d.w.	Total price	Type	Classification	Speed, knots	Approximate delivery date	Keel laid	Launched	Name

General Shipbuilding Matters Throughout Canada.

Cholberg Ship Co., Victoria B.C.—The second auxiliary powered schooner built for the Porsgrund Damp and Seil Co., Porsgrund, Norway, by this company, was launched during July, and christened Washington, by Mrs. C. Cholberg, wife of the company's manager. On completion the vessel will go to the Columbia River for a cargo of railway ties for England.

The Dominion Shipbuilding Co., Toronto, launched the steel cargo steamship Hessa, July 12, the christening being performed by Mrs. J. B. Simpson, New York. This vessel is one of six steel cargo steamships built for ocean service during the war. She is of the single deck type, with poop, bridge and forecastle, steel texas on bridge, with wing deckhouses, chart room and pilot house, and is built on the transverse system, with steel hull divided into compartments by 4 watertight bulkheads and 1 screen bulkhead. She has cargo capacity for 151,466 cub. ft. of grain, with carrying capacity of 3,550 tons. She has a double bottom fore and aft for 779 tons of water ballast, and the water tank capacity is 5,053 imp. gals. There are 4 hatches, each 22 x 18 ft. She is schooner rigged, with 2 pole masts and is classed 100 A1 at Lloyd's for ocean service. The propelling machinery consists of inverted triple expansion engines with three cylinders, 20, 33 and 54 ins. diar., by 40 in. stroke, 165 n.h.p., 1,200 i.h.p., at 87.5 r.p.m., supplied with steam by two Scotch marine boilers, each 14½ ft. diar. by 11 ft. long, 2,730 sq. ft. heating surface, each boiler, at 180 lb. a sq. in.; average speed 10.2 knots on a fuel consumption of 20.1 tons in 24 hours. The screw is cast iron, 13¼ ft. diar. and has 4 wings, 12 ft. 8 in. pitch. The auxiliary equipment includes 8 reversible single drum, 7 x 5 in. cargo winches, anchor windlass 8 x 8 in., and steam steering gear 7 x 7 in. There is accommodation for 35 officers and men. Her dimensions are, length overall, 261 ft.; length between perpendiculars, 251 ft.; breadth moulded, 43½ ft.; depth moulded, 24 ft. 2½ in.; approximate tonnage, 2,300 gross, 1,400 register.

Foundation Co., Victoria, B.C.—The ninth of the 20 wooden steamships of 3,000 tons capacity, being built by this company at its Point Hope and Point Ellice yards for the French Government, was launched July 4, and named Trois Rivieres. The vessel built under yard no. 207, was completed early in the month, and underwent her trials July 5, and was turned over to her owners July 10. Over the measured mile she exceeded her contract speed of 11 knots, her maximum speed on the whole trip being 12.377 knots, with an average of 11.91 knots. The names selected for the 20 vessels are: Strasbourg, Metz, Mulhouse, Canada, Montcalm, Winnipeg, Ontario, Wilfrid Laurier, Trois Rivieres, Vancouver, Victoria, Quebec, Montreal, Ottawa, Frontenac, La Salle, Acadie, Montmagny, Alberta and Nouvelle Ecosse. They are full powered vessels, of the following chief dimensions: Length over all, 293 ft., length b.p., 276 ft.; beam extreme, 47½ ft.; beam moulded, 46½ ft.; depth moulded, 23½ ft., draft over keel, 23½ ft.; displacement, 5,655½ tons.

Grant & Horne, St. John, N.B., engineers and contractors, who built several steamships for the British Government, under orders from the Imperial Munitions Board, have dissolved partnership, E. G. Horne retiring, and J. A. Grant carrying on the business under the same name as heretofore. He will continue to build ships, if contracts can be obtained, but will particularly concentrate on construction work.

R. H. Howes Construction Co., Yarmouth, N.S., launched the schooner Maria A. Howes, 485 gross, 415 register, July 1. She is classed A1 at Lloyd's, and has been taken to St. John, N.B. to load lumber for Great Britain under charter.

T. H. & W. S. McDonald, Meteghan, N.S., have a three-masted schooner of 360 tons under construction for coal and general cargo coastwise trade. Several vessels have been built at this yard during the war, the last one, the barkentine T. H. McDonald, having arrived recently at Montevideo, where she is taking on a general cargo for a European port under charter to a New York company.

McKay & McLean, Parrsboro, N.S., launched the tern schooner Acadian Queen, 440 tons register, at the end of June. She is classed with Bureau Veritas for 12 years and is fitted with engine for hoisting power. It is stated that she will be operated in the coasting trade by her builders.

National Shipbuilding Co., Levis, Que. Canadian Railway and Marine World for January described an interesting operation performed by the National Shipbuilding Co. at its Levis, Que., shipyard, viz: the bringing out of the water on a specially constructed marine railway, of the steel suction dredge Galveston, for rebuilding and conversion into an ocean freighter for the Affrêteurs Réunis of Paris, France. The work of reconstruction was carried out during the past winter, and, although the slip was not protected or covered in any way, very little time was lost on account of cold or snow, and on May 31, the vessel was launched 95% completed and fitted out. The work consisted of the removal of all superstructures, dredging equipment and hoppers, and the construction of a new double bottom, with ballast tanks, cargo holds with 2 new watertight bulkheads, raising of the forecastle, main and poop decks, 8 ft., with new steel decks; construction of a bridge deck, and deck house accommodations amidships, with chart room and navigating bridge above, crew's quarters in forecastle and petty officers quarters in poop deck house, new masts with 6 cargo booms, and all standing and running rigging complete, 3 cargo hatches, deck winches, capstan and other deck auxiliaries; new rudder, rudder stock and quadrant; rearrangement of engine room auxiliaries with steam and water piping, complete electric installation, etc. The official trials were successfully carried out on June 21, under the supervision of officials of Bureau Veritas. The dimensions of this vessel, which has been renamed Pomone, are as follows: Length, between perpendiculars, 233 ft.; beam, 39 ft.; moulded depth, 23 ft. 6 in.; deadweight tonnage, 3110 tons.

The National Shipbuilding Co. is about to commence the reconstruction of a lake steamship, for a Cuban firm of ship owners, and it is negotiating with the French Government for the construction of several 6,000-ton steel freight steamships.

Quebec, Que.—T. M. Kirkwood, who is interested in a project for the construction of steel steamships in Quebec, addressed a meeting of the Quebec Board of Trade Council early in July, to discuss the establishment of a steel shipbuilding plant there. His proposal is to build a plant for the construction of at least 30 steel steamships of 10,000 tons d.w. capacity each, for a daily service between Quebec and European ports, the vessels to be registered and controlled in Quebec. He contends that the Provincial Government should guarantee the necessary bond issue, and also that the Dominion Government should interest itself in the matter.

The Great Lakes Transportation Co.'s Purchases of United States Vessels.

The Great Lakes Transportation Co., Midland, Ont., of which James Playfair is President and General Manager, has bought the steamships America, Brazil and Granville A. Richardson. The first two were owned formerly by the North American Steamship Co., Cleveland, Ohio, and the last one was owned by the Erie Rd. Steamship Line.

The s.s. America is a steel vessel of the spar deck type, with double bottom for watertight ballast, steel boiler house, 3 watertight bulkheads, and electric lighting equipment. She was built at Buffalo, N.Y., in 1889, and overhauled in 1913. Her dimensions are: Length b.p., 274 ft. 7 in.; breadth, moulded, 42 ft. 2 in.; depth moulded, 24 ft. 4 in.; tonnage, 2,171 gross; 1,748 net. The propelling machinery consists of fore and aft compound engine, with cylinders 28 and 52 in. diar. by 48 in. stroke, 750 i.h.p. at 82 r,p,m,, supplied with steam by 2 Scotch boilers, each 11½ by 12 ft., under forced draft, at 125 lb.

The s.s. Brazil is a steel vessel of the spur deck type, with double bottom for watertight ballast, 2 watertight and 2 nonwatertight bulkheads, steel boiler house, electric light, etc. She was built at Buffalo, N.Y., in 1890, and was overhauled in 1913. Her dimensions are: Length b.p., 276 ft. 1in.; breadth moulded, 40 ft. 2 in.; depth moulded, 24 ft. 4 in.; tonnage, 2,186 gross; 1,665 net. The propelling machinery consists of triple expansion engine, with cylinders 19½, 32 and 52 in. diar. by 45 in. stroke, 985 i.h.p., at 84 r.p.m., and supplied with steam by 2 Scotch boilers, each 11½ by 12 ft., at 160 lb.

The s.s. Granville A. Richardson is a steel vessel of spar deck type, with double bottom for watertight ballast, 6 watertight and 2 nonwatertight bulkheads, electric light, etc. She was built at Buffalo, N.Y., in 1893, and named George J. Gould. The propelling machinery consists of triple expansion engine, with cylinders 18, 30 and 48 in. diar. by 42 in. stroke, 800 i.h.p. at 83 r.p.m., supplied with steam by 2 Scotch boilers, each 11½ by 12 ft., at 160 lb. Her dimensions are: Length b.p., 266 ft., breadth moulded, 41 ft.; depth, 25½ ft.; tonnage, 2,237 gross; 1,790 net.

These vessels have been transferred to the Canadian register, and their names have been changed to Glenstriven, Glenbrae and Glencairn, respectively.

A steamboat service for freight was commenced early in July on the Saskatchewan River from Prince Albert north to Nipawin, about 100 miles.

Mainly About Marine People.

James Hugh Allan, a son of the founder of the Allan Line, who died recently in Great Britain, left an estate of $1,-[illegible].

Hugh Allan, formerly of the Allan Steamship Co., Montreal, and Mrs. and Miss Allan, all of whom have been in England for several years, are spending the summer at the Algonquin Hotel, St. Andrews, N.B.

Hon. C. C. Ballantyne, Minister of Marine and Naval Service, left Ottawa July 12, intending to spend about three weeks with Mrs. Ballantyne and their family, at the Algonquin Hotel, St. Andrews, N.B.

C. E. Benjamin, Passenger Traffic Manager, Canadian Pacific Ocean Service, Ltd., has returned to Montreal after a visit to England.

J. M. Clark, who has been appointed Naval Architect for the Harbour Marine Co., Ltd., Victoria, B. C., which has contracts from the Marine Department for 2 steel cargo steamships of approximately 8,100 tons d. w. each for Canadian Government Merchant Marine Ltd., has had an extended experience. Having familiarized himself with shipbuilding work on shore he spent 8 months at sea, as ship's carpenter, on the sailing ship Tycoon, to learn the working of a ship at sea. He was for 15 years with a large shipbuilding firm in England, during the last 7 years of which he was manager. While there he won a $4,000 prize offered by the Thames Conservancy Board in a competition open to the world. He laid out the dockyards at Bilbao, Spain, for building armoured cruisers. Later he spent 12½ years in Japan, where he designed and superintended the construction of ships built by the Mitsu Bishi Dockyard and also 14,000 ton steamships for the Toyo Kissen Kaisha.

Duncan D'Eyncourt Cooper, who has been appointed Agent, Export and Import Traffic, Canada Steamship Lines, Ltd., Toronto, was born at Buffalo, N.Y., July 8, 1862, and entered transportation service in Sept., 1881, since when he has been, to 1882 freight clerk, G.T.R., Montreal; 1882 to 1884, freight clerk, G.T.R., Toronto; 1884 to 1885, chief clerk to District Freight Agent, G.T.R., Toronto; [illegible] to [illegible], chief clerk to District Freight Agent, G.T.R., Toronto; 1885 to [illegible], City Freight Agent, G.T.R., Montreal; 1889, to the closing of U.S. railway offices in Canada by the U.S. Railroad Administration in 1917, Canadian Freight Agent, Lehigh Valley Rd., Toronto.

Capt. A. W. Davison, R. N. R., formerly master of the s.s. Empress of Asia, is reported to have been appointed Marine Superintendent, Canadian Pacific Ocean Services, Ltd., at Hong Kong, China. He was in charge of the Empress of Asia throughout the war, during which she acted as a transport between practically every country of importance in the world.

Mrs. G. J. Desbarats, wife of the Deputy Minister of the Naval Service, and her family, are spending some time at [illegible].

Robert Dollar, of the Dollar Steamship Co., is announced as one of the speakers at the industrial congress to be held at Calgary, Alta., Aug. [illegible] and 14.

Commander Thomas Fisher, C. B. E., R. N., who has been appointed General Manager, Atlantic Lines, Canadian Pacific Ocean Services Ltd., Liverpool, Eng., was born at Birmingham, Eng., in 1883, and underwent training at Dartmouth, Eng., on the old wooden battleship Brittania. He spent four years in China during the Boxer rebellion, and subsequently passed his examinations and secured rapid promotion, becoming a lieutenant at the age of 20. He served in the Mediterranean on H. M. S. Bacchante. After having qualified in gunnery, he served on the staff of the Director of Target Practice, and subsequently joined the H. M. S. Bellerophon, as gunnery officer, and after taking the staff course, was selected as a lecturer at the Naval College, Portsmouth, Eng. At the outbreak of war he served as Flag Commander in the Reserve Fleet, and was associated with the work of safeguarding the passage of the forces from England to France. At the end of 1914 he joined the Trade Division of the Naval War Staff at the Admiralty, and was in charge of part of the organization dealing with questions relating to neutral shipping. He took part in the supervision of movement of cargoes, etc., on neutral vessels, by means of control of their coal supply at ports both at home and abroad. In 1916 he acted as technical representative in negotiations for the use of neutral shipping by the allied powers, and incidentally gained valuable knowledge of European shipping interests. He served on various Government committees, dealing with commecial and shipping matters, and in 1917, was appointed liaison officer to link the British Ministry of Shipping with the U.S. Shipping Board, and while in the U. S. he had opportunities of examining at first hand shipping and transport problems of Canada and the U. S., his duties calling for visits to Canadian and U. S. ports on the Atlantic and Pacific oceans.

R. B. Teakle,
Manager, Canadian Government Merchant Marine Limited.

Mrs. Foy, widow of John Foy, formerly President Niagara Navigation Co., who died in Toronto recently, left an estate, valued at $41,253, to her two sons, F. C. Foy, Passenger Agent, New York Central Rd., Utica, N.Y., and J. V. Foy, General Passenger Agent, Canada Steamship Lines, Toronto, who are her executors, to be used for the maintenance of the family residence, and of those of her family who may be residing therein. Mrs. Foy, who was a daughter of the late Sir Frank Smith, also a former President of the Niagara Navigation Co., received a considerable annual income from his estate.

Capt. A. J. Hailey, R. N. R., Master of the Canadian Pacific Ocean Service's s. s. Monteagle, is reported to have been transferred to the company's s. s. Empress of Asia, succeeding Capt. A. W. Davison, transferred to shore service.

George Hall, head of the George Hall Coal Co. of Canada, Ltd., and other concerns which bear his name at Ogdensburg, N.Y., died at his house in Montreal, June 24, aged 72, and was buried at Ogdensburg. In his early days he was a telegraph operator and subsequently started business in coal transportation at Ogdensburg, being one of the first to enter the coal trade on the St. Lawrence River. When it became necessary for the Ogdensburg and Lake Champlain Rd. to change its locomotives so as to burn coal instead of wood, owing to the scarcity of lumber, he obtained the contract for 5,000 tons of coal which was brought down from Lake Erie. He later had a large contract for supplying coal to the C.P.R.

Sir Arthur Harris, Director General, British Ministry of Shipping, Canada, sailed from New York, June 28, on the s.s. Aquitania for England.

E. N. Hurley, Chairman, U. S. Shipping Board, has resigned, effective Aug. 1. It is stated that he will be succeeded by J. B. Payne, General Counsel, U. S. Railroad Administration, Chicago, Ill.

Col. G. Patterson Murphy, President, Ottawa Transportation Co., and Mrs. Murphy, are spending some time at Rye Beach.

Sir Henry M. Pellatt, C. V. O., Toronto, has been elected a director of Canada Steamship Lines, Ltd. He was at one time director of the Richelieu and Ontario Navigation Co., now one of the constituents of Canada Steamship Lines, Ltd.

Capt. J. E. Pettis, who died at Port Greville N.S., recently, aged 79, was one of the oldest sailing vessel masters along the Atlantic coast, and was at one time the owner of a large fleet. He is said to have built the first three-masted schooner launched in Canada. During the war he re-entered the shipbuilding business and was concerned with the building of two schooners at Spencers Island, the last one the Minas Prince, being launched in February.

Capt. G. E. L. Robertson, heretofore Agent Marine Department, Victoria, B.C., has been appointed Superintendent of Pilotage, at Ottawa, Ont. He was presented with a suit case by the employes of the department at Victoria, July 12, on leaving for the east.

John Roy Shaw, who has been appointed Passenger Agent, Canadian Pacific Ocean Services Ltd., Manila, Philippine Islands, was born at Montreal, June 28, 1871, and entered transportation service in 1885, since when he has been, to 1891, clerk in Passenger Department, C.P.R., Montreal; 1895 to 1898, clerk and ticket agent, C.P.R., Boston, Mass.; 1898 to 1904, Travelling Passenger Agent, C.P.R., Boston, Mass.; Feb., 1904 to June 1916, Passenger Agent, C.P.R., Yokohama, Japan; June, 1916, to June, 1917, General Agent, Passenger Department, Canadian Pacific Ocean Services Ltd., Shanghai, China; June, 1917, he was appointed General Agent, Passenger Department, same company, Hong Kong, China, and latterly to July, 1919, was Passenger Agent, same company, New York, N.Y.

Robert B. Teakle, whose appointment as Manager, Canadian Government Merchant Marine Ltd., Montreal, was announced in our last issue, was born at Quebec, Que., May 19, 1877, and entered transportation service in May, 1893, since when he has been to Apr., 1904, in various positions, Allan Line Steamship Co., at Quebec, Halifax and Portland, Me.; Apr., 1904 to Oct., 1914, in various positions at Montreal, and the latter portion of that time, as Manager, same company, St. John, N.B.; Oct., 1914 to Mar., 1918, Manager, same company, Boston, Mass.; Mar., 1918 to Apr., 16, 1919, Northeastern Manager, France and Canada Steamship Corporation, Boston.

Lorne C. Webster, President, Webster Steamship Co., left Montreal early in July, for Winnipeg, intending on his return to spend some time with his family at Metis, Que.

J. A. Wilson, Director of Stores, Naval Service Department, Ottawa, is to be appointed Assistant Deputy Minister, Naval Service. The supplementary estimates, passed at the Dominion Parliament's recent session, provide for increase of his salary, from $3,100 a year to $3,500, from July 1, 1918.

R. M. Wolvin, President Montreal Transportation Co., and Vice President, Halifax Shipyards Ltd., has been elected a director of the Dominion Steel Corporation.

The sinking of the s. s. Lusitania by Germans, which caused one of the principal sensations of the war, was again before the court at New York, July 14, when all claims against the Cunard Steamship Co., were dismissed, and all future claims barred, on the ground that the sinking of the vessel, May 7, 1915, was caused solely by an illegal act of the German Government acting through its instrument the commander of a submarine, and that the company was not liable to any extent for any loss, damage, injury or claim whatsoever arising in consequence of the commission of the unlawful act. All the claims were dismissed, without costs and the company's officers were absolved of any fault or neglect in connection with the loss. There were 64 claims aggregating about $6,000,000.

The York Steamship Co. Ltd., has been incorporated under the Dominion Companies Act with capital stock of 1,000 shares of no nominal or par value, provided that the amount with which the company shall carry on business shall be $5,000, and with head office in Toronto, to own and operate steam and other vessels for the carriage of mails, passengers and merchandise, and to carry on a general navigation and steamship management business.

Shipbuilding in Canada for the British Government.

Steamships Launched and Under Construction—Since the information given in our last issue respecting launchings of steamships under construction in Canada for the British Government was published, the following steel steamships have been launched: July 7, War Racoon, 3.500 tons d.w., by British American Shipbuilding Co., Welland, Ont.; July 23, War Algoma, 3.500 tons d.w., by Polson Iron Works, Ltd., Toronto, Ont.; July 28, War Company, 8,800 tons d.w., J. Coughlan & Sons, Vancouver, B.C.; July 26, War Vixen, 3,500 tons d.w., by Canadian Allis - Chalmers, Bridgeburg, Ont. This leaves 3 steel steamships still under construction with a total tonnage of 15,700. All the wooden steamships ordered for the British Government have been completed, viz: 46, with an aggregate d.w. tonnage of 141,680, and 38 steel steamships with an aggregate d.w. tonnage of 188,600, a grand total of 84 vessels and 330,280 tons. The following steel steamships are still under construction:

Builder.	Tons d.w.
J. Coughlan & Sons, Vancouver, B.C.—War Chariot	8,800
Midland Shipbuilding Co., Midland, Ont.—War Fury	3,400
Polson Iron Works, Ltd., Toronto, Ont.—War Halton	3,500
3 steel steamships	15,700

British American Shipbuilding Co., Welland, Ont.—The third of the steel steamships of 3,500 tons d.w. capacity, to be built for the British Government, under orders from the Imperial Munitions Board, was launched at this yard, July 7, and named War Racoon, by Mrs. H. T. F. Estrup. The first vessel, War Weasel, was launched Aug. 21, 1918, and the second, War Badger, Jan. 21. These vessels are of the standard type adopted by the board, for 3,500 tons d.w. capacity, and are 261 ft. long, 43½ ft. beam, 23 ft. deep, and are designed for ocean service.

Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont.—The strike which had been in progress at this yard for about a month was settled and the men returned to work July 7. An 8 hr. day and an increase of approximately 10% in wages was granted. Work on the two steel steamships under construction for the British Government was considerably delayed. The second of the 2 steel cargo steamships of 3,500 tons d.w. which this company is building under orders from the Imperial Munitions Board for the British Government, was launched July 26, and named War Vixen. The other vessel, the s.s. War Magic, was launched Mar. 3, and is nearing completion.

Polson Iron Works, Ltd., Toronto—The s.s. War Algoma, built at this yard for the British Government under order of the Imperial Munitions Board, was launched July 23. This is the fifth of the 6 steel cargo steamships of 3,500 tons d.w. each built by this company under the Imperial Munitions Board's order. She is of the following dimensions: Length overall, 261 ft.; length b.p., 251 ft.; beam, 32½ ft.; depth moulded, 22½ ft., and she is equipped with triple expansion, surface condensing engine of approximately 1,256 h.p. The first of these vessels, War Taurus, was launched Sept. 19, 1918; the War Hydra, Oct. 15, 1918; War Hamilton, Dec. 22, 1918; and War Timiskaming, Feb. 8, 1919. The last of these vessels is to be named War Halton, and it is expected she will be launched shortly, thus completing the orders with this company for British Government vessels.

Steamship Companies' Bond Issues

The Bishop Navigation Co. Ltd., offered to the public recently, an issue of $1,000,000 of 6% mortgage serial gold bonds. The company was incorporated recently with authorized capital of $1,500,000 common stock, of which $1,428,000 has been issued. The head office is at Montreal, and most of those concerned in the company are associated with the Montreal Transportation Co., Halifax Shipyards Ltd., and Canada Steamship Lines Ltd. The bonds will be redeemable at the company's option, in whole or in part, on any interest date, at 102½ and accrued interest, on 90 days' previous notice. The bonds, which are in denominations of $1,000 and $500, may be registered as to principal and bear interest coupons payable half yearly. The schedule of maturities is so arranged that all will yield 6¼%.

The President of the company, R. M. Wolvin, has issued the following statement: "The Bishop Navigation Co. Ltd. was incorporated under Dominion charter, Jan. 20, 1919, and owns and operates the s.s. Ivor Heath, a steel, twin screw freight steamship, 469½ ft. long, 56¼ ft. beam and 34 ft. 10 in. deep, total deadweight capacity 11,400 tons, and with a speed of about 12 to 13 knots per hour. The rebuilding of this ship is nearing completion, and when ready for sea, she will have the highest classification of Lloyd's Register. The bonds are a closed mortgage on all the company's assets, and particularly on the s.s. Ivor Heath. The Canadian Appraisal Co. values this vessel when rebuilt at $2,109,000. Insurance for not less than 150% of the outstanding bonds will be carried. Based on the present ocean freight rates and probable freight rates for the six months following the completion of the rebuilding of the steamship the company's gross earnings should be approximately $750,000 The net earnings for the six months period should be sufficient to provide three times for the redemption of the first maturity, together with interest on the whole bond issue for 12 months."

The Canadian Appraisal Co.'s certificate states that the ship was built in 1901, and is twin screw, with triple expansion engines, 5 boilers, and holds the classification on Lloyd's Register. The ship (formerly the s.s. Lake Manitoba owned by Canadian Pacific Ocean Services Ltd.) was burned and sank in the St. Lawrence River in Sept., 1918, after which she was purchased and taken to Halifax, where extensive alterations and repairs were undertaken by Halifax Shipyards Ltd., under the supervision of Lloyd's surveyor, and it is expected that the work will be completed during August.

The company's officers are: President, R. M. Wolvin, President, Montreal Transportation Co., Managing Director, Halifax Shipyards Ltd., and Director, Dominion Steel Corporation; Vice President, F. H. Markey, K.C., Montreal; Managing Director, H. W. Brown, New York, formerly Managing Director, Canada West Coast Navigation Co., Vancouver, B.C.; other directors, J. W. Norcross, President and Managing Director, Canada Steamship Lines Ltd., and President, Halifax Shipyards Ltd.; F. S. Isard, Director of Finance, Canada Steamship Lines Ltd.; Secretary, T. R. Enderby, Secretary Treasurer, Montreal Transportation Co.

Another bond issue will, it is said, be placed on the market shortly for $300,000, but the Trans-Atlantic Co. of Canada Ltd., Montreal, with which some of the same interests are concerned. The company acquired the s.s. Mariska from the Bassett Steamship Co., Toronto, recently, and has an authorized capital of $1,000,000, of which $700,000 has been issued. The ship has been valued by the Canadian Appraisal Co. at $880,000. The s.s. Mariska is a steel vessel, with double bottom for watertight ballast, steel boiler house, 3 watertight, and 2 non-watertight bulkheads, with hatches spaced 24 ft. centers, and with complete electric lighting equipment. She was built at Cleveland, Ohio, in 1890, and is of the following dimensions: Length b.p., 291 ft.; breadth moulded, 40 ft.; depth moulded, 22 ft.; tonnage, 2,502 gross, 1,875 net. She is equipped with triple expansion engine, with cylinders 24½, 38 and 61 in. diar., by 42 in. stroke, 1,200 i.h.p. at 80 r.p.m., supplied with steam by 2 Scotch boilers, 14 by 12½ ft. at 160 lb. She was bought by the Bassett Steamship Co., Toronto, in 1914, from the Pittsburg Steamship Co.

British Government's Coastwise Shipping Policy Will Relieve North Atlantic Freight Situation.

A London, Eng. copyright cablegram, of July 23, to the Toronto Globe says: Traders whose business is suffering from the prevailing deficiency of shipping will benefit by a new government measure to reduce the congestion in British ports. In future all heavy, bulky cargoes consigned through ports where congestion is extreme to destinations capable of being served more readily through other ports, will be transferred to coastwise steamships as a matter of course. Hitherto coasting freighters have been unable to compete on a commercial basis with the low rates offered by state-controlled railways. Under the new arrangements the difference between rail and steamship rates is to be charged against the railways.

This practically amounts to subsidizing coastwise shipping. Commander Fisher, General Manager, Atlantic Lines Canadian Pacific Ocean Services, Ltd., thinks this measure should be advantageous to both the Canadian trader and the British consumer. At present there is at least 25% more shipping in the North Atlantic than would be required for the same amount of freight if the ports were working perfectly. Such abolition of port delays would increase the voyage capacity of these vessels, and also tend to reduce freight rates, with the result that more goods could be brought over, and at lower prices to the consumer, thus benefitting the Canadian exporter and doubly benefitting the British consumer. Commander Fisher considers, however, the success of the measure depends considerably upon whether the rate offered to coastwise shipmasters is sufficiently high to attract them back from the very profitable French coal trade, in which many are now engaged, for it is this, besides depredations of enemy submarines, which has so reduced the number of vessels plying in the old coasting trade.

Wreck Commissioner's Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Corcoran-Champion Collision.

Held at Quebec, Que., June 30, before Capt. A. L. Demers, Dominion Wreck Commissioner, assisted by Capts. C. Lapierre and L. R. Demers as nautical assessors, into the collision between the s.s. Corcoran and the s.s. Champion on June 26, near Levis drydock in the River St. Lawrence. The court found that the s.s. Champion was alone to blame for the collision and suspended the certificate of the master, Capt. D. Lemay for six months, and also suspended the certificate of the mate, A. Gagne, for three months, both dating from July 16.

Henry B. Hall—Keyport Collision.

Held at Montreal, July 2, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. C. Lapierre and N. McKay, as nautical assessors into the collision between the s.s. Henry B. Hall and s.s. Keyport in the Soulanges Canal, Apr. 30. The court found that in view of the circumstances attending the casualty, the mates of both vessels were in default, the mate of the s.s. Keyport in a lesser degree, and it therefore suspended the certificate of P. Dussault, mate of the s.s. Henry B. Hall, for 2 months from date of the certificate's delivery to the court. The certificate of F. Proteau, mate of the s.s. Keyport, was not dealt with, but he was reprimanded for not having called the master, and for not sending an alarm signal, instead of acquiescing in the Henry B. Hall's signals. Masters of both vessels, Capt. H. Mallette, of the s.s.. Henry B. Hall, and Capt. J. Mullen, of the s.s. Keyport, were reprimanded, not for taking rest, but for failing to give specific directions or instructions to their officers to call them when danger was apprehended

Stranding of the s.s. Caddo.

Held at Montreal, July 21, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. C. Lapierre and C. J. Stuart, as nautical assessors, into the stranding of the s.s. Caddo near Basque Island in the River St. Lawrence, June 15. The court found that the casulty was due to the fact that pilot P. Lachance, of the Quebec Pilotage district, did not adopt the precautionary measures which the circumstances demanded, the weather being thick. The pilot's evidence was honest and straightforward and no attempt was made to lead the court astray, and it was, therefore, not considered necessary to call other witnesses. The pilot, in his 34 years of service, has had but one minor accident prior to this, and in this case the vessel was undamaged and no delay was caused. For this reason the court did not deal with his license, but reprimanded him severely, for lack of attention to elementary precautions in keeping speed, and failing to note the intervals of time for shaping each course. It further ordered him to pay the costs of the investigation and cautioned him to exercise prudence in future.

With respect to the master who holds a U.S. license, the court has always held the view that in thick weather, the master is expected to be on the bridge. He also gave straightforward evidence as to his actions, but had the vessel suffered any damage he would have stood in a more serious light. The court cautioned him not to forget the grave responsibility which rests on him as master of a vessel.

The Cost of United States Ships.

Canadian Railway and Marine World for July reproduced a letter from E. N. Hurley, chairman U.S. Shipping Board, to the chairman of the House of Representatives appropriations committee, at which an attempt was made to show that the steamships built by the board cost only $180 a ton, an attempt which we characterized as "certainly ingenious." The Marine News, New York, states a similar view and says:—

"Chairman Hurley, of the U.S. Shipping Board, has become very adept in the juggling of figures. Apparently he has learned a good deal during his incumbency in the Shipping Board as to 'window dressing' for the benefit of placating a very disgruntled Congress. In a communication to the Chairman of the house committee on appropriations, Mr. Hurley resorts to the 9th degree of statistical presentation as to shipbuilding costs under the regime and management of the U.S. Shipping Board and Emergency Fleet Corporation. He figures that some shipbuilders have paid $40 a deadweight ton to the U.S. Treasury in the form of income and excess profits taxes. Other shipbuilders have paid $30 a ton. He figures an average tax return of $25 a deadweight ton. He applies this $25 a d.w. ton to 13,885,106 d.w. tons building and figures that the shipbuilders have returned to the government $347,127,650. He subtracts this amount from $2,861,756,570 the actual cost of the ships, which leaves 2,514,527,920 or $180 a d.w. ton as the actual cost to the government of the vessels built and building.

"This is a most remarkable presentation of shipbuilding costs. We doubt if Congress will absorb this explanation without a grain of sale. Mr. Hurley has apparently formed the belief that any explanation will suffice to convince Congress that additional funds are needed for the completion of the ship construction programme. He actually asks for $673,368,301. No doubt this additional money is needed and no doubt Congress will eventually grant additional funds, but we are of the belief that Mr. Hurley is not using the proper methods to get such funds. Congress rebels when it feels that it is being bamboozled and it is very plain that Mr. Hurley's juggling of shipbuilding costs figures is nothing but an effort to bamboozle Congress, a very plain, inept and clumsy effort to convince a very sharp visioned Congress."

United States Schoolship Newport—The Dominion Government passed an order in council recently consenting to a cruise up the St. Lawrence River and Welland Canal of the U.S. schoolship Newport, provided that it is not intended to retain her on the Great Lakes and that she is to return to the Atlantic Coast before the close of navigation. The schoolship Newport is lent to the New York National State Nautical School by the U.S. Government, is 168 ft. long, of 1,010 tons displacement, and is armed, for the purpose of drilling the cadets, with two 3-inch and one 4-inch rifles.

The supplementary estimates for the year ending Mar. 31, 1920, passed at the Dominion Parliament's recent session, provide $200,000 for the Port Maitland pier.

Revision of Dominion Government's Contract for Steel Plates for Shipbuilding.

Early in 1918 the Dominion Government gave the Dominion Iron and Steel Co., Sydney, N. S., a contract for 250,000 tons of steel plates, to be used in building steamships under the government's shipbuilding programme, the contract being explained by the Minister of Marine in the House of Commons, Apr. 4, 1918, as follows:

"The Dominion Government has guaranteed to the company that it will have a minimum tonnage of 50,000 tons of ship plates a year, extending over five years, making in all a total of 250,000 tons. The price per 100 lb. for the moment is $4.15. The safeguarding of the public interest, so far as the price is concerned, from time to time, has been arranged on the following basis: Ship plates are made from steel ingots which, in turn, are made from pig iron, the pig iron being produced from iron ore. The Dominion Iron and Steel Co. owns and operates within British territory facilities to produce all the raw materials that I have just mentioned as being required for the rolling of ship's plates. We have taken, as a basis to adjust this price every six months, the price per ton of steel ingots. The price at the time the contract was entered into for steel ingots was $25.50 a ton. The price of plates to start with is $4.15 per 100 lb., based on an ingot price of $25.50 a ton. These prices were agreed upon after long weeks of negotiation, and I was accused, in a friendly way perhaps, by President Workman, of the Dominion Iron & Steel Co., of driving too hard a bargain on behalf of the people of Canada. I do not think that is exactly so, because I consider the contract we have entered into is eminently fair to the company as it is also fair to Canada. The mill will take about 15 months to be erected, and Mr. Workman estimates that it will cost about $5,000,000. The government does not put up one cent of money for the erection of this mill. The government was pressed to advance this money, but I declined to make such a recommendation to my colleagues, because I considered that the Dominion Iron & Steel Co. is strong enough to put up the $5,000,000 required for the plant, and I, therefore, recommended to my colleagues that we do not advance the money. Accordingly, the company is going to erect this plant at its own cost.

"The company claims that within 12 to 15 months it will be turning out all the ship plates that Canada may require. The company estimates that the capacity of the mill will be 150,000 tons of plate a year. In addition to ship plate, it is estimated that there are about 50,000 tons of other plate, such as boiler plate, used in Canada yearly. There is no duty on boiler plate, nor on ship plate. This mill will be a new national industry for Canada, and not only will it turn out the ship plates which we shall require here, and which, I think, even the existing yards we have, will run something like 75,000 tons a year, but there is no reason why the Dominion Iron & Steel Co. should not be able to get orders for, if not the whole, at least a part of the 50,000 tons of plate used for other purposes than for ships.

"To follow along the policy of safeguarding the public interest so that we shall not be paying too much for the ship plate, after the mill has run for six months, turning out the plate, the price of the plate will be determined on the fluctuating price for steel ingots, based on a price of $25.50 a ton. We were also able to arrange with the company, also with a great deal of reluctance on its part, that no matter how high the price of steel ingots goes, in no event will the price of steel plate cost the government any higher price than $4.25 per 100 lb. If the price of steel ingot drops over a period of six months, the price of plate will be lowered accordingly. We are not going to take the company's say-so as to what its cost may be. It is provided in the contract that the government shall send expert accountants, whom we shall name, to go over the company's books and costs, and if the price of steel ingots has fallen during the period of six months they will see to it that the government gets a proportionate reduction in the price of steel plates. Those are the essential points in the contract into which we are about to enter. The further particulars will be known when the order in council is laid upon the table.

"There is another clause in the contract into which we are about to enter, viz., that on all the plant and machinery that the Dominion Iron & Steel Co. will require to import into Canada for the ship plate mill it will pay duty, and that duty will afterwards be refunded. The government is making only two concessions: first, we are guaranteeing 250,000 tonnage for five years and secondly, we are remitting the duty on the machinery and material the company will require to bring in for its mill. In order that the ships which the government is ordering shall not cost too much money, I am happy to be able to say that through the splendid support of the British and Canadian War Missions at Washington, and through the generosity of the U. S. Government, we have been able to buy 80,000 tons of steel plate in the U. S. on very favorable terms, at a price as low as the U. S. shipbuilders are paying. This amount will keep our plants operating during the balance of 1918 and during the whole of 1919, so that our supply of steel plate is assured until such a time as Canada is able to roll her own plate."

After the armistice was signed the price of steel plates commenced to drop and the Minister negotiated with the Dominion Iron & Steel Co. for a modification of the contract. On July 11, 1919, he announced in Montreal, that he had arranged with the company to reduce the price from $4.15 to $3.65 per 100 lb. It apparently is not expected that all the plates ordered will be required by the government for shipbuilding, and it is said that efforts are being made to have some of them used for locomotive building, and other purposes, for the Canadian National Rys.

Union Navigation Co. Ltd., has been incorporated under the Dominion Companies Act, with $50,000 authorized capital, and office at Montreal, to own and operate steam and other vessels, wharves, docks and other navigation facilities, and to carry on a general navigation, carrying and forwarding business.

Vancouver Harbor Commission.

It is announced from Vancouver that at the Marine Department's request the members of the Vancouver Harbor Commission: F. Carter Cotton, J. A. Fullerton, and S. McClay, have resigned. It is stated that there will be a complete reorganization of the harbor commission. The act by which the commission was created provides that the commissioners must be appointed by the Governor General in council upon the recommendation of the Minister of Marine, and that they hold office during pleasure. The remuneration is fixed at $1,500 each with $2,000 for the chairman, but this may be changed by order in council and it is reported that the salaries will be raised to be more in accordance with those paid at other ports.

The Dominion Parliament has passed an act providing that the Governor General in council may advance to the Vancouver Harbor Commissioners, from time to time, sums, not exceeding in the whole $5,000,000, to enable them to carry on the construction of works and terminal facilities deemed necessary for the development and equipment of the harbor. Before any work is commenced, for which such advances may be required, plans, specifications and estimates must be submitted for approval, and applications for advances to cover the cost for such work are to be made monthly while the work is in progress, and as each advance is made, the commissioners are to deposit with the government, 25 year, 5% debentures, secured on the harbor revenues, and ranking next after all debentures and bonds, heretofore issued by the commissioners.

Shipbuilders' Wages in British Columbia.

A recent report made by the wage adjuster appointed to act in connection with the shipbuilding trades disputes in British Columbia, states that it is found that the cost of living in Victoria, Vancouver and New Westminster combined, for February, was $21.357 a week, and for May, $22.052 a week, an increase of $0.695 or 70c a week. This works out, for a 44 hr. week at 1.6c an hour. As it is stated the foregoing figures do not include the necessaries of life, a further investigation was made into the prices of clothing and other necessities, and it was considered that the increases would be met by an addition of 1.1c an hour to the wages, which in addition to the 1.6c already mentioned, makes a total of 2¾c an hour increase to all employes, and it was recommended that such increase be made effective June 1.

What is known as the Robertson agreement, providing for quarterly wage adjustments in the province, became effective June 1, 1918 and provides for increases in wages quarterly, to keep pace with the increased cost of living, if any. The first quarter brought an increase in wages of 3c an hour, the second quarter an additional 2¾c an hour, the third quarter an additional 2c an hour, and the fourth quarter an additional 2¾c an hour.

British Government War Risk Insurance.—Sir Auckland Geddes, Minister of National Service and Reconstruction, stated in the British House of Commons July 18, that the government had made a profit of £16,000,000 from premiums on war risk insurance of shipping.

Contracts Let for Marine Public Works.

The Dominion Public Works Department has awarded the following contracts:

Cobourg, Ont.—Dredging. Contractors: Ottawa Contractors, Ltd., Ottawa, at 27c a cubic yard, scow measurement (approximate quantity of material, 57,000 cubic yards).

Port Arthur, Ont.—Repairs to temporary pile protection breakwater. Contractors: Barnett-McQueen Co., Port Arthur, at $8,319 (unit prices).

Fort William, Ont.—Construction of breakwater in Mission Channel entrance. Contractors: Port Arthur Construction Co., Toronto, at 5381,000 (unit prices).

Richmond, Que.—Ice-brbeakers. Contractor: P. Charleson, Ottawa, at $10,407 (unit prices).

Bayfield, Ont.—Construction of retaining wall. Contractor: J. C. Bogie, Goderich, Ont., at $3,568.30 (unit prices).

Magog, Que.—Wharf. Contractor: T. P. Charleson, Ottawa, at $19,924.75 (unit prices).

Devil's Island, N.S.—Repairs to breakwater. Contractors: M. C. Denton and M. A. Condon, of Digby, N.S., at $11,446.15 (unit prices).

Bayfield, Ont.—Construction of retaining wall. Contractor: James C. Bogie of Goderich, Ont., at $3,568.30 (unit prices).

Magog, Que. — Wharf. Contractor: Thos. P. Charleson, of Ottawa, at $19,924.75 (unit prices).

Cobourg, Ont.—Dredging. Contractors: Ottawa Contractors, Ottawa, at 27c a cubic yard, scow measurement (approximate quantity of material, 57,000 cubic yards).

Port Arthur, Ont. Repairs to temporary pile protection breakwater. Contractors: Barnett-McQueen Co., Port Arthur, at $8,319 (unit prices).

Fort William, Ont.—Construction of breakwater in Mission Channel entrance. Contractors: Port Arthur Construction Co., of Toronto, at $381,000 (unit prices).

Richmond, Que.—Ice-breakers. Contractor: T. P. Charleson, Ottawa, at $10,407 (unit prices).

St. Ignace de Loyola (Nord), Que. Reconstruction of wharf and approach. Contractor: Onesime Poliquin, Portneuf, Que., at $3,768.25 (unit prices).

Spry Bal, N.S.—Wharf extension. Contractors: A. W. Girrior and W. F. MacKinnon, Antigonish, N.S., at $3,981 (unit prices).

Gross Isle, Que., Quarantine Station Operating house in connection with radiotelegraph station. Contractor: Delphe Maranda, Quebec, at $2,340.

Port Arthur (Bare Point), Ont.—Breakwater extension. Contractors: Chambers, McQuigge & McCaffrey Co., Toronto, at $684,000 (unit price).

Dredges P.W.D. no 110 and P.W.D. no. 116—Supply of dipper arms. Contractors: M. Beatty & Sons, Welland, Ont., at $11,535.

Port Colborne, Ont. — Repairs to breakwater. Contractor: J. M. Hogan, Port Colborne, at $34,325 (unit prices).

Burlington Channel, Ont.—Repairs to South Pier. Contractors: Ottawa Contractors, Ltd., Ottawa, at $27,940 (unit prices).

Shortage of Tonnage for St. Lawrence Coal Shipments.

Some information was given in Canadian Railway and Marine World for July as to steps being taken to urge on the British Ministry of Shipping the necessity for the early release of vessels, used formerly in the St. Lawrence coal trade, and which were requisitioned by the British Government for war purposes. In the House of Commons, July 1, the Prime Minister stated that in response to a telegram he had sent to the High Commissioner in London, Eng., he had received a reply to the effect that an announcement made in the British House of Commons on behalf of the Shipping Controller regarding the non-return of coal ships chartered by the Dominion Coal Co., was that all vessels except one, which were, prior to requisition, time chartered to the Dominion Coal Co., are owned in the United Kingdom, and these charters are private contracts between the owners and charterers and are matters with which the Shipping Controller is in no way concerned. During last winter it became necessary as part of the general allied food programme, to send several of these vessels, as well as a large number of other requisitioned vessels, to load wheat in Australia for Europe, for which trade the size of the vessels made them particularly suitable. The owners were not consulted in this matter, not even informed of it, until the order was issued to the vessels by the Shipping Controller. The suggestion as to the steps taken being due to any desire on the part of the Shipping Controller to assist owners in avoiding completion of contracts was entirely without foundation. Of 5 vessels in which the Dominion Coal Co. is interested, 3 have been released from requisition, and the remaining 2 have been offered release as soon as the present cargoes have been discharged.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during June, 1919:

ARTICLES.		Can. Canal.	U.S. Canal.	Total.
	Eastbound.			
Lumber	m. ft. b. m.	9,731	1,243	10,974
Flour	Barrels	911,020	120,510	1,031,630
Wheat	Bushels	3,138,698	3,263,353	6,402,051
Grain other than wheat	Bushels	3,606,387	3,088,511	6,694,901

The Dominion Government Takes Over St. John Harbor.

Following on the government's decision that the St. John harbor should be taken over as a public harbor, the Dominion Parliament has passed an act transferring the property and rights from the City of St. John, N.B., to the government, and placing it under the control of the St. John Harbor Commissioners. The St. John charter, giving the city certain rights and powers over the harbor, was granted in 1785. The harbor boundaries are as follows:—The northerly limit is a line drawn due northeast from the middle of the government lighthouse tower on the westerly bank of the St. John River, at Green Head, to the easterly bank of the river; the southerly and westerly limits are, beginning at the intersection with high water mark of the westerly face of the government breakwater at Negro Point, thence due south 4,450 ft., to an intersection with a line drawn due southwest from the middle of the government lighthouse tower on Partridge Island, thence due east 6,000 ft. to an intersection with a line drawn due southwest from where the easterly boundary of the military grounds at Red Head cuts high water mark, and thence due northeast 9,000 ft. to high water mark.

Three commissioners are to be appointed by the Dominion Government, and two shall form a quorum, and a quorum may act regardless of a possible vacancy in the commission, and their remuneration is to be paid out of the harbor revenues, the amounts to be fixed by the government. The commission is to appoint harbor officials, and will have jurisdiction over all the property and privileges transferred from the city to the government, and it may own and operate vessels, plant and machinery which it may deem necessary for the efficient discharge of its duties.

The consideration to be paid for the property taken over is $2,000,000, made up as follows: $1,342,717.55, representing the bonded indebtedness of the city in connection with harbor development, taken over by the commission, which will pay interest on the bonds, and the principal of the bonds as they mature; and the balance, $657,282.45 to be paid to the city in harbor commissioners' debentures, bearing interest at 5% a year and repayable in 25 years.

The elevator, wharves and other property in the harbor, already government property, shall be subject to the commissioners' jurisdiction, and they are to pay to the government, 3½% a year on the cost of construction.

Atlantic and Pacific Ocean Marine.

The s. s. Curacoa, which was damaged and sunk in the Halifax explosion in Dec., 1917, and which was salved from the Dartmouth shore, has completed repairs at New York and is again ready for ocean service.

The s. s. Nascopie, which arrived at St. John's, Nfld., about the middle of July, from Hull, Eng., took on lumber and general cargo, for the first trip of the season to Hudson Bay ports for the Hudson's Bay Co.

The London, Eng. Salvage Association offered for sale by tender recently, through its Halifax, N. S. office, the s. s. Appenine, 3,684 gross tons, as she lay stranded at Witness Point, 24 miles south of St. John's, Nfld.

The Maple Leaf Line will, it is stated, resume its steamship service between Vancouver, B. C. and New York, via the Panama Canal, early in October. This service was interrupted by the war, but will now be increased, some standard steel steamships of 9,680 d.w. tons having been acquired.

The British s. s. Onwen was towed into St. John's, Nfld., July 12, with only one blade left on her propeller and her steering gear out of order, having been damaged in a servere storm, July 8. She is owned in Cardiff, Wales, and sailed from Ardrossan, Scotland, June 27, to load lumber at Campbellton, N. B.

La Cie. Canadienne Trans-Atlantic Ltee., has announced that the steamships California and Hudson will sail from Montreal, August 9, in a passenger service to Havre, France. Up to the present the company, which is represented in Canada by Canada Steamship Lines, Ltd., has confined its operations to the freight business.

Canadian Pacific Ocean Services' s. s. Grampian, while bound from Montreal to Liverpool, Eng., July 9, collided, head on, with an iceberg, off Cape Race. Two members of the crew were killed and two were injured. The bow was considerably damaged above the water line, and she immediately proceeded to St. John's, Nfld., where repairs were made, the passengers being transferred to another vessel. She sailed again from St. St. John, July 21, for Liverpool.

The Head Line s.s. Ballagally Head arrived at Montreal, July 17, on her maiden trip from Belfast, Ireland. At a luncheon given on board, W. R. Eakin, Vice President and Managing Director, McLean Kennedy, Ltd. Canadian agents of the line, stated that more vessels of the same type would soon be in the company's service for the Canadian trade, to replace those lost during the war. He said that the Head Line had 17 vessels in operation at the outbreak of war, and now had only 5. A sister vessel of the Ballagally Head was launched at Belfast, Ireland, early in July, and two slips have been reserved at Belfast for further similar construction.

Royal Pilotage Commission. The estimates for the year ending March 31, 1920, passed by the Dominion Parliament at its recent session, contain the following items: $5,000 for chairman, and $2,000 each for commissioners, of the Royal Pilotage Commission, total $11,000. Also honorarium to J. T. Brown, for special services rendered royal commission on pilotage and vessel traffic regulations, $350.

Maritime Provinces and Newfoundland.

The Canadian Transport & Fishing Co. has deposited plans and description of site for a wharf to be built on the the Bay Chaleur at New Mills, N. B.

The s. s. Princess, purchased by J. A. Farquhar & Co., Halifax, N. S., has been placed in service between Halifax and the west coast of Newfoundland, she is in charge of Capt. R. D. Burns, with J. H. Gunn as chief engineer.

The Dominion Steel Corporation's s.s. Maskinonge collided with an iceberg at the end of June while en route from Sydney, N.S., to Wabana, Nfld. She put back to Sydney with a broken hawse pipe and some damage to her starboard bow.

The s.s. Fern, which was beached at Knights Cove Point, Nfld., towards the end of June, after being caught in ice near Cape Bonavista, was floated and taken to St. John's, Nfld., at the end of the month, for repairs. She was bound from Mobile, Ala., for Rotterdam, with a cargo of pitch pine.

The Eastern Steamship Corporation's s. s. Northland, which completed her repairs recently after grounding at West Island, Buzzards Bay, when bound from New York to Boston, has been put on the St. John, N. B., route, taking the place of the s. s. Governor Dingley, withdrawn for repairs.

The Maritime Wrecking and Salvage Co's tug, Sarnia City and s. s. Maggie Marshall towed the wrecked steamship Troja into Halifax, July 15, where she is to be overhauled and repaired by Halifax Shipyards, Ltd. The s. s. Troja was wrecked on the Old Proprietor Ledge in the Bay of Fundy, Mar. 18, and was refloated at the end of May. The hull is reported to be bady damaged, but the machinery is said to be intact.

The Richmond Steamship Co.'s s.s. Richmond was wrecked during a storm, at the end of June, on Bear Island, near Point Tupper in the Strait of Canso, and is stated to be a total loss. She was built at Sydney, N.S., in 1905, her dimensions being, length, 112.5 ft.; breadth, 18 ft.; depth, 8.3 ft.; tonnage, 162 gross, 105 register, and she is equipped with an engine of 20 n.h.p., driving a screw. She has a cargo capacity of 75 tons, and accommodation for 100 passengers. She had been operated for some years on a Dominion Government subsidized service between Port Mulgrave, St. Peters, Irish Cove, Marble Mountain and other ports on Bras d'Or Lake, making two round trips each week, for a payment full round trips each week, for a payment of $6,500 a year. She was reported to have been refloated during July.

Shipbuilding in China—Considerable shipbuilding is reported to be in progress in Shanghai, where several vessels are under construction for other countries. It is stated that 4 steamships of 10,000 tons each are being built there for the U.S., and it is expected that a further order for 8 similar ships is to be placed there shortly. Four standard steel steamships of 5,000 tons each are also under construction for undisclosed interests, and another 4 ships are being built for Norway.

Donald Shipping Co. Ltd., has been granted supplementary letters patent increasing its capital stock from $30,000 to $36,000.

Province of Quebec Marine.

The Cunard Steamship Co's monthly meeting of officials in North America was held in Montreal, July 9, this it is said being the first of such meetings to be held outside New York. At the conclusion of business they were entertained by the Montreal Harbor Commissioners, with a trip round the harbor in the steam tug, Sir Hugh Allan, and a dinner at the Windsor Hotel.

The s.s. Oceanica, a wooden steamship, owned by the Acme Corporation, of New York, was damaged by fire in Montreal harbor, July 2. About ten years ago, the ship changed hands for $4,000, and a few years later, again changed, the price paid for her being $40,000, while in the latter part of 1918, she was acquired by the present owners for $100,000. It was the intention to overhaul her and place her in the lake and river service.

The wreck of the Marine Department's s.s. Montmagny which was sunk in collision off the Isle of Orleans in 1916 by the s.s. Lingan is reported to have been sold to G. Dussault Co., Ltd., Levis, Que., which company is associated with the National Shipbuilding Co. The work of raising the wreck was commenced at the end of June, 5 cables having been attached, and it was expected that she would be raised about the middle of July. She was built at Sorel, Que., in 1909, her dimensions being, length 212.6 ft., breadth, 34.8 ft., depth, 19.5 ft., tonnage, 1,269 gross, 723 registered, and she is equipped with engine of 148 n.h.p. driving a screw.

Ontario and the Great Lakes.

The s. s. Turbinia, which, as mentioned in our last issue, was offered for sale by public auction in England, June 17, as she lay at Southampton, was not sold, and we are officially advised she has been taken off the market.

The Brockville and Morristown Transportation Co., is reported to have sold the ferry steamboat John Webster, which it has been operating between Brockville and Morristown, to a firm of contractors in Erie, Pa.

The s.s. Sir Thomas Shaughnessy, owned by Jenkins Steamship Co., Cleveland, Ohio, while downbound with ore, ran ashore at Windmill Point in the Detroit River, at the end of June. She was released after having part of her cargo lightered, with comparatively little damage.

The U.S. Lighthouse Service has established a temporary light, fixed red, 15 c.p., 16 ft. above water, on the channel side of the framework of the tower, and 12 ft. above the base of the tower, at Huron harbor, on the south side of Lake Erie. This light is to be maintained until a permanent light is established.

On account of the falling into the river of high banks, the shoal extending from the south side of the Kaministiwia River at the lower end of the Westfort turning basin, Fort William, has increased in length and the black spar buoy used to mark the shoal has been moved 300 ft. eastward, to mark the new extremity of the shoal.

The contract for the extension to the breakwater at Bare Point, Port Arthur, is reported to have been awarded, by the Dominion Public Works Department, to Chambers, McQuigge and McCaffrey.

also, it is said, will also build the revetment wall at the mouth of the Mission River, Fort William, the pile driving for which will be done by the Thunder Bay Contracting Co.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for June as follows: Superior 602.45; Michigan and Huron, 581.50; St. Clair 576.45; Erie 573.77; Ontario 247.95. Compared with the average June levels for the past ten years, Superior was 0.24 ft. above; Michigan and Huron 0.68 ft. above; Erie 0.92 ft. above; and Ontario 1.06 ft. above.

The Windsor and Detroit city councils held a joint meeting, July 10, to consider a plan for the operation of an all night ferry service between the two cities. The automobile traffic is stated to have been so heavy recently, that many people are compelled to stay on one or the other side of the river overnight, through the ferries not being able to handle the traffic in the schedule hours.

Canada Steamship Lines' barge Dundurn, in tow of the tug Home Rule, foundered and sank just outside the outer breakwater at Ashtabula, Ohio, July 15, during a heavy storm, two of the crew being lost. The Dundurn was formerly a steamboat named Pere Marquette II, and was built at Detroit, Mich. in 1882. Her dimensions were, length 196.3 ft., breadth 30.3 ft., depth 12 ft.; 172 tons register.

The U.S. Government has decided to widen the Grosse Pointe channel to permit vessels of deep draft to pass more easily. Tenders have been received by the U.S. Engineering Department for dredging and other work connecting therewith. The specifications include the removal of approximately 1,250,000 cub. yds. When the dredging is completed it is expected a depth of 21 ft. at low water will be obtained, with a bottom width of 800 ft. between the established channel lines.

The s.s. Mariska, owned formerly by the Basset Steamship Co., Toronto, and operated in the Great Lakes trade, but recently acquired by the Trans-Atlantic Steamship Co., Montreal, has been remodelled and equipped for ocean service by Halifax Shipyards, Ltd., Halifax, N.S. The deck construction has been changed and an additional deck has been erected aft. The bridge, which was somewhat forward, has been set back aft of midships and the crew's quarters have also been moved aft.

During 1918, 2,887 vessels passed through the Welland Canal, of which 1,318 were upbound, and 1,569 downbound. These figures do not include regular canal tugs, small craft, nor vessels which entered the canal at Port Colborne and discharged cargoes at Welland and returned to Lake Erie. There were 216 new vessels sent through the canal for Atlantic service, and 17 vessels which had been operated on the lakes previously, passed through the canal in sections to the coast.

Owing to target practice taking place from sunrise to sunset at the government rifle ranges at Long Branch, six miles west of the western entrance to Toronto harbor, mariners are warned that they must keep at least 8,000 ft. out from the shore when passing the ranges, and under no circumstances must they enter the danger area, which is marked by red barrel buoys, with the word "Danger," on the top and "rifle ranges," on the ends. The target practice will continue until Oct. 15.

British Columbia and Pacific Coast

A Vancouver press report states that private advices received from Ottawa indicate that the Dominion Government dry dock will be located at Victoria.

The Coast Island range lights, at the entrance to Prince Rupert Harbor, are being discontinued, and the lights moved to new positions, one on the northeastern point of Kinahan Island, and one on the northwestern point of Genn Island.

The Clayoquot Sound Canning Co. is suing the C.P.R. in the British Columbia Admiralty Court for $6,000, claimed to be due for salvage services rendered to the s.s. Princess Adelaide by the auxiliary schooner Iskum, when the former vessel went ashore at Georgina Point, in Active Pass, Oct. 13, 1918.

The Marine Department announces the reporting of an uncharted rock off the northeast side of Nigei Island, in the new channel in Queen Charlotte Sound. It is seven cable lengths from the northeast shore of the island and 2 miles southeast of Greeting Point. Another uncharted rock is reported 450 ft. northwestward from the northwest extreme of McCreight Island, Buckley Bay, Masset Inlet, Queen Charlotte Islands.

Freight Steamship Requisitioning by British Government.

A London, Eng. copyright cablegram of July 22 to the Toronto Globe says: It is anticipated in well informed shipping circles that the government freight requisition for August will be 35 per cent. This is a reduction of 5 per cent. only, as against 10 per cent. for July. It applies to eastward voyages from North America to the United Kingdom. While the gradual whittling down of government control gives satisfaction, there is some disappointment, because the process is not faster. Any increase in the monthly rate of reduction is not anticipated.

The reason given is the government decision to bring over to the United Kingdom 300,000 standards, say 1,000,000 tons, of Canadian lumber, bought during the war by the British Timber Controller, and still held at his disposal. The whole of this lumber is to be shipped during the next 12 months, if that is found practicable. It is to be distributed in all parts of the country and utilized in the construction of tens of thousands of houses to be erected under the national housing scheme, which, as a factor in industrial pacification, is regarded as a matter of prime urgency. At the same time it is realized that operations of such magnitude are bound to militate against the speedy improvement in the shipping position.

The Union Navigation Co. Ltd., Montreal and New York, which recently gave up business, and was wound up, had the following officers: President, H. Whiton, New York; Vice President, W. I. Gear, Montreal; Secretary, H. J. Donnelly, Montreal; Treasurer, C. H. Schneider, New York; other directors, W. A. Coates, R. W. Reford, and J. R. Gordon. Interests associated with Robt. Reford Co. Ltd., have applied for the incorporation of another company having the same name, and it is now being organized.

United States Grain Shipments via Montreal.

Canadian Railway and Marine World for July contained, on page 409, a statement made by the acting Minister of Trade and Commerce on June 19, to the effect that shipment of U.S. wheat when arriving above Montreal in transit for export, would be permitted by license from the Trade and Commerce Department until further ordered, and that in a few days thereafter regulations would be formulated in respect to such shipments to ensure that shippers must provide tonnage to carry such grain from the Canadian seaboard in order to prevent a congestion in Canadian elevators.

We were advised by the Trade and Commerce Department on July 7 that the contemplated regulations were not formulated and that U.S. grain is permitted to pass through Canada in transit, without license, for the present at least, but that later on, should it appear that the quantity of foreign grain in Canadian elevators is liable to endanger prompt dispatch of the Canadian crop when it comes on the market, steps will have to be taken to limit the movement of such foreign grain through Canada.

The Robert Reford Co., Ltd., agents for the Cunard Line, Montreal, has been reorganized, the Cunard Steamship Co. acquiring an interest in the new company. The directors are: President, Robt. W. Reford; Vice President, W. I. Gear; Sir T. Ashley Sparke, New York; W. A. Coates, Wm. Phillips, and S. Barrow. The Cunard Steamship Co. now includes, in addition to the Cunard Line, the Anchor, Donaldson, Thomson, Brocklebank, Well, Commonwealth and Dominion, and American-Levant Lines. When the Canadian Northern Ry. decided a few years ago to relinquish its ocean steamship business, the Cunard Steamship Co. took over Canadian Northern Steamships Ltd. and its vessels Royal Edward and Royal George, the former of which was lost during the war. Wm. Phillips, one of the new directors of the Robert Reford Co., was formerly European Manager, Canadian Northern Steamships Ltd., London, Eng.; W. A. Coates, another director, has been in the Cunard Co's service for many years, and S. Barrow is the company's Manager at Quebec. R. W. Reford, President of the Robert Reford Co., has been added to the Cunard Steamship Co's board of directors. The new arrangements will bring the Cunard Line into closer touch with Canadian trade, and will result in increased service between Canada, the United Kingdom and the European Continent, as soon as the new steamships now under construction are ready for service.

The Dominion Government's s.s. Lansdowne is being offered for sale by tender as she lies at Dartmouth, N.S. She was built at Maccan in 1884, her dimensions being, length, 188.6 ft.; breadth, 32.1 ft.; depth, 15.8 ft.; tonnage, 680 gross; 463 net. She is equipped with compound surface condensing engine, with cylinders 24 and 43 in. diameter by 36 in. stroke, 80 n.h.p. driving a screw, and is supplied with steam by a return tubular boiler 13 ft. by 9 ft. 10½ in., built in 1904.

Job Shipping Corporation, Ltd., has been granted supplementary letters patent subdividing its existing 300 shares of the par value of $100 each into 3,000 shares of $10 each.

The Canadian Government Merchant Marine Ltd.. Discussed in the House of Commons

On July 5, when the House of Commons was in committee of supply, on the item "Public Works, chargeable to capital, Marine Department, $10,000,000," the following discussion took place.

J. H. Sinclair, M.P., for Antigonish and Guysborough, N.S. "What does the Minister propose to do with that money?"

Hon. C. C. Ballantyne, Minister of Marine:—I am quite sure that all members of the committee are fully aware of the government's programme for shipbuilding. The very modest amount that we have in this item is to complete the government's programme.

J. H. Sinclair—Could the minister give us any idea of what he expects to earn from his ships? I asked a question the other day about the rate earned on the cargo that the Canadian Warrior carried, and the answer I got was that it was not in the public interest to give the information, and that at the end of the year a statement would be made by somebody to the shareholders —which is the government—but that the people did not seem to have anything at all to do with it. The owners of ships in centers of business make no objection to the publication of the rates they receive for their freights. If you read the New York trade papers you will find the rates quoted day by day, I do not see any good reason why the minister should not give such information to a member of parliament when he asks for it. The minister said, in the answer he gave to my former question, that he carried a certain amount of cargo from one port to another. He did not state the rate he received, and when he was asked to state it he declined to do so. In connection with this matter, I want to obtain from the minister, if I can, the rate that is being charged on raw sugar from the north side of Cuba to Montreal. I drew to the attention of the Minister of Railways some time ago the fact that I was informed that the Shipping Board of New York had made a rate for raw sugar from the north side of Cuba to New York at 38½c per 100 lb. and had made a larger rate to Halifax of 58½c —20c more. It was a curious thing to me, that the Shipping Board of New York was fixing a rate on raw sugar to a Canadian city. That was the first point, then it transpired that one of the government's ships had been used for carrying sugar from Cuba to Montreal refiners at 38½c per 100 lb.—the rate fixed by the Shipping Board of New York to New York,—whereas Montreal is twice as far away from the north side of Cuba as is Halifax; but the refiners at Halifax had to pay 58½c per 100 lb. I want information on two points: In the first place, is our government willing to submit to the New York Shipping Board fixing the rate to Halifax from the north side of Cuba? In the second place, is the government using its ships to carry raw sugar for one particular concern at 20c per 100 lb. less than to their competitors in Halifax and St. John? I would like to get that information from either the Minister of Railways or the Minister of Marine.

Mr. Ballantyne—The reason I was unable to give the information asked for in regard to rates on cargos carried by government ships is due to the fact that these ships are being operated by the Canadian Government Merchant Marine under D. B. Hanna and his board of directors; it was with no desire on the part of the government to withhold the information were we in possession of it.

J. H. Sinclair—I suppose, Mr. Hanna is a public servant, and if the minister does not know he could get the information by asking him.

Mr. Ballantyne—I will be very glad indeed to get it.

J. H. Sinclair—What does the Minister of Railways say? He is in charge of this business. I notice he smiles. He ought to be able to give me that information. I notified him a few days ago that I wanted to get it before the closing of the house.

Hon. J. D. Reid—The operation of the ships has been by the marine officials and under the board of directors operating the Canadian National Rys. The rates made are kept by that company. Any information, of course, I would have to get from the board of directors, and I can get it if it is in the public interest that it should be given at any particular time. That is the only question that will have to be taken up and discussed at some future time—the question of giving information of that kind just at the time transactions may be made in connection with our great railway and steamship systems. This is what happens in connection with our railways and also with our steamships. Some person wants to get information that will be of assistance to him individually, and it would not be in the public interest to furnish it to him. I admit that members are entitled to all information that is in the public interest to impart, and I would suggest that at another session both sides get together and decide what information we should give out, for the reason that if it is against the apparent successful operation either of our steamships or our railways, I am sure there is not a member who would want the information. With reference to the rate mentioned, I do not know anything about it, but there has been in force on the Atlantic for years an understanding that the rates from Atlantic ports to foreign ports are the same whether from Canadian or United States ports. The rates from Montreal to Liverpool would be the same as from Portland or from New York, and probably the rate from Cuba to Montreal would be the same as the rate from Cuba to New York. The matter of getting a return cargo has probably something to do with these rates being generally the same to the Atlantic ports.

J. H. Sinclair—Why are the rates higher to Halifax than they are to Montreal?

Hon. J. D. Reid—I will make enquiries and get the information.

Hon. A. K. Maclean, acting Minister of Trade and Commerce. The sugar rate from the British West India Islands, which enjoy preferential treatment under our West Indies treaty, was fixed by the International Sugar Board. My impression is that the International Sugar Board fixed the rate on sugar from British West India Islands to Halifax and St. John at 57c.

J. H. Sinclair—Did they fix the rate to Montreal?

Mr. Maclean—No, because during the war Montreal was getting its sugar via New York, and the New York rate from the British West India Islands was somewhat lower, because of the fact that the rail rate from New York to Montreal had to be taken into consideration. The situation to which my hon. friend refers was unfair to the sugar refineries at Halifax and St. John and as soon as I learned of it I protested. The Montreal sugar refineries wanted the Cuban sugar for the purpose of manufacturing it and selling it in the United Kingdom, and if the refineries at St. John and Halifax could not get the same rate as the Montreal people got, they were under a disadvantage in attempting to sell sugar in the United Kingdom. Later, however, I understand, the railway made the same offer to the refineries at St. John and Halifax as was made to the Montreal refineries. I myself think that a mistake was made in the first instance.

J. H. Sinclair—My point is that the government ships have been used for the benefit of the Montreal refineries and to the disadvantage of the refineries at Halifax and St. John.

Mr. Ballantyne—I heard Mr. Hanna say that he was quite prepared to carry sugar at the same rate to Halifax and St. John as he carried it to New York for the Montreal refineries.

J. H. Sinclair—The rate ought to be less from the north side of Cuba to Halifax and St. John than it is to Montreal, because it is only half the distance; but the rate to Halifax and St. John is 20c more than the rate to Montreal; and that is due to the interference of the government. I am informed on credible authority that the government has contracted to carry 36,000 tons of raw sugar from the north side of Cuba to Montreal at 37½c per 100 lb. If that is true, it will be impossible for the refiners at Halifax and St. John to compete with the refiners in Montreal. The point is that the government should not use government ships to favor the Montreal refiners against the interests of the refiners at Halifax and St. John. If the minister cannot clear that point up, the people of the Maritime Provinces will not be satisfied.
